TITLE	Microfiche Set of Documents Announced in Abstracts of Instructional and Research Materials in Vocational and Technical Education (AIM/ARM), Volume 9, Number 5.
INSTITUTION	Ohio State Univ., Columbus. Center for Vocational Education.
SPONS AGENCY	Bureau of Occupational and Adult Education (DHEW/OE), Washington, D.C.
PUB DATE	76
NOTE	9,873p.
EDRS PRICE	MF-$17.53 Plus Postage. HC Not Available from EDRS.
DESCRIPTORS	Agricultural Education; Business Education; Career Education; Distributive Education; Documentation; *Educational Research; Health Occupations Education; Home Economics Education; Industrial Arts; *Instructional Materials; *Microfiche; Resource Materials; *Technical Education; Trade and Industrial Education; *Vocational Education

ABSTRACT

Documents announced in the Volume 9, Number 5 issue of "Abstracts of Instructional and Research Materials in Vocational and Technical Education" (AIM/ARM) and not available under individual ED numbers are included in this microfiche set. Microfiche availability for these documents is shown in the VT-ED Number Cross Reference List included in AIM/ARM, Volume 10, Number 2. The microfiche set is arranged in the following sequence: (1) A VT number list of those documents in the microfiche set for Volume 9, Number 5, and (2) the full text of documents listed, in ascending VT-number order. The documents are filmed continuously. (Author/HD)

****
* Documents acquired by ERIC include many informal unpublished *
* materials not available from other sources. ERIC makes every effort *
* to obtain the best copy available. Nevertheless, items of marginal *
* reproducibility are often encountered and this affects the quality *
* of the microfiche and hardcopy reproductions ERIC makes available *
* via the ERIC Document Reproduction Service (EDRS). EDRS is not *
* responsible for the quality of the original document. Reproductions *
* supplied by EDRS are the best that can be made from the original. *

TABLE OF CONTENTS

INTRODUCTION ii

VT NUMBER LIST 1

INTRODUCTION

This set of microfiche consists of the documents which are announced in Abstracts of Instructional and Research Materials in Vocational and Technical Education (AIM/ARM), Volume 9, Number 5, 1976 and are not available individually by ED number. These documents are grouped in VT-number sequence and filmed continuously as a microfiche set (AIM/ARM, VT-ERIC SET).

Microfiche availability of documents in this set is shown in the VT-ED Number Cross Reference List in Volume 10, Number 2, of AIM/ARM.

Microfiche copies of individual documents in this set may be obtained by reproducing the appropriate microfiche on microfiche reproduction equipment.

Hardcopy of individual documents in this set may be available from the sources listed in the resume for each document.

This publication was prepared pursuant to a contract with the Bureau of Occupational and Adult Education, U.S. Department of Health, Education and Welfare. Contractors undertaking such projects under Government sponsorship are encouraged to express freely their judgement in professional and technical matters. Points of view or opinions do not, therefore, necessarily represent official Bureau of Occupational and Adult Education or U.S. Office of Education position or policy.

TITLE: INTRODUCTION TO COMPUTER SCIENCE FORTRAN PROGRAMMING CONCEPTS. STUDY GUIDE. OCCUPATIONAL-TECHNICAL CURRICULUM DEVELOPMENT TV STUDY.

DESCRIPTOR: *COMPUTER SCIENCE EDUCATION; *PROGRAMING LANGUAGES; *STUDY GUIDES; *TELEVISION CURRICULUM; TELECOURSES; TECHNICAL EDUCATION

IDENTIFIER: *FORTRAN

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 48P.; RELATED DOCUMENTS VT 103 208 AND VT 103 302 IN THIS ISSUE.

ABSTRACT: THIS STUDY GUIDE FOR A TELEVISION COURSE IN COMPUTER PROGRAMMING WAS DESIGNED FOR INDEPENDENT STUDY AND CONSISTS OF TWO LESSONS DEALING WITH FORTRAN PROGRAMMING CONCEPTS. LESSON ONE INTRODUCES PHASES NEEDED IN PROGRAM PREPARATION: ANALYSIS, BLOCK DIAGRAMMING, AND CODING. LESSON TWO EMPHASIZES TECHNIQUES REQUIRED TO PROCESS AND DEBUG A PROGRAM UTILIZING THE COMPUTER. THE STUDY GUIDE FOR EACH LESSON CONTAINS THESE SECTIONS: STUDY SEQUENCE, LESSON OVERVIEW, LEARNING OBJECTIVES, SELF-PRETEST, KEY TERMS, SUPPLEMENTARY MATERIALS, STUDY QUESTIONS, SELF-POSTTEST WITH ANSWER KEY, AND LESSON EVALUATION FORM. (NJ)

STUDY GUIDE

INTRODUCTION TO COMPUTER SCIENCE

FORTRAN PROGRAMMING CONCEPTS

TABLE OF CONTENTS

Orientation to the Course ---------- i - iv

Lesson 1: ---------- 1/1 - 1/21

Evaluation ---------- 1/22 - 1/23

Lesson 2: ---------- 2/1 - 2/17

Evaluation ---------- 2/18 - 2/19

Instructor: Bette Plog

Project Director: Lyndon McClure

Cover Design: Faith Helen Faust

INTRODUCTION TO COMPUTER SCIENCE
FORTRAN PROGRAMMING CONCEPTS

ORIENTATION TO THE COURSE

INTRODUCTION

OVERVIEW OF COURSE

Introduction to Computer Science is a course designed for anyone who would like a familiarization with computers and their effect on society. The course covers the history of computer development, vocabulary, study of input/output devices, basic program concepts, and emphasis is placed upon applications of computers.

OVERVIEW OF LESSONS 1 & 2

The two lessons or modules to be covered in this study guide deal with FORTRAN programming concepts. Lesson 1 introduces the student to phases needed in program preparation: Analysis, Blockdiagramming, and Coding. Lesson 2 emphasizes techniques required to process and Debug a program utilizing the computer.

INDEPENDENT STUDY

MATERIALS AND ACTIVITIES

The Introduction to Computer Science course has been designed for independent study. All of the instructions, information and basic learning materials you should require are provided: Orientation materials, a Study Guide, and 2 fifteen minute television programs. In addition, opportunities will be scheduled for on-campus sessions, such as orientation, compiling and testing FORTRAN programs on the computer, and examinations. If additional information or tutorial assistance is needed, you can talk to your instructor by calling 746-2156.

KEYS TO SUCCESSFUL INDEPENDENT STUDY

The keys to successful independent-study are:

- a genuine desire to achieve the learning goals (objectives) of the course...considerable interest in the subject is also very helpful.

- the establishment of a weekly study routine, and sticking closely to it.

- following instructions, assignments and study-tips carefully and completely.

- calling the telephone number if you are really "stuck" and require tutorial help or information.

YOUR INSTRUCTIONAL MATERIALS

IMPORTANCE OF USING STUDY GUIDE

The key to your study of the FORTRAN Programming Concepts is your Study Guide. It has been specially designed to assist you in learning the material. You will find it very useful if you use it as described on the next page.

SECTIONS IN EACH LESSON OF THE STUDY GUIDE

The Study Guide for each Lesson or Module will have the following sections:

- Study Sequence
- Overview of the Lesson
- Learning Objectives for this Lesson
- Self Pretest of Learning Objectives for this Lesson
- Key Terms
- Supplementary Material
- Study Questions
- Self Post Test of Learning Objectives for this Lesson, with Answer Key
- Lesson Evaluation Form

HOW TO USE YOUR INSTRUCTIONAL MATERIALS

STUDY SEQUENCE

Study Sequence: The very first thing you should do before viewing the TV Program or studying any of the material for a lesson is read the Study Sequence. This is one of the most important sections in all of your material. It tells you what you should do, and in what order, so that your study time and other learning activities are most likely to be beneficial to you in achieving the learning objectives for each lesson, and most helpful in preparing for the examination.

The purpose of each section of the Study Guide follows.

OVERVIEW

Overview: This section for each lesson tells you the main ideas and purposes of the lesson, why you should study it, and how it fits in the overall picture of Introduction to Computer Science. In some cases, applications of the information contained in the lesson are indicated as well.

LEARNING OBJECTIVES

Learning Objectives: These statements are very important because they summarize the main concepts of the lesson. They tell you what you will be expected to be able to do with these concepts when you have completed your study of the lesson, and what topics will be tested on the examinations. Be sure to keep these Learning Objectives in mind when viewing the TV programs and when studying the lesson.

SELF PRETEST

Self Pretest: You may be unaccustomed to "taking-a-test" over a lesson before you study it, but this can be a very helpful study aid for you, if done conscientiously. Among the benefits of a Self Pretest are the following:

- Alerts you to the main concepts to be learned.

- Tells what you already know about these concepts, so you know what to concentrate on and what you might merely skim in your study of the lesson.

- When you compare your score on the Self Pretest with your score on the Self Post Test you will have some indication of how much you have learned as a result of your study of the module, a measure of "learning gain." (Note: Only you need know your scores as these are self-tests.)

KEY TERMS

Key Terms: These are words, technical terms, or phrases you should be able to define and use appropriately when writing and talking about the concepts in the particular lesson. It will aid your study if you "know" these terms in advance. Looking them up in the supplementary material or the dictionary, or watching for them in the TV Programs will aid you also in learning to use them correctly.

SUPPLEMENTARY MATERIAL

Supplementary Material: It has been considered necessary to supplement the information contained in the TV Programs in order to help you accomplish the learning objectives of a particular lesson. This supplementary information will be tested on the Self Pretest, the Self Post Test and on the course examination.

STUDY QUESTIONS

Study Questions: These questions are designed to help you organize your knowledge of the main ideas of the lesson and to assist you in reviewing for the Self Post Test and the course examination. Be sure to write out your answers to all questions thoughtfully and completely. Check your answers by referring to the Supplementary Material.

SELF POST TEST AND ANSWER KEY

Self Post Test: This self test should give you a good idea of how well you have accomplished the learning objectives of the lesson, and how well you are prepared to answer examination questions about the main concepts of the lesson. Further, your score on this Test, when compared with your score on the Self Pretest, will give you some indication of how much you have learned by studying the module. (For example, if your score on a Self Pretest is 10% and your score on the Self Post Test for that same module is 90%, your "learning gain" for the lesson is probably about 80%). The Self Post Test should prove very useful to you in preparing for the course examination. particularly since the questions on the course examination. will be based upon the Self Post Test questions. (Note that an Answer Key is provided for each Self Post Test.) Be sure to review carefully any questions you missed or were unable to answer.

LESSON EVALUATION

Lesson Evaluation Form: At the end of each lesson is a very important section--YOUR EVALUATION OF THIS LESSON. We need your help in identifying as soon as possible ways in which we might improve the learning effectiveness of this course. Major revisions of the printed materials and the TV Programs probably will not be possible until the Course is prepared for presentation again. We will, however, make what changes we can as soon as we have enough reliable information upon which to base the changes. Equally vital is the need for critical evaluation from each of you on all components of the Course, lesson by lesson, so that significant improvements can be made in the next edition of all the materials, including the TV Programs. You are urged to complete the lesson evaluation form as soon as possible after you have finished the lesson. Please submit these evaluation forms regularly and promptly, according to the directions you are given. You may be sure your assistance will be appreciated and your evaluations carefully considered.

SUGGESTIONS FOR VIEWING THE TV PROGRAM

Review the appropriate lesson in your Study Guide before viewing the TV Program. Be sure to schedule the times for the TV Program so that you will not be distracted during the presentation. Do not attempt to do other things while you are viewing the lesson, it needs your full attention. Keep paper and pencil handy so you can take notes.

During the presentation you may wish to write comments in your study guide while watching the program, or you may choose to do so immediately after the program. If you own a tape recorder, you may wish to tape the audio portion of the presentation. Be sure to review your Study Guide prior to and after watching the TV Program. It will be far easier to respond to the activities under Study Questions immediately after viewing the TV Program.

LESSON 1

STUDY SEQUENCE

1. Read the Overview and Learning Objectives.
2. Answer the Pretest questions and write the definition of the Key Terms. Check your answers as directed.
3. Read the Supplementary Material for Lesson 1 in the Study Guide.
4. Work through the Study Guide carefully answering all exercises and study questions <u>before</u> viewing TV Program for Lesson 1.
5. View the TV Program for Lesson 1.
6. Complete the Post Test on Lesson 1.
7. Review ideas tested by the questions you <u>missed</u> or were <u>unable</u> to answer. Then rewrite your answers to these particular questions.
8. After completing the exercises and questions in the Study guide and viewing the TV Program, flowchart and code the Lesson Assignment on page 21 of this Study Guide, using the FORTRAN programming language.

OVERVIEW

Lesson 1 introduces you to phases needed in program preparation: Analysis, Block Diagramming, and Coding. Statements of the FORTRAN language needed to code a program which reads and writes numeric data are discussed. Less than ten years ago it was rare for an individual to have direct contact with more than three or four computer applications, including payroll and retail store computerized billing systems. The ready accessibility of the computer has brought about the need for knowledge of computers for all enlightened citizens in this age of technology.

LEARNING OBJECTIVES

Upon successful completion of this lesson, you should be able to:

1. Discuss data organization and its inter-relationship.
2. Identify Integer data fields.
3. Identify Real data fields.
4. Assign names to variables to indicate mode of data (integer or real).
5. Analyze a sample problem using Real and Integer data.

6. Define each of the following FORTRAN Statements:

   FORMAT READ WRITE GO TO STOP END

7. Utilize the sample problem to illustrate the concepts explained in this lesson.

8. Successfully complete a problem which reads and writes numeric data by flowcharting and coding using the FORTRAN language.

9. Define the following key terms:

   Input Program Flowchart Instruction

   Output Programmer FORTRAN

SELF PRETEST OF LEARNING OBJECTIVES FOR LESSON 1

Before proceeding further in your study of this lesson and before viewing the TV Program, try to answer the following questions. Check your answers by referring to the Supplementary Material and by viewing the TV Program, as well as the answer key.

Match the following: (TV and supplement)

1. Character	a. Quantity Sold
2. Field	b. Set of invoices
3. Record	c. Invoice by item
4. File	d. 98 (number)

Identifying Integer Data Fields (Supplement)

Examine the following numerals and make appropriate changes so that they represent valid FORTRAN INTEGERS

5. 765. _____

6. 859,657 _____

7. 0. _____

Identifying Real Data Fields (Supplement)

Examine the following numerals and make appropriate changes so that they represent valid REAL NUMBERS

8. 9,268 _____

9. 5280 _____

10. 666,666,666 _____

Assigning Variable Names (Supplement)

Identify the following variable names as Integer or Real. If a variable name is invalid, state why.

Type of Variable Names	Why Invalid
11. JA _____	_____
12. X1.4 _____	_____
13. TOTAL _____	_____
14. KOUNT _____	_____
15. DISTANCE _____	_____

Matching (Supplement and TV)

Match the following FORTRAN statements with their purpose.

16. FORMAT	a. defines the end of the program to the compilier
17. READ	b. specifies the type and arrangement of data fields
18. WRITE	c. brings input data from an input device into memory
19. GO TO	d. terminates execution of the program
20. STOP	e. causes the computer to output the information placed in storage
21. END	f. causes control to transfer to statement number given

ANSWERS TO SELF PRETEST OF LEARNING OBJECTIVES

1. d	7. 0	13. Real	17. c
2. a	8. 9268.	14. Integer	18. e
3. c	9. 5280.	15. Invalid, too long	19. f
4. b	10. 6666666.	16. a	20. d
5. 765	11. Integer		21. a
6. 859657	12. Invalid, no decimal permitted		

KEY TERMS

Instructions: a. Write a short definition of each term.
b. Check your definition by referring to a dictionary as well as the answers below.
c. Write a short sentence using these terms properly, at least one term per sentence.

1. Input:

2. Output:

3. Program:

4. Programmer:

5. Flowchart:

6. FORTRAN:

7. Instruction:

DEFINITIONS OF KEY TERMS

1. Input: any type of data going into the central processing unit for processing.
2. Output: the end result of processing sent from the central processing unit.
3. Program: a series of instructions which tells the computer in detail how to process data.
4. Programmer: one who writes or codes the program instructions.
5. Flowchart: a graphic representation of the sequential steps used to solve a problem.
6. FORTRAN: a high level language meaning Formula Translation.
7. Instruction: a step in a program telling the computer how to process data.

SUPPLEMENTARY MATERIAL

HISTORY OF FORTRAN

In 1954 IBM began study on a programming language that did not require a detailed knowledge of the internal characteristics of the computer system. The goal of the project was to aid the programmer in solving mathematical problems using a concise language like that of mathematics. The programming language that developed was called FORTRAN which was a contraction for FORMULA TRANSLATION. FORTRAN was designed to be relatively easy to learn. It soon gained wide acceptance by the mathematical and scientific programmer and today nearly all manufacturers of computer systems provide for utilization of the FORTRAN language.

Regardless of the programming language being used, the programmer must understand the hierarchy of data organization illustrated in the following chart.

HIERARCHY OF DATA ORGANIZATION

DATA ORGANIZATION

The terms used in regard to the organization of data are:

Character: a single letter, number, or symbol which a computer may read, write or store.

Field: one or more positions set aside for specific information such as Quantity Sold.

Record: a complete unit of information consisting of 1 or more fields such as Item Number, Quantity Sold, and Sales Amount.

File: a collection of related records for one particular DP application such as a set of invoices.

TYPE OF NUMBERS

There are two types of FORTRAN numbers:

Integer: a decimal number of 1 to 10 digits with no decimal point and no punctuation (corresponds to fixed point arithmetic numbers, such as 820)

Real: a decimal number of 1 to 7 digits with a decimal point but no punctuation (corresponds to floating point arithmetic numbers, such as 25.30)

Prior to actually coding the program, the programmer must analyze the input/output data fields, determine the type of data stored within them, and assign a unique name to each.

VARIABLE NAMES

Rules for Forming Variable Names

1. 1 to 6 alpha or numeric characters
2. Permissible characters:
   numeric (0 thru 9)
   alphabetic (A thru Z and $)
3. First character must be alphabetic
4. Integer Variables must begin with letter I, J, K, L, M, or N
5. Real Variables begin with alphabetic letters other than I thru N

The following are examples of acceptable integer and real variable names.

Integer Variable Names	Real Variable Names
I	A
JOB	PAY
LI	X8Y3

INPUT

A sample problem will be used to illustrate the concepts of FORTRAN programming for the input and output of numeric information.

INPUT is a file of Employee Time Cards. Each record contains the following fields: Employee number, columns 1 to 3; Hourly pay rate, columns 9 to 11. See Figure 1-1. Note that the decimal point in the Hourly Pay Rate and Hours Worked fields is not punched in the card. In the Rate field it is conceptually located between card columns 4 and 5 and thus expressing dollars and cents. In the Hours worked field it is conceptually located between card columns 10 and 11, thus representing hours and tenths of an hour.

Figure 1-1 Input Data

OUTPUT

OUTPUT is to be a file creating a report listing the Employee Number, Pay Rate, and Hours Worked fields. Each record will be single spaced. Figure 1-2 illustrates the printer spacing chart and related output report. Note that there are 5 blank printing positions between each field. In addition, the Hourly Pay Rate and the Hours Worked field are to be edited with a decimal point.

8	4.75	40.0
15	2.15	42.5
110	7.50	39.6
123	5.40	40.0

Figure 1-2 Output

ANALYSIS

A programmer's first phase in problem preparation is to Analyze the problem definition he has been given. When he is certain that he understands all the processing needed to solve the problem, he then determines the logic required for the solution of the problem. The best way to express this logic is in terms of a block diagram or program flowchart. Using predefined symbols, we graphically represent the logic required to solve a defined problem. See Figure 1-3.

Figure 1-3 Program Flowchart

BLOCK DIAGRAMMING

The Start symbol in box A3 is used to indicate the beginning of the program. Input data must be described to the computer by means of a FORMAT statement prior to processing. The computer must be instructed as to which card columns are to be used, the type of data contained in the fields, and the printing positions required for the output report. This step is symbolized in B3. The step shown in C3 represents the operation whereby the contents of the input data cards are placed within the storage unit of the computer. D3 illustrates a logical decision that is performed after the input data has been read. If the card being read is not the last card, the program will execute the instructions specified in E3. If the card is the last card, control branches to D4, where processing is terminated by means of a STOP statement. E3 identifies the operation whereby the data from storage is sent to the output device, the printer, and a line is printed on the report. After the first data card has been read and printed, program control must be directed to the instruction which causes the next data card to be read.

CODING

This basic sequence of operations will be repeated until eventually the last card is tested and program control is terminated. This technique used which illustrates the repetition of instructions is commonly called a loop. Once the flowchart logic is determined, the next phase is coding the program. The FORTRAN language is composed of several types of statements. We will examine the general form and required entries for those statements needed in our program, and the purpose of each.

FORMAT STATEMENT

GENERAL FORM OF FORMAT STATEMENT

This statement specifies the type and arrangement of data fields to be entered as input or output. It is always referenced by a READ or WRITE statement within the program.

General form of a FORMAT statement:

XXXXX FORMAT (f1, f2, ...fn)

XXXXX is a statement number 1 to 5 digits

f1, f2, ...fn are descriptions of the type and arrangement of data fields from left to right on the input or output medium.

FORMAT () and, separating each entry are required

An Integer data field is specified by Iw — I meaning Integer; W indicated total number of columns in the field.

A Real data field is specified by Fw.d — F meaning Real; W indicates total number of columns in the field; d indicates the number of digits to the right of the decimal point.

Figure 1-4 illustrates the Input FORMAT statement and the related input data record.

INPUT FORMAT STATEMENT

The statement number 100 was arbitrarily chosen by the programmer and will be used in the READ statement to reference this description of the input record. The first entry after the left parenthesis, 13, defined the Employee Number field. The next entry F3.2 defines the Pay Rate field. The 2X entry is necessary to designate that the two card columns following the Pay Rate field (columns 7 and 8) are unused in the problem. The X format notation is used to indicate blank spaces or unused card columns. The last entry F3.1 identifies the Hours Worked field. The comma is used to separate the entries.

OUTPUT FORMAT STATEMENT

Figure 1-5 illustrates the Output FORMAT statement and the related printer spacing chart.

The statement number 200 is used in the WRITE statement to reference this description. Whenever output is in the form of a printed report, a special code must be used as the first entry in the FORMAT statement to control the functions of single or double spacing, or skipping from one page to another. The entry, 1X, as the first entry in the FORMAT statement will cause single spacing to occur. It should be noted that this entry does not cause a blank space to appear on the printed report in printing position 1, as this is not a print position but a "carriage control" character. The entries which follow represent the printable positions of the report. 13 established that the 3 position Integer field will print in print positions 1, 2 and 3 (Employee Number). The entry 5X signifies that the next five printing positions are to contain five blank spaces. When a real number is to be printed, and the decimal point was not punched into the input field, an extra position is required for the printing of the decimal point. The FORTRAN compiler will supply the decimal point if space is provided. F4.2 describes the printing positions for the Pay Rate field. Again 5 blank spaces separate the entries. F4.1 designates the required printing positions for the Hours Worked

READ STATEMENT

This statement is used to bring input data from an input device into the memory of the computer. As each input record is read, a value is given to the fields referenced by variable names. An end of file test can also be made.

General form of a READ statement:

XXXXX READ(a, b, END=c) list

XXXXX is a statement number 1 to 5 digits

a is a number (1 thru 9) given to the input device. We will use the number 1 to designate the card reader in our program.

b references the number of the FORMAT statement that defined the fields in the record to be read as to type and arrangement.

END=c is the test for last card. The program will go to statement number c when the last card has been read. If it is not last card, the program executes the next sequential instruction.

list denotes the variable names assigned to fields in the input record (left to right order)
commas must separate each variable name

READ ( ) and , separating each entry are required

```
1 READ(1,100,END=3)NUM,RATE,HRS
```

Figure 1-6 illustrates the READ statement and related input data record

DATA CARDS WITH /*

The statement begins with a programmer selected number 1 that will be used in later statements for reference. Within the parenthesis the 1 references the card reader, the 100 references the FORMAT statement which described the fields on the input card to be read. One method of detecting the end of the input data file is by placing a card with a /* at the end of the input data deck. See Figure 1-7.

Figure 1-7 Data cards with /* following

When the program is executed, a test is made on each data card to determine if it is the card with the /*. If the card being read is a data card and does not contain /*, then processing is allowed to continue. When the card is read containing /*, the program directs control to a routine where processing is terminated. End=3 will send control to statement number 3 which is associated with the STOP statement in our program.

The next entries are the variable names that were assigned to each of the fields on the input data card. The selection of names followed the rules for forming variable names and are listed in the order in which the fields appear on the input record: NUM, RATE, HRS.

WRITE STATEMENT

WRITE STATEMENT

This statement causes the computer to output the information placed in storage by referencing its variable name.

General form of a WRITE statement:

WRITE (a,b) list

a is a number (1 thru 9) given to the output device. We will use the number 3 to designate the line printer in our program.

b references the number of the FORMAT statement that defined the fields on the printer spacing chart as to type and arrangement.

list denotes the variable names assigned to fields in the output line (left to right order)
commas must separate each variable name.

WRITE ( ) and, separating each entry are required

Figure 1-8 illustrates the WRITE statement and related printer spacing chart

The first entry contained within the parenthesis, 3, references a number designating the printer to the computer. 200 references the FORMAT statement which described the fields on the output line to be printed. The next entries in the statement are NUM, RATE, HRS, which are the variable names assigned to each of the data fields to be printed. These names must occur in the same sequence as described in the FORMAT statement.

GO TO STATEMENT

GO TO STATEMENT

This statement causes control to transfer to the statement number given.

General form of Unconditional GO TO statement:

GO TO XXXXX

XXXXX is a number of an executable statement such as READ or WRITE

Figure 1-9 illustrates the GO TO statement

LAST CARD TEST

When the GO TO statement is executed, program control is transferred to statement number 1, the READ statement. Therefore, every time a data card is read the card is tested to see if it is the last card. If it is not the last card containing /*, the information contained on the card is printed by the printer and another data card is read. A repetitious loop of instructions will continue until all data cards have been read.

STOP STATEMENT

STOP STATEMENT

This statement terminates execution of the program.

General form of the STOP statement: STOP

This statement is referenced in the READ statement. After the last card of the input data file has been read, (the card containing /*), the STOP statement is executed.

END STATEMENT

This statement defines the end of the program to the compiler. It must be the last statement in every FORTRAN program.

General form of the END statement: END

There is no statement number allowed in the statement.

```
3 STOP
  END
```

Figure 1-10 illustrates the STOP and END statements

CODING FORM

Each of the FORTPAN statements is placed on a coding form. Space is provided at the top of the form for general documentation purposes such as Program Name, Programmer, Date, and Punching instructions. A hand-written alphabetic "O" if mistaken for a numeric zero when keypunching or vice-versa, could cause a serious computer error when the program is eventually compiled. In Figure 1-10, it can be seen that the letter of the alphabet O, the open-faced character, is to be punched as an eleven and six punch in the card. The graphic character that contains the slashmark, Ø, is to be punched as a numeric zero, a single zero punch in the card.

MAIN PART OF CODING FORM

The main part of the coding form consists of four areas: STATEMENT NUMBER, CONTINUATION, FORTRAN STATEMENT, AND IDENTIFICATION SEQUENCE. Each horizontal line of coding in these graph-like areas corresponds directly with the card columns of an 80 column punched card. Position 1, found in the Statement Number field of the coding form refers to card column 1 on the punched card, etc. Each horizontal line of coding represents one program card to be keypunched. Examine Figure 1-11.

Figure 1-11 Card punched from Coding Sheet

STATEMENT NUMBER FIELD

STATEMENT NUMBER field, columns 1-5 may contain a number if the statement is referred to elsewhere in the program. Statement numbers are assigned by the programmer arbitrarily and need not be in sequence. No two statements may be given the same number. Column 1 of this field may contain an alphabetic "C" when it is desired to document the program with comments. CONTINUATION field, column 6, contains a zero or blank character is the statement to be contained on one line. If a FORTRAN statement is so long that it extends past column 72, an entry of any character other than blank or zero is required in column 6 for all continued lines. There may be up to 19 continuation lines in a FORTRAN statement. The FORTRAN STATEMENT field, columns 7-72, is used to record the FORTRAN program statements. (READ, WRITE, FORMAT, etc.) The IDENTIFICATION SEQUENCE field, columns 73-80, can be used to document each line of coding. It is suggested that a four character abbreviation be used to identify the program by recording the selected entry such PR01, in columns 73-76. In addition, a sequence number is recorded in positions 77-80 such as 0010. The sequence number usually advances by 10 for each line of coding. This technique allows up to nine additional lines of coding to be inserted between instructions if required. The entries in this field have no effect on the program and require no storage, but are simply a means of controlling the sequencing of the keypunched program cards if they should become out of order.

FORTRAN CODING FORM

Figure 1-12 illustrates the placement of our sample problem on the FORTRAN coding form. Note that 2 COMMENT lines have been added for documentation purposes.

Figure 1-12 Sample FORTRAN program on Coding Form

STUDY QUESTIONS

Write out your answers carefully and completely. Use separate paper if necessary. Check your answers by referring back to the Supplementary Material and any notes you have on the TV Program.

1. Define the term "Integer Data". What is the rule for assigning a variable name to "Integer Data"?

2. Define the term "Real Data". What is the rule for assigning a variable name to "Real Data"?

3. What does the entry 14 represent in a FORMAT statement which defines a punched card?

4. What does the entry F5.2 represent in a FORMAT statement which defines a punched card?

5. What does the entry 5X indicate in a FORMAT statement representing a punched card?

6. How is single spacing specified when programming in FORTRAN?

SELF POST TEST OF LEARNING OBJECTIVES FOR LESSON 1

Answer the following questions carefully as this exercise is of great importance to you. It will give you some indication of how much you know about this lesson. If you can successfully answer these questions, you have probably mastered the content of the TV Program and the Supplementary Material in the Study Guide very well. If you need to refer to your Study Guide and notes often, reread the Study Guide completely, go over the Key Words, and review Pretest questions. Be sure to review any questions you missed or were unable to answer. You should score 75% or better to earn a passing grade.

MATCH

1. Character	a. Employee Time Cards
2. Field	b. Employee Number
3. Record	c. 1 (number)
4. File	d. Joe Blow's Time Card

Identifying Integer and Real Data Fields

Identify the following numeric data as Integer or Real

6. 298,765.257 _____

7. 5280 _____

8. 0. _____

9. 9999999 _____

Assigning Variable Names

Identify the following variable names as Integer or Real. If a variable name is invalid, state why.

	Type of Variable Name	Why Invalid
10. JA	_____	_____
11. X1.4	_____	_____
12. MINT	_____	_____
13. KOUNT	_____	_____
14. DISTANCE	_____	_____

Matching

Match the following FORTRAN statements with their purpose.

15. FORMAT	a. defines the end of the program to the compiler
16. READ	b. specifies the type and arrangement of data fields
17. WRITE	c. brings input data from an input device into memory
18. GO TO	d. terminates execution of the program
19. STOP	e. causes the computer to output the information placed in storage
20. END	f. causes control to transfer to statement number given

More Matching

Match the following key terms introduced in this lesson with an appropriate definition.

21. Input	a. a high level language meaning Formula Translation
22. Output	b. a graphic representation of the sequential steps used to solve a problem
23. Program	c. a step in a program telling the computer how to process data
24. Programmer	d. one who writes or codes the program instructions
25. Flowchart	e. the end result of processing sent from the central processing unit
26. FORTRAN	f. any type of data going into the central processing unit for processing
27. Instruction	g. a series of instructions which tells the computer in detail how to process data

28. Write the FORMAT statement to define the card illustrated below.

ANSWERS TO SELF POST TEST OF LEARNING OBJECTIVES FOR LESSON 1

1. c
2. b
3. d
4. a
6. Real
7. Integer
8. Real
9. Integer
10. Integer
11. Invalid . not permitted
12. Real .
13. Integer
14. Invalid Too long - 7 characters
15. b

INTRODUCTION TO COMPUTER SCIENCE
FORTRAN PROGRAMMING CONCEPTS

YOUR EVALUATION OF LESSON 1

Please complete this brief form as soon as possible after you have completed this Lesson. Then submit it according to the instructions you have received concerning these lesson evaluation forms. Your thoughtful evaluation will be of great help to us in making useful revisions both immediately and in the next edition of these modules.

Circle the most appropriate response for you.

1 - strongly disagree
2 - disagree
3 - uncertain, or no opinion
4 - agree
5 - strongly agree

1. The TV Program for this lesson was helpful in studying this lesson.

   1 2 3 4 5

2. The TV Program for this lesson caught and held my attention very well.

   1 2 3 4 5

3. On the whole, I was very impressed by the technical or professional quality of the TV Program.

   1 2 3 4 5

4. On the whole, the TV Program was very helpful in preparing me for the test and FORTRAN programming assignment.

   1 2 3 4 5

5. The learning objectives stated in the Study Guide were on the whole very useful to me.

   1 2 3 4 5

6. The Supplementary Material was very helpful in achieving the learning objectives of this lesson.

   1 2 3 4 5

7. The Supplementary Material was easy to understand.

   1 2 3 4 5

8. The methods of presentation of the subject matter were very appropriate for me.

   1 2 3 4 5

9. On the whole this lesson was well designed to help me accomplish the learning objectives.

1 2 3 4 5

10. In my opinion this lesson is an important one in an introduction to computer science study.

1 2 3 4 5

11. I believe I learned a lot, considering the time I spent on this lesson.

1 2 3 4 5

DISCUSSION QUESTIONS

Please record your answer to these questions on the attached blank sheets of paper.

1. What did you like best, or find most helpful in your study, regarding the TV Program?

2. What did you like least, or find of little help, regarding the TV Program?

3. What section, or sections, of Lesson 1 in the Study Guide did you find most helpful?

5. What section, or sections, of Lesson 1 in the Study Guide did you find least helpful?

5. What recommendations or suggestions do you have for improving the TV Program?

6. What recommendations or suggestions do you have for improving the lesson as a whole?

Please write any other comments that you might have about this lesson.

LESSON 2

STUDY SEQUENCE

1. Read the Overview and Learning Objectives.

2. Answer the Pretest questions and write the definition of the Key Terms. Check your answers as directed.

3. Read the Supplementary Material for Lesson 2 in the Study Guide.

4. Work through the Study Guide carefully answering all exercises and study questions before viewing TV Program for Lesson 2.

5. View the TV Program for Lesson 2.

6. Complete the Post Test on Lesson 2.

7. Review ideas tested by the questions you missed or were unable to answer. Then rewrite your answers to these particular questions.

8. After completing the exercises and questions in the Study Guide and viewing the TV Program, arrange a time to come to El Centro College, Main at Lamar, 7th floor, Room 715 to process your FORTRAN program on the computer.

9. You will be expected to keypunch the JCL cards listed in this lesson to COMPILE and COMPILE AND TEST your program; as well as the following test data:

TEST DATA:

	CUSTOMER NUMBER (cc 39-43)	ITEM NUMBER (cc 50-52)	SALES AMOUNT (cc 53-58)
CARD 1	05011	008	099987
CARD 2	16503	847	312546
CARD 3	34067	258	001351
CARD 4	45654	567	100895

10. Check your output against the following listing.

```
  8      5011      999.87
847     16503     3125.46
258     34067       13.51
567     45654     1008.95
```

11. When you are satisfied with your answer, submit the Compile and Test listing, with your name and a flowchart to the lab assistant.

OVERVIEW

Lesson 2 introduces the student to the procedures needed to process the program on the computer: These include Debugging, the act of correcting errors or mistakes in the program instructions; use of Job Control Language cards to indicate the type of processing desired; and operation of equipment to be used by the student in the laboratory. It is important that all programs be completely debugged prior to being used in an actual production run. It is the responsibility of the programmer to fully understand the problem being solved and the output being produced to insure that the correct answers are developed under all possible processing conditions.

LEARNING OBJECTIVES

Upon successful completion of Lesson 2, you should be able to:

1. Discuss basic concepts of analysis, block diagrams and coding phases of program preparation presented in Lesson 1.

2. Describe what occurs during the Compile and Testing phases of processing.

3. Give some examples of clerical errors produced during a Compile stage and corrections that are needed.

4. Give some examples of logical errors produced during the Test stage and corrections that are needed.

5. Discuss the use of JCL cards.

6. List the job set up necessary to Compile and Compile and Test a program on the DCCCD Computer system.

7. Discuss the steps students will take when they Compile and Test their programming assignment from Lesson 1.

    1. Job stream to Compile
    2. Readying the card reader
    3. Operating the console
    4. Removing paper from the printer
    5. Debugging and error correction
    6. Compiling again
    7. Checking for clerical errors
    8. Job stream to Compile and Test
    9. Checking for logical errors
    10. Submitting a problem for grading

8. Define the following key terms:

Bug	Console	I/O	Printer
Card Reader	Debug	Language Translator	Source Program
Compile	Execute	Object Program	Syntax
Central Processing Unit		Terminal	

SELF PRETEST OF LEARNING OBJECTIVES FOR LESSON 2

Before proceeding further in your study of this lesson and before viewing the TV Program, try to answer the following questions. Check your answers by referring to the Supplementary Material and by viewing the TV Program, as well as the answer key.

Match the following: (Supplement)

1. Source Program	a. The machine instructions produced by the language translator during the Compile stage.
2. Syntax	b. a part of the computer's operating system which converts the program language instructions into machine language instructions.
3. Language Translator	c. the general form and permissable entries of a FORTRAN statement.
4. Object Program	d. to process data with stored instructions-check for logical errors.
5. Compile	e. a set of program language instructions written by the programmer.
6. Compile and Test	f. to translate source program instructions into machine language instructions--checks for clerical and syntax errors.

7. List the ABCD stages of programming

A _____ C _____

B _____ D _____

True/False

8. The computer's memory has the ability to store both the data and the instructions needed to process that data.

9. If the programmer does not code his instructions in sequence the computer will put them in order for him.

10. FORTRAN is similar to English language in the use of words, sentences, and paragraphs.

Multiple Choice

11. Computer programming requires that:

    a. a programmer understands the problem to be programmed
    b. a programmer is skilled in operating the key punch
    c. all instructions be initially written in machine language
    d. all the above are correct

12. A high level language generally used in programming scientific applications:

    a. COBOL
    b. FORTRAN
    c. COMPILIER
    d. none of the above

13. A program is best defined as:

    a. a data deck
    b. a series of questions
    c. a series of conclusions
    d. a series of instructions

Debugging FORTRAN Programs

14. The following FORTRAN program contains errors which have occurred during compilation of the program. Circle each error and record the corrected entries directly on the listing. Explain the error and method of correction in the space provided below.

```
C     THIS PROGRAM PREPARES A TIME CARD LISTING.                          PR01

EXPLANATION Missing Right Parenthesis in FORMAT 100

Unnecessary comma in READ statement

Comma omitted in WRITE statement

Statement number not an executable statement

KEY TERMS

Instructions: a. Write a short definition of each term.
b. Check your definition by referring to a dictionary as well as the answers below.
c. Write a short sentence using these terms properly, at least one term per sentence.

1. Bug:

2. Card Reader:

3. Central Processing Unit:

4. Compile:

5. Console:

6. Debug:

7. Execute:

8. I/O:

9. Language Translator:

10. Object Program:

11. Printer:

12. Source Program:

13. Syntax:

14. Terminal:

DEFINITION OF KEY TERMS

1. Bug: an error in a program instruction.
2. Card Reader: an input device that reads or senses coded data.
3. Central Processing Unit: the part of the computer containing the arithmetic, control, and in some cases, storage units.

4. Compile: to translate source program instructions into machine language instructions--checks for clerical and syntax errors.

5. Console: part of the computer used for manual control and observation by the operator.

6. Debug: to correct mistakes in the program instructions.

7. Execute: to process data with stored instructions--checks for logical errors. Same as Compile and Test.

8. I/O: a general term for Input and Output devices.

9. Language Translator: a part of the computer's operating system which converts the program language instructions into machine language instructions.

10. Object Program: the machine language instructions produced by the language translator during the Compile stage.

11. Printer: an output device for writing out computer results.

12. Source Program: the set of program language instructions written by the programmer.

13. Syntax: the general form and permissible entries of a FORTRAN statement.

14. Terminal: a point in a system or communications network at which data can enter or leave.

SUPPLEMENTARY MATERIAL

HISTORY OF PROGRAMMING LANGUAGE	When engineers design a computer system, they must determine the unique set of instructions that cause the computer to function. These instructions, which are coded in numeric form, are called MACHINE LANGUAGE INSTRUCTIONS, and consist of such operations as READ, WRITE, ADD, SUBTRACT, etc. Once the machine language instructions are recorded in the storage unit of the central processing unit each instruction can be executed sequentially one at a time at a tremendous rate of speed.
COMPILING	Computer programs written in machine language were difficult and tedious to write and subject to numerous errors. One of the first steps to improve the efficiency of writing computer programs was the introduction of SYMBOLIC symbols to represent the various operations in computer instructions.
SYMBOLIC LANGUAGE	Symbolic programming proved to be a significant improvement over machine language programming. However, it should be understood that the computer can only be instructed to perform a task by instruction that is in

its machine language form. Therefore, when a program is written in a symbolic language, it must first be translated into machine language before any of the instructions can be executed. This process of translating symbolic instructions into machine language instructions is called COMPILING. When translating a HIGH LEVEL programming language such as FORTRAN, a single symbolic instruction will generate one or more machine language instructions.

JOB CONTROL LANGUAGE CARDS

When a program is to be compiled, the proper LANGUAGE TRANSLATOR must first be stored within the computer and called for by JOB CONTROL LANGUAGE CARDS inserted with the program. Once the language translator is stored, the set of instructions written in symbolic language by the programmer is read into storage. This programmer-written set of instructions is called the SOURCE PROGRAM. The translation process or COMPILE can now take place and the generated machine language instructions called the OBJECT PROGRAM, can be stored on another auxiliary device such as disk until needed.

Job Control Language cards are placed around the program and communicate with the computer's operating system. They vary with each program language used and each computer system, however, the purposes are basically the same. They identify the program with a name; they call for the appropriate language translator; they identify the source program instructions; and they indicate which stage of processing is desired, Compile or Compile and Test.

Following are JCL cards which are needed to Compile a FORTRAN program in the DCCCD laboratory. Note the placement of the Source Program in the job stream.

Figure 2-1 JCL cards and job stream to COMPILE a FORTRAN program at DCCCD

EQUIPMENT USED

The laboratory that will be used to process the program on the computer used an I/O device called a TERMINAL. This terminal is connected to the central computer, located in another building, by telephone lines. The terminal consists of a CARD READER that reads or senses coded data on cards and inputs it to the central processing unit; a PRINTER which is an output device for writing out results from the central processing unit; and a CONSOLE which is used by the operator for manual control and observation.

OPERATION OF I/O DEVICES

After the program has been keypunched into cards and the appropriate job stream is set up, the following steps must be taken to process the program on the terminal.

1. Place program deck in Card Reader, Face down, 9 edge in.
2. Depress TRANSIT mode button on Console to alert the computer that we want to read cards from the reader. (all other lights should be off)
3. Depress the following buttons on the Card Reader in the order given.

   STOP START CLEAR FEED RUN

4. Depress INTERRUPT on the Console and cards should begin reading.

   After all the cards have been read, the Transmit light will go off automatically and the RECEIVE and END OF FILE indicators will come on. Approximately 30 seconds later the listing of the source program and errors will begin to print on the Printer.

5. To remove the listing from the Printer, depress CLEAR and HOME PAPER several times. The listing can then be removed from the rear of the printer.

DEBUGGING

When the compilation process is performed, errors are many times found in the coding due to improperly used statements, syntax, and key-punching or clerical errors. These errors must be corrected by the programmer. This process is referred to as DEBUGGING. Figure 2-2 illustrates a FORTRAN listing and related BUGS or errors.

```

Figure 2-2 Sample FORTRAN listing with errors

The Compilier prints a row of asterisks below the statement in error, and identifies the type of error. A $ will print under the position in error if possible, or the $ will print at the extreme right of the FORTRAN statement field.

The first error is a SYNTAX error on FORMAT statement 100. The $ at the extreme right indicates that it was unable to find the position of error. In examining this form, we find that the right parenthesis has been omitted and must be added.

Another SYNTAX error appears in the READ statement with a $ printing under the comma following the right parenthesis, thus this comma should be omitted.

Next we find a $ printing under the HRS field and the type of error defined as NAME LENGTH. Maximum length for a variable name is 6 characters. RATE Hrs represents 8 characters. Actually this was not intended to be one field name, but the comma separating RATE and HRS was omitted by mistake. A comma needs to be inserted between the two variable names.

Last we find ILLEGAL LABEL error with a $ printing below 100. A GO TO statement must always be sent to an executable statement. 100 is the statement for a FORMAT statement which is not considered executable. This should go to 1 which returns to the READ statement where another record in the file is read and processing continues.

CLEAN COMPILE

These errors must be corrected by the programmer by repunching the cards and inserting them back into the deck in the proper place. The program is again Compiled until there are no clerical or syntax errors in the source listing. This is commonly called a "Clean Compile." When this occurs, the operating system will print out a message stating there are "No diagnostics generated." See Figure 2-3.

```
FORTRAN IV G LEVEL  21                    MAIN                    DATE = 74134

*OPTIONS IN EFFECT*  ID,EBCDIC,SOURCE,NOLIST,NODECK,LOAD,NOMAP
*OPTIONS IN EFFECT*  NAME = MAIN    , LINECNT =       50
*STATISTICS*   SOURCE STATEMENTS =        7,PROGRAM SIZE =
*STATISTICS*   NO DIAGNOSTICS GENERATED
```

Figure 2-3 Message given for Clean Compile

PREPARATION OF TEST DATA

After a program has been successfully compiled, it must be tested in order to determine that the logic of the program is correct and that the data is being processed properly. Data must be prepared and punched like the fields we described in our program. See Figure 2-4 for the input data used to test our sample problem. Remember the decimal point is assumed and not punched in the test data card.

	EMPLOYEE NUMBER (cc 1-3)	PAY RATE (cc 4-6)	HOURS WORKED (cc 9-11)
CARD 1	008	4.75	40.0
CARD 2	015	2.15	42.5
CARD 3	110	7.50	39.6
CARD 4	120	5.40	40.0

Figure 2-4 Test data for Sample problem

COMPILE

This processing stage is called COMPILE AND TEST or EXECUTION. The language translator is again stored within the computer and called for by job control language cards inserted with the program. Symbolic language instructions are converted into machine language instructions to form the object program. The object program then instructs the computer how to process the incoming test data cards.

JCL CARDS TO COMPILE AND TEST

The following JCL cards are needed to Compile and Test a FORTRAN program in the DCCCD laboratory. Note the placement of the test data deck in the job stream.

```
STATEMENT NUMBER   YOUR INITIALS                    FORTRAN STATEMENT
//PXX176A JOB 522176,PLOG-TV,CLASS=G
//  EXEC FORTGCLG
//F.SYSIN DD *
                SOURCE PROGRAM
/*
//G.FT03F001 DD SYSOUT=A,DCB=(RECFM=A,BLKSIZE=133)
//G.FT01F001 DD *
                TEST DATA CARDS
/*
```

Figure 2-5 JCL cards and job stream to COMPILE AND TEST a FORTRAN program at DCCCD

COMPILE AND TEST ERRORS

Even though no bugs are indicated by the compiler there is still the possibility that logical errors exist within the program. Figure 2-6 illustrates a case in which there are no clerical or syntax errors but the output is incorrect.

```
C     THIS PROGRAM PREPARES A TIME CARD LISTING.
C
  100 FORMAT(I5,F3.2,2X,F3.1)
  200 FORMAT(I4,F3.5X,F4.2,5X,F3.1)

      WRITE(5,200) NUM,RATE,HRS
      GO TO 1
    3 STOP
      END

        5      4.75      *.*
       15      2.15      *.*
      110      7.50      *.*
      120      5.40      *.*
```

Figure 2-6 Listing with errors during Compile and Test

BEST COPY AVAILABLE

ERROR ASTERISKS

Again the asterisks point out an error. This time they indicate that the field size defined in the FORMAT statement for the HRS field is not large enough to print the entire field. FORMAT 200 described the output line. The description for HRS field is F3.1 and should be F4.1 to allow for an extra printing position to print the decimal point on the printed report. This correction must be made and another Compile and Test run performed.

NUMBER OF TEST RUNS TO DEBUG

The number of test runs which will be required to completely debug a program normally depends on the size and complexity of the program. Other logical errors that occur often include the first position not printing due to failure to specify the carriage control character as the first entry in the FORMAT statement to return to READ another record for processing; and other error messages sent from the compilier due to improper coding of logical statements within the program, or JCL errors.

RESPONSIBILITY OF THE PROGRAMMER

It is the responsibility of the programmer to fully understand the problem being solved and the output being produced to insure that the correct answers are developed under all possible processing conditions. A review of the problem definition provides an effective way of determining this.

SAMPLE PROBLEM SOLUTION

Figure 2-7 illustrates the correct solution for our sample problem used in Lessons 1 and 2. This program can now be classified as ready for use in an actual production run.

```
C     THIS PROGRAM PREPARES A TIME CARD LISTING
C

STUDY QUESTIONS

Write out your answers carefully and completely. Use separate paper if necessary. Check your answers by referring back to the Supplementary Material and any notes you have on the TV Program.

1. What is the purpose of Job Control Language cards?

2. What is meant by "high-level" programming language?

3. What is the purpose of a language translator?

4. What is a Source Program?

5. What is an Object Program?

SELF POST TEST OF LEARNING OBJECTIVES FOR LESSON 2

Answer the following questions carefully as this exercise is of great importance to you. It will give you some indication of how much you know about this lesson. If you can successfully answer these questions, you have probably mastered the content of the TV Program and the Supplementary Material in your Study Guide very well. If you need to refer to your Study Guide and notes often, reread the Study Guide completely, go over the Key Words, and review the Pretest questions. Be sure to review any questions you missed or were unable to answer. You should score 75% or better to earn a passing grade.

Match

Match the following key terms introduced in this lesson with an appropriate definition.

1. Bug:	a. to process data with stored instructions--checks for logical errors. Same as Compile and Test.
2. Card Reader:	b. an error in a program instruction.
3. Central Processing Unit:	c. part of the computer used for manual control and observation by the operator.
4. Compile:	d. to translate source program instructions into machine language instructions--checks for clerical and syntax errors.
5. Console:	e. the part of the computer containing the arithmetic, control, and in some cases, storage units.
6. Debug	f. to correct mistakes in the program instructions.
7. Execute:	g. a general term for Input and Output devices.
8. I/O:	h. an input device that reads or senses coded data.
9. Printer	i. a point in a system or communications network at which data can enter or leave.
10. Terminal:	j. an output device for writing out computer results.

45

11. Debugging FORTRAN Programs

The following FORTRAN program contains an error which occured during execution of the program. Circle the error and record the corrected entries directly on the listing. Explain the error and method of correction in the space provided below.

```
C     THIS PROGRAM PREPARES A TIME CARD LISTING
C
  100 FORMAT (I3,F3.2,2X,F3.1)
  200 FORMAT (1X,I3,5X,F4.2,5X,F3.1)
    1 READ(1,100,END=3)NUM,RATE,HRS
      WRITE(3,200)NUM,RATE,HRS
      GO TO 1
    3 STOP
      END

ANSWERS TO SELF POST TEST OF LEARNING OBJECTIVES FOR LESSON 2

INTRODUCTION TO COMPUTER SCIENCE
FORTRAN PROGRAMMING CONCEPTS

YOUR EVALUATION OF LESSON 2

Please complete this brief form as soon as possible after you have completed this Lesson. Then submit it according to the instructions you have received concerning these lesson evaluation forms. Your thoughtful evaluation will be of great help to us in making useful revisions both immediately and in the next edition of these modules.

Circle the most appropriate response for you.

1 - strongly disagree
2 - disagree
3 - uncertain, or no opinion
4 - agree
5 - strongly agree

1. The TV Program for this lesson was helpful in studying this lesson.

   1 2 3 4 5

2. The TV Program for this lesson caught and held my attention very well.

   1 2 3 4 5

3. On the whole, I was very impressed by the technical or professional quality of the TV Program.

   1 2 3 4 5

4. On the whole, the TV Program was very helpful in preparing me for the test and FORTRAN programming assignment.

   1 2 3 4 5

5. The learning objectives stated in the Study Guide were on the whole very useful to me.

   1 2 3 4 5

6. The Supplementary Material was very helpful in achieving the learning objectives of this lesson.

   1 2 3 4 5

7. The Supplementary Material was easy to understand.

   1 2 3 4 5

8. The methods of presentation of the subject matter were very appropriate for me.

   1 2 3 4 5

9. On the whole this lesson was well designed to help me accomplish the learning objectives.

1 2 3 4 5

10. In my opinion this lesson is an important one in an introduction to computer science study.

1 2 3 4 5

11. I believe I learned a lot, considering the time I spent on this lesson.

1 2 3 4 5

DISCUSSION QUESTIONS

Please record your answer to these questions on the attached blank sheets of paper.

1. What did you like best, or find most helpful in your study, regarding the TV Program?

2. What did you like least, or find of little help, regarding the TV Program?

3. What section, or sections, of Lesson 2 in the Study Guide did you find most helpful?

4. What section, or sections, of Lesson 2 in the Study Guide did you find least helpful?

5. What recommendations or suggestions do you have for improving the TV Program?

6. What recommendations or suggestions do you have for improving the lesson as a whole?

Please write any other comments that you might have about this lesson.

TITLE: RADIOGRAPHIC POSITIONING. STUDY GUIDE. OCCUPATIONAL-TECHNICAL CURRICULUM DEVELOPMENT TV STUDY.

DESCRIPTORS: *RADIOGRAPHERS; *TECHNICAL OCCUPATIONS; *TECHNICAL EDUCATION; STUDY GUIDES; *TELEVISION CURRICULUM; TELECOURSES; *RADIOLOGIC TECHNOLOGISTS

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 40P.; RELATED DOCUMENTS VT 103 207 AND VT 103 302 IN THIS ISSUE.

ABSTRACT: THIS STUDY GUIDE FOR A TELEVISION COURSE IN RADIOGRAPHIC POSITIONING CONSISTS OF TWO MODULES PLUS COURSE ORIENTATION. MODULE I IS ENTITLED ANTEROPOSTERIOR TOWNE'S POSITION OF THE SKULL; MODULE II, ANTERIOR OBLIQUE LUMBAR-SACRAL APOPHYSEAL JOINTS PROJECTION. THE GUIDE IS DESIGNED TO ALLOW THE STUDENT TO PRODUCE A DIAGNOSTIC TOWNE'S POSITION OF THE SKULL AND AN OBLIQUE LUMBOSACRAL SPINE PROJECTION. THE STUDENT RADIOLOGIC TECHNOLOGIST IS INTRODUCED TO THE DIFFERENT BODY PROJECTIONS OR POSITIONS REQUIRED TO PROPERLY DEMONSTRATE INTERNAL BODY STRUCTURES. EACH MODULE CONTAINS THE FOLLOWING SECTIONS: STUDY SEQUENCE, OVERVIEW OF THE LESSON, LEARNING OBJECTIVES, SELF-PRETEST, KEY TERMS, SUPPLEMENTARY MATERIAL, STUDY QUESTIONS, SELF-POSTTEST WITH ANSWER KEY, AND LESSON EVALUATION FORM. (AUTHOR/NJ)

RADIOGRAPHIC POSITIONING

ORIENTATION TO THE COURSE

INTRODUCTION

OVERVIEW OF COURSE

The student radiologic technologist is introduced to the different body projections or positions required to properly demonstrate internal body structures very early in his training. Because each structure in the body must be projected from different angles, Radiographic Positioning is usually presented as a five-semester course in most programs. The student must learn the theory behind each projection, must observe a demonstration of each projection and must practice in a laboratory setting until he can correctly obtain the projection on the finished radiograph. The final test is, of course, to be able to duplicate the projection on a patient in the hospital setting.

The human skull and spinal column are the most difficult and challenging parts of the body to radiograph. It therefore behooves every instructor to try to devise methods which will quickly and accurately enable every student regardless of his learning abilities to radiograph these parts with ease and accuracy.

It is the hope of this instructor that the study guide along with the TV presentation will allow any student to produce a diagnostic Towne's position of the skull and an oblique lumbosacral spine projection. With this approach each student may repeat the lesson as many times as he desires and until he feels comfortable he can perform the positions in the hospital setting.

OVERVIEW - LESSON 1

The Towne's position of the skull primarily demonstrates the posterior portion of the skull. The x-ray beam is projected in such a way as to project the anterior facial bones inferior to the area of interest.

This module identifies the skull bones to be demonstrated, the relationship between the skull, x-ray film and x-ray beam required to demonstrate the structures of interest and how to evaluate the final product.

RADIOGRAPHIC POSITIONING

ORIENTATION TO THE COURSE

INTRODUCTION

OVERVIEW OF COURSE

The student radiologic technologist is introduced to the different body projections or positions required to properly demonstrate internal body structures very early in his training. Because each structure in the body must be projected from different angles, Radiographic Positioning is usually presented as a five-semester course in most programs. The student must learn the theory behind each projection, must observe a demonstration of each projection and must practice in a laboratory setting until he can correctly obtain the projection on the finished radiograph. The final test is, of course, to be able to duplicate the projection on a patient in the hospital setting.

The human skull and spinal column are the most difficult and challenging parts of the body to radiograph. It therefore behooves every instructor to try to devise methods which will quickly and accurately enable every student regardless of his learning abilities to radiograph these parts with ease and accuracy.

It is the hope of this instructor that the study guide along with the TV presentation will allow any student to produce a diagnostic Towne's position of the skull and an oblique lumbosacral spine projection. With this approach each student may repeat the lesson as many times as he desires and until he feels comfortable he can perform the positions in the hospital setting.

OVERVIEW - LESSON 1

The Towne's position of the skull primarily demonstrates the posterior portion of the skull. The x-ray beam is projected in such a way as to project the anterior facial bones inferior to the area of interest.

This module identifies the skull bones to be demonstrated, the relationship between the skull, x-ray film and x-ray beam required to demonstrate the structures of interest and how to evaluate the final product.

OVERVIEW - LESSON 2

The anterior oblique lumbar-sacral projection primarily demonstrates the apophyseal or interarticular joints which are located on the posterior portion of the lower spine. The body is rotated to a certain degree until the joints are projected perpendicular to the film.

This module identifies the parts of the lumbar vertebrae to be demonstrated, the relationship between the five lumbar vertebrae, x-ray film, and x-ray beam required to demonstrate the structures of interest and how to evaluate the final product.

INDEPENDENT STUDY

MATERIALS AND ACTIVITIES

The Radiographic Positioning course has been designed for independent study. All of the instructions, information and basic learning materials you should require are provided: Orientation materials, a Study Guide, and 2 fifteen minute television programs. In addition, opportunities will be scheduled for on-campus sessions, such as orientation and examinations. If additional information or tutorial assistance is needed, you can talk to your instructor by calling 746-2392.

KEYS TO SUCCESSFUL INDEPENDENT STUDY

The keys to successful independent-study are:

- a genuine desire to achieve the learning goals (objectives) of the course...considerable interest in the subject is also very helpful.

- the establishment of a weekly study routine, and sticking closely to it.

- following instructions, assignments and study tips carefully and completely.

- calling the telephone number if you are really "stuck" and require tutorial help or information.

YOUR INSTRUCTIONAL MATERIALS

IMPORTANCE OF USING STUDY GUIDE

The key to your study of Radiographic Positioning is your Study Guide. It has been specially designed to assist you in learning the material. You will find it very useful if you use it as described on the next page.

SECTIONS IN EACH LESSON OF THE STUDY GUIDE

The Study Guide for each Lesson or Module will have the following sections:

- Study Sequence
- Overview of the Lesson
- Learning Objectives for this Lesson
- Self Pretest of Learning Objectives for this Lesson
- Key Terms
- Supplementary Material
- Study Questions
- Self Post Test of Learning Objectives for this Lesson, with Answer Key
- Lesson Evaluation Form

HOW TO USE YOUR INSTRUCTIONAL MATERIALS

STUDY SEQUENCE

Study Sequence: The very first thing you should do before viewing the TV Program or studying any of the material for a lesson is read the Study Sequence. This is one of the most important sections in all of your material. It tells you what you should do, and in what order, so that your study time and other learning activities are most likely to be beneficial to you in achieving the learning objectives for each lesson, and most helpful in preparing for the examination.

The purpose of each section of the Study Guide follows.

OVERVIEW

Overview: This section for each lesson tells you the main ideas and purposes of the lesson, why you should study it, and how it fits in the overall picture of Radiographic Positioning. In some cases, applications of the information contained in the lesson are indicated as well.

LEARNING OBJECTIVES

Learning Objectives: These statements are very important because they summarize the main concepts of the lesson. They tell you what you will be expected to be able to do with these concepts when you have completed your study of the lesson, and what topics will be tested on the examinations. Be sure to keep these Learning Objectives in mind when viewing the TV programs and when studying the lesson.

SELF PRETEST

Self Pretest: You may be unaccustomed to "taking-a-test" over a lesson before you study it, but this can be a very helpful study aid for you, if done conscientiously. Among the benefits of a Self Pretest are the following:

- Alerts you to the main concepts to be learned.
- Tells what you already know about these concepts, so you know what to concentrate on and what you might merely skim in your study of the lesson.
- When you compare your score on the Self Pretest with your score on the Self Post Test you will have some Indication of how much you have learned as a result of your study of the module, a measure of "learning gain." (Note: Only you need know your scores as these are self-tests.)

KEY TERMS

Key Terms: These are words, technical terms, or phrases you should be able to define and use appropriately when writing and talking about the concepts in the particular lesson. It will aid your study if you "know" these terms in advance. Looking them up in the supplementary material or the dictionary, or watching for them in the TV Programs will aid you also in learning to use them correctly.

SUPPLEMENTARY MATERIAL

Supplementary Material: It has been considered necessary to supplement the information contained in the TV Programs in order to help you accomplish the learning objectives of a particular lesson. This supplementary information will be tested on the Self Pretest, the Self Post Test and on the course examination.

STUDY QUESTIONS

Study Questions: These questions are designed to help you organize your knowledge of the main ideas of the lesson and to assist you in reviewing for the Self Post Test and the course examination. Be sure to write out your answers to all questions thoughtfully and completely. Check your answers by referring to the Supplementary Material.

SELF POST TEST AND ANSWER KEY

Self Post Test: This self test should give you a good idea of how well you have accomplished the learning objectives of the lesson, and how well you are prepared to answer examination questions about the main concepts of the lesson. Further, your score on this Test, when compared with your score on the Self Pretest, will give you some indication of how much you have learned by studying the module. (For example, if your score on a Self Pretest is 10% and your score on the Self Post Test for that same module is 90%, your "learning gain" for the lesson is probably about 80%). The Self Post Test should prove very useful to you in preparing for the course examination, particularly since the questions on the course examination will be based upon the Self Post Test questions. (Note that an Answer Key is provided for each Self Post Test.) Be sure to review carefully any questions you missed or were unable to answer.

LESSON EVALUATION

Lesson Evaluation Form: At the end of each lesson is a very important section--YOUR EVALUATION OF THIS LESSON. We need your help in identifying as soon as possible ways in which we might improve the learning effectiveness of this course. Major revisions of the printed materials and the TV Programs probably will not be possible until the Course is prepared for presentation again. We will, however, make what changes we can as soon as we have enough reliable information upon which to base the changes. Equally vital is the need for critical evaluation from each of you on all components of the Course, lesson by lesson, so that significant improvements can be made in the next edition of all the materials, including the TV Programs. You are urged to complete the lesson evaluation form as soon as possible after you have finished the lesson. Please submit these evaluation forms regularly and promptly, according to the directions you are given. You may be sure your assistance will be appreciated and your evaluations carefully considered.

SUGGESTIONS FOR VIEWING THE TV PROGRAM

Review the appropriate lesson in your Study Guide before viewing the TV Program. Be sure to schedule the times for the TV Program so that you will not be distracted during the presentation. Do not attempt to do other things while you are viewing the lesson, it needs your full attention. Keep paper and pencil handy so you can take notes.

During the presentation you may wish to write comments in your study guide while watching the program, or you may choose to do so immediately after the program. If you own a tape recorder, you may wish to tape the audio portion of the presentation. Be sure to review your Study Guide prior to and after watching the TV Program. It will be far easier to respond to the activities under Study Questions immediately after viewing the TV Program.

MODULE I. ANTEROPOSTERIOR TOWNE'S POSITION OF THE SKULL

STUDY SEQUENCE

1. Read Overview and Learning Objectives

2. Answer the Self Pretest questions and write the definitions for the Glossary terms. Check your answers as directed.

3. View the TV Program for this module

4. Study Volume 2, pp. 318, 327, 336, 337 in the Atlas of Roentgenographic Positions.

5. Work through Module I Study Guide, carefully following all instructions and answering all questions.

6. Complete the Self Post Test for Module I.

7. Reread areas which you missed on the Self Post Test. Answer related questions again.

8. Using x-ray equipment do an AP Towne's position on a phantom and have your instructor check the position.

9. Develop the x-ray film and evaluate the film.

10. If the film is not 100% accurate, repeat the position until it is perfect.

11. Have your instructor check your positioning on a patient in the hospital setting.

12. Take instructor administered test on complete routine skull unit.

OVERVIEW

The Towne's position of the skull primarily demonstrates the posterior portion of the skull. The x-ray beam is projected in such a way as to project the anterior facial bones inferior to the area of interest.

This module identifies the skull bones to be demonstrated, the relationship between the skull, x-ray film and x-ray beam required to demonstrate the structures of interest and how to evaluate the final product.

LEARNING OBJECTIVES FOR THIS MODULE

Upon successfully completing this module, you should be able to:

1. Identify and locate the occipital bone, petrous ridges, foramen magnum, dorsum sella and posterior clinoid processes.

2. Identify and locate the median sagittal plane and infraorbital-meatal line.

3. Choose the correct cassette size required for a Towne's projection and properly place it in the film tray.

4. Position the patient's body and skull to the radiographic table.

5. Position the cassette to the skull.

6. Set the proper focal-film distance and angle the tube.

7. Direct the x-ray beam to the foramen magnum and film.

8. Choose the proper exposure technique.

9. Check the film quality and identify the structures of interest on the radiograph.

SELF PRETEST OF LEARNING OBJECTIVES FOR THIS MODULE

Before proceding further in your study of this module and before viewing the TV Program, try to answer the following questions. Check your answers by referring to the textbook, the Supplementary Material and by viewing the TV Program.

1. The occipital bone is located inferior to the:

   (a) frontal bone
   (b) maxillary bone
   (c) parietal bones
   (d) nasal bones

2. Another name for the petrous ridges is:

   (a) petrous apices
   (b) petrous pyramids
   (c) pars petrous
   (d) all of the above

3. The _____ _____ passes through the foramen magnum into the vertebrae column.

4. The posterior portion of the sella turcica is the ventral sella.

True or False

5. The two points at each end of the posterior portion of the sella turcica are the middle clinoid processes. True or False

6. The median sagittal plane:

(a) is a horizontal plane dividing the body into upper and lower sections.

(b) is a diagonal plane with its axis in the region of the heart.

(c) is a longitudinal plane dividing the body into left and right halves.

(d) is a vertical plane dividing the body into upper and lower sections.

7. The infraorbitomeatal line is formed by an imaginary line passing from the external auditory meatus to the:

(a) outer canthus
(b) acanthion
(c) glabella
(d) infraorbital margin

8. Adult Towne's projections of the skull require _____ cassettes:

(a) 8" x 10"
(b) 14" x 17"
(c) 10" x 12"
(d) 7" x 17"

9. In order to center the AP skull to the table the (a) _____ is centered to the midline of the table:

(a) median sagittal plane
(b) longitudinal plane
(c) vertical plane
(d) each of the above would be conest

10. In order that the cassette may be centered to the foramen magnum, the center of the cassette should be placed at or near the:

(a) mastoid tip
(b) ear lobe
(c) top of the auricle of the ear
(d) pinna

11. After angling the central ray to the desired angle, the vertical distance is set at:

(a) 32" F.F.D.
(b) 30" F.F.D.
(c) 36" F.F.D.
(d) 40" F.F.D.

12. The central ray must be directed to the:

(a) right petrous ridge
(b) left petrous ridge
(c) foramen magnum
(d) E.A.M.

13. The average skull measuring 21 cm. for a Towne's projection would call for what mAs and K.V.P. factors?

14. The Towne's projection primarily demonstrates what three structures?

GLOSSARY

Instructions: a. Write a short definition for each term.
b. Check each term by referring to your Medical Dictionary or Atlas of Roentgenographic Positions.

SUPPLEMENTARY MATERIAL

PROCEDURE

POSTERIOR PORTION OF SKULL

When you view the posterior portion of the skull from a superior semiaxial projection, the major bone visualized is the occipital bone which makes up approximately half of the base of the skull. The occipital bone you might remember articulates with the parietal bones superiorly, the temporal bones laterally, and the sphenoid anteriorly.

The foramen magnum is the large opening located on the occipital bone through which the spinal cord passes into the spinal column. In the semiaxial projection the dorsum sella, the posterior wall of the sella turcica, is projected onto the foramen magnum making it easy to see the posterior clinoid processes at each end of the superior border of the dorsum sella.

On each side of the foramen magnum you can see the petrous pyramids (par petrous, petrous ridges or petrous apices) which are a portion of the temporal bone. Within the petrous pyramid is the internal auditory meatus. The highest point of the petrous ridges is the arcuate eminence.

MEDIAN SAGITTAL PLANE

The median sagittal plane is a longitudinal, vertical or perpendicular plane which divides the skull symetrically in half.

INFRAORBITAL-MEATAL LINE

The Infraorbitalmeatal line, Reid's Base Line, Anatomical Base Line, or Anthropological Base Line is a horizontal or transverse line passing from the external auditory meatus (E.A.M.) to the inferior margin of the orbit.

PROPER CASSETTE SIZE IN FILM TRAY

The average human skull is much longer than it is wide. Therefore, a cassette 10" x 12" in size usually is sufficient for a normal skull. You should place the cassette lengthwise in the tray with the identification marker to be projected towards the mandibular area.

ALIGNMENT OF BODY TO TABLE

Align the patient's median sagittal plane to the midline of the table making sure the body is straight. Place the arms along side the body. Adjust the shoulders to lie in the same transverse plane.

Adjust the patient's head so that its median sagittal plane is perpendicular to the midline of the cassette (or midline of the table since the cassette is center to the midline of the table).

Flex the head enough to place the Infraorbitalmeatal line perpendicular to the plane of the cassette.

ALIGNMENT OF CASSETTE TO SKULL

Adjust the film so that its upper margin is at the level of the highest point to the cranial vertex. The center of the cassette should be at the bottom of the ear lobe; it will be centered at or near the level of the foramen magnum.

F.F.D. AND ANGULATION OF TUBE

The vertical focal film distance (F.F.D.) is set at 32" on the distance indicator. Angle the tube caudad until it indicates 37° to the vertical plane. When the tube is angled the vertical F.F.D. is reduced correspondly to maintain the conventional 40" F.F.D. after angulation.

The same results obtained above may be obtained by angling the tube only 30° caudad provided the orbitomeatal line is perpendicular to the cassette. When using the orbitomeatal line the patient must depress the chin more than when using the infraorbital-meatal line. This is uncomfortable and some patients are unable to depress the chin excessively.

For some patients with short necks, it might become necessary to use a combination of tube tilt and part-film tilt. This can only be accomplished in an upright head unit. The cassette holder is inclined 15° posterior and the tube is angled 15° caudad. For a total of 30° angulation.

C.R. DIRECTION

Direct the 37° angled central x-ray (C.R.) to enter at the hairline, passing through the foramen magnum and projecting to the center of the cassette.

Recheck the position of the skull and suspend respiration before making the exposure.

EXPOSURE FACTORS

An average sized skull measured in the semiaxial projection usually measures around 21 centimeters. Utilizing 95 KVP and hi speed screens as mAs factor of 30 would most likely prove to be sufficient. Par speed screens would need an increase of 50% in mAs and detail screens 4x as much mAs as par speed screens.

FILM EVALUATION

Using the film provided by your instructor compare your film for proper density, contrast and definition. If long scale contrast is present, all anatomical details should be well visualized.

The occipital bone, foramen magnum, dorsum sella and petrous pyramids should be well defined. The shadows of the interal auditory canal which lie within the petrous pyramids are well demonstrated. The mastoid air cells are also seen on the Towne's view.

STUDY QUESTIONS

Instructions: Write out your answers carefully and completely---use separate paper. Check your answers by referring back to the Atlas, the procedure, and any notes you have on the TV program.

1. What are the major structures demonstrated on the Towne's Projection?

2. What portion of the sphenoid bone projects right over the foramen magnum in the Towne's Projection?

3. The internal auditory meatus is within what bone?

4. What is the arcuate eminence?

5. List the different names for the petrous pyramids.

6. What is the median sagittal plane?

7. Give the three other names for the infraorbitomeatal line.

8. Why is the 10" x 12" cassette placed lengthwise on the film tray?

9. When angling the C.R. 37° what meatal line must be perpendicular to the cassette?

10. When angling the C.R. 30° what meatal line must be perpendicular to the cassette?

11. Why is the vertical F.F.D. reduced to 32" for the 37° C.R. angle Towne's position.

12. What can be done if your patient has a short neck and you cannot follow the usual procedure?

13. A good topographic point to direct the entering ray to is the _____.

14. What factors change the exposure technique you may use.

15. What kind of film contrast usually demonstrates more details?

STUDY EXERCISES

Instructions: The following questions represent situations which you might encounter with patients who cannot be x-rayed as explained in the procedure. Answers may be found in texts; on some you might have to ask an experienced technologist.

1. Can the Towne's projection be duplicated with the patient on the P.A. position.

2. What does the term nuchofrontal mean?

3. If the patient cannot be examined in the AP or PA position, how would you do a Towne's position?

4. Is the Grashey position the same as the Towne's position.

5. How is a Reverse Towne's done?

6. What is the disadvantage in trying to duplicate a semiaxial view with the patient PA.

SELF POST TEST OF LEARNING OBJECTIVES FOR THIS MODULE

Instructions: This exercise is of great importance to you, so answer the following questions carefully. It will give you some indication of how well you know this module. If you can successfully answer these questions, you have followed instructions well and mastered the content of the TV Program, and text. If you need to refer to the textbook, or your notes often, reread pages 318, 327, 336, 337 in the Atlas completely and go back to the Glossary and review the Pretest questions. Be sure to review any questions you missed or were unable to answer. You should score 80% or better to earn a "passing grade" and continue to the next module.

Match the following:

1. _____ a. foramen magnum

2. _____ b. dorsum sella

3. _____ c. posterior clinoid processes

4. _____ d. petrous ridge

5. _____ e. internal auditory canal

f. arcuate eminence

6. The AP projection of the skull with a 37° caudal angulation demonstrates primarily the:

(a) sphenoid bone
(b) frontal bone
(c) petrous bone
(d) parietal bone

7. The occipital bone is located inferior to the:

(a) frontal bone
(b) maxillary bone
(c) parietal bone
(d) nasal bones

8. Another name (s) for the petrous ridge is (are):

(a) petrous apices
(b) petrous pyramids
(c) pars petrous
(d) nasal bones

9. In the Chamberlain - Towne position the C.R. is directed so that the orbitomeatal line forms an angle with the central ray of:

(a) 60°
(b) 30°
(c) 20°
(d) 45°

10. The _____ _____ passes through the foramen magnum into the vertebral column.

11. The posterior portion of the sella turcica is the ventral sella. True or False

12. The two points at each end of the posterior portion of the sella turcica are the middle clinoid processes. True or False

13. The foramen magnum is best demonstrated by using the:

(a) Water's Position
(b) Stenver's Position
(c) Law Position
(d) Towne's Position

14. The median sagittal plane:

(a) is a horizontal plane dividing the body into upper and lower sections.
(b) is a diagonal plane with its axis in the region of the heart.
(c) is a longitudinal plane dividing the body into left and right halves.
(d) is a vertical plane dividing the body into upper and lower sections.

15. The infraorbitomeatal line is formed by an imaginary line passing from the external auditory meatus to the:

(a) outer canthus
(b) acanthion
(c) glabella
(d) infraorbital margin

16. Adult Towne's projections of the skull require _____ cassettes:

(a) 8" x 10"
(b) 14" x 17"
(c) 10" x 12"
(d) 7" x 17"

17. In the AP half axial projection of the petrous portion of the temporal bone, when using the infraorbitomeatal line, it is necessary to use a caudad angulation of:

(a) 37°
(b) 17°
(c) 30°
(d) 45°

18. In order to center the AP skull to the table the (a)_____ is centered to the midline of the table:

(a) median sagittal plane
(b) longitudinal plane
(c) vertical plane
(d) each of the above would be correct

19. In order that the cassette may be centered to the foramen magnum, the center of the cassette should be placed at or near the:

(a) mastoid tip
(b) ear lobe
(c) top of the auricle of the ear
(d) pinna

20. After angling the C.R. to the desired angle, the vertical distance is set at:

(a) 32" F.F.D.
(b) 30" F.F.D.
(c) 36" F.F.D.
(d) 40" F.F.D.

21. The C.R. must be directed to the:

(a) right petrous ridge
(b) left petrous ridge
(c) foramen magnum
(d) E.A.M.

22. The average skull measuring 21 cm. for a Towne's projection would call for what mAs and K.V.P. factors?

23. The Towne's projection primarily demonstrates what three structures?

ANSWERS TO SELF POST TEST

4. (c), 3. (b), 2. (d), 1. (c)
12. (False), 11. (False), 10. (Spinal cord), 9. (b), 8. (d), 7. (c), 6. (c), 5. (a),
21. (c), 20. (a), 19. (b), 18. (a), 17. (a), 16. (c), 15. (d), 14. (c), 13. (d),
23. (Foramen Magnum, Petrous Apices, Occipital bone), 22. 30 mAs, 95 KVP or close to,

YOUR EVALUATION OF LESSON 1

Please complete this brief form as soon as possible after you have completed this Lesson. Then submit it according to the instructions you have received concerning these lesson evaluation forms. Your thoughtful evaluation will be of great help to us in making useful revisions both immediately and in the next edition of these modules.

Circle the most appropriate response for you.

1 - strongly disagree
2 - disagree
3 - uncertain, or no opinion
4 - agree
5 - strongly agree

1. The TV Program for this lesson was helpful in studying this lesson.

   1 2 3 4 5

2. The TV Program for this lesson caught and held my attention very well.

   1 2 3 4 5

3. On the whole, I was very impressed by the technical or professional quality of the TV Program.

   1 2 3 4 5

4. On the whole, the TV Program was very helpful in preparing me for the test and assignment.

   1 2 3 4 5

5. The learning objectives stated in the Study Guide were on the whole very useful to me.

   1 2 3 4 5

6. The Supplementary Material was very helpful in achieving the learning objectives of this lesson.

   1 2 3 4 5

7. The Supplementary Material was easy to understand.

1 2 3 4 5

8. The methods of presentation of the subject matter were very appropriate for me.

1 2 3 4 5

9. On the whole this lesson was well designed to help me accomplish the learning objectives.

1 2 3 4 5

10. In my opinion this lesson is an important one in this course.

1 2 3 4 5

11. I believe I learned a lot, considering the time I spent on this lesson.

1 2 3 4 5

DISCUSSION QUESTIONS

Please record your answer to these questions on the attached blank sheets of paper.

1. What did you like best, or find most helpful in your study, regarding the TV Program?

2. What did you like least, or find of little help, regarding the TV Program?

3. What section, or sections, of Lesson 1 in the Study Guide did you find most helpful?

4. What section, or sections, of Lesson 1 in the Study Guide did you find least helpful?

5. What recommendations or suggestions do you have for improving the TV Program?

6. What recommendations or suggestions do you have for improving the lesson as a whole?

Please write any other comments that you might have about this lesson.

MODULE II. ANTERIOR OBLIQUE LUMBAR-SACRAL APOPHYSEAL JOINTS PROJECTION

STUDY SEQUENCE

1. Read Overview and Learning Objectives.

2. Answer the Self Pretest questions and write the definitions for the Glossary terms. Check your answers as directed.

3. View the TV Program for this Module.

4. Study Volume 1, pp. 214, 215, 256 in the Atlas of Roentgenographic Positions.

5. Work through Module II Study Guide, carefully following all instructions and answering all questions.

6. Complete the Self Post Test for Module II.

7. Reread areas which you missed on the Self Post Test. Answer related questions again.

8. Using x-ray equipment do an anterior oblique Lumbar-Sacral Spine Projection on a phantom and have your instructor check the position.

9. Develop the x-ray film and evaluate the film.

10. If the film is not 100% accurate, repeat the position until it is perfect.

11. Have your instructor check your positioning on a patient in the hospital setting.

12. Take instructor administered test on complete Lumbar-Sacral Spine Unit.

OVERVIEW

The anterior oblique lumbar-sacral projection primarily demonstrates the apophyseal or interarticular joints which are located on the posterior portion of the lower spine. The body is rotated to a certain degree until the joints are projected perpendicular to the film.

This module identifies the parts of the lumbar vertebrae to be demonstrated, the relationship between the five lumbar vertebrae, x-ray film, and x-ray beam required to demonstrate the structures of interest and how to evaluate the final product.

LEARNING OBJECTIVES FOR THIS MODULE

Upon successfully completing this module you should be able to:

1. Locate the lumbar region of the spinal column.
2. Identify the apophyseal joint, pars interarticularis, transverse process, pedicle, superior articular process, spinous process, inferior articular processes, and vertebrae body.
3. Select and properly place a cassette in the film tray.
4. Position the lumbar sacral region to the x-ray table.
5. Position the cassette to the lumbar region.
6. Set the proper F.F.D.
7. Direct the C.R. to L-3 and film.
8. Measure the lumbar region, choose the proper technic and make the exposure.
9. Analyze the film for proper film quality and identify the structures of interest on the radiograph.

SELF PRETEST OF LEARNING OBJECTIVES FOR THIS MODULE

Before proceding further in your study of this module and before viewing the TV Program, try to answer the following questions. Check your answers by referring to the textbook, the Supplementary Material and by viewing the TV Program.

1. The lumbar region is composed of _____ articulating vertebrae:

   (a) 2. (b) 3. (c) 5. (d) 4.

2. L-1 does not have a _____ attached to it, easily distinguishing it from a thoracic vertebrae.

(a) transverse process.
(b) rib.
(c) cartilage.
(d) sternum.

3. The following structure(s) is (are) seen in the oblique lumbar projection:

(a) transverse process.
(b) pedicles.
(c) apophyseal joints.
(d) all of the above.

4. The lumbar spine is located between the:

(a) thoracic and sacral vertebrae.
(b) skull and cervical vertebrae.
(c) cervical and thoracic vertebrae.
(d) sacral and coccygeal vertebrae.

5. The apophyseal or interarticular joints are formed by the:

(a) superior and inferior pedicles.
(b) superior and inferior vertebral notches.
(c) superior and inferior articular facets.
(d) superior and inferior laminae.

6. An adult anterior oblique lumbar-sacral projection requires a _____ cassette.

(a) 8" x 10"
(b) 14" x 17"
(c) 10" x 12"
(d) 7" x 17"

7. The usual degree of rotation for the oblique lumbar-sacral projection is:

(a) 35°
(b) 45°
(c) 30°
(d) 25°

8. The lumbar vertebrae are centered to the midline of the table by placing a (the) _____ over the midline of the table.

(a) coronal plane 2" anterior to the mid axillary plane
(b) longitudinal plane 2 1/2" medial to the upper A.S.I.S.
(c) frontal plane
(d) transverse plane

9. In order that the cassette may be centered to L-3, the center of the cassette should be placed:

   (a) 2" above the top of the iliac crest.
   (b) 2" below the top of the iliac crest.
   (c) 3" above the top of the iliac crest.
   (d) 3" below the top of the iliac crest.

10. The focal-film is set at _____ inches.

   (a) 30"
   (b) 32"
   (c) 36"
   (d) 40"

11. The C. R. is directed to the center of the _____.

12. Where do you measure the patient in order to arrive at the proper technique for an oblique lumbar-sacral spine projection?

13. Primarily what structure is demonstrated on the posterior oblique lumbar-sacral spine view?

GLOSSARY

Instructions: a. Write a short definition of each term.
b. Check your definitions by referring to a medical dictionary or Atlas of Roentgenographic Positions.

1. Interarticular Joints:

2. Apophyseal Joints:

3. Lordosis:

4. Cephalad:

5. Oblique:

6. Anterior superior iliac spine:

7. Right Anterior Oblique Projection:

SUPPLEMENTARY MATERIAL

	PROCEDURE
LUMBAR REGION OF THE SPINE	The lumbar region of the spine is composed of five articulating vertebrae located between the dorsal and sacral vertebrae. The first lumbar vertebrae (L-1) is easily distinguished from the twelfth thoracic vertebrae (T-12) articulating above L-1 because it has no rib attached to it. The fifth lumbar vertebrae (L-5) is easily distinguished from the first sacral (S-1) vertebrae because S-1 articulates with the pelvis.
ANATOMICAL PARTS	The posterior oblique view demonstrated by the anterior oblique projection of the lumbar-sacral spine demonstrates the apophyseal joints in profile projected in the region of the vertebral body. The transverse processes are projected medial to the apophyseal joint and the spinous process appear laterally to the body. The pedicles are the round details visualized in the midline of the body. The inferior articular process of one vertebra is seen articulating with the superior articular process of another vertebra.

PROPER CASSETTE SIZE IN FILM TRAY	The individual lumbar vertebra are small but the five articulating lumbar vertebrae are rather long requiring a 10" x 12" cassette placed lengthwise in the tray. An 11" x 14" cassette may be used on certain occasions. The identification is directed cephalad and your code marker (left or right) is used to identify the side of the body nearest the film and should be placed on the proper side of the cassette.
ALIGNMENT OF PART TO TABLE	Start with the patient supine on the table. (At this point we will assume you are radiographing the right apophyseal joints). Rotate the patient 45° up on his right side. This places the coronal plane of the body at a 45° angle to the table top. Ask the patient to place his right arm along side the body and grasp the edge of the table with his left hand for better support. Flex the right leg 90° and place it under the left leg. This allows the patient support and balance. The patient's right side is closest to the table. This is a right anterior oblique projection. Center the lumbar sacral spine to the table by placing a longitudinal plane 2 1/2" medial to the upper-most left anterior superior iliac spine right over the midline of the table. Adjust the patient's body until the longitudinal plane is right over the center of the table. This will assure that the spine is right over the center of the film. Check to make sure the spine is rotated 45°; use a 45° sponge to maintain the right degree of obliquity.
ALIGNMENT OF CASSETTE TO SPINE	Center the 10" x 12" cassette to L-3 by placing the center of the cassette 2" above the top of the iliac crest. This assures that the bottom of the cassette is projected 2 - 2 1/2" below the top of the iliac crest showing the articulation between L-5 and S-1 and superior part of the sacroiliac joints.
SETTING F.F.D.	Set the focal-film distance at 40". Adjust the collimator shutters to allow radiation to interact only with a region 10" x 12" in size. This prevents radiating parts which are not of interest.

C.R. DIRECTION	The central ray is directed to the center of the cassette. Since the cassette was previously centered to the level of L-3, the C. R. should now be centered to the cassette.
EXPOSURE FACTORS	In order to arrive at the proper exposure factors, measure the patient at the lower margin of the anterior ribs with a calipher. Although the C. R. falls right over the umbilicus, the measurement is made at a thicker region in order to guarantee penetration of L-1 and L-2. Select the mAs and kVp called for on the technic chart. Recheck the position of the spine, and make the exposure on expiration.
FILM EVALUATION	Using the film provided by your instructor compare your film for proper density, contrast and definition. If long scale contrast is present, all anatomical details should be well visualized. The primary structures of interest in the posterior oblique view of the lumbar-sacral spine are the apophyseal joints or interarticular joints. Other structures visualized are the superior and inferior articular facets, transverse processes, pedicles, and spinous processes.

STUDY QUESTIONS

Instructions: Write out your answers carefully and completely --- use separate paper. Check your answers by referring back to the Atlas, the procedure, and any notes you have on the TV Program.

1. How many vertebrae make up the lumbar spine?

2. How can you distinguish a lumbar vertebra from a thoracic vertebra?

3. In the oblique projection, what structures are demonstrated?

4. Why is the 10" x 12" cassette placed lengthwise on the film tray?

5. The patient is rotated _____ for the anterior oblique lumbar-sacral spine projection.

6. How can you be sure the spine is over the midline of the table when the patient is obliqued?

7. How is the 10" x 12" cassette centered to the lumbar vertebrae?

8. What F.F.D. is used for the oblique lumbar-sacral spine projection?

9. How is the C. R. centered to the cassette?

10. Where is the patient measured for proper thickness?

STUDY EXERCISES

Instructions: The following questions will review and enrich your knowledge on the lumbar spine. Answers may be found in textbooks.

1. Draw a superior-inferior view of a lumbar vertebra and label the following parts:

   (a) vertebral body
   (b) vertebral foramen
   (c) lamina
   (d) pedicle
   (e) transverse process
   (f) spinous process
   (g) superior articular process

2. Draw a lateral lumbar vertebra and label the following parts:

   (a) vertebral body
   (b) intervertebral foramen
   (c) intervertebral joint
   (d) intervertebral disc
   (e) vertebral notches
   (f) superior articular process
   (g) inferior articular process
   (h) spinous process
   (i) pars interarticularis

3. What is the congenital anomaly "spina bifida"?

4. What is spondylolisthesis?

5. What is a laminectomy?

SELF POST TEST OF LEARNING OBJECTIVES FOR THIS MODULE

Instructions: This exercise is of great importance to you so answer the following questions carefully. It will give you some indication of how well you know this module. If you can successfully

answer these questions, you have followed instructions well and mastered the content of the TV Program and text. If you need to refer to the textbook, or your notes often, reread pages 214, 215, and 256 in the Atlas completely and go back to the Glossary and review the Self Pretest questions. Be sure to review any questions you missed or were unable to answer. You should score 80% or better to earn a "passing grade" and continue to the next Module.

MATCH THE FOLLOWING:

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____

a. pedicle
b. superior articular facet
c. spinous process
d. transverse process
e. inferior articular process
f. apophyseal joint
g. lamina

7. The lumbar region is composed of _____ articulating vertebrae:

(a) 2. (b) 3. (c) 5. (d) 4.

8. L-1 does not have a _____ attached to it, easily distinguishing it from a thoracic vertebrae.

(a) transverse process
(b) rib
(c) cartilage
(d) sternum

9. The following structure (s) is (are) seen in the oblique lumbar projection:

(a) transverse process.
(b) pedicle.
(c) apophyseal joints.
(d) all of the above.

10. The best projection to show the articular facets is the:

(a) oblique
(b) AP
(c) lateral
(d) PA

11. The lumbar spine is located between the:

(a) thoracic and sacral vertebrae.
(b) skull and cervical vertebrae.
(c) cervical and thoracic vertebrae.
(d) sacral and coccygeal vertebrae.

12. The apophyseal or interarticular joints are formed by the:

(a) superior and inferior pedicles.
(b) superior and inferior vertebral notches.
(c) superior and inferior articular facets.
(d) superior and inferior laminae.

13. An adult anterior oblique lumbar-sacral projection requires a _____ cassette.

(a) 8" x 10"
(b) 14" x 17"
(c) 10" x 12"
(d) 7" x 17"

14. The most satisfactory oblique projection of the lumbar vertebrae may be accomplished by rotating the body from the true lateral so that the coronal plane forms an angle with the table top of:

(a) 35°
(b) 45°
(c) 15°
(d) 25°

15. The lumbar vertebrae are centered to the midline of the table by placing a (the) _____ over the midline of the table:

(a) coronal plane 2" anterior to the mid-axillary plane.
(b) longitudinal plane 2 1/2" medial to the upper A.S.I.S.
(c) frontal plane.
(d) transverse plane.

16. In order that the cassette may be centered to L-3, the center of the cassette should be placed:

(a) 2" above the top of the iliac crest.
(b) 2" below the top of the iliac crest.
(c) 3" above the top of the iliac crest.
(d) 3" below the top of the iliac crest.

17. The focal-film distance is set at _____ inches:

(a) 30" (b) 32" (c) 36" (d) 40'

18. The C. R. is directed to the center of the _____.

19. That portion of a typical vertebrae that is situated anteriorly is called the:

(a) pedicle
(b) body
(c) lamina
(d) transverse process

20. Where do you measure the patient in order to arrive at the proper technique for an oblique lumbar-sacral spine projection?

21. Primarily, what structure is demonstrated on the posterior oblique lumbar-sacral spine view?

YOUR EVALUATION OF LESSON 2

Please complete this brief form as soon as possible after you have completed this Lesson. Then submit it according to the instructions you have received concerning these lesson evaluation forms. Your thoughtful evaluation will be of great help to us in making useful revisions both immediately and in the next edition of these modules.

Circle the most appropriate response for you.

1 - strongly disagree
2 - disagree
3 - uncertain, or no opinion
4 - agree
5 - strongly agree

1. The TV Program for this lesson was helpful in studying this lesson.

1 2 3 4 5

2. The TV Program for this lesson caught and held my attention very well.

1 2 3 4 5

3. On the whole, I was very impressed by the technical or professional quality of the TV Program.

1 2 3 4 5

4. On the whole, the TV Program was very helpful in preparing me for the test and assignment.

1 2 3 4 5

5. The learning objectives stated in the Study Guide were on the whole very useful to me.

1 2 3 4 5

6. The Supplementary Material was very helpful in achieving the learning objectives of this lesson.

1 2 3 4 5

7. The Supplementary Material was easy to understand.

1 2 3 4 5

8. The methods of presentation of the subject matter were very appropriate for me.

1 2 3 4 5

9. On the whole this lesson was well designed to help me accomplish the learning objectives.

1 2 3 4 5

10. In my opinion this lesson is an important one in this course.

1 2 3 4 5

11. I believe I learned a lot, considering the time I spent on this lesson.

1 2 3 4 5

DISCUSSION QUESTIONS

Please record your answer to these questions on the attached blank sheets of paper.

1. What did you like best, or find most helpful in your study, regarding the TV Program?

2. What did you like least, or find of little help, regarding the TV Program?

3. What section, or sections, of Lesson 2 in the Study Guide did you find most helpful?

4. What section, or sections, of Lesson 2 in the Study Guide did you find least helpful?

5. What recommendations or suggestions do you have for improving the TV Program?

6. What recommendations or suggestions do you have for improving the lesson as a whole?

Please write any other comments that you might have about this lesson.

TITLE: A STUDY OF CONSTRUCTION TECHNOLOGY CURRICULUMS AND CONSTRUCTION INDUSTRY NEEDS WITH A SUGGESTED APPROACH TO CURRICULUM DEVELOPMENT IN BUILDING CONSTRUCTION TECHNOLOGY PROGRAMS IN TEXAS COMMUNITY COLLEGES.

DESCRIPTOR: COMMUNITY COLLEGES; *CURRICULUM GUIDES; *CURRICULUM DEVELOPMENT; POST SECONDARY EDUCATION; *HOUSING INDUSTRY; *BUILDING TRADES; *CONSTRUCTION MANAGEMENT; TEACHING GUIDES; TRADE AND INDUSTRIAL EDUCATION

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 652P.; ILLUSTRATIVE MATERIALS MAY NOT REPRODUCE WELL.

ABSTRACT: DESCRIBED IN THE REPORT IS A STUDY TO ANALYZE THE EDUCATION AND TRAINING NEEDS OF THE BUILDING CONSTRUCTION INDUSTRY AND TO DETERMINE WHETHER OR NOT EXISTING PROGRAMS ARE ADEQUATELY FULFILLING THOSE NEEDS. BASED UPON AN ANALYSIS OF THE INDUSTRY AND AN OVERVIEW OF CURRENT PROGRAMS, CURRICULUM GUIDES FOR TWO COMMUNITY COLLEGE PROGRAMS WERE DEVELOPED AND ARE INCLUDED IN THE DOCUMENT. THE GUIDE FOR RESIDENTIAL CONSTRUCTION MANAGEMENT (257 PAGES) IS A TWO-YEAR PROGRAM DESIGNED TO PREPARE STUDENTS FOR CAREERS IN RESIDENTIAL CONSTRUCTION ENTERPRISES AS MEMBERS OF THE MANAGEMENT TEAM. EMPHASIS IS ON BUSINESS, FINANCE, OFFICE PROCEDURES, AND GENERAL MANAGEMENT CONSIDERATIONS AS THEY SPECIFICALLY RELATE TO THE RESIDENTIAL CONSTRUCTION BUSINESS. THE TWO-YEAR RESIDENTIAL CONSTRUCTION TECHNOLOGY PROGRAM (253 PAGES) FOCUSES ON TECHNICAL KNOWLEDGE AND OPERATIONS AND INCLUDES COOPERATIVE TRAINING. STUDENTS MAY EXIT TO POSITIONS IN INDUSTRY WITHOUT COMPLETING THE ENTIRE PROGRAM. FOR EACH COURSE LISTED IN THE GUIDES, INFORMATION PROVIDED INCLUDES: THE COURSE OBJECTIVE, COURSE DESCRIPTION, SUGGESTED TEXT, COURSE OUTLINE, INSTRUCTIONAL RECOMMENDATIONS/SUGGESTIONS, AND ADDITIONAL INSTRUCTIONAL MATERIALS AND REFERENCES. STUDENT HANDOUTS AND TESTS ARE ALSO INCLUDED. THE DOCUMENT CONTAINS TWO EVALUATION INSTRUMENTS--A PRETEST/POSTTEST ON PRINCIPLES OF RESIDENTIAL CONSTRUCTION AND A STUDENT FOLLOWUP QUESTIONNAIRE. FOREWORD

There can be little argument that the construction industry plays an increasingly important role in the economy of the United States. Its product currently represents approximately fourteen percent of the gross national product and by 1976 the dollar volume of construction is expected to exceed $150 billion per year. In terms of invested dollars and of numbers of people employed, construction is larger than steel, oil, automobiles, food products, textiles, or any other economic activity (with the exception of the vast "service" and "agriculture" industries as referred to in publications of the U. S. Bureau of Labor Statistics).

Since demand for construction generally follows population trends, the high rates of population growth and economic expansion forecast for the State of Texas would seem to portend an expanding requirement for manpower, both in construction and in construction-related business enterprises. The purpose of this study has been to analyze the education and training needs of the industry and to determine whether or not existing programs are adequately fulfilling these needs. In order to restrict the scope of this study to an area of manageable proportions, the main research effort has been directed to the sector of the construction industry normally referred to as "building construction". Activities occurring under this more restrictive heading are performed on a continuing basis in every community throughout the state. Because of this widespread distribution of activity, building construction becomes of

special interest under the community college concept of providing educational service to the local community.

Curriculum guides developed during the course of this research effort are a direct outgrowth of a pilot program which was operated by Paris Junior College, Paris, Texas, in conjunction with the research. It is not intended that these suggested guides should be considered as a "standard" program. They are furnished to reflect actual program experience to those considering the initiation of new programs in building construction or the revision of existing ones. In each case, they should be modified to meet the needs of implementing institutions and the localities which they serve. Their principal function is to present a detailed description of "one way" in which needed educational support can be provided to a sector of the industry which has been somewhat neglected in the development of previous programs; their principal value lies in the fact that they have been tested and frequently revised during almost two years of actual operations. Used judiciously in the implementation of similar programs, they should be helpful in preventing many false starts and in getting new programs underway in the most expeditious manner possible.

Many educational institution administrators, technician educators, construction industry employers and craftsmen, and other persons acquainted with the educational and training needs of the industry have contributed to the development of this research study. While all suggestions

for content were considered in putting this study into final form, not all the suggestions offered could be completely incorporated into the study in their original form. For this reason, it should be recognized that this study may not receive the complete endorsement of all those persons and organizations who have contributed to it.

A list of the persons and organizations who made some form of contribution to this research effort is included under the heading of "Acknowledgements". Thanks are due to all of them for the valuable help they gave. A special expression of appreciation is due each member of the Building Trades Advisory Committee, Paris Junior College, Paris, Texas, for their invaluable assistance in providing the voice of experience which was so necessary throughout this project. Special appreciation is also extended to the following personnel of Paris Junior College who provided me with their unfailing enthusiasm, generous assistance and encouragement always:

Louis B. Williams, President

Bill R. Moseley, Vice-President for Instructional Affairs

Dr. Ross G. Alsup, Dean of Applied Sciences Instruction

Harley Davis, Chairman, Division of Industrial Technology

Joe N. Crigler, Instructor/Coordinator, Residential Construction Programs

While gratefully acknowledging the contributions made by others, it must also be noted that the writer of this study accepts full responsibility

for any errors whether of omission or commission. The final views expressed are those of the author and should be charged to no other person, institution or organization.

Gerald G. Rambo

Project Director

ACKNOWLEDGEMENTS

The writer of this report would like to acknowledge the contributions of the individuals listed below during the conduct of this research study. Although not cited individually, a very special note of gratitude is extended to the more than fifty Building Trades instructors at high schools across the State of Texas who assisted in the administration of a student interest survey which provided a significant input to this research effort. Many other persons far too numerous to thank individually also made valuable contributions to this report and their assistance is genuinely appreciated. Without their support, the task would surely remain unfinished.

INTRODUCTION AND SUMMARY OF FINDINGS

Purpose of the Study

The purpose of this study is to advance knowledge of the education and training needs of the building construction industry, and to develop a suggested approach to curriculum development in building construction technology programs in Texas community colleges.

The construction industry is one of the largest industries operating in the United States today, and is of enormous importance to the nation's economy. Building construction constitutes a highly significant part of the total construction activity accomplished under the general heading of contract construction. There is a positive correlation between the level of building construction activity and population growth patterns. Thus the continuing high rates of economic and population growth which are forecast for the state of Texas indicate a corresponding long range requirement for qualified technicians and managers who can erect high quality structures at economically attractive unit costs to accomodate the anticipated expansion.

This study will analyze the education and training needs of the building construction industry and will attempt to determine whether or not existing programs are effectively filling these needs. Suggested curriculum guides will be developed for supplemental programs which the research indicates may be needed.

Major Educational and Training Problems In the Building Construction Industry

The cyclical nature of business activity is perhaps the most significant single factor effecting manpower development and utilization in the construction industry. The widespread instability stemming from this industry characteristic results in high personnel turnover rates, insufficient numbers of qualified personnel, and a wide range of other associated inefficiencies. Despite the determined efforts of various governmental agencies and numerous industry related organizations there appears to be little likelihood that this persistent problem will be significantly reduced in the near future. The major problem for education and training therefore is the deve opment of programs which improve the ability of the industry to cope with this cyclical phenomenon. The programs needed fall into two broad categories:

1. Programs designed to provide a relatively rapid response to cyclical demands over the short term, and
2. Programs designed to dampen or reduce the impact of such cycles over the long term.

Scope of the Analyses

The main focus of this study is directed to an examination of the educational and training needs of the building construction industry and a review of the various programs currently being operated to meet these needs. The study is limited geographically to the state of Texas, and its principal concern is with programs operating at the post-secondary level of education. Information gathered during the conduct of the research provides the fundamental base for development of a suggested approach to curriculum development in building construction technology programs in Texas community colleges.

Methodology

The materials utilized in the development of this study were obtained from published data, private surveys, and personal interviews. Consultations were held with key industry leaders, recognized specialists in vocational and technical education, instructors and administrators of vocational technical schools, executive officers and administrators of numerous organizations and societies pertinent to the building construction industry, and with members of the Building Trades Advisory Committee, Paris Junior College, Paris, Texas. A pilot program, designed to test the validity of training concepts and to refine the curriculum content of two new programs proposed for supplemental support of the residential construction sector of the of the industry was conducted as an extension of the original research

project. The experience and knowledge gained through operation of the pilot program has been incorporated directly into many of the various aspects of this study and has made a positive contribution to the overall quality of the final product.

Plan of the Study

The main body of this study begins with Chapter 2 which presents a profile of the construction industry. Definitions and relationships are discussed with the view of furnishing added insight into the role and function of the various industry sectors which combine to produce the total product of construction. This chapter also contains a brief description of the most commonly used routes of entry for persons seeking employment in the industry. Chapter 3 contains a discussion of some of the more important considerations which should be applied to manpower development and training for the industry. The considerations developed then become the foundation on which a suggested approach to curriculum development at the post-secondary level of education is formulated. A brief analysis of the principle programs of education and training currently operating in support of the industry is provided in Chapter 4. Recommended supplemental programs for support of the residential construction sector of the industry are described in Chapter 5. An overview of supporting curriculums suggested for the new programs with brief descriptions of courses are contained in Chapter 6.

The need for development of effective program evaluation procedures is discussed in Chapter 7. Some suggestions regarding facilities, equipment, and costs necessary to the implimentation of the recommended programs are furnished in Chapter 8. Curriculum guides, developed through the operation of the pilot program and designed to serve as models for implimentation by other interested institutions, are contained in Appendixes A and B. A listing of some of the more widely recognized professional and technical societies and associations concerned with the development of building construction technology programs is provided in Appendix C. The classifications of construction as developed by the U. S. Bureau of the Budget and published in the Standard Industrial Classification Manual is contained in Appendix D.

The remainder of this chapter summarizes the findings and suggests areas that merit more intensive study.

Summary of Findings

1. Development of educational programs for building construction according to the ladder concept is a valid overall objective, but must be pursued with clearly established reservations. Individual program objectives must not be subordinated to the ladder objective to the extent that the principal purpose of any program is invalidated.

2. Programs currently operating in support of the building construction industry are, without exception, achieving the objectives for which they were designed.

3. Additional education and training programs are needed in support of the residential construction sector of the building construction industry. The supplemental programs should be established within the community junior college system.

4. A related finding of potentially serious consequence for vocational occupational education involves program awareness. Failure to fully implement career education in the public school system seriously limits the ability of young people to make informed decisions regarding programs and careers. This finding is more fully developed in Chapter 3, "Suggested Approach to Curriculum Development in Building Construction Technology Programs" and in Chapter 5, "Recommended Supplemental Programs."

PROFILE OF THE CONSTRUCTION INDUSTRY

Introduction[1]

Recent studies indicate that construction activity in the United States currently exceeds 100 billion dollars per year and it is expected that by 1976 construction volumn will exceed $150 billion annually. The combined output of construction represents approximately 14% of the gross national product. More than 4,000,000 people are employed by the 870,000 firms presently doing business in construction. In terms of invested dollars and numbers of people employed construction is larger than steel, oil, automobiles, food products, textiles, or any other economic activity.

---

P. Cassimatis, "Economies of Scale in Construction," Fairleigh Dickenson University Business Review, Winter 1967.

"Economics of the Construction Industry," The Conference Board, National Industrial Conference Board, Inc. New York, 1969.

"Manpower in Construction: A Profile of the Industry and Projections to 1975." Report of the President's Committee on Urban Housing: Technical Studies, Vol. 2, Washington, D. C., 1968.

Howard G. Foster, "The Labor Market in Nonunion Construction," Industrial and Labor Relations Review, 26, 4 (July 1973), pp. 1071-1085.

Definitions

The term "construction" refers to all of the various types of construction activity associated with the erection and repair of immobile structures and facilities, such as buildings of all types, highways and streets, ports and airports, dams and conservation projects, railroad lines and canals, and other similar types of work. Mobile home and travel trailer construction are not, however, included in construction because they are considered to be products of manufacturing.

"Contract Construction," as opposed to the general term, "construction," refers to an industry consisting of a large number of firms who perform construction work for others. It is estimated that between 85 and 90% of all construction activity is accomplished by elements of the contract construction industry. The remaining 10 to 15% is performed by other than construction enterprises (notably public utilities, military and other governmental departments, etc.) utilizing their own in-house labor resources. This type of activity is referred to as "force-account" construction.

According to the statistical series of the Census Bureau, new construction activity is divided into three broad categories, usually referred to as industry sectors:

1. Private residential construction
2. Private nonresidentail construction
3. Public construction.

Private residential construction is composed of all of the activity related to the production of various types of housing units (single family, multi-family, condominuims, apartments, etc.). Private nonresidential construction includes industrial and commercial construction such as facilities used in support of all types of manufacturing activity, and the offices, warehouses, stores, etc., required for the operation of private industry and its associated service functions. Public construction consists of such things as the buildings and facilities used by all branches of local, state, and federal governments, including military facilities and conservation and development projects. Highways, streets, and other public works are also included in this category of construction.

It is a common practice that firms engaged in construction tend to specialize by type of product. Thus the construction activity reported within the statistical series as private residential construction and private nonresidential construction would be performed almost without exception by firms classified as "building construction" enterprises. Buildings erected within the public construction sector of the industry would also be built by the same type of firms. Other types of construction activity such as highways, dams, and airports (reported under the public construction sector) would be performed by construction firms operating under the general classification of "Heavy Construction." A major operational distinction between the two types of

firms lies in the kind and quantity of equipment employed. Heavy construction contractors ordinarily have a high capital investment in equipment and perform most of the work themselves, using their own equipment. Building contractors on the other hand either subcontract large parts of the work (thereby minimizing equipment requirements) or rent construction equipment for the duration of each project.

A more comprehensive breakdown of construction activities occurring under the general classification of "Contract Construction" may be found in The Standard Industrial Classification Manual (SIC), compiled by the U. S. Bureau of the Budget, Executive Office of the President. Selected portions of the manual have been extracted and are contained in Appendix D of this report.

Since the main concern of this study is with activity performed under the heading of building construction, all future references to construction should be assumed to pertain to the type of functional organization thus described, except in cases where qualifying words or statements clearly indicate otherwise.

Operating Characteristics

A well established system of contracting and sub-contracting is one of the most distinctive characteristics of the building construction industry. At the construction site level work is performed by a multitude of independent firms organized along the lines of the building trades crafts. Basically the business of these firms is to furnish the skills of their craft in the accomplishment of the construction project. For the most part each craft operates within its own functional channel and communications flow up and down through vertical channels of organization (i.e., painting contractor to painting foreman to journeyman painter to apprentice painter, etc.). The same basic pattern is repeated for each craft operating on the site. Work flow processes and overall coordination is affected by a general contractor who obtains the specialized services of the crafts through a series of subcontracts.

The traditional concepts of rugged individualism and private enterprise continue to prevail to an exceptionally high degree throughout the industry. Homebuilding in particular is marked by large numbers of small-volumn contractors and sub-contractors who prefer to operate their own businesses as owner-managers and remain small enough to exercise personal control over every part of their operation. This industry characteristic is further evidenced by the fact that more than 75% of the 870,000 firms engaged in construction employ fewer than eight employees. Only about 1% employ more than one hundred employees.

Another factor which encourages the entry of vast numbers of small firms into construction is the relatively low capital investment requirement. Plant investment is, in most cases, virtually nonexistent, because construction activity occurs at the site of each project. Ease of entry of firms into construction is evidenced by recent statistical data which shows that approximately 13% of all firms entered the industry during the reporting year. The high rate of entry is balanced by data which indicates that more than 14% of all firms left the industry during the same reporting period. These high rates of entry and exit can also be explained in part by practices peculiar to the construction industry. It is a frequent practice to organize a firm for the construction of a single project (i.e., large scale apartment complex, major housing development, etc.) and to then dissolve the firm on completion of the project.

A characteristic of special significance is the "boom-or-bust" nature of construction activity. National and international business cycles, local business conditions, and the normal seasonality of construction combine to create an exceptional degree of instability and insecurity for all elements of construction.

Organization of the Industry

Most of the firms engaged in construction are relatively small both in numbers of employees and in annual dollar volumn of work performed. Consequently these firms tend to operate within a limited market area, normally ranging no more than 100 miles from their

headquarters. Since construction demand in any given area is highly correlated to population the geographic distribution of construction firms is quite similar to the geographic distribution of population. A phenomenal growth in the total number of firms in construction has occurred during the last 20 years. While the number of partnerships and sole proprietorships has continued to grow this same time period has disclosed a tendency for relatively more firms to incorporate. This can be attributed to the increasing complexity of certain types of contract construction work requiring more versatile management and larger financial resources which the corporate structure seems better able to supply. The trend toward the corporate structure is even more dramatically emphasized by the shifts in relative shares of the market. Data compiled by the U. S. Internal Revenue Service, and published in "Statistics of Income, U. S. Business" shows that the relative share of sole proprietorships declined from 39% to 24% of the industry's output. Partnerships experienced a decline from 22.5% to 9% of the industry total, while at the same time corporations increased their share of the market from 38% to approximately 68%. The increasing competitive pressures which prevail throughout the industry today are likely to cause a continuation of the trend toward incorporation.

Degree of Unionization

Within the contract construction industry there appears to be a direct relationship between the degree of unionization and the size of construction projects: as the type of construction becomes lighter, from heavy construction (where the highest degree of unionization prevails) to industrial and commerical (high degree) to public and private building (relatively high) to housing developments (moderate) to home building (relatively low). The strength of union organization among construction workers in residential construction also shows a direct correlation between the degree of unionization and the size of the city or location. In cities with populations of more than 500,000 union strength is estimated to range from 75% upward. As the size of the city decreases the degree of unionization drops rapidly from a maximum of approximately 80% down to 0% in the smaller less urbanized localities.

Routes of Entry into Construction

Persons seeking employment in construction enter the industry through both formal and informal training routes. Formal training is perhaps best exemplified by the widely known apprenticeship system. Training apprentice workers under a journeyman's supervision is a centuries old tradition in construction. The central objective of apprenticeship is to maintain the high quality of skill required by the craft. In the building trades formal apprenticeship programs are organized along craft lines and are operated by the respective unions. While in times

past apprenticeship involved little more than informal on-the-job training this is far from true in modern apprenticeship programs. Formal apprenticeship programs today involve a systematic program of instruction including the following elements:

1) A formal syllabus of instruction,
2) On-the-job training,
3) Related instruction off the job site, and
4) Indenture to a joint labor-management committee responsible for the apprentice's progress.

Contrary to popular opinion, however, apprenticeship is not the only route to journeyman status, nor even to union membership. Far greater numbers of workers enter construction through informal means of training than enter through formal programs.

Informal training in the crafts originates primarily in non-unionized areas and consists almost totally of on-the-job training under the tutelage of a journeyman in the craft.

Because of the inferior nature of informal training, formal apprenticeship appears to serve as the principal source of key journeymen, foremen, supervisors, and even contractors in most trades. In this sense apprenticeship may be viewed as being as much a management training mechanism in some trades as a means of training journeymen.

To this point entry into construction has been concerned with entry from the bottom. Quantitatively this is,of course,the main point of entry. By tradition persons enter one of the crafts through either

formal or informal training and, after completing the required periods of experience, are then elevated to journeyman status. Smaller numbers of other persons enter at the top as owner-managers. Usually, if they are to be successful, these persons have received formal training in architectural or engineering degree programs or have had extensive experience in related construction enterprises. Because of the high degree of specialization by function,there is little lateral movement into the industry at the intermediate levels.

A SUGGESTED APPROACH TO CURRICULUM DEVELOPMENT IN BUILDING CONSTRUCTION TECHNOLOGY PROGRAMS

Introduction

The President of the United States has emphasized the urgent need for vocational education and training in support of the construction industry. Although indexes of current economic activity show that the industry has moved from a period of "boom" to a period of "bust" during the time that has transpired since his statement was released, the concerns voiced by the President remain as valid today as they were on the date the statement was first published. Selected excerpts from the President's statement are reprinted as follows:

> "Today, as the result of five years of inflation, America is not building the housing that is needed to provide adequate shelter for her people . . .
>
> Our most urgent need is for homes that middle and lower income Americans can afford. Yet today, the average price of all new houses offered for sale is $27,000.
>
> . . . The basic problem is quite simply that the nation's needs for construction outran the industry's ability to expand its productive resources. . .

The cost of construction is basically the cost of money, the cost of materials, the cost of labor, the cost of management, and the cost of improved land . . .

To moderate severe increases in the cost of labor we must increase the supply to meet the demand. This means that we must assure equal employment opportunity for all in the industry, increase productivity through vocational training, adopt innovative techniques, and reduce seasonality . . .

Between now and 1978 almost 2 million new jobs will be created in the construction industry. The normal operation of the labor market will supply many of these workers, but new training and apprentice programs will be required and access to the skilled labor market must be eased to meet heavy demands of the 1970's.

Training and apprentice programs also must be developed to take advantage of technological opportunities in the home building industry. The nature of skills required may be modified by shifting part of the production and assembly of housing units to off-site industrial plants . . .

There is clearly a demand for the kind of housing that new low-cost production techniques could bring."[1]

In January, 1968, the Coordinating Board, Texas College and University System, adopted a "Statement of Role and Scope" for community colleges which reads, in part, as follows:

"The public community college in Texas will have a multiple responsibility which involves:

1) Programs in general college education,

2) Technical programs of varying length . . . to train students for skilled employment.

3) Continuing education."[2]

---

[1] "Excerpts from the President's Statement on Combating Construction Inflation and Meeting Future Construction Needs." Earl M. Bowler, Comp., Division of Vocational and Technical Education, Department of Health, Education, and Welfare, U. S. Office of Education, 17 March 1970.

[2] The Coordinating Board, Texas College and University System. The Development of Community Junior Colleges in Texas. Statement of Role and Scope. Adopted: January 1968.

The Texas Advisory Council on Vocational-Technical Education has also gone on record as favoring programs both at the secondary and the community college level which provide the student with both academic training and an acquired job skill.

> "It is felt that every student should leave the system with at least job-entry skills and with sufficient preparation in basic academic subjects to enable entry into further education. The student is thus equipped to continue his formal education to a baccalaureate degree or to enter the labor market at the time he chooses with some kind of saleable skill."[3]

Within the context of the goals and objectives contained in the above cited publications, curriculum development for programs operat- in support of the construction industry becomes a completely valid concern for post-secondary vocational education in Texas community colleges.

[3] Advisory Council for Vocational-Technical Education, News, Vol. 2, No. 7, August 1971.

General Considerations

The construction industry is characterized by a plethora of small independent business firms operating within a well established system of contracting and subcontracting. More than 75% of these firms have less than eight employees. Relative ease of entry into construction contributes to the large number of firms in construction. Ease of entry is evidenced by the high percentage of new firms entering construction each year (approximately 13%). A correspondingly high rate of exit (about 14% annually) testifies to the severity of competition which prevails through-out the industry. An additional indicator of the competitive nature of the industry is the fact that construction consistently leads all other industries in percentage of annual business failures. Studies disclose that more of these firms fail because of poor management practices than for any other reason. This observation is not inconsistent with prior comments on the severity of competition, but serves to better explain the reasons why some firms in the construction industry are unable to survive.

Volumn of annual output is often used to identify different categories of builders. Those who complete 1 to 10 housing units per year are classified as small-volumn builders. About 90% of all builders in the United States today are in this category. Together these builders account for about one-third of all the houses produced each year. The medium volumn builder completes from 10 to 50 houses per year.

Approximately 8% of all builders fit into this category and they account for 20 to 25% of the annual housing product. Large-volumn builders are those who construct more than 50 houses per year. While only about 2% of all builders are included in this category they produce almost 50% of all the housing built in the United States each year. Despite overall industry trends toward the corporate organizational structure and larger scale business enterprises, there is no argument but that for the foreseeable future the small-volumn operative builder will continue to play an important role in the total construction picture.

The relative small size of firms operating in construction seriously limits the ability of the industry to train new employees. Because of the small size of the average firm and high prevailing rates of pay, the wages of one non-productive employee can often mean the difference in whether a job is completed at a profit or at a loss. The contractor who includes the wages of such an employee in the development of his bid decreases his chances of being awarded the contract; the one who does not, and who subsequently is awarded the contract, decreases his chances of completing the job at a profit. Contractors often describe such untrained employees as being "worth considerably less than nothing" - meaning that not only is the untrained employee non-productive in his own right, but that he also decreases the productivity of the trained employee who must devote a part of his time to the training process.

The problem of training new employees is particularly acute for residential construction firms in small to medium size cities. The absence of formal apprenticeship programs in this non-unionized environment leaves a gap in training requirements which local firms are unable to fill. Only the larger construction firms which characteristically operate in larger metropolitan areas are capable of absorbing the training costs associated with developing new personnel. Thus potential employees from smaller cities must migrate to the larger metropolitan areas to enter construction, whether by formal apprenticeship or by means of informal training. Working associations developed during training, coupled with generally greater job opportunities, serve to effectively discourage the return of such persons to smaller cities subsequent to completion of their training.

Wide cyclical swings in construction activity have a devastating impact on manpower development and utilization. Many persons who exit the industry during periods of reduced building activity will not, for a variety of reasons, be available for re-employment when the cycle starts up again. Persons leaving the industry take with them the training and experience acquired during the course of their employment. Thus when an upturn in construction activity occurs the industry is forced to hire large numbers of untrained, inexperienced workers to replace personnel lost during the downturn. This repeating pattern not only results in a duplicity of training costs but also causes decreased levels of productivity throughout the industry.

Major economic studies disclose that the construction industry's performance is adversely effected by the separation of design from production, by the absence of vertical integration with the suppliers of building materials, and by the prevalence of building code and labor union restrictions on innovations.[4]

---

[4]For a detailed discussion of the factors effecting construction industry productivity, see the following:

Earnest L. Buckley, Construction Management. (Ft. Worth: University of Texas Press, October 1972).

"Economics of the Construction Industry." The Conference Board, National Industrial Conference Board, Inc. N.Y., 1969.

Suggested Approach

The development of curriculums for the building construction industry must evolve through a conceptual approach having as its central guiding objective the need to provide buildings and facilities for our society at the lowest possible cost in terms of financial, material, and human resources. To this end post-secondary vocational programs operating in support of construction must be promulgated on the degree to which their curriculums expand the ability of the industry to:

1) Develop improved means by which to cope with the cyclical phenomenon of construction; in terms of both

a) reductions in the extremes of cyclical activity, and

b) more effective response to cyclical demands.

2) Explore all possible avenues for increasing productivity through greater integration of the functions of design and production.

3) Identify the increases in effectiveness which may be obtained through greater vertical integration with the suppliers of materials.

4) Eliminate restrictions on innovation resulting from outdated and unrealistic building codes, and from non-productive union attitudes toward innovation.

5) Provide alternative means of training for persons to whom formal apprenticeship is not now available.

6) Adapt organizational structures through which maximum economies of scale may be realized.

AN OVERVIEW OF CURRENT PROGRAMS

Introduction

A wide array of educational and training programs is currently being operated in support of the construction industry. These programs range from the industry orientation type programs recently implemented on a pilot basis in selected junior high schools through 5-year professional degree programs conducted by major institutions with the Texas College and University System. Additional programs are provided within the established secondary and post-secondary public educational systems, and numerous formal apprenticeship programs are conducted by the various unions representing the building trades crafts. Two other sources known to be providing programs of limited scope are: proprietary schools, and agencies of the federal government.

Proprietary schools conduct skill development courses for selected crafts within the building trades group. These courses are conducted by private business organizations with profit to the sponsoring institution being the dominant motive. Total output of such programs is insignificant in terms of overall manpower requirements in construction.

Programs operated by agencies of the federal government are primarily those originating through authorizations contained in the Manpower Development and Training Act, of 1963. The five major federally funded occupational training programs are: MDTA

institutional, MDTA On-the-Job Training, Concentrated Employment Program (CEP), Jobs in the Business Sector (JOBS), and the Work Incentive Program (WIN). These are special purpose programs which operate to relieve unemployment among persons displaced by automation (through means of various retraining programs), provide improved employment opportunities for the hard-core unemployed, and to improve racial balance in skilled occupations having a history of disproportionate minority race representation.[1] Programs operated to provide for the internal manpower needs of agencies of the Department of Defense are currently of decreasing importance (as a potential source for construction manpower in the civilian economy), due to expiration of the Selective Service Act and the longer term enlistments encouraged by the all-volunteer military force concept. These special purpose programs are considered to be outside the scope of this study and are only mentioned here to round out the total picture of current programs.

The remainder of this chapter will be directed to a more detailed discussion of programs having a special relationship to post-secondary education, and to implications for future requirements which may be derived from the analysis.

Secondary School Programs

Programs relating to the construction industry, at the secondary school level, are generally within the Building Trades courses or the General Construction Trades cluster of the Coordinated Vocational-Academic Education Program (CVAE). These programs are operated in pursuit of the following objectives:

1) Providing sufficient training to the student to encourage elevation of his apprenticeship entrance level should he choose immediate employment upon completion of the course, and

2) Providing a substantial foundation for further study in post-secondary programs dealing with construction technology, for those who desire to continue their formal educational development.

Although not a part of the normal secondary school curriculum many high schools (especially in larger metropolitan areas) also provide training opportunities in construction related skills through their Community Services and Adult Trade Extension Programs. Apprenticeship classes in the building trades fall into this category and are generally developed as cooperative programs between the industry, the United States Department of Labor, and the school conducting the training. Such courses are normally restricted to persons already employed in the trade. These courses are developed under the presumption that students will be getting laboratory or practical work experience

on the job while related theory and background information pertaining to the trade can be presented by the school in an established training facility.

Post-Secondary Programs

Post-secondary programs operating in support of the construction industry have developed along two distinct lines; (a) those operated by technical schools and (b) those operated by community colleges.

By tradition the primary role of technical schools has been to provide opportunities for the development of occupationsl skills through "hands on" training in the tools of the trade. Extensive laboratory facilities are provided to accomodate this type of training. A main campus is provided which serves as a focal point for administration of several subordinate campuses located in other geographic areas of the state. In addition to skills development training technical schools in Texas currently provide some management skills development for the construction industry through a 2-year Construction Technology Program. The major Technical School contribution, however, remains the 1-year Construction Craftsman program which is offered on the home campus and on several subordinate campuses.

The primary area of interest for community/junior colleges, in terms of support to construction, has been in the direction of management skills development. The relatively recent emphasis on improving employment opportunities, however, has resulted in the introduction of a number

of program offerings in the Construction Trades which are almost totally skills development oriented. Construction oriented programs currently operating in Texas community colleges include:

a) one 2-year degree program in Construction Management and Technology

b) one 2-year degree program in Homebuilding Technology

c) three 2-year Architectural Technology Programs, and

d) two programs in Residential Construction developed during the conduct of this research. These programs are being continued as regular program offerings by the piloting institution.

College and University Level Programs

In addition to the traditional professional degree programs in engineering and architecture two new 4-year degree programs have recently been implemented within the Texas College and University System. These are:

a) a 4-year program in Construction Technology leading to the Bachelor of Science Degree in Industry and Technology

b) a 4-year Homebuilding Program offering the following options: a Bachelor of Science degree in Construction, a Bachelor of Science degree in Urban Development, and two Bachelor of Arts degrees in Design --- Design I and Design II. The latter of the two is pointed toward

qualification of the student for post-graduate study in Architecture. Design I is calculated to satisfy the needs of students who desire to specialize in the design of family housing.

Formal Apprenticeship Programs

Apprenticeship programs operating in construction related skills areas have developed largely along craft lines. Each of the building trades crafts has its own union organization and each of these unions is dedicated to protection of the interests of its membership. Formal apprenticeship programs are operated by the craft unions and have as their central objective maintenance of the high skill qualities demanded by the craft. Modern apprenticeship programs include a formal syllabus of instruction, on-the-job training, related instruction off-the-job site, and indenture to a joint labor-management committee responsible for the apprentice's progress. Strict journeyman/apprentice ratios are maintained within each craft to assure that the number of apprentices is kept to the level which the available journeyman can effectively train. Apprenticeship appears to supply a core of key journeymen, foremen, supervisors and even contractors in most trades. In this sense apprenticeship may be viewed as being as much a management training mechanism as a means of training journeymen.[2]

---

[2] For an in-depth analysis of the role of apprenticeship in construction see John T. Dunlop and D. Q. Mills, Manpower Development and Utilization in the Contract Construction Industry (Cambridge: Harvard University Press, 1972); see also Roger H. Comer and Herbert J. Lahne, Admission and Apprenticeship in the Building Trades Unions (Washington, D.C.: Department of Labor, April 1971).

Informal Training

In non-union areas an informal type of training is carried out which is sometimes erroneously referred to as "informal apprenticeship." Laborers or helpers are hired by contractors and are encouraged to improve their skills to the journeyman level under the tutelage of a journeyman. These programs lack the formal development and control which characterize union sponsored programs, and have no specific provision for related training and background development.

Implications Derived Through Analysis of Current Programs

1. As regards program development utilizing the ladder concept certain limitations must be recognized:

The established pattern of programs at each major educational level encourages program development geared to the ladder concept. Each program should effectively serve as a stepping stone to comparable programs at the next higher level. This pattern can be said to be a general characteristic of the total system of programs relating to construction. There are specific limitations, however, in the degree to which the ladder concept can be accommodated within each major program area. Perhaps the best example can be made by describing some of the special aspects of the Architectural Technology program. A recently published study of curriculum requirements for the program contains the following observations:

"Basically, the technicians training programs are not designed for transfer to the universities. The concept of the program is to provide the student with the skills required to enter the architectural profession and gain immediate employment. For those desiring to become architects it is recommended that they either study pre-architecture or enter directly a university offering a course leading to the architectural degree."[3] This strong stand on the need to remain focused on basic program objectives stems directly from the job tasks and functions which architectural technicians must be prepared to perform. The range and breadth of skills required simply does not leave room for concern with transferability characteristics in this highly technical program. In this case the building of foundations in mathematics and science, which characterizes the first two years of architectural degree programs, must yield to development of the more practical skills required by post-program employment. The time limitations imposed by a two-year program cannot accommodate both objectives.

On the other hand excellent course and program transfer arrangements have been worked out between individual community colleges and 4-year universities in the Construction Technology, Home Building, and Residential Construction programs. For the most part the

---

[3] J. Carter Howald and James B. Boggs, Architectural Technology. A Research Study Prepared For Division of Occupational Research and Development, Texas Education Agency, Austin, Texas (Corpus Christi: Del Mar College Press, June 1972).

4-year institutions grant block credit to graduates of comparable community college programs. They do, however, review individual student transcripts and prepare degree plans on the basis of the student's personal needs and achievements. In some cases this may mean that the so-called 4-year program is extended by one or more additional semesters.

The most important single consideration in terms of transferability between programs is to insure that the primary objective of each program is not jeopardized by the desire to alter courses or curriculums to make them more transferable.

2. Legal and regulatory restrictions effectively limit programs operating at the secondary school level:

Restrictions on hiring employees under 18 years of age virtually eliminates any possibility for secondary school students to complete the construction related programs with any accompanying degree of job experience. Lack of a work record makes employment in construction extremely difficult to obtain especially during slack building periods.

3. The fundamental orientations of building trades apprenticeship programs are directed more toward the needs of the craft than to the needs of the industry:

This basic orientation does not encourage the highly innovistic management attitudes required by the trend toward larger more

complex business organizations within the industry. The ability of the industry to adopt new materials and new techniques is restricted by the high degree of influence exercised by craft unions in the operation of formal apprenticeship programs.

4. The ability of the construction industry to attract the quality of supervisory and management personnel needed for staffing modern organizations is limited by lack of a well developed career education in the public school system:

In the present system information regarding construction industry careers, and appropriate preparatory programs, seldom reaches students other than those already participating in the building trades courses. These programs frequently do not contain the high achievers who will be needed in the more complex organizations now emerging within the industry.[4]

---

[4]An exemplary comprehensive program designed to improve career education in the public schools in Texas entitled " Coordinated Effort for Career Education (CECE), is described in a research study recently prepared for the Division of Occupational Research and Development, Texas Education Agency. For a complete discussion see An Analysis of Fifteen Occupational Clusters Identified by the U.S. Office of Education, ed. Theodore M. Vestal and Neal A. Baker, Jr. (Sherman/Denison, Texas: Grayson County College Press, 1972).

RECOMMENDED SUPPLEMENTAL PROGRAMS

Introduction

Studies of the construction industry consistently indicate long range requirements for new manpower inputs in excess of that which can be supplied by existing education and training programs.[1] Chief among the factors which have combined to create this situation are:

1) Vast increases in the number of firms operating in construction during the last 20 years, and

2) Failure of supporting systems to adequately identify and respond to changing manpower needs.

---

[1] Long range manpower needs of the industry are especially well defined in the following studies:

L. A. Lecht, "Manpower Requirements for National Objectives in the 1970's," Report to the Office of Manpower Policy, Evaluation, and Research, U. S. Department of Labor, 1968.

"The Pursuit of National Goals and Career Opportunities in the Construction Crafts in the 1970's." Working paper prepared by John Teeple and Berdj Kanadjian. Center for Priority Analysis. National Planning Association, U. S. Office of Education, April 1969.

John T. Dunlop and D. Q. Mills, Manpower Development and Utilization in the Contract Construction Industry. (Cambridge, Mass: Harvard University Press, 1972).

William F. Hahn, "Construction Manpower Needs by 1980," Monthly Labor Review, 94, 1 (January 1971), pp. 12-18.

Building construction has been classified in economic studies as a labor intensive industry. It follows therefore that development of adequate manpower resources is of special concern to both the private residential construction and private nonresidential construction sectors of the industry.

Traditional routes of entry into construction are supported by formal apprenticeship programs and informal training measures which place primary emphasis on the needs of the various crafts. Technological advancements and the trend toward larger more complex organizations has imposed new demands for supervisors and middle managers well beyond the scope of the training provided by formal apprenticeship. The increased complexity of modern management tasks, as opposed to the high rates of pay which experienced craftsmen are currently able to command, serves to effectively discourage many of these experienced persons from leaving their craft for positions in management. As a result, there has tended to be a drying-up of this traditional source of supervisors and managers. The lack of general educational development characteristic of informal training measures virtually eliminates the possibility of advancement, in today's environment, for persons who have entered the industry through informal training programs.

The appropriate role for post-secondary vocational education in supplementing the efforts of the industry to meet its future manpower needs is evidenced by the following statement:

It would be unrealistic to expect a neat balance between training completions and job openings in construction or elsewhere. Formal job training is not always necessary for successful performance in a skilled job, and in some instances it may not be the most efficient way of preparing young persons for employment in the building trades. It is still possible in many of these crafts to begin as a laborer, and to progress to semi-skilled work such as a carpenter's helper, and to become qualified, with experience, as a journeyman without the benefit of specific training programs. However, in a world of increasingly complex technology and reliance on credentials as a prerequisite for employment, participation in vocational programs can reduce the time required for attaining the journeyman's status, and it can provide the credentials needed for admission to employment or to more specialized training programs.[2]

Identification of Building Construction Industry Needs

Consultations with industry leaders, interview and discussions with contractors, supervisors, and workers, and detailed research studies consistently point up two problem areas for manpower development in the building construction industry:

1) There is a persistent shortage of potential employees with an entry level skill in at least one of the building crafts who have an understanding of working relationships at the construction site level.

---

[2] Underscoring provided. Statement extracted from "The Pursuit of National Goals and Career Opportunities in the Construction Crafts in the 1970's." Working paper prepared by John Teeple and Berdj Kanadjian. Center for Priority Analysis, National Planning Association, U. S. Office of Education, April 1969.

2) There is a continuing need for experienced personnel who have the technical education and the supervisory/management skills to function effectively at the lower and middle management levels.

Creating programs to assist in meeting these needs involves development of four specific types of skills:

1) Manipulative skills. These are the motor skills associated with the need for acquisition of an entry level skill in the construction crafts. Programs in this area necessarily involve highly repetitive training processes.
2) Technical skills. The knowledge of and proficiency in construction processes and techniques.
3) Human skills. The ability to interact effectively with people and to build teamwork in construction enterprises.
4) Conceptual skills. The skills which enable a manager to deal successfully with abstractions, to set up models, and to devise plans.[3]

The functional nature of construction frequently requires the development of manipulative skills in one of the crafts for initial employment in the industry. Thus programs should include skill training

---

[3]Simon Marcson, "Role Concept of Engineering Managers." IRE Transactions on Engineering Management, March 1960, pp. 30-33.

to the entry level in one of the crafts. Skill development beyond the entry level is considered to be more appropriately a function of the craft and outside the scope of vocational education.

The remainder of the skills described above are referred to as management skills. Different types of functions and different levels of management require different mixes of these skills -- from a primary emphasis on technical skills, at the lowest management levels, to a greater emphasis on conceptual skills at higher levels. It is important, therefore, that vocational programs concerned with career development (as opposed to job qualification) make positive provision for appropriate foundations in each.

Program Requirements By Industry Sector

The term "building construction" includes all of the construction activities occurring under the headings of both "private residential construction" and "private nonresidential construction." In common usage these two sectors are more often referred to as "residential construction" - or "home building," and "light commercial construction." An important distinguishing feature between the two is the degree of unionization which prevails in each; light commercial construction operates in a highly unionized environment whereas residential construction is almost totally free of union influence. The degree of unionization has a direct effect on the type of educational and training support needed by each of the two sectors.

In the highly unionized light commercial sector, well established formal apprenticeship programs provide a solid base whereby relatively large numbers of new personnel enter the crafts and progress to journeymen status. The larger size of construction firms operating in this sector also provides a greater capability for accommodating informal training measures where formal programs are not available. The principle post-secondary support needed for this industry sector lies in the areas of technical knowledge and the development of management skills. An exemplary program for providing these skills has been developed through the cooperative efforts of elements of the Texas education system and representatives of the light commercial construction industry.[4] This program is strongly recommended for adoption by other post-secondary institutions servicing large metropolitan areas. An additional major source of support for light commercial construction is provided through architectural technology programs conducted by various community colleges within the Texas College and University System and by the state technical institute. These well developed programs can readily be expanded to meet

---

[4]Dallas County Community College District, with the cooperation and support of the Associated General Contractors of America (Dallas Chapter), has developed an excellent program in Construction Management and Technology, designed specifically to help in meeting the needs of this industry sector. Continued cooperative efforts by the AGC has aided in the establishment of a 4-year Bachelor of Science Degree program in Construction Technology at neighboring East Texas State University. Through arrangements between the two institutions the ladder concept of program development has been fully incorporated into these programs.

future increased needs which may arise from greater integration of design and production within the industry. Architectural technology programs are designed to provide practical job skills within specific functional areas and as such are not adaptable to any significant degree of integration into professional architectural degree programs.

Programs operating in support of the residential construction sector of the industry must provide for development of both manipulative and management skills. The non-unionized environment of residential construction seriously curtails support by formal apprenticeship programs. The small size of typical firms effectively limits the development of informal training within the industry. In the residential construction sector, as in the light commercial construction sector, an outstanding example of cooperation in program development has occurred. The result is a highly commendable program in Home Building Technology designed to impart both usable skills and a general knowledge of the construction business.[5] The program is especially suitable for presentation in the larger metropolitan areas for which it was designed.

---

[5] The Home Building Technology program was developed jointly by San Antonio College and the Greater San Antonio Builders Association. Through mutual arrangements a modified ladder concept for transfer of credits has been worked out with nearby Trinity University. Trinity University was the first university in the U. S. to offer the Bachelor of Science degree with a major in home building.

The Need For Supplemental Programs

The principle requirement for supplemental programs in support of the building construction industry resides in the residential construction sector. Small-volumn and medium-volumn builders constitute approximately 98% of all residential construction contractors and this important target group operates extensively in geographic areas not served by formal apprenticeship or the limited home building technology programs presently in operation. Nowhere in the industry has the effective span of managerial control served as a greater constraint than in the domain of the medium-volumn builder; and no other area of the industry offers greater potential for increased effectiveness through improved management skills.[6]

To effectively serve small-volumn and medium-volumn builders programs must be developed which can be implemented by post-secondary institutions serving the small- to medium-size cities in which these builders are frequently located. It goes without saying that programs developed along these guidelines can also be adapted to the needs of institutions serving larger areas and program graduates can effectively serve throughout the industry.

---

[6]See Ewan Claque, "The Economics of Construction," Constructor, February 1965; and, P. J. Cassimatis, "Economies of Scale in Construction," Fairleigh Dickenson University Business Review, Winter 1967.

An excellent discussion of Sources of Economies of Scale in House Construction is also contained in "Economics of the Construction Industry," The Conference Board, National Industrial Conference Board, Inc. New York, 1969.

Proposed Supplemental Programs

Supplemental programs proposed for support of the residential construction sector of the building construction industry fall into two distinct program categories; residential construction technology and residential construction management. Both program areas have been developed within the broad guidelines contained in Chapter 3, "A Suggested Approach to Curriculum Development in Building Construction Technology."

Three closely related supplemental programs are proposed under the general heading Residential Construction Technology; they are:

1) A 2-year cooperative work study program leading to the Associate of Applied Sciences Degree in Residential Construction Technology.
2) A 1-year Certificate program in Residential Construction Technology.
3) Continuing and adult education courses designed for rapid response to basic skills development on an area demand basis.

The 2-year Residential Construction Technology program is designed to equip the successful graduate with technical knowledge, a practical outlook, and management ability as applied to the residential construction industry. Development of basic/entry level skill in one of the principal occupational areas of residential construction (i.e., carpentry, plumbing, electrical) is made possible through the cooperative training phase.

Relatively long-term exposure to the construction site, in an actual working employee status, affords an opportunity to observe the inter-relationships which exist among the various crafts operating on a construction site. Practical experience is gained in understanding construction site problems, how they develop and how they are resolved. Primary objectives of the program are:

1) To provide enhanced employment opportunity through development of entry level skills in an industry related skill area.

2) To prepare students to assume supervisory/management positions in the residential construction industry following appropriate periods of experience.

Suggested supporting curriculums for this program are outlined in Chapter 6 of this study. Expanded curriculum guides along with suggested instructional materials are contained in Appendix A. Functions which graduates of this program may be expected to perform are:[7]

1) Help plan, supervise, or inspect construction of residential structures.

2) Help plan construction processes, work as a member of the management team; assume responsibility for the efficient use of manpower, materials, and equipment on the construction site.

---

[7]Adapted from "Occupational Criteria and Preparatory Curriculum Patterns in Technical Education Programs (OE-80015), U.S. Office of Education, Washington, D. C. 20202.

3) Advise, plan, and estimate the cost of selected operations.

4) Assume responsibility for supervision or inspection of residential construction projects; prepare technical reports covering supervision or inspection.

5) Design, develop, or plan modifications of residential construction procedures, techniques, or processes.

6) Prepare or interpret engineering drawings and sketches, or write detailed specifications relating to certain phases of construction.

7) Analyze and interpret information obtained from site inspections. Make decisions based on these evaluations.

8) Select, compile, and use technical information from references such as engineering standards, handbooks, specifications, and technical digests.

Examples of some of the jobs which may be available to graduates of the Residential Construction Technology program are: construction foreman, construction site coordinator, construction site manager or assistant, building supplies salesman, estimator, inspector, or contractor.

The 1-year Certificate program in Residential Construction Technology consists of both the cooperative training phase, (or practicum), and the technical courses prescribed for the first two semesters of the Residential Construction Technology curriculum. The objective of the 1-year option is to prepare the graduate to become a productive employee

at the entry level in the construction industry. Practical work experience and manipulative skill development are attained on the job in the cooperative training phase. Related learning experiences are provided through classroom instruction and outside study. This program is designed to serve as a suitable alternative to formal apprenticeship for persons to whom apprenticeship is not available.

The third program suggested under the heading of Residential Construction Technology is concerned with minimal skill development only. The objective of this program is to provide improved response to the short-term manpower needs typically associated with cyclical construction requirements. Programs of the type required have been developed by the various military services (Army, Navy, Air Force) for the purpose of providing quick response to manpower needs. Complete packaged programs for minimal skill development in any of the building trades can be obtained by request to the appropriate military departments. These packaged courses can be presented, on a demand basis, through programs in continuing and adult education. A suggested alternative is that these courses be offered in area vocational schools or in local high schools in cases where these institutions are better equipped to provide the necessary facilities.

The Residential Construction Management program is designed to prepare students for careers in residential construction enterprises as members of the management team. It has been developed as a parallel

to the 2-year Residential Construction Technology program, and leads to the Associate of Applied Sciences Degree in Residential Construction Management. Although many aspects of the programs are identical distinct differences exist in the objectives which the two programs seek to serve: the Residential Construction Technology program is tailored to the needs of persons planning to enter the operations side of the residential construction business while emphasis in the Residential Construction Management program is on business, finance, office procedures, and general management conditions as they specifically relate to residential construction enterprises. Graduates of this program will be qualified for employment as contractor's assistants, estimators, quality control inspectors, contractors, office managers, construction site coordinators, etc. The primary objective of this program is to provide the necessary background upon which graduates can build successful careers in the management of residential construction enterprises.

The total number of training stations available for the practicum in small cities will sometimes determine the number of students that can be accepted in the Residential Construction Technology program. Since experience on the construction site is absolutely essential to this program every effort should be made to obtain sufficient training stations to accommodate the student load. When sufficient stations are not available excess Technology applicants may enroll in the Management program. This important dual role for Residential Construction Management should not be overlooked by institutions considering implementation of residential construction programs.

A Related Problem in Program Awareness

A problem of potentially serious consequence for post-secondary vocational education is becoming increasingly evident as new programs are entered into the total program inventory. The problem involves program awareness. Without effective procedures for getting program information to potential users no program can fully serve the purposes for which it is intended.

The infusion of large sums of money into vocational education in recent years has resulted in the development and implementation of a wide range of new programs. In vocational education programs are directed toward development of the practical knowledge required in specific occupational areas. The overall objective is to enhance the ability of the student to obtain employment in a clearly defined area of employment, and to provide a sound base for successful career development within a chosen career field. The Dictionary of Occupational Titles currently describes more than 18,000 separate occupations and the list is still growing. While vocational programs will obviously not be developed for each of these separate occupations the total number of possibilities can be used to effectively illustrate the potential magnitude of the problem. Vocational programs cannot achieve their goals without the development of adequate program information systems. There is considerable evidence that present systems have reached their effective limits.

Implementation of new programs increases the competition for top quality students. As greater numbers of institutions seek to provide students with information on a wider range of program offerings related problems are generated for public school administrators. The multitude of program promoters has expanded beyond the time limits which public school officials can accommodate. The reaction has ranged from the complete closing of some high school campuses to such presentations through the resort to such innovations as "Career Days" and "Senior Days." None of these approaches solve the problem of getting adequate information to appropriate students in order that they can make better informed decisions regarding the important matter of careers.

The problem of program awareness is of sufficient significance to vocational education to warrant a high priority committment in terms of formal research effort. The study should be sufficiently broad in scope to provide for a concurrent development of the appropriate media for support of the recommended program information system.

SUGGESTED SUPPORTING CURRICULUMS

Introduction

The curriculums described herein have been developed specifically to accommodate the program objectives identified in Chapter 5 of this report, "Recommended Supplemental Programs."

The three principal components around which the curriculums have been designed are:

1) The training should prepare the graduate to be a productive employee in an entry level job.
2) The broad technical training, together with a reasonable amount of experience, should enable the graduate to advance to positions of increasing responsibility.
3) The foundations provided by the training should be broad enough to enable the graduate to do further study within his field. In addition to reading and understanding technical journals, texts, and other reference materials, the foundation should be sufficient to support and encourage enrollment in other formal courses and programs in the pursuit of professional competence.

In each of the curriculums the sequence of courses is of critical importance. The subject matter is carefully coordinated so that the student may progress smoothly from one level of understanding to the next. Another major consideration has been the desire to arrange the

courses in such a way that any student who departs the program at any point prior to graduation will have improved his potential for employment within the industry as a direct consequence of the portion of the program which he has completed.

Expanded curriculum guides, developed during conduct of the pilot program, have been prepared for both Residential Construction Technology and Residential Construction Management. Instructional aids such as suggested primary texts, course outlines, training films, additional reference materials, and transparency masters are included, as appropriate, for individual courses contained in each of the curriculums. The curriculum guides are contained in Appendix A and Appendix B of this report.

The remainder of this chapter contains an overview of the suggested curriculums and a brief description of the courses contained in each.

RESIDENTIAL CONSTRUCTION TECHNOLOGY

DESCRIPTION OF COURSES

FIRST SEMESTER

Principles of Residential Construction

This course entails a study of the basic principles involved in residential construction. It introduces the student to the principal factors which must be considered during each of the major phases of the residential construction process from bare lot to the finished structure. Topics include: location and excavation, concrete and masonry, framing, exterior and interior finish, roofing, wall and floor coverings, electrical, heating, and air conditioning systems and plumbing.

Blueprint Reading

This course is designed to acquaint the student with the purpose, function and proper use of blueprints. Topics include: working drawings, reading drawings, elevations, floor plans, symbols, scales and dimensions, structural information, reading detail drawings and plot plans.

Special emphasis is placed on such subjects as: How blueprints reflect architectural progress, how specifications amplify blueprints, how blueprints vary with the purpose of the structure, and how material variations affect blueprints.

Fundamentals of Mathematics

This course provides an in-depth review and additional refinement of the use of whole numbers, fractions, percentages, ratio and proportion, areas and volumes. It introduces various short methods for rapid calculations and explains the advantages and disadvantages of their use in construction-related activities. It provides a basic review of algebra and the algebraic functions used in construction. Emphasis throughout the course is on the understanding of basic processes.

Construction Surveying

This is an introductory course in the principles of surveying which focuses on the elements of surveying most directly related to residential construction. Some of the major areas of concern in this course are: principles and use of the engineer's transit, theory and practice of leveling, the proper maintenance and use of field notebooks, field layout of structures and field staking for earth-work.

Construction Practicum I

The Construction Practicum is designed to provide students with an opportunity to gain first-hand knowledge of work processes as they actually occur in residential construction. Satisfactory completion of both Practicum I and Practicum II should be a positive program requirement for all students electing the Technology option, either in the Certificate program or the Associate Degree program. The Practicum also serves as the skill development phase of the Certificate program

and the Associate Degree programs in Residential Construction Technology. Through the use of on-the-job training measures, the Practicum provides an opportunity for each student to develop a basic entry-level skill in one of the principal crafts of the residential construction industry.

SECOND SEMESTER

Introduction to Estimating

This course introduces the student to the basic methods of estimating and develops a system for doing quantity surveys. The course also prepares the student to make some of the kinds of estimates that are commonly used in residential construction.

Residential Construction Materials and Processes

This course is a broad survey of the materials used in the various processes of residential construction. It is designed to familiarize the student with the components of modern construction so that he can select the materials best suited for the application, whether from the standpoint of durability and serviceability or from that of appearance, or both.

Communication Skills

A study of the basic skills of writing; foundation work in the principles of grammar, punctuation, and sentence structure. Includes drills in spelling, exercises in vocabulary development, and practice

in writing effective sentences. The course should provide analysis of each student's strengths and weaknesses, and instruction should be aimed at remedying the most serious deficiencies.

Introduction to Business

This is a survey-type course which examines the characteristics of business organization, the records of business, problems of marketing, personnel, finance, decision making, and the legal and regulatory environment of business. Special emphasis is placed on defining the responsibilities of business in regard to such nonprofitable activities as employing the disadvantaged, promoting civic and educational projects and fighting pollution.

Construction Practicum II

This course is a continuation of the student development concepts initiated in Construction Practicum I. The work experiences gained during Construction Practicum I and II should result in student acquisition of an entry-level skill in one of the principal areas of employment in residential construction, and serve as a base for further individual development as each student acquires additional experience within the industry.

THIRD SEMESTER

Residential Construction Estimating

This course requires that the student utilize knowledge gained in previous courses to develop realistic estimates of the cost factors which will ordinarily be experienced in the residential construction process. It provides for the study of estimating from the viewpoint of the general contractor, sub-contractor, general superintendent, and the professional construction estimator.

Business Mathematics

A study of the fundamental processes, common and decimal fractions, bank statement reconciliations, aliquot parts percentage, cash and trade discounts, simple and compound interest, notes and drafts, billing procedures, mark-up, commissions, profit and loss, payrolls, social security and other taxes. Emphasis is on practical problems in the various fields of business.

Introduction to Architectural Drawing

This course intorduces representation in residential construction. It covers the fundamentals of drafting, including projection, sectioning, pictorial drawings, and architectural representation. It is comprised of both lecture (or classroom) periods, wherein fundamentals and principles are introduced, and laboratory periods which provide opportunity to participate in exercises involving these principles.

Elements of Structural Design

This course intorduces the student to the basic principles of statics and to the effects of loads and loading on building elements and frames. Methods are developed for determining preliminary sizes of certain key building elements, knowledge of which is essential to proper building layout and design.

Contracts, Codes, Specifications and Office Practices

This course explains the organization and operation of a typical small- to medium-size residential construction contractor's office. It includes the study of office practices, bookkeeping and accounting methods, and general office administration. Considerable attention is devoted to the study of the codes, restrictions, standards, and the legal documents governing construction. Students are introduced to the interpretation and preparation of specifications, and to the application of CPM as a method for controlling construction projects.

FOURTH SEMESTER

Construction Planning and Control

A course in residential construction planning and control which deals with information on the materials, labor, and equipment necessary in the proper operation of a construction project. The course covers building construction procedures from preliminary site planning to

final job inspection and introduces the most frequently used methods of construction job scheduling. The course shows how the proper combination of men, materials, and machines can be used to construct residential structures successfully.

Business Speech

This is designed to be a practical and general course in the basic principles of oral communication. Includes use of body and voice, the speaker-listener relationship, oral reading of literature, group discussion, and parliamentary procedure. Diagnostic testing of students should be included and instruction should be planned to help students improve skills in which they are weak. Stress should be placed on interpersonal relationships, technical reports, speeches to promote sales and services, and business and job interviews.

History of Architecture and Construction

This course is designed to afford the student an opportunity to survey all of the major styles of architecture which have been used in residential construction from early times to the present. It focuses special attention on styles which are in current use, and encourages detailed study of residential construction developments in the geographical area where the course is being presented. Opportunity is provided for students to make in-depth studies of selected architectural design or structural methods.

Business Communication

A detailed study of business communications from the standpoint of arrangement and content of letters of inquiry, orders, credit, applications, sales, claims and adjustments. Emphasis on grammar and mechanics of writing.

RESIDENTIAL CONSTRUCTION MANAGEMENT

DESCRIPTION OF COURSES

FIRST SEMESTER

Principles of Residential Construction

This course entails a study of the basic principles involved in residential construction. It introduces the student to the principal factors which must be considered during each of the major phases of the residential construction process; from bare lot to the finished structure. Topics include: location and excavation, concrete and masonry, framing, exterior and interior finish, roofing, wall and floor coverings, electrical, heating, and air conditioning systems and plumbing.

Blueprint Reading

This course is designed to acquaint the student with the purpose, function and proper use of blueprints. Topics include: working drawings, reading drawings, elevations, floor plans, symbols, scales and dimensions, structural information, reading detail drawings and plot plans.

Special emphasis is placed on such subjects as: how blueprints reflect architectural progress, how specifications amplify blueprints, how blueprints vary with the purpose of the structure, and how material variations affect blueprints.

Fundamentals of Mathematics

This course provides an in-depth review and additional refinement of the use of whole numbers, fractions, percentages, ratio and

proportion, areas and volumes. It introduces various short methods for rapid calculations and explains the advantages and disadvantages of their use in construction-related activities. It provides a basic review of algebra and the algebraic functions used in construction. Emphasis throughout the course is on the understanding of basic processes.

Construction Surveying

This is an introductory course in the principles of surveying which focuses on the elements of surveying most directly related to residential construction. Some of the major areas of concern in this course are: principles and use of the engineer's transit, theory and practice of leveling, the proper maintenance and use of field notebooks, field layout of structures and field staking for earth-work.

Introduction to Business

This is a survey-type course which examines the characteristics of business organization, the records of business, problems of marketing, personnel, finance, decision making, and the legal and regulatory environment of business. Special emphasis is placed on defining the responsibilities of business in regard to such nonprofitable activities as employing the disadvantaged, promoting civic and educational projects and fighting pollution.

SECOND SEMESTER

Introduction to Estimating

This course introduces the student to the basic methods of estimating and develops a system for doing quantity surveys. The course also prepares the student to make some of the kinds of estimates that are commonly used in residential construction.

Residential Construction Materials and Processes

This course is a broad survey of the materials used in the various processes of residential consruction. It is designed to familiarize the student with the components of modern construction so that he can select the materials best suited for the application, whether from the standpoint of durability and serviceability or from that of appearance, or both.

Communication Skills

A study of the basic skills of writing; foundation work in the principles of grammar, punctuation, and sentence structure. Includes drills in spelling, exercises in vocabulary development, and practice in writing effective sentences. The course should provide analysis of each student's strengths and weaknesses, and instruction should be aimed at remedying the most serious deficiencies.

Business Mathematics

A study of the fundamental processes, common and decimal fractions, bank statement reconciliations, aliquot parts percentage, cash and trade discounts, simple and compound interest, notes and drafts, billing procedures, mark-up, commissions, profit and loss, payrolls, social security and other taxes. Emphasis is on practical problems in the various fields of business.

Business Speech

This is designed to be a practical and general course in the basic principles of oral communication. Includes use of body and voice, the speaker-listener relationship, oral reading of literature, group discussion, and parliamentary procedure. Diagnostic testing of students should be included and instruction should be planned to help students improve skills in which they are weak. Stress should be placed on interpersonal relationships, technical reports, speeches to promote sales and services, and business and job interviews.

Management Processes

This is a basic course in the principles of management. It is designed to familiarize the student with the role of the manager in modern business enterprises. Provides instruction in organizational designs, human relations, decision making, communications, leadership techniques, and enterprise control. Emphasizes initiative, individual research, and group discussion.

THIRD SEMESTER

Residential Construction Estimating

This course requires that the student utilize knowledge gained in previous courses to develop realistic estimates of the cost factors which will ordinarily be experienced in the residential construction process. It provides for the study of estimating form the viewpoint of the general contractor, sub-contractor, general superintendent, and the professional construction estimator.

Introduction to Architectural Drawing

This course introduces representation in residential construction. It covers the fundamentals of drafting, including projection, sectioning, pictorial drawings, and architectural representation. It is comprised of both lecture (or classroom) periods, wherein fundamentals and principles are introduced, and laboratory periods which provide opportunity to participate in exercises involving these principles.

Elements of Structural Design

A course which familiarizes the student with the mechanical properties of materials and the relationship and use of these materials in residential and construction processes. Subjects include stress, deformation, member size and investigation, and connections. Typical members used

in residential frameworks are studied, analyzed, and discussed. The material presented makes it possible for the student to understand the interaction of the various elements used in a framing system.

Contracts, Codes, Specifications and Office Practices

This course explains the organization and operation of a typical small- to medium-size residential construction contractor's office. It includes the study of office practices, bookkeeping and accounting methods, and general office administration. Considerable attention is devoted to the study of the codes, restrictions, standards, and the legal documents governing construction. Students are introduced to the interpretation and preparation of specifications, and to the application of CPM as a method for controlling construction projects.

Principles of Accounting I

An introductory accounting course designed to furnish a general knowledge of accounting principles and procedures. Examination of present-day accounting theory and practices with application to the sole proprietorship. This is the first of a two-course series in basic accounting procedures.

FOURTH SEMESTER

Construction Planning and Control

A course in residential construction planning and control which deals with information on the materials, labor, and equipment necessary in the proper operation of a construction project. The course covers the building construction procedures from preliminary site planning to final job inspection and introduces the most frequently used methods of construction job scheduling. The course shows how the proper combination of men, materials, and machines can be used to construct residential structures successfully.

Business Communication

A detailed study of business communications from the standpoint of arrangement and content of letters of inquiry, orders, credit, applications, sales, claims and adjustments. Emphasis on grammar and mechanics of writing.

History of Architecture and Construction

This course is designed to afford the student an opportunity to survey all of the major styles of architecture which have been used in residential construction from early times to the present. It focuses special attention on styles which are in current use, and encourages detailed study of residential construction developments in the geographical

area where the course is being presented. Opportunity is provided for students to make in-depth studies of selected architectural design or structural methods.

Principles of Accounting II

A continuation of "Principles of Accounting I." This course extends the application of accounting theory andpractice to partnerships and corporations, manufacturing operations, cost determination, and financial statement analysis.

PROGRAM EVALUATION

A vast amount of interest in the evaluation of vocational and occupational programs has developed in recent times. As the amount of public funds expended on such programs increases, there will likely occur a corresponding increase in the need to assure that the money is spent with the greatest efficiency for society's ultimate welfare. Program evaluation at the state and national levels will undoubtedly be expanded significantly in years to come. Quite obviously the data for such evaluation must originate at the institutional level. For this reason, as well as for other more commonly accepted reasons, it becomes important that institutions implementing new vocational programs develop plans for the accumulation of certain student and program data concurrently with planning for the new program. At the institutional level evaluation is important because it provides evidence about the relative merits of programs thus enabling administrators to make more rational decisions about the theories and practices of program development and operation. In the Texas community college system institutions are committed to providing for the educational needs of the locality which they serve, thus programs are quite often modified to better serve local objectives. It follows therefore that program evaluation must be conducted on the same basis. In the development of local program

evaluation procedures, however, attention should be directed toward a concurrent accumulation of the types of data which can be anticipated as a reporting requirement in state or federal program evaluation systems which may be implemented in the future. For the most part such systems will be concerned with the student and what has happened to him since he left the program, and with the program itself; what did the program contribute to the students' development?

Although admittedly rudimentary in concept two separate evaluation instruments are included at the end of this Chapter which can well serve as a starting point for this important function. Each interested institution can build from this base within the limits of its requirements and capabilities. The evaluation instruments contained herein are:

1. Pre-Tests and Post-Tests For Residential Construction Programs. The purpose of this two-part instrument is to provide information on the increase in technical knowledge which may be attributable to participation in the program.
2. A Follow-Up Survey of Former Students. The objective of this instrument is to obtain feedback on how well the program has served the expectations of students who have left the program, whether as drop-outs, by transfer to other programs, or as program graduates.

The pre-test/post-test should be administered to each new student at the time of admittance to the program, and again at the time the student leaves the program. The information obtained can provide much useful data on the effectiveness of the program in terms of increased technical knowledge. In addition, data obtained from individual students can be compared to that obtained later through the follow-up survey.

It is suggested that the follow-up survey be administered at the 90 day, 1 year, and 5 year intervals subsequent to departure from the program. This practice will provide a more expanded time frame on which to evaluate the program's contribution to student development.[1]

---

[1] For persons interested in the development of more sophisticated program evaluation procedures the following documents should prove especially helpful:

Jerome Moss, Jr., "The Evaluation of Occupational Education Programs." A Technical Report. Research Coordination Unit in Occupational Education. University of Minnesota, May 1971.

David N. Wheeler, "The Measurement of Job Relatedness For Vocational Program Evaluation." Research Coordination Unit For Vocational Education. University of Minnesota, April 1969.

Harold Starr, "A System For State Evaluation of Vocational Education." A Research Report. Research Series No. 45. Ohio State University Center for Vocational and Technical Education, August 1969.

FOLLOW-UP SURVEY OF FORMER STUDENTS, RESIDENTIAL CONSTRUCTION PROGRAMS, PARIS JUNIOR COLLEGE PARIS, TEXAS

This survey is being conducted to obtain first-hand information on which to base decisions as to the direction the Residential Construction programs should take in the future. Your answers can be of critical importance to future enrollees. We would greatly appreciate your responses to the questions contained in this survey and would be equally appreciative of your constructive criticisms at any time. If you have information or experiences which you feel would be of value to us in the conduct of this program, please get in touch--we will make the necessary arrangements to get the data into a usable format.

STUDENT AND PROGRAM IDENTIFICATION

_____ _____ _____

/_/ Residential Construction Technology, Certificate Program (1-year)

/_/ Residential Construction Management, Associate Degree (2-year)

Is the information concerning student and program identification correct as printed on page one? Yes /_/ No /_/ If your answer is "No", please enter corrected information in the spaces provided below:

STUDENT AND PROGRAM IDENTIFICATION

Social Security Number _____

_____ _____ _____
LAST NAME FIRST NAME MIDDLE INITIAL

Address _____
Number and Street or Rural Route

_____
City, Town or Post Office State Zip Code

Program Pursued at PJC:

/_/ Residential Construction Technology, Associate Degree (2-year)

/_/ Residential Construction Technology, Certificate Program (1-year)

/_/ Residential Construction Management, Associate Degree (2-year)

Directions: Please use an "X" in the appropriate box to indicate your response to the following questions.

1. Did you complete the indicated program while a student at PJC?
   /_/ Yes /_/ No

2. If your response to Question #1 was "No", why did you leave the program?
   /_/ To enter another program at PJC
   /_/ Changed schools
   /_/ Dropped out of school
   /_/ Other. Please explain: _____

   _____

3. Since you left this program, did you seek full-time employment (30 or more hours per week)?
   /_/ Yes /_/ No

4. If you did not seek full-time employment when you left this program, please indicate the reason:
   /_/ Entered another school
   /_/ Physical or other handicap
   /_/ Not interested in job at that point in time
   /_/ Desired only part-time employment (less than 30 hours per week)
   /_/ Became self-employed
   /_/ Other (Specify.) _____

   _____

5. Did you seek part-time employment (less than 30 hours per week) when you left this program?
   /_/ Yes /_/ No

6. If you sought part-time employment instead of full-time employment when you left this program, please indicate the reason:
   /_/ Entered another program at PJC
   /_/ Entered another school
   /_/ Physical or other handicap
   /_/ Not interested in a full-time job
   /_/ Unable to find a full-time job
   /_/ Other (Specify.) _____

   _____

7. How many full-time jobs (30 or more hours per week) have you held since you left this program?
   /_/ None
   /_/ One full-time job
   /_/ Two full-time jobs
   /_/ Three to five full-time jobs
   /_/ Six or more full-time jobs

NOTE: If your answer to Question #7 was "None", skip to Question #15.

8. If you got a full-time job when you left this program:
   What was your job? _____

   _____

9. How closely did your first full-time job (30 or more hours per week) after leaving this program relate to the training you received? (Check only one.)
   /_/ I was employed in the occupation for which I was trained by this program.
   /_/ I was employed in a related occupation.
   /_/ I was employed in a completely different occupation.

10. Did this program adequately prepare you for your first full-time job after leaving this training?
/_/ Yes /_/ No

11. What was your beginning hourly wage on your first full-time job since leaving this program?
(Check only one.)
/_/ $2.00 or less per hour
/_/ $2.00 to $3.00 per hour
/_/ $3.00 to $4.00 per hour
/_/ $4.00 to $5.00 per hour
/_/ $5.00 to $6.00 per hour
/_/ $6.00 or more per hour
/_/ Salaried position

12. What is the most you have earned on a full-time job since leaving this program?
(Check only one.)
/_/ $2.00 or less per hour
/_/ $2.00 to $3.00 per hour
/_/ $3.00 to $4.00 per hour
/_/ $4.00 to $5.00 per hour
/_/ $5.00 to $6.00 per hour
/_/ $6.00 or more per hour
/_/ Monthly wage or salary. Amount per month _____

13. How did you get your first full-time job after leaving this program?
(Check appropriate box or boxes below.)
/_/ I got the job myself.
/_/ My family or friends helped me get the job.
/_/ The job placement services provided by the school helped me get the job.
/_/ A state employment service helped me get the job.
/_/ A private employment agency helped me get the job.
/_/ Other (Specify.) _____

_____

14. Indicate below the location of your present or more recent full-time employment.

_____
Village, Town, or City

_____
County State

15. What is your current employment status?
(Check the appropriate box or boxes below.)

/_/ I am employed
  /_/ full-time (30 or more hours per week)
  /_/ part-time (less than 30 hours per week)
/_/ I am unemployed,
  /_/ but looking for work
  /_/ and not looking for work
/_/ I am in the military service

16. If you are presently working:
What is your job? _____

_____

17. What wages are you presently earning?
(Check one box below.)

/_/ $2.00 or less per hour
/_/ $2.00 to $3.00 per hour
/_/ $3.00 to $4.00 per hour
/_/ $4.00 to $5.00 per hour
/_/ $5.00 to $6.00 per hour
/_/ $6.00 or more per hour
/_/ Monthly wages or salary

18. As best you know, what type(s) of job placement service(s) were provided by the school and the vocational program in which you were enrolled?

/_/ School had no placement services
/_/ A school placement service coordinated with the State Employment Service
/_/ Vocational Teachers helped place students in jobs by making referrals
/_/ Guidance Counselors helped students find jobs.
/_/ Other (Specify.) _____

_____

19. Were you satisfied with the vocational training you received in this program?

/_/ Yes /_/ No

20. Would you recommend this vocational program to others?

/_/ Yes /_/ No

21. Since you left this vocational program, have you enrolled in any additional education program(s)?

/_/ Yes /_/ No

If yes, check type(s) and purpose(s) below:

/_/ General education program(s)

/_/ To raise my general education level

/_/ Informal, noncredit course(s)

/_/ Vocational program(s)

/_/ To upgrade the vocational skills previously learned in this program

/_/ To learn a new occupation

22. If you did enroll for additional education after leaving this vocational program, have you received (or do you expect to receive) one or more of the following:

/_/ Yes /_/ No

If yes, check type(s):

/_/ A certificate (type) _____

/_/ A diploma (type) _____

/_/ A two-year associate degree (major) _____

_____

/_/ A four-year college degree (major) _____

_____

/_/ Other (Specify.) _____

_____

23. Are you now enrolled in a vocational program?

/_/ Yes /_/ No

24. Are you now enrolled in any educational program(s) other than vocational?

/_/ Yes /_/ No

25. Are you interested in getting more vocational training?

/_/ Yes /_/ No

26. Are you interested in getting more general education?

/_/ Yes /_/ No

27. If you are interested in getting more training of any kind, indicate the type you are interested in:

_____

_____

28. How much effect would you say this program has had on your ability to get and hold a job?
    /_/ Greatly improved my chances
    /_/ Somewhat improved my chances
    /_/ No noticeable effect

29. Of what value do you feel this program has been in helping you to establish some realistic long-range employment goals?
    /_/ Extremely helpful
    /_/ Somewhat helpful
    /_/ No noticeable effect

30. Based on your personal observations to date, which courses in the program do you think have contributed the most to your chances for long-range success?
    /_/ Technical courses
    /_/ General academic courses
    /_/ Other related courses

31. While enrolled in this program did you participate in the "practicum"?
    /_/ Yes /_/ No
    If yes, how important would you say the practicum was in preparing you for your present employment?
    /_/ Extremely helpful
    /_/ Somewhat helpful
    /_/ No noticeable effect
    For achieving your long-range objectives?
    /_/ Extremely helpful
    /_/ Somewhat helpful
    /_/ No noticeable effect

PRE-TEST/POST-TEST

PRINCIPLES OF RESIDENTIAL CONSTRUCTION

1. The two-slope roof is called: (A) hip (B) mansard (C) gambrel (D) flat.

2. A true Cape Code-style house is a low, simple house with the major rooms on the first floor and a (A) hip roof (B) low gable roof that may have dormers (C) mansard roof (D) high-pitched roof with massive chimney.

3. Present-day windows which are divided into small panes are (A) easier to clean than single panes (B) imitation of windows of days gone by when large sheets of glass were hard to get (C) less expensive than wi-dows with a single pane.

4. The type of house most frequently built today is the (A) split-level house (B) two-story house (C) one-and-a-half story house (D) one-story house.

5. The house that costs less per sq. ft. of living space to build is the (A) split-level house (B) one-story house (C) two-story house (D) house with a basement.

PRE-TEST/POST-TEST
PRINCIPLES OF RESIDENTIAL CONSTRUCTION
page 2

Figure A
(To be used in answering questions 6, 7, 8, 9 and 10)

Figure A

6. The lot slopes down to the (A) Northeast (B) Northwest (C) Southeast (D) Southwest corner.

7. If the city datum point in this area has an elevation of 100 feet, then the first floor of the finished house will be (A) 14' (B) 13' (C) 114' (D) 10' above the city datum point.

8. The location and grade level is shown for what number of trees? (A) 8 (B) 9 (C) 10 (D) 11.

9. The southeast corner of the completed driveway will be (A) 1.4' higher (B) 0.6' higher (C) 1.4' lower (D) 0.6' lower than the existing grade level at that spot.

PRE-TEST/POST-TEST
PRINCIPLES OF RESIDENTIAL CONSTRUCTION
page 3

10. Both the existing and the new contour lines are at elevation intervals of (A) one foot (B) two feet (C) ten feet (D) fifty feet.

11. The point of known elevation or height from which a surveyor works is known as a (A) standard city elevation (B) city datum point (C) average elevation point.

12. The curved, numbered lines showing elevations on a survey drawing are called (A) contour lines (B) datum lines (C) elevation lines.

13. The footing acts as a base for the foundation and transmits the superimposed load to the (A) sill (B) studs (C) soil (D) mud sill.

14. A good rule for determining the width of the footing is (A) 2" wider than the foundation wall (B) as wide as the foundation wall is tall (C) twice as wide as the foundation wall.

15. In a full basement the walls are approximately (A) 10 ft. high (B) 6 ft. high (C) 7 ft. high.

16. Step footing is used when (A) you have a basement (B) on all two-story buildings (C) when the building is built on a slope.

17. Reinforcing rods are one way to tie wall and footing together; the other method is (A) key way (B) race way (C) run way.

18. Which of the following types of foundation is the most economical? (A) full basement foundation (B) crawl-space foundation (C) slab on grade foundation.

19. Brick ledges are usually how wide? (A) 5" (B) 5 1/2" (C) 6".

20. Concrete is usually figured by (A) cu. ft. (B) cu. yd. (C) sq. yd.

21. Vapor barrier is used under slab to (A) keep ground dry if a water pipe leaks (B) keep moisture in the ground from reaching the concrete slab (C) keep concrete from curing too fast.

22. All reinforcements should be covered by at least (A) 1/2" (B) 1" (C) 1 1/2" of concrete.

PRE-TEST/POST-TEST
PRINCIPLES OF RESIDENTIAL CONSTRUCTION
page 4

23. Control joints in concrete (A) keep concrete from cracking (B) keep cracks small (C) create weak places so as to control place of cracking of slab.

24. Reinforcing steel in concrete (A) prevents concrete from cracking (B) helps prevent cracks from opening (C) is used to keep concrete from sagging in center of building.

25. The generally-accepted best method of anchoring sill to concrete wall or slab is (A) lead anchors and screws (B) concrete nails (C) anchor bolts (C) shoot down.

26. Subflooring laid diagonally over wood joists gives the floor (A) less strength (B) more strength (C) makes no difference.

27. If a girder or beam is used in a pocket in a foundation wall, an air space should be left so that the girder (A) will go in easy (B) will come out easy (C) can dry out in case it picks up moisture.

28. Bridging is used in floor joists to (A) help take care of knots in lumber (B) take care of joists that are not the same width (C) stiffen joists and help distribute weight.

29. In wet areas, water around the footing can be removed by (A) use of footing drain tile laid in a bed of gravel (B) extending brick down to bottom of footing (C) compacting soil so no water can seep in.

30. To add strength to concrete, you (A) add lots of water (B) let it start to set up before placing (C) place with the proper amount of water for mixing.

31. Batter boards are (A) used to locate outside of foundation (B) used to prevent lumber from being stacked where building is to be constructed (C) always 18" above finish grade.

32. If the legs of a right triangle measure 6' and 8', then the hypoteruse will measure (A) 9' (B) 10' (C) 10' 6".

33. The corners of a rectangle are 90 degrees when (A) the opposite sides measure the same (B) opposite sides are parallel (C) if the diagonal distances are the same.

PRE-TEST/POST-TEST
PRINCIPLES OF RESIDENTIAL CONSTRUCTION
page 5

34. Which of the following climatic areas is best suited for pier construction? (A) very cold climate (B) wet, mild climate (C) very windy areas.

35. In platform framing, the subfloor (A) stops at the inside edge of bottom plate (B) goes under bottom plate 1/2 width of bottom plate (C) extends to outside edge of bottom plate.

36. Platform framing is easier to erect because (A) there is only one top plate (B) the studs are longer (C) you have a flat surface to work on.

37. In platform construction you have (A) one bottom and two top plates (B) two bottom and one top plates (C) one bottom and one top plates.

38. In which of the following ways are platform construction and slab construction most similar? (A) from slab or subfloor up (B) both have box sill (C) both have floor joists.

39. In Balloon Construction the studs sit on (A) bottom plate (B) sill (C) directly on foundation.

40. In Balloon Construction the second-floor joists rest on (A) two top plates (B) a ribbon set in edge of studs (C) a 2x12 beam going all around building.

41. In making one type of standard outside corner, you use (A) three studs and blocks (B) only two studs (C) all studs are shorter than standard.

42. In Balloon Construction of a two-story house (A) the studs are not cut at second floor (B) the studs have to be 4"x4" (C) twice as many studs are used as are used in platform construction.

43. In nailing bridging to floor joists, you use (A) two 8D nails at each end of bridging (B) two 16D nails at one end, and two 8D nails at other end (C) one 16D nail at each end.

44. A "T" is used (A) where two walls join together at ends (B) where one wall intersects another at a right angle (C) where wall and the roof intersect.

PRE-TEST/POST-TEST
PRINCIPLES OF RESIDENTIAL CONSTRUCTION
page 6

45. Headers over windows and doors should always be 2x4. True or False.

46. Nails hold best when stress is applied (A) at right angle to nail (B) parallel to nail.

47. Sheathing applied diagonally is (A) more rigid (B) of no value to walls (C) less expensive to install.

48. 2x6 studs are used in some interior walls to (A) add strength to support roof (B) take care o. plumbing (C) make doors stronger.

49. Post-and-beam construction requires (A) less interior wall (B) more interior walls (C) that no windows be installed in gable end of house.

50. In post-and-beam construction, planking is used as decking (A) because of the distance to be spanned (B) for appearance (C) because planking is 12" wide.

51. Shrinkage is less in two-story balloon framing than in platform framing because (A) studs rest on sill (B) studs cover both floors (C) ceiling joists are longer.

52. In rough-door buck, the header is supported on each end by (A) cripples or trimmers (B) regular studs (C) does not rest on anything.

53. In post-and-beam construction, ceiling beams are (A) not over 2 ft. apart (B) as much as 10 ft. apart (C) always 2x6.

54. The shed roof (A) sheds water two ways (B) sheds water one way (C) has no pitch at all.

55. Lookout rafters are used to (A) support ridge board (B) support roof that extends beyond outside wall (C) support hip rafters.

56. Which type of roof has a double pitch? (A) hip (B) gable (C) gambrel (D) shed.

57. Jack rafters are used in connection with hip and valley roof construction. True or False.

PRE-TEST/POST-TEST
PRINCIPLES OF RESIDENTIAL CONSTRUCTION
page 7

58. Solid sheathing which is not end matched must (A) joint over rafter or trusses (B) joint between rafter or trusses (C) be parallel to rafter or trusses.

59. Name four types of rafters:

A.

B.

C.

D.

60. What is the total rise of a roof if the pitch is 1/3 and span is 36'?

_____

61. The distance from outside to outside of the top plates is called (A) run (B) span (C) rise.

62. When 2x6s are used, the seat cut of rafters should be at least (A) 3" (B) 5" (C) 2".

63. The plumb cuts of a rafter are made at tail, at ridge board, and at the birds mouth. True or False.

64. Collar beams help to stiffen (A) studs (B) ceiling joists (C) rafters.

65. Trusses require More Less bearing wall partitions.

66. In regard to 1x4 sheathing, it is used for (A) asphalt shingles (B) wood shingles (C) it is never used.

67. Asphalt shingles are packaged (A) 3 (B) 4 (C) 5 bundles to the square.

68. Wood shakes and shingles should be butted as close together as possible. True or False.

69. Asphalt shingles can be laid on flat roofs. True or False.

70. What is meant by "235 lb." roofing material?

PRE-TEST/POST-TEST
PRINCIPLES OF RESIDENTIAL CONSTRUCTION
page 8

71. Asphalt square tab shingles are usually laid (A) 3" (B) 5" (C) 7" exposed to weather.

72. Asphalt and wood shingles should have a starter course. True or False.

73. Explain difference between wood shingles and wood shakes.

74. Mastic tab on asphalt shingles helps to make a better roof. True or False.

75. What is the advantage of a wide cornice over a narrow cornice?

76. Which size of electrical wiring is most commonly used in 110v circuits in residential construction?
#10, #14, or #12 wire _____

77. Which size wire is most commonly used for Switch Legs?
#12, #14, or #10 wire _____

78. If you use large enough wire, you can install two 220v air conditioners on the same circuits and still meet the electrical code. True or False.

79. A three-way switch allows control of a light by use of:
two, three, or four switches _____.

80. Switches are always connected in the hot line. True or False.

81. In regard to wire size, the larger the wire number, the smaller the wire. True or False.

82. All major plumbing fixtures have to be vented. True or False.

83. What is the purpose of a "P" trap?

84. The part of the roof which overhangs at the end of the rafters is called _____.

PRE-TEST/POST-TEST
PRINCIPLES OF RESIDENTIAL CONSTRUCTION
Page 9

85. The part of the roof which overhangs the gable end is called _____.

86. In hip roof construction, the cornice goes completely around the house horizontally. True or False.

87. Explain the difference between open and closed cornices.

88. In brick veneer construction, the board that fills the space between the top of soldier course and soffit is called _____ _____.

89. What is a brick pocket?

90. What is the purpose of ventilating an attic?

91. How are most attics ventilated?

92. Explain the difference between porches, patios, and atriums.

93. In present-day construction, what are the two main functions of windows?

94. Name the three classifications of windows and give examples of each.

95. Explain the difference between casement, hopper and awning windows.

96. What is a jalousie window?

97. When used with jalousie windows, are screens installed on the inside or outside? _____

98. To assure proper lighting in a room, the window area should be a minimum of what percentage of the floor space? _____%

99. Which of the following windows permits deeper penetration of light in a room? A 3x5 window placed (A) one foot from the floor (B) 2 1/2 feet from the floor.

100. What makes a hinged door a left- or right-hand door?

101. What is a flush door?

102. What is insulating glass as used in windows or doors?

103. What is usually the maximum overhang in a narrow box cornice? 8", 12", or 18" _____

104. What is the disadvantage of narrow cornice as compared to wide cornice?

105. List three disadvantages of corner windows.

PRE-TEST/POST-TEST
PRINCIPLES OF RESIDENTIAL CONSTRUCTION
page 11

106. What is a skylight?

107. What is the purpose of mullions in window installation?

108. Where are drip caps used in connection with windows?

109. What is a storm sash?

110. Name ten materials used for exterior wall coverings.

(1) (6)
(2) (7)
(3) (8)
(4) (9)
(5) (10)

111. How far above finish grade should all wood of a frame house be?
(A) 6" (B) 4" (C) 8" (D) 10"

112. Name three of the four methods of making outside corners on wood beveled siding.

(1)
(2)
(3)

113. Explain the proper method in nailing cedar vertical siding and give the reason for using this method. (Boards and Battens)

114. What is the name of the wood member used where vertical and horizontal siding join? _____

115. What is meant by textured plywood siding?

PRE-TEST/POST-TEST
PRINCIPLES OF RESIDENTIAL CONSTRUCTION
page 12

116. Explain the reason for venting the crawl space.

117. If concrete blocks are used as the exterior wall, what can be done to improve their appearance (other than painting)?

118. What are the advantages and disadvantages of asbestos cement siding?

119. On the average, (A) 600 (B) 400 (C) 1,000 face brick are required to lay a square of wall in brick veneer construction.

120. (A) 300 (B) 450 (C) 550 SCR brick will cover a square of wall space.

121. In brick veneer construction, about (A) 6 cu. ft. (B) 10 cu. ft. (C) 14 cu. ft. of mortar will lay one square of wall.

122. In Early American construction, what were the two most common interior wall coverings?
(1)
(2)

123. Which type of edge is most frequently used on gypsum board (sheetrock) today? (A) square (B) tapered (C) beveled.

124. What is used in drywall finish to protect the corner and make the corner straight?

125. Name five materials used for interior wall coverings.
(1) (4)
(2) (5)
(3)

126. Name four types of insulation used in residential construction.
(1) (3)
(2) (4)

PRE-TEST/POST-TEST
PRINCIPLES OF RESIDENTIAL CONSTRUCTION
page 13

127. Describe one of the most commonly-used methods of fastening paneling to masonry walls.

128. Vapor barrier is placed on which side of the wall? (A) cold (B) warm

129. Which type of insulation is best suited for use in insulating ceilings? Why?

130. Blanket insulation used between staggered studs will reduce sound transmission by what percentage? (A) 30% (B) 54% (C) 75%

131. For best results, where should the flange of batt insulation be nailed on the studs? Explain answer.

132. Explain briefly the method used to cover joints in drywell construction.

133. A staircase is a complete stairway consisting of treads, risers, handrail, and other stair parts. True or False.

134. A staircase is always made of wood. True or False.

135. A shaft through one or more floors in a house through which a staircase is constructed is called a _____.

136. In stair construction, there is always one more riser than tread. True or False.

137. If three or more risers are used in a stairway, you should always have a handrail for safety. True or False.

138. According to standards established by National Workman's Compensation Bureau, stairs should be no more than (A) 40 (B) 50 (C) 60 degrees and no less than (A) 10 (B) 20 (C) 30 degrees steep.

139. The sum of one tread and one riser should be not more than 18", or not less than (A) 15" (B) 16" (C) 17".

140. If hinges are on the right and the door opens toward the key side, is it a (A) right-hand door or (B) right-hand reverse bevel door?

141. In reference to casement windows, if you are standing inside the room and the hinges are on the right, is it a (A) right-hand window or (B) left-hard window?

142. Locks, door stops, shelf brackets, and nails are operative hardware. True or False.

143. Bolts, glue, and building paper are holding hardware. True or False.

144. What type of hinges are most common for hanging doors in residences?

145. A semi-visible cabinet hinge is screwed to the face of cabinet doors. True or False.

146. Which is the larger nail? (A) 8D (B) 6D.

147. Which nail has a larger head? (A) finish nail (B) box nail.

148. Which is the larger screw? (A) #6 (B) #8.

149. In truss construction, joints are held together by metal truss plates or wood _____.

150. What is the most common wood used for strip hardwood flooring?

151. How is strip flooring applied over concrete slab?

152. What is the most important thing to consider when selecting flooring?

153. Asphalt tile can be laid below grade. True or False.

154. If two fireplaces are in the same chimney, they can be vented in the same flue successfully. True or False.

155. The flue need not extend above the ridge of a house if it is less than 10 feet from the ridge. True or False.

156. What is the purpose of flashing around a chimney?

FACILITIES, EQUIPMENT, AND COSTS

A maximum of flexibility in terms of facility requirements has been a guiding principle in the development of the residential construction programs described in Chapter 5.

As a function of economic activity residential construction occurs to some degree in every city, community and locality throughout the state. Thus the target element to which the residential construction programs are directed will often be located in small to medium size cities served by community colleges who simply do not have the necessary financial resources to support programs which require expensive sophisticated facilities and equipment. The wide range of program options which can be effected by interested institutions should afford the opportunity to implement either or both of the programs with a minimum of expenditure for facilities. The residential construction management program, in its most basic form, can be presented in a standard classroom equipped with sufficient work tables (approximately 2-1/2' x 4-1/2' in size) to accommodate the number of students in the program. The minimum requirements for the residential construction technology program are only slightly higher; the difference being due to the drawing laboratory and equipment, and the surveying equipment, which are absolutely essential for this program. It should be noted that the construction site itself provides the most effective laboratory possible for many of the learning activities in the technology program and does so at zero cost to the institution.

The program configuration which is ultimately adopted by each interested institution should be determined in large measure by the extent to which existing facilities can be used to satisfy the needs of the residential construction programs. Many institutions will, as an example, be able to accommodate the need for drawing laboratories and surveying equipment through a sharing arrangement with other existing programs. The facilities planning committee should be brought into the program planning function at the earliest possible stage in order that all such possibilities can be included in the overall plan. The industry advisory committee should also play an important role in developing the program configuration and in defining the technical considerations pertinent to the supporting facilities and equipment.

Institutions adopting program configurations which require the purchase of significant quantities of laboratory equipment should not overlook the possibility of effecting worthwhile cost savings through the acquisition of surplus property. The appropriate channels for obtaining information on the availability of such property, and the procedures which must be followed, have already been established by most educational institutions. Experience has shown, however, that judgment and care should be exercised in acquiring surplus property. Specific plans for its use and sound justification for need should be clearly established before any piece of surplus property is obtained. A careful analysis should be made of its total cost, transportation, space required, cost

///

of installation, repair or parts replacement, and of the maintenance requirements to be expected. The probable usable life of such equipment should also be investigated.

Only technically competent, responsible, and imaginative persons directly concerned with the program should select surplus equipment and then only after thorough on-site inspection. Such persons can better avoid the tempation to acquire equipment that is attractive, but obsolete, irrelevant, bulky, or in excessive quantities to the requirements of the program.

The following publications should be especially helpful to persons or groups responsible for planning the necessary supporting facilities:

Nerden, Joseph T. Vocational-Technical Facilities for Secondary Schools: A Planning Guide. Washington, D. C.: Office of Education, 1970.

Guide For Planning Educational Facilities (Current Ed.), Council of Education Facility Planners, Columbus, Ohio.

Frank P. Merlo, Guide for Planning Community College Facilities. (New Brunswick: Rutgers, The State University).

APPENDIXES

APPENDIX A

Curriculum Guides for Residential Construction Management

RESIDENTIAL CONSTRUCTION MANAGEMENT

A RECOMMENDED PROGRAM

This program is designed to prepare students for careers in residential construction enterprises as members of the management team. It has been developed as a parallel to the Residential Construction Technology Program. While many aspects of the programs are identical, distinct differences exist in the end objectives which the two programs seek to serve. The Residential Construction Technology Program is tailored principally to the needs of those persons planning to enter into the operations side of the residential construction business, while the emphasis in the Residential Construction Management Program is on business, finance, office procedures, and general management considerations, as they specifically relate to the residential construction business. Graduates of this program will be qualified for employment as Contractor's Assistants, Estimators, Quality Control Inspectors, Office Managers, Construction Site Coordinators, etc.

PRIMARY OBJECTIVE

To provide the necessary background upon which students can build successful careers in the management of residential construction enterprises.

RESIDENTIAL CONSTRUCTION MANAGEMENT

SUGGESTED CURRICULUM

First Semester	Semester Hours
Principles of Residential Construction	3
Blueprint Reading	3
Fundamentals of Mathematics	3
Construction Surveying	4
Introduction to Business	3
	16

Second Semester	
Introduction to Estimating	3
Residential Construction Materials and Processes	3
Communication Skills	3
Business Mathematics	3
Business Speech	3
Management Processes	3
	18

Third Semester	
Residential Construction Estimating	4
Introduction to Architectural Drawing	4
Elements of Structural Design	3
Contracts, Codes, Specifications and Office Practices	3
Principles of Accounting I	4
	18

Fourth Semester	
Construction Planning and Control	3
Business Communication	3
History of Architecture and Construction	3
Principles of Accounting II	4
Elective	3
	16

Program total	68 hours

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: Principles of Residential Construction

Course Objectives: To equip the student with a basic understanding of the principles of construction, the tools and terminology of the building trades, and the relationships between the crafts involved in residential construction processes.

Course Description: This course entails a study of the basic principles involved in residential construction. It introduces the student to the principal factors which must be considered during each of the major phases of the residential construction process; from bare lot to the finished structure. Topics include: location and excavation, concrete and masonry, framing, exterior and interior finish, roofing, wall and floor coverings, electrical, heating, and air conditioning systems and plumbing.

Suggested Primary Text: Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp., 1968.

Course Outline:

I. Design of a House
   A. One story
   B. Two story
   C. Split level
   D. Traffic through house
   E. How to locate house on lot
   F. Plot plan

II. Excavation and Foundation
   A. Layout of house
      1. Batter boards
      2. How to square a house
   B. Types of soil
      1. Wet line
      2. Frost line
   C. Types of foundations
      1. Equipment used to excavate
   D. Forming
      1. Materials
      2. Types of forms
      3. Basement
      4. Slab
   E. Foundations
      1. Concrete
      2. Brick
      3. Concrete blocks
      4. Pier and beams

III. Sills, Girders, Joists and Subflooring
   A. Types of sills
      1. Box
      2. Balloon framing sill
      3. Platform framing sill
   B. Girders
      1. Use
      2. How to construct
      3. Strength

III. Sills, Girders, Joists and Subflooring (Continued)
- C. Joists
  - 1. Wood
  - 2. Steel
  - 3. Concrete
  - 4. Use of each
  - 5. Bridging
    - a. Types
    - b. How to install
    - c. Purpose
- D. Subflooring
  - 1. Types of material used
  - 2. How to install
  - 3. Size of materials

IV. Wall Construction (Framing)
- A. Material used
  - 1. Size of materials
- B. Balloon framing
- C. Platform framing
- D. Post and beam construction
- E. "Ts" and corners
- F. Door and window bucks
  - 1. Trimmers
  - 2. Headers
- G. Wind braces
  - 1. Cut in
  - 2. Let in
- H. Sheathing

V. Roof Construction
- A. Type of roof design
- B. Rafters
- C. Trusses
- D. Dormers
- E. Roofing materials

VI. Exterior Trim
- A. Cornices
- B. Door and window trim
- C. Porch and patio trim
- D. Atriums

VII. Windows
- A. Types
  - 1. Wood
  - 2. Aluminum
  - 3. Glass blocks

VIII. Doors
- A. Exterior
- B. Interior
- C. Pockets
- D. Sliding glass
- E. Garage doors

IX. Exterior Wall Covering
- A. Wood
- B. Brick
- C. Stone
- D. Stucco
- E. Plywood
- F. Asbestos siding
- G. Simulated stone and brick
- H. Aluminum
- I. Glass block

X. Interior Wall and Ceiling Covering
- A. Lath and plaster
- B. Sheetrock
- C. Paneling
- D. Wall paper and vinyl
- E. Tiles--wall and ceiling
- F. Suspended ceilings

XI. Insulation
- A. Purpose
- B. Types and use of each type
- C. Advantages of types

XII. Stair Construction
- A. Open
- B. Closed
- C. Disappearing
- D. Winding

XIII. Hardware
- A. Hinges
- B. Locks
- C. Door checks
- D. Special hardware
- E. Holding hardware
  - 1. Nails
  - 2. Screws and bolts
  - 3. Corrugated fasteners
  - 4. Split-ring fasteners

XIV. Closets and Shelves
- A. Clothes closets
- B. Storage closets
- C. Cabinets
  - 1. Kitchen
  - 2. Bath

XV. Floor Covering
- A. Wood
- B. Vinyl
- C. Carpet

XVI. Chimneys and Fireplaces
- A. Materials

XVII. Scaffolding
- A. Safety
- B. Types

XVIII. Heating and Air Conditioning
- A. Hot water
- B. Hot air
- C. Cold air

XIV. Electricity
- A. Circuits
- B. Wire
- C. Devices
- D. Service panel

XX. Plumbing
- A. Hot water
- B. Cold water
- C. Sewer

Instructional Recommendations/ Suggestions:

During the conduct of this course continuous emphasis should be placed on describing the relationships between the classroom topics and the work experiences occurring in the "Construction Practicum" course.* The text suggested for use with this course is excellent. It contains a wealth of photographs, illustrations, and drawings which are used to emphasize and reinforce the ideas and concepts involved in the various topics presented. It is suggested that the instructor augment these materials with 35MM color slides made up from actual photographs of local construction which are representative of the construction processes being studied. Transparencies for use with an overhead projector should be made from illustrations contained in the text (or from other reference books) to support classroom presentations. The course outline developed for this course follows the sequence of the normal construction process from the initial planning and design of a residence through completion of the final product. Materials contained in chapters of the text which are not reflected in the course

*NOTE: The "Construction Practicum" is not a program requirement for Residential Construction Management students.

outline have been incorporated into other lesson topics as appropriate (i.e., "Building Materials" . . . this topic is of such importance that it is tied into the main subject matter of each class period throughout the course rather than attempting to treat it as a separate lesson topic). The course outline should be modified to provide special opportunity for the thorough study of building materials and processes which are of special interest to the geographic area in which the course is presented (i.e., types of foundations used in the local area, basements, two-story construction, etc.). It is suggested that plumbing and electrical installation be taught along with inside wall and ceiling framing (Chapter Five, text), since this is the point in the actual construction process where these two functions normally are begun.

Because of the importance of materials contained in this course for persons planning to be engaged in residential construction, a "Pre-Test/Post-Test" has been developed, and its use is strongly recommended. Test items included in the examination

are designed to evaluate the students' understanding of the principles and fundamentals as described in the classroom instruction, and practical application as actually used in the construction industry. It is recommended that the test be administered to each student at the beginning of the course and again at the close of the semester. Analysis of test results can provide excellent indicators of both class achievement and individual student development. A copy of the suggested "Pre-Test/Post-Test" is included.

It is recommended that the suggested primary text for this course (House Construction Details) be retained by each student for use as a principal reference during the remainder of the Residential Construction program.

Additional Instructional Materials:

1. Transparencies:

   a. Building Construction Transparencies, DCA Educational Products Inc., Philadelphia, 1970. A set of 24 transparencies depicting various phases of construction processes.

   b. Locally-developed transparencies

      (1) Typical Wall Section, Brick Veneer Residence on Slab Foundation. For use with Chapters Two, Four, and Ten, text.

Additional Instructional Materials (Continued):

b. Locally-developed transparencies (Continued)

(2) Water Pipe Installation, Concrete Slab Foundations. For use with Chapters Two and Five, text.

2. 16MM Films:

a. "Foundation and Concrete", 26 min. (MN6719-A) Available from: National Archives and Records Service, National Audiovisual Center, Washington, D. C. 20409 for approximately $48.

b. "Framing Floor Joists and Walls", 25 min. (MN6719-B) Available from: National Archives and Records Service, National Audio-visual Center, Washington, D. C. 20409 for approximately $44.

c. "Framing Rafters", 15 min. (MN6719-C) Available from: National Archives and Records Service, National Audio-visual Center, Washington, D. C. 20409 for approximately $27.

d. "Interior and Exterior Walls", 12 min. (MN6719-E) Available from: National Archives and Records Service, National Audiovisual Center, Washington, D. C. 20409 for approximately $23.

e. "Fundamentals of Stair Layout", 11 min. (MN6719-F) Available from: National Archives and Records Service, National Audio-visual Center, Washington, D. C. 20409 for approximately $20.

Additional Instructional Materials (Continued):

3. Film Loops (Motion Pictures):

a. The Third Wire Can Save Your Life. 4 min., 8MM. Fairfield Associates. Released by Jam Handy School Service, 1968.

b. Wiring an Attachment Plug. 4 min., 8MM, Fairfield Associates. Released by Jam Handy School Service, 1968.

c. Outlet Box Installation. 4 min., 8MM, Fairfield Associates. Released by Jam Handy School Service, 1968.

d. Basic Wiring: Receptacles and Fixture Circuits. 4 min., 8MM, Moreland-Latchford Productions, Toronto. Released in the U.S. by Universal Education and Visual Arts, 1971.

e. Basic Wiring: Household Service. 4 min., 8 MM, Moreland-Latchford Productions, Toronto. Released in the U.S. by Universal Education and Visual Arts, 1971.

f. Basic Wiring: Domestic Distribution Systems. 4 min., 8MM, Moreland-Latchford Productions, Toronto. Released in the U.S. by Universal Education and Visual Arts, 1971.

g. Basic Wiring: Low Voltage Circuits. 4 min., 8MM, Moreland-Latchford Productions, Toronto. Released in the U.S. by Universal Education and Visual Arts, 1971.

Additional Instructional Materials (Continued):

h. Basic Wiring: Domestic Service Conductors. 2 motion pictures, 4 min. each, 8MM, Moreland-Latchford Productions, Toronto. Released in the U.S. by Universal Education and Visual Arts, 1971.

i. Connecting Wires in an Outlet Box. 4 min., 8MM, Fairfield Associates. Released by Jam Handy School Service, 1968.

j. Basic Wiring: Switch Wiring. 4 min., 8MM, Moreland-Latchford Productions, Toronto. Released in the U. S. by Universal Education and Visual Arts, 1971.

4. Building Materials Samples. Available through local building materials centers, manufacturers, representatives, etc.

5. Recommended "Pre-Test/Post-Test". (See attachment.)

PRE-TEST/POST-TEST

PRINCIPLES OF RESIDENTIAL CONSTRUCTION

1. The two-slope roof is called: (A) hip (B) mansard (C) gambrel (D) flat.

2. A true Cape Code-style house is a low, simple house with the major rooms on the first floor and a (A) hip roof (B) low gable roof that may have dormers (C) mansard roof (D) high-pitched roof with massive chimney.

3. Present-day windows which are divided into small panes are (A) easier to clean than single panes (B) imitation of windows of days gone by when large sheets of glass were hard to get (C) less expensive than windows with a single pane.

4. The type of house most frequently built today is the (A) split-level house (B) two-story house (C) one-and-a-half story house (D) one-story house.

5. The house that costs less per sq. ft. of living space to build is the (A) split-level house (B) one-story house (C) two-story house (D) house with a basement.

PRE-TEST/POST-TEST
PRINCIPLES OF RESIDENTIAL CONSTRUCTION
page 2

Figure A
(To be used in answering questions 6, 7, 8, 9 and 10)

Figure A

6. The lot slopes down to the (A) Northeast (B) Northwest (C) Southeast (D) Southwest corner.

7. If the city datum point in this area has an elevation of 100 feet, then the first floor of the finished house will be (A) 14' (B) 13' (C) 114' (D) 10' above the city datum point.

8. The location and grade level is shown for what number of trees? (A) 8 (B) 9 (C) 10 (D) 11.

9. The southeast corner of the completed driveway will be (A) 1.4' higher (B) 0.6' higher (C) 1.4' lower (D) 0.6' lower than the existing grade level at that spot.

PRE-TEST/POST-TEST
PRINCIPLES OF RESIDENTIAL CONSTRUCTION
page 3

10. Both the existing and the new contour lines are at elevation intervals of (A) one foot (B) two feet (C) ten feet (D) fifty feet.

11. The point of known elevation or height from which a surveyor works is known as a (A) standard city elevation (B) city datum point (C) average elevation point.

12. The curved, numbered lines showing elevations on a survey drawing are called (A) contour lines (B) datum lines (C) elevation lines.

13. The footing acts as a base for the foundation and transmits the superimposed load to the (A) sill (B) studs (C) soil (D) mud sill.

14. A good rule for determining the width of the footing is (A) 2" wider than the foundation wall (B) as wide as the foundation wall is tall (C) twice as wide as the foundation wall.

15. In a full basement the walls are approximately (A) 10 ft. high (B) 6 ft. high (C) 7 ft. high.

16. Step footing is used when (A) you have a basement (B) on all two-story buildings (C) when the building is built on a slope.

17. Reinforcing rods are one way to tie wall and footing together; the other method is (A) key way (B) race way (C) run way.

18. Which of the following types of foundation is the most economical? (A) full basement foundation (B) crawl-space foundation (C) slab on grade foundation.

19. Brick ledges are usually how wide? (A) 5" (B) 5 1/2" (C) 6".

20. Concrete is usually figured by (A) cu. ft. (B) cu. yd. (C) sq. yd.

21. Vapor barrier is used under slab to (A) keep ground dry if a water pipe leaks (B) keep moisture in the ground from reaching the concrete slab (C) keep concrete from curing too fast.

22. All reinforcements should be covered by at least (A) 1/2" (B) 1" (C) 1 1/2" of concrete.

PRE-TEST/POST-TEST
PRINCIPLES OF RESIDENTIAL CONSTRUCTION

23. Control joints in concrete (A) keep concrete from cracking (B) keep cracks small (C) create weak places so as to control place of cracking of slab.

24. Reinforcing steel in concrete (A) prevents concrete from cracking (B) helps prevent cracks from opening (C) is used to keep concrete from sagging in center of building.

25. The generally-accepted best method of anchoring sill to concrete wall or slab is (A) lead anchors and screws (B) concrete nails (C) anchor bolts (C) shoot down.

26. Subflooring laid diagonally over wood joists gives the floor (A) less strength (B) more strength (C) makes no difference.

27. If a girder or beam is used in a pocket in a foundation wall, an air space should be left so that the girder (A) will go in easy (B) will come out easy (C) can dry out in case it picks up moisture.

28. Bridging is used in floor joists to (A) help take care of knots in lumber (B) take care of joists that are not the same width (C) stiffen joists and help distribute weight.

29. In wet areas, water around the footing can be removed by (A) use of footing drain tile laid in a bed of gravel (B) extending brick down to bottom of footing (C) compacting soil so no water can seep in.

30. To add strength to concrete, you (A) add lots of water (B) let it start to set up before placing (C) place with the proper amount of water for mixing.

31. Batter boards are (A) used to locate outside of foundation (B) used to prevent lumber from being stacked where building is to be constructed (C) always 18" above finish grade.

32. If the legs of a right triangle measure 6' and 8', then the hypotenuse will measure (A) 9' (B) 10' (C) 10' 6".

33. The corners of a rectangle are 90 degrees when (A) the opposite sides measure the same (B) opposite sides are parallel (C) if the diagonal distances are the same.

34. Which of the following climatic areas is best suited for pier construction? (A) very cold climate (B) wet, mild climate (C) very windy areas.

35. In platform framing, the subfloor (A) stops at the inside edge of bottom plate (B) goes under bottom plate 1/2 width of bottom plate (C) extends to outside edge of bottom plate.

36. Platform framing is easier to erect because (A) there is only one top plate (B) the studs are longer (C) you have a flat surface to work on.

37. In platform construction you have (A) one bottom and two top plates (B) two bottom and one top plates (C) one bottom and one top plates.

38. In which of the following ways are platform construction and slab construction most similar? (A) from slab or subfloor up (B) both have box sill (C) both have floor joists.

39. In Balloon Construction the studs sit on (A) bottom plate (B) sill (C) directly on foundation.

40. In Balloon Construction the second-floor joists rest on (A) two top plates (B) a ribbon set in edge of studs (C) a 2x12 beam going all around building.

41. In making one type of standard outside corner, you use (A) three studs and blocks (B) only two studs (C) all studs are shorter than standard.

42. In Balloon Construction of a two-story house (A) the studs are not cut at second floor (B) the studs have to be 4"x4" (C) twice as many studs are used as are used in platform construction.

43. In nailing bridging to floor joists, you use (A) two 8D nails at each end of bridging (B) two 16D nails at one end, and two 8D nails at other end (C) one 16D nail at each end.

44. A "T" is used (A) where two walls join together at ends (B) where one wall intersects another at a right angle (C) where wall and the roof intersect.

PRE-TEST/POST-TEST
PRINCIPLES OF RESIDENTIAL CONSTRUCTION
page 6

45. Headers over windows and doors should always be 2x4. True or False.

46. Nails hold best when stress is applied (A) at right angle to nail (B) parallel to nail.

47. Sheathing applied diagonally is (A) more rigid (B) of no value to walls (C) less expensive to install.

48. 2x6 studs are used in some interior walls to (A) add strength to support roof (B) take care of plumbing (C) make doors stronger.

49. Post-and-beam construction requires (A) less interior wall (B) more interior walls (C) that no windows be installed in gable end of house.

50. In post-and-beam construction, planking is used as decking (A) because of the distance to be spanned (B) for appearance (C) because planking is 12" wide.

51. Shrinkage is less in two-story balloon framing than in platform framing because (A) studs rest on sill (B) studs cover both floors (C) ceiling joists are longer.

52. In rough-door buck, the header is supported on each end by (A) cripples or trimmers (B) regular studs (C) does not rest on anything.

53. In post-and-beam construction, ceiling beams are (A) not over 2 ft. apart (B) as much as 10 ft. apart (C) always 2x6.

54. The shed roof (A) sheds water two ways (B) sheds water one way (C) has no pitch at all.

55. Lookout rafters are used to (A) support ridge board (B) support roof that extends beyond outside wall (C) support hip rafters.

56. Which type of roof has a double pitch? (A) hip (B) gable (C) gambrel (D) shed.

57. Jack rafters are used in connection with hip and valley roof construction. True or False.

PRE-TEST/POST-TEST
PRINCIPLES OF RESIDENTIAL CONSTRUCTION
page 7

58. Solid sheathing which is not end matched must (A) joint over rafter or trusses (B) joint between rafter or trusses (C) be parallel to rafter or trusses.

59. Name four types of rafters:

A.

B.

C.

D.

60. What is the total rise of a roof if the pitch is 1/3 and span is 36'?

_____

61. The distance from outside to outside of the top plates is called (A) run (B) span (C) rise.

62. When 2x6s are used, the seat cut of rafters should be at least (A) 3" (B) 5" (C) 2".

63. The plumb cuts of a rafter are made at tail, at ridge board, and at the birds mouth. True or False.

64. Collar beams help to stiffen (A) studs (B) ceiling joists (C) rafters.

65. Trusses require More Less bearing wall partitions.

66. In regard to 1x4 sheathing, it is used for (A) asphalt shingles (B) wood shingles (C) it is never used.

67. Asphalt shingles are packaged (A) 3 (B) 4 (C) 5 bundles to the square.

68. Wood shakes and shingles should be butted as close together as possible. True or False.

69. Asphalt shingles can be laid on flat roofs. True or False.

70. What is meant by "235 lb." roofing material?

PRE-TEST/POST-TEST
PRINCIPLES OF RESIDENTIAL CONSTRUCTION

71. Asphalt square tab shingles are usually laid (A) 3" (B) 5" (C) 7" exposed to weather.

72. Asphalt and wood shingles should have a starter course. True or False.

73. Explain difference between wood shingles and wood shakes.

74. Mastic tab on asphalt shingles helps to make a better roof. True or False.

75. What is the advantage of a wide cornice over a narrow cornice?

76. Which size of electrical wiring is most commonly used in 110v circuits in residential construction?
#10, #14, or #12 wire _____

77. Which size wire is most commonly used for Switch Legs?
#12, #14, or #10 wire _____

78. If you use large enough wire, you can install two 220v air conditioners on the same circuits and still meet the electrical code. True or False.

79. A three-way switch allows control of a light by use of:
two, three, or four switches _____.

80. Switches are always connected in the hot line. True or False.

81. In regard to wire size, the larger the wire number, the smaller the wire. True or False.

82. All major plumbing fixtures have to be vented. True or False.

83. What is the purpose of a "P" trap?

84. The part of the roof which overhangs at the end of the rafters is called _____.

PRE-TEST/POST-TEST
PRINCIPLES OF RESIDENTIAL CONSTRUCTION
page 9

85. The part of the roof which overhangs the gable end is called _____.

86. In hip roof construction, the cornice goes completely around the house horizontally. True or False.

87. Explain the difference between open and closed cornices.

88. In brick veneer construction, the board that fills the space between the top of soldier course and soffit is called _____ _____.

89. What is a brick pocket?

90. What is the purpose of ventilating an attic?

91. How are most attics ventilated?

92. Explain the difference between porches, patios, and atriums.

93. In present-day construction, what are the two main functions of windows?

94. Name the three classifications of windows and give examples of each.

95. Explain the difference between casement, hopper and awning windows.

96. What is a jalousie window?

97. When used with jalousie windows, are screens installed on the inside or outside? _____

98. To assure proper lighting in a room, the window area should be a minimum of what percentage of the floor space? _____%

99. Which of the following windows permits deeper penetration of light in a room? A 3x5 window placed (A) one foot from the floor (B) 2 1/2 feet from the floor.

100. What makes a hinged door a left- or right-hand door?

101. What is a flush door?

102. What is insulating glass as used in windows or doors?

103. What is usually the maximum overhang in a narrow box cornice? 8", 12", or 18" _____

104. What is the disadvantage of narrow cornice as compared to wide cornice?

105. List three disadvantages of corner windows.

106. What is a skylight?

107. What is the purpose of mullions in window installation?

108. Where are drip caps used in connection with windows?

109. What is a storm sash?

110. Name ten materials used for exterior wall coverings.

(1)	(6)
(2)	(7)
(3)	(8)
(4)	(9)
(5)	(10)

111. How far above finish grade should all wood of a frame house be?
(A) 6" (B) 4" (C) 8" (D) 10"

112. Name three of the four methods of making outside corners on wood beveled siding.
(1)
(2)
(3)

113. Explain the proper method in nailing cedar vertical siding and give the reason for using this method. (Boards and Battens)

114. What is the name of the wood member used where vertical and horizontal siding join? _____

115. What is meant by textured plywood siding?

PRE-TEST/POST-TEST
PRINCIPLES OF RESIDENTIAL CONSTRUCTION

116. Explain the reason for venting the crawl space.

117. If concrete blocks are used as the exterior wall, what can be done to improve their appearance (other than painting)?

118. What are the advantages and disadvantages of asbestos cement siding?

119. On the average, (A) 600 (B) 400 (C) 1,000 face brick are required to lay a square of wall in brick veneer construction.

120. (A) 300 (B) 450 (C) 550 SCR brick will cover a square of wall space.

121. In brick veneer construction, about (A) 6 cu. ft. (B) 10 cu. ft. (C) 14 cu. ft. of mortar will lay one square of wall.

122. In Early American construction, what were the two most common interior wall coverings?
(1)
(2)

123. Which type of edge is most frequently used on gypsum board (sheetrock) today? (A) square (B) tapered (C) beveled.

124. What is used in drywall finish to protect the corner and make the corner straight?

125. Name five materials used for interior wall coverings.
(1) (4)
(2) (5)
(3)

126. Name four types of insulation used in residential construction.
(1) (3)
(2) (4)

127. Describe one of the most commonly-used methods of fastening paneling to masonry walls.

128. Vapor barrier is placed on which side of the wall? (A) cold (B) warm

129. Which type of insulation is best suited for use in insulating ceilings? Why?

130. Blanket insulation used between staggered studs will reduce sound transmission by what percentage? (A) 30% (B) 54% (C) 75%

131. For best results, where should the flange of batt insulation be nailed on the studs? Explain answer.

132. Explain briefly the method used to cover joints in drywell construction.

133. A staircase is a complete stairway consisting of treads, risers, handrail, and other stair parts. True or False.

134. A staircase is always made of wood. True or False.

135. A shaft through one or more floors in a house through which a staircase is constructed is called a _____.

136. In stair construction, there is always one more riser than tread. True or False.

137. If three or more risers are used in a stairway, you should always have a handrail for safety. True or False.

138. According to standards established by National Workman's Compensation Bureau, stairs should be no more than (A) 40 (B) 50 (C) 60 degrees and no less than (A) 10 (B) 20 (C) 30 degrees steep.

139. The sum of one tread and one riser should be not more than 18", or not less than (A) 15" (B) 16" (C) 17".

140. If hinges are on the right and the door opens toward the key side, is it a (A) right-hand door or (B) right-hand reverse bevel door?

141. In reference to casement windows, if you are standing inside the room and the hinges are on the right, is it a (A) right-hand window or (B) left-hand window?

142. Locks, door stops, shelf brackets, and nails are operative hardware. True or False.

143. Bolts, glue, and building paper are holding hardware. True or False.

144. What type of hinges are most common for hanging doors in residences?

145. A semi-visible cabinet hinge is screwed to the face of cabinet doors. True or False.

146. Which is the larger nail? (A) 8D (B) 6D.

147. Which nail has a larger head? (A) finish nail (B) box nail.

148. Which is the larger screw? (A) #6 (B) #8.

149. In truss construction, joints are held together by metal truss plates or wood _____.

150. What is the most common wood used for strip hardwood flooring?

151. How is strip flooring applied over concrete slab?

152. What is the most important thing to consider when selecting flooring?

153.. Asphalt tile can be laid below grade. True or False.

154. If two fireplaces are in the same chimney, they can be vented in the same flue successfully. True or False.

155. The flue need not extend above the ridge of a house if it is less than 10 feet from the ridge. True or False.

156. What is the purpose of flashing around a chimney?

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: Blueprint Reading

Course Objectives: To provide a basic understanding of the standard symbols, abbreviations, format, and other data contained in blueprints. To enable the student to interpret working drawings and visualize the finished product intended by the architect.

Course Description: This course is designed to acquaint the student with the purpose, function and proper use of blueprints. Topics include: Working drawings, reading drawings, elevations, floor plans, symbols, scales and dimensions, structural information, reading detail drawings and plot plans.

Special emphasis is placed on such subjects as: How blueprints reflect architectural progress, how specifications amplify blueprints, how blueprints vary with the purpose of the structure, how material variations affect blueprints.

Suggested Primary Text: Sundberg, Elmer W., et al. Building Trades Blueprint Reading, 5th ed., Part I: Fundamentals. Chicago: American Technical Society, 1973.

Supplemental Text: Sundberg, Elmer W., et al. Building Trades Blueprint Reading, 2nd ed., Part II: Residential and Light Commercial Construction. Chicago: American Technical Society, 1974.

Course Outline:

I. Working Drawings and Blueprints
   A. How blueprints are made

II. Reading Elevation Drawings
   A. Information depicted on elevation drawings
   B. Building design
   C. Roof design
   D. Openings
   E. Dimensions
   F. Exterior finishes
   G. Exterior materials

III. Reading Floor Plans
   A. Importance of floor plan
   B. How to read floor plans
   C. Dimensions depicted on floor plans

IV. Symbols and Notations Used on Floor Plans
   A. Symbols for materials
   B. Symbols for parts of building
   C. Abbreviations

V. Scaling and Dimensions
   A. How to use the architect's scale
   B. Use of folding rule to scale blueprint
   C. Types of construction

VI. Reading Blueprints for Structural Information
   A. Finding structural information on blueprints
   B. Types of construction

VII. Reading Detail Drawings
   A. Scales used for details
   B. How to locate details

VIII. Plot Plan
- A. The survey plot
- B. Scale used by surveyor
- C. Elevations
- D. Contour lines
- E. The plot plan

IX. Reading Blueprints for Trade Information
- A. Electrical
- B. Plumbing
- C. Masonry
- D. Concrete
- E. Heating and air conditioning

Instructional Recommendations/ Suggestions:

The two texts recommended for use in this course were designed by the author to be used in conjunction with each other in developing an ability to read and understand blueprints. Principles and fundamentals are presented in Part I. Extensive opportunity to actually apply these principles and fundamentals is afforded by the exercises contained in Part II. The texts are flexible and may be used for individual study or for several distinct classroom organizational formats. Four distinct methods of presenting the course material are described for the convenience of prospective instructors.

House Construction Details (suggested for use as the primary text in "Principles of Residential Construction") provides an excellent reference source for

understanding the details of construction as depicted in the blueprints to be studied in this course.

In the interest of competency testing, it is recommended that the final examination in the course be developed through use of an actual blueprint which the students will not have had an opportunity to study or review prior to the testing period. (Copies of such blueprints can be obtained from local architects and/or home builders.) This procedure will provide a more valid measure of the students' ability to apply the concepts and principles of blueprint reading to a realistic work situation. An example of a suggested final examination, constructed along the lines of this recommendation, is included. The answers shown on the sample examination should be changed, as necessary, to correspond to the blueprint ultimately selected for testing purposes.

Additional Instructional Materials:

1. Supplemental blueprint for final examination purposes. May be obtained through local architects or home builders.

2. Selected Transparencies. To be developed locally. From the List of Transparencies suggested for use in the course entitled "Principles of Residential Construction".

FINAL EXAMINATION

BLUEPRINT READING

(Questions 1-68 based on general information.)

1. Blueprints are copies of working drawings made by placing tracings over light-sensitive paper and exposing them to light. T F

2. A tracing can only be used a few times to make blueprints. T F

3. Orthographic projection is another name for the three-view concept. T F

4. Working drawings for a building are made to scale because it would be impossible to draw them full size. T F

5. Dimensions should be shown in each room on a floor plan giving its exact size. T F

6. A dimension should only be shown once on the same sheet. T F

7. A center line and a cutting plane line are drawn with the same symbol. T F

8. All of the basic window types are included among swinging and sliding windows. T F

9. Awning windows swing outward. T F

10. Package doors include the door frames and hardware. T F

11. Door dimensions 2'8" x 6'8" x 1 3/8" indicate width, height and thickness in that order. T F

12. Hollow core doors have a core of wood blocks. T F

13. Straight stairs are preferred to winding stairs for safety. T F

14. A steep stair would have a wide tread and low riser height. T F

15. Provisions for the disposal of storm water from the roof is decided by the builder. T F

16. Anyone who can assemble pipe is qualified to do plumbing work. T F

FINAL EXAMINATION

BLUEPRINT READING

17. The electrician working on a small building makes his own sketch to show arrangement of circuits. T F

18. The electrician must be familiar with the electrical code. T F

19. The craftsman should never guess about the meaning of an abbreviation. T F

20. Working drawings include floor plans, elevations, section views and detail views. T F

21. Concrete walks and drives should be shown on plot plans. T F

22. The architect shows details on the blueprints for the rough framing around windows and doors. T F

23. A 2x6 plank actually measures 1 1/2" x 5 1/2". T F

24. Concrete footings vary in size according to the bearing properties of the soil and the weight of the building. T F

25. All footings and foundation walls have steel reinforcing bars in them. T F

26. A brick window sill laid in rowlock fashion shows the 2x4 inch (nominal size) end of the brick arranged in a vertical row. T F

27. A brick veneer wall is ventilated by a one-inch air space. T F

28. Common concrete block has nominal dimensions of 8" x 8" x 16". T F

29. Steel is the only metal of any importance in the construction industry. T F

30. Aluminum structural shapes are supplied in various sizes. T F

31. All reinforcing bars are the same except for diameter. T F

32. Electric wires are carried through special steel pipe called conduit. T F

33. A built-up roof is made of several layers of saturated felt with tar or asphalt spread over each layer. T F

34. The working drawings show how the rough openings for windows should be framed. T F

35. Dimensions for interior partitions are nominal dimensions to the face of studs. T F

36. Chimney footing needs no reinforcing bars. T F

37. Cross-bridging and solid bridging are the same thing. T F

38. Windows are moved by the builder to fall in line with stud spacing. T F

39. Clearance is allowed between the rough-frame opening and the window frame to permit adjustment. T F

40. Siding can be nailed directly to plywood sheathing. T F

41. Members of platform framing are always placed on 16 inch centers. T F

42. The A frame can only be used for plans with single floor. T F

43. The mix of concrete is varied for different applications. T F

44. Steel reinforcing bars are used in concrete footings. T F

45. Voids in concrete are filled with the aid of a vibrator. T F

46. Cavity walls are brick walls made of two wythes with an air space between. T F

47. Brick veneer is combined with wood platform framing. T F

48. The brick part of a brick veneer wall supports the rafters or trusses. T F

49. Earthquake damage can be minimized by making the framework as rigid as possible. T F

50. Snow and ice damage to roofs can be counteracted by increasing the strength of roof supports. T F

FINAL EXAMINATION

BLUEPRINT READING

51. Regarding the three-view concept,
    A. a set of working drawings is based on the idea of three views: top, front and side, or plan views and elevation views.
    B. each drawing is worked out to show information in three dimensions.
    C. a floor plan is a slice through a building taken a few inches above the floor.
    D. pictorial drawings are included in the working drawings to show details of very complex problems.

52. The word scale is used correctly as follows:
    A. a triangular scale is a ruler with six faces and twelve types of graduations.
    B. an architect can draw everything in a set of working drawings using a scale of 1/4 inch equals one foot.
    C. in order to be meaningful, preliminary sketches should be drawn to scale (in proportion).
    D. using a scale, such as 1/4 inch equals one foot, will automatically bring about good proportions and design in a drawing.

53. Scales used in making drawings include:
    A. six inches per foot for moldings.
    B. 1/4 inch per foot for elevation and plan views.
    C. 1 1/2 inch per foot for section views through exterior walls.
    D. 3/4 inch foot for details to be drawn 3/4 size.

54. Regarding dimensioning,
    A. a dimension for the same measurement can be shown twice or on two sheets if it will make it easier to locate.
    B. 4-inch and 6-inch partition thickness dimensions are actual measurements.
    C. buildings should be built with such precision that dimensions should be given in feet, inches and fractions of an inch.
    D. dimensions should be shown in a continuous row, whenever possible, with the figures shown above the dimension line.

55. Regarding symbols
    A. all architects use the same symbols.
    B. symbols are used because the scale is too small to show the object in complete detail, and they save drafting time.
    C. all lines on plan and elevation views are shown as object lines.
    D. a break line shows where cuts are to be made.

56. Regarding the alphabet of lines,
    A. cutting plane line shows where the cutting plane passes and the direction in which the section view is to be viewed.
    B. the architect may devise his own alphabet of lines.
    C. all lines on plan and elevation views are shown as object lines.
    D. a break line shows where cuts are to be made.

57. Regarding types of windows,
    A. there are three basic types of windows--casement, hoppe and awning.
    B. all swinging windows swing outward.
    C. hopper windows have hinges at the bottom of the sash.
    D. screens are on the outside of all windows which have screens.

58. Regarding door types,
    A. the three basic types are flush, hollow core, and solid core.
    B. accordion doors are the same as bi-fold doors.
    C. panel doors are only used as interior doors.
    D. solid-core doors are used for exterior doors.

59. A floor plan shows
    A. a designation such as 14 R Down, which means 14 risers from the floor of the plan to the floor below.
    B. both the top and bottom riser of a flight of stairs.
    C. how two flights above one another have starting points which line up.
    D. construction details for rough structural members around stairwells.

60. Regarding plumbing and electrical work for residences,
    A. the working drawings show plumbing fixtures and piping for the water supply.
    B. the plumber makes his own layout of drainage piping, including venting through the roof.
    C. electrical and plumbing symbols resemble the units they represent.
    D. electrical circuits are shown on floor plans.

61. Regarding verbal information,
    A. specifications are of minor importance for verbal information.
    B. the title block serves mainly to identify the building.
    C. specific notes are shown near where they apply.
    D. mistakes due to misreading verbal information are not the fault of the craftsman.

FINAL EXAMINATION

BLUEPRINT READING

62. Regarding abbreviations,
    A. abbreviations are all standardized.
    B. abbreviations should be used everywhere to save time.
    C. abbreviations should have meaning even when not associated to parts of a drawing with an arrow or by its location.
    D. when two abbreviations may be used for the same thing, the architect can use either as long as the description is clear.

63. The relationship between the house and the lot include:
    A. the use of an official survey which gives a legal description of the property.
    B. the use of a plot plan which only has value for town or city property.
    C. the use of a city datum point or bench mark which is located on the property.
    D. compliance with zoning ordinances which specify details of construction.

64. The plot plan
    A. shows a point of beginning which is used to find the bench mark or city datum point.
    B. shows lot dimensions and angles at each corner.
    C. shows contour lines which help the concrete workers decide on the depth of the foundation.
    D. shows designations such as +4' 0", which means that the elevation is 4' 0" above sea level.

65. Regarding structural lumber,
    A. the craftsman chooses the right size members to be used to support floors and roofs.
    B. the actual size of a 2x4 is 1" x 3", arrived at by subtracting 1/2 inch from each surface.
    C. structural lumber is sold in two-foot intervals within certain lengths and described by nominal dimensions such as 2x4 or 2x8.
    D. the architect and the builder together decide on how openings shall be framed.

66. Regarding plywood,
    A. finish wood paneling is actually plywood.
    B. plywood is excellent for covering large surfaces but has little strength.
    C. the glue used in plywood is waterproof.
    D. the main use of plywood in light construction is for wall sheathing.

67. Concrete
    A. in monolithic form is reinforced concrete.
    B. symbol consists of small dots.
    C. with a mix of 1:3 1/2:5 means that one part cement, 3 1/2 parts sand, and five parts gravel are used.
    D. reaches full strength in three days.

68. Regarding roofing,
    A. shingles can be used on a roof which has any slope.
    B. most asphalt shingles are single-tab shingles.
    C. roll roofing is used exclusively for built-up roofs.
    D. a square of roofing covers 100 square feet when it is laid.

(Questions 69-143, based on information contained in blueprint.)

69. The kitchen has
    A. a pass-through opening to the family room.
    B. a soffit all around the room at the ceiling.
    C. horizontal slider window
    D. stock cabinets to be fitted by the carpenter on the job.

70. The family room has
    A. a pair of sliding glass doors, both of which open.
    B. three warm air registers and no return air register.
    C. two sets of casement windows which are alike in size.
    D. a doorway leading to the kitchen.

71. Regarding the bedroom wing, (bedrooms 18 and 22)
    A. each bedroom has a closet with bi-fold doors.
    B. the bathrooms are identical but reversed, except for the placement of the doors and switches.
    C. the bedroom doors are all sliding doors.
    D. warm air is supplied to the bathroom by a ceiling fan.

72. Regarding doors,
    A. the front entrance door is a wood panel door with nine lights.
    B. doors are all 6' 8" tall--except doors 1 and 6.
    C. the basement door is a wood panel door with six lights.
    D. closet doors in bedrooms and hall are either sliding or bi-fold doors.

FINAL EXAMINATION

BLUEPRINT READING

73. Regarding brick veneer walls,
   A. the brick veneer part of the wall is erected before the frame part.
   B. a one-inch air space is provided for ventilation.
   C. the brick veneer is set back one inch from the face of the foundation.
   D. anchors on two-foot centers between each course hold the brick tight against the sheathing.

74. Regarding the fireplace and chimney,
   A. flue liners are not permitted to extend above the top of the chimney masonry.
   B. a fireplace ash drop opens into the carport.
   C. the round flue shown on the floor plan is for the furnace.
   D. details to build the chimney are given in vertical and plans section through fireplace.

75. The plot plan (sheet 1) shows:
   A. a point of beginning which is also a local bench mark.
   B. a difference in elevation of 1.33 feet between the grade at the northwest corner of the building and the first-floor elevation.
   C. the length of each side of the lot, and angles at the corners.
   D. the location of the driveway and walks.

76. The foundation plan and details on sheet 2 show:
   A. information about steel reinforcing bars in the footings under the house and in the pad under the fireplace.
   B. dimensions for the size and location of the footings under the retaining wall.
   C. dimensions locating the stepped footings.
   D. location of the depressed slabs for brick floors and areas for tubs.

77. The south elevations (sheet 6) show:
   A. the living-room windows as fixed glass.
   B. the footing for the chimney with hidden lines.
   C. that both doors of the pair of glass doors slide open.
   D. dimensions of the fascia member.

78. The door schedule on sheet 1 shows:
   A. that the doors are typical 6' 8" doors (except doors 1 and 6).
   B. that doors are either swinging or sliding.
   C. that window sills for plate-glass windows are at the floor level.
   D. interior wall finish held back 1/2 inch from the door jambs.

BLUEPRINT READING

79. Electrical plan (sheet 9) shows:
    A. a 200 amp service.
    B. a gas outlet in the utility room.
    C. three-way switches to control the electric garage-door operator.

80. Regarding carpentry,
    A. joists over the garage and those over the kitchen and bedroom No. 22 have the same length.
    B. the wall studs are eight feet long.
    C. window and door openings in exterior walls are framed to exactly fit the window and door frames.
    D. cross bridging is unnecessary for the roof joists because of the 3/4-inch plywood sheathing.

81. Regarding interior finish (sheet 1),
    A. a vinyl tile floor is required in the bath and linen closets.
    B. interior door jambs are flush with the wall surface.
    C. wood trim base is specified for all rooms except bathrooms and kitchen.
    D. gypsum board wall finish on exterior walls is applied over furring strips.

82. What type of roof does the house have?
    A. hip roof.
    B. gable roof.
    C. shed roof.
    D. shed and hip roof.

83. The house has
    A. a full basement
    B. no basement.
    C. a half basement.
    D. two levels.

84. The living room
    A. is separated from the dining room by a room divider.
    B. has direct access to the kitchen.
    C. has a fireplace on the west wall.
    D. is part of a living-dining room area.

FINAL EXAMINATION

BLUEPRINT READING

85. The dining area
    A. has direct access to the breezeway.
    B. has a swinging door to the kitchen.
    C. has glass sliding doors to the patio.
    D. has fixed windows.

86. The kitchen
    A. has cabinets on three sides.
    B. has two doors.
    C. has an exit to the patio.
    D. serves also as a laundry.

87. The hallway
    A. opens to all of the rooms but bath #2 and dining room.
    B. has no door which swings outward into it.
    C. is L-shaped.
    D. has all sliding doors.

88. Regarding closets,
    A. bedroom No. 11 has three closets.
    B. the linen closet has a sliding door.
    C. bedrooms No. 18 and 22 have closets of equal size.
    D. no closet is provided in the kitchen.

89. Regarding plumbing,
    A. all of the plumbing fixtures in the bathrooms are arranged along the same wall.
    B. bath #21 has a shower.
    C. the kitchen sink is located under the kitchen window.
    D. the washing machine is located on the east kitchen wall.

90. The south elevation will have what type of windows?
    A. sliding and fixed sash.
    B. awning type and horizontal sliding.
    C. hopper and casement.
    D. double hung and casement.

91. The east elevation will have what type of windows?
    A. single hung and fixed.
    B. casement.
    C. awning.
    D. horizontal sliding.

92. The north elevation will have what type of windows?
    A. horizontal sliding and double hung.
    B. horizontal sliding and casement.
    C. single hung and fixed.
    D. awning and double hung.

93. Exterior doors for the house (excluding garage doors)
    A. are all alike.
    B. are two flush doors and one pair of sliding doors.
    C. are flush doors which have the same light arrangement.
    D. all swing in the same direction.

94. Regarding interior doors,
    A. all are swinging or sliding.
    B. all closet doors are sliding.
    C. all closet doors are swinging, sliding, or bi-fold.
    D. all doors to rooms from the hall are swinging.

95. Regarding floor levels,
    A. the living and garage areas are the same level.
    B. the garage floor is lower than the living area.
    C. the garage and entry passage floor levels are the same.

96. Closets
    A. have louvered doors.
    B. have shelves and rods.
    C. have shelves.
    D. have lights with pull switches.

97. The kitchen
    A. has a drop-in range.
    B. has ceramic tile floor and base.
    C. has a gas oven.
    D. has upper cabinets on two walls only.

98. The dimensions of the lot are _____ x _____.

99. The corners are each _____ degrees.

100. The long dimension of the lot is in a _____ compass direction.

101. The greatest dimensions of the house are _____ x _____.

FINAL EXAMINATION

BLUEPRINT READING

102. The house is located _____ from the west property line.

103. It is located _____ from the south property line.

104. The greatest difference in the natural grade elevations of all points on the lot is_____.

105. The floor elevation is _____.

106. What type of roof does this house have? _____

107. What material is used for roofing? _____

108. What is the slope of the roof? _____

109. How far does cornice project beyond face of brick? _____

110. What type window is window A? _____

111. What type window is window E? _____

112. What type exterior wall covering is used on garage? _____

113. How many hose bibs are shown? _____

114. How many amps is main disconnect? _____

115. How many light circuits in this house? _____

116. Total circuits used _____

117. How many spare slots for future circuits? _____

118. How many three-way switches? _____

119. How many water-proof plugs are shown? _____

120. How high above floor is wall plug on circuit #2? _____

121. Where are the lights on circuit #1? _____

122. How many switches control circuit #6? _____

123. How many freeze-proof water hydrants are shown? _____

BLUEPRINT READING

124. How many cleanouts are shown? _____

125. How many 4" stacks are shown and what do they vent? _____

_____ _____

126. How many hot-air supply ducts in living room? _____

127. How many cold-air return ducts are shown? _____

128. What is size of master bedroom? _____

129. What is the size of garage in east-west direction? _____

130. How thick is wall where commode and bathtub is vented in bathroom #21? _____

131. What size and how thick are doors #9? _____

132. What type is door #3? _____

133. What materials are window sills made of? _____

134. Describe the material used to trim out the eaves: _____

135. Describe the material used in soffit: _____

136. What size material is used for collar beams? _____

137. What type of material is used in gable ends? _____

138. How many windows are shown on the north elevation? _____

139. What type of windows are shown on the north elevation? _____

140. What room does the skylight open into? _____

141. Where is the outside opening to the ash pit? _____

142. How large is the flue? _____

143. How many drawers are in the desk shown on detail 7? _____

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: Fundamentals of Mathematics

Course Objectives: To emphasize the importance of a thorough understanding of the mathematics of the construction trades for students planning careers in construction. To encourage maximum development of student skills in the practical application of the mathematical processes used in residential construction.

Course Description: This course provides an in-depth review and additional refinement of the use of whole numbers, fractions, percentages, ratio and proportion, areas and volumes. It introduces various short methods for rapid calculations and explains the advantages and disadvantages of their use in construction-related activities. It provides a basic review of algebra and the algebraic functions used in construction. Emphasis throughout the course is on the understanding of basic processes.

Suggested Primary Text: To be determined locally.

Course Outline: To be determined locally.

Instructional Recommendations/ Suggestions: This course is basically an intensive review of the fundamental mathematical processes. Because of the wide variations which normally exist in the mathematical background of individual students in classes of this type, testing procedures should be developed to allow accelerated progress for more advanced students. Recommend student evaluation be based on demonstrated proficiency in the required processes. Most post-secondary institutions will have comparable course offerings within their regular curriculum which can satisfy the requirements of this course.

Additional Instructional Materials: To be developed locally.

Additional References: To be developed locally.

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: Construction Surveying

Course Objectives: To provide the student with a working knowledge of the fundamentals of surveying and to develop basic skills in the use of surveying information as applied to the home-building industry.

Course Description: This is an introductory course in the principles of surveying which focuses on the elements of surveying most directly related to residential construction. Some of the major areas of concern in this course are: principles and use of the engineer's transit, theory and practice of leveling, the proper maintenance and use of field notebooks, field layout of structures and field staking for earthwork.

Suggested Primary Text: Brinker, Russell C. Elementary Surveying, 5th ed. Scranton, Pa.: Intext Educational Publishers, 1969.

Course Outline:

I. Angles, Bearings, and Azimuths
   - A. General
   - B. Units of angle measurement
   - C. Measurement of angles
   - D. Measurement of distance
   - E. Calculations of bearings

II. Traversing
- A. Methods of running a traverse
- B. Traversing by deflection angles
- C. Traversing by azimuths
- D. Measurement of lengths
- E. Angle closure
- F. Sources of error

III. Leveling
- A. Curvature and refraction
- B. Methods of determining differences of elevation
- C. Types of leveling instruments
- D. Theory of leveling
- E. Profile leveling
- F. Cross sectioning
- G. Signals

IV. The Transit
- A. Upper plate, lower plate, and leveling head
- B. Method of reading a vernier
- C. Operation of the transit
- D. Laying off an angle
- E. Deflection angles and azimuths
- F. Measurement of a vertical angle

V. Area
- A. Methods of measuring
- B. Area by division into triangles
- C. Area by offsets
- D. Area by double meridian distances
- E. Area by coordinates
- F. Area by planimeter

VI. Topographic Surveys
- A. Control for topographic surveys
- B. Topographic details
- C. Locating points in the field
- D. Contours and method of obtaining
- E. Transit tape method
- F. Coordinate squares
- G. Sources of errors in topographic surveys

VII. Construction Surveys
- A. General
- B. Pipelines
- C. Staking out a roadway
- D. Staking out a building
- E. Sources of error

VIII. Parabolic Curves
- A. General
- B. Computations for an equal-tangent curve
- C. Computations for an unequal-tangent curve
- D. Vertical curves
- E. Sight distance
- F. Sources of error

IX. Mapping
- A. General
- B. Mapping agencies
- C. Map drafting
- D. Plotting the traverse
- E. Plotting details
- F. Plotting contours
- G. Topographic symbols
- H. Locating the traverse on the map sheet
- I. Title
- J. Notes
- K. Sources of error in mapping

Instructional Recommendations/ Suggestions: Surveying is an outside activity and field work is an absolutely essential requirement for this course. In geographic areas where extreme or inclement weather conditions can be expected during certain portions of a semester, instructors may need to alter the sequence of subject matter depicted in the suggested course outline. Field

work should approximate industrial practice with special emphasis being placed on the degrees of precision required in good surveying practice. Field notebooks should be kept according to good professional practice and field notes should be reduced to a convenient form for the plotting or calculation of distances and volumes. It is recommended that laboratory/field survey periods comprise a minimum of three hours, once each week, with a one-hour period for class lectures and problem solving.

Additional Instructional Materials:

Surveying equipment normally used in residential construction practice (engineer's transits, surveying rods and chains, stakes, etc.); quantities commensurate with size of class.

Surveyor's field notebooks. Obtainable through retail bookstores, printing and office supply outlets.

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: Introduction to Business

Course Objectives: To familiarize the student with the economic, social, and legal environments in which business is conducted in our present-day society. To provide an opportunity for the student to learn what capitalism is and how it functions. To encourage the student to acquire a usable vocabulary of business terms and to gain an understanding of the methods and procedures used by businessmen to arrive at decisions.

Course Description: This is a survey-type course which examines the characteristics of business organization, the records of business, problems of marketing, personnel, finance, decision making, and the legal and regulatory environment of business. Special emphasis is placed on defining the responsibilities of business in regard to such nonprofitable activities as employing the disadvantaged, promoting civic and educational projects and fighting pollution.

Suggested Primary Text: Glos, Raymond E., and Baker, Harold A. Business: Its Nature and Environment; An Introduction, 7th ed. Cincinnati, Ohio: South-Western Publishing Co., 1972.

Course Outline:

I. Business and Society
   A. Nature of business
   B. Economic business environment
   C. Ethics and social responsibilities

II. Ownership, Organization, and Management
   A. Unincorporated businesses
   B. Incorporated businesses
   C. Organization for management
   D. Management activities

III. Marketing
   A. Marketing--nature and scope
   B. Wholesaling and retailing
   C. Prices and pricing
   D. Advertising
   E. International trade

IV. Personnel
   A. Employee selection and training
   B. Employee compensation
   C. Labor problems and legislation

V. Production
   A. Materials management
   B. Production problems

VI. Finance
   A. Short-term financing
   B. Long-term financing
   C. Financial problems and policies
   D. Security markets and financial news
   E. Risks and insurance

VII. Quantitative Controls
   A. Accounting and financial statements
   B. Data processing
   C. Business statistics and reports
   D. Forecasting and budgeting

VIII. Legal and Regulatory Environment of Business
   A. Business law
   B. Governmental regulation of business
   C. Business and taxes

Instructional Recommendations/ Suggestions: The text suggested for use in this course is designed to provide a general familiarization with the whole area of activity known as business. This complete view will provide a framework into which the student can fit the segments he subsequently studies in greater detail (Business Mathematics, Accounting, Management, etc.). The stress on environmental factors is considered to be of special importance for those students planning careers in construction. The suggested text is well suited to the purposes of this course. It also serves as the nucleus around which the authors have developed a complete teaching materials package. The various parts of the total package are listed in the section on Additional Instructional Materials, below.

Additional Instructional Materials:

"Student Supplement" to suggested primary text (Questions, Problems, Readings, Incidents). Available through the publisher.

"Instructor's Manual" for use with suggested text. Available through the publisher.

"Transparency Masters" for use with the suggested text. Contains a series of several masters for each chapter of the text. Available through the publisher.

Additional Instructional Materials (Continued):

"Objective Tests" for use with the suggested text. Contains a set of ten complete objective examinations over materials contained in the text. Available through the publisher.

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: Introduction to Estimating

Course Objectives: To introduce the student to the techniques and procedures used in determining the probable cost of any given construction project. To provide a basic understanding of bidding procedures and the interrelationships between contract documents and the quantity take-off of materials.

Course Description: This course introduces the student to the basic methods of estimating and develops a system for doing quantity surveys. The course also prepares the student to make some of the kinds of estimates that are commonly used in residential construction.

Prerequisites:

1. "Principles of Residential Construction"
2. "Blueprint Reading"

Suggested Primary Text: Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Course Outline:

I. Estimating and the Estimator
   - A. What is estimating?
   - B. Kinds of estimating
   - C. How to prepare an estimate

II. Specifications
   A. Format

III. Excavation Estimating
   A. Cubic yard
   B. Plot plan

IV. Estimating Concrete
   A. Cubic yard
   B. Reinforcement steel
   C. Form work
      (a) Materials used

V. Estimating Wall Framing
   A. Studs (spacing)
   B. Plates
   C. Door and window bucks
   D. Board feet of lumber

VI. Estimating Ceiling Joist
   A. Spacing
   B. Size of materials
   C. Board feet of lumber
   D. Stiff back (strong back)

VII. Roof Framing
   A. Spacing of rafters
   B. Length of rafters
   C. Collar beam
   D. Purlings
   E. Decking

VIII. Exterior Wall Covering
   A. Brick
   B. Siding wood

IX. Interior Wall and Ceiling Covering
   A. Sheet rock
   B. Paneling
   C. Wall paper
      (a) Vinyl
   D. Tiles

X. Electrical
   A. Size of wire
   B. Electrical devices
   C. Circuits
   D. Appliance circuits

XI. Plumbing
   A. Water lines
      (a) Hot
      (b) Cold
   B. Sewer systems

Instructional Recommendations/ Suggestions: The fundamental concepts of construction estimating should be developed during an introductory series of classroom presentations. It is recommended that blueprints be obtained from local architects or building contractors for use in presenting the portions of this course which deal with quantity take-offs of material. These same blueprints should be used to develop the materials take-off for units of work reflected in the course outline. Care should be taken to insure that the introductory nature of this course is given positive consideration in selection of class projects. Suggested lesson plans and student handout materials for each phase contained in the course outline have been prepared and are included for use, as appropriate, by other instructors. (Note: Some items of information on these handouts will have to be altered to

correspond to the actual data depicted in the blue-

prints selected for use by other instructors.)

Satisfactory completion of the courses entitled "Principles of Residential Construction" and "Blueprint Reading" should be an absolute prerequisite for admitting students to this course.

Additional Instructional Materials:

1. Residential blueprints for use in determining materials requirements, types of work to be performed, etc. Obtainable through local area architects or building contractors. Individual copies of the complete set of blueprints should be provided to each student.

2. Lesson plans and Student Handouts, Lessons Two through Eight (copies attached).

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Weaver, Michael K., and Kirkpatrick, James M. Environmental Control. New York: Harper and Row, 1974.

Lesson Plan: Building Construction Estimating, Chapters One through Four, text, "Introduction to Estimating".

Time: 90 minutes (one and one-half one-hour periods)

References:

Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Instructional Aids: Set of blueprints and specifications.

Lesson Objective: To introduce the student to the purpose and type of estimates used in residential construction. To acquaint the student with the various forms, documents, and contractor data used in developing estimates.

Lesson Outline:

I. General Introduction
   - A. Building construction estimating
   - B. Estimating cost before construction begins
   - C. Estimate prepared from working drawings and specifications
   - D. Variables in estimating

II. The Estimator
   - A. Quantity take-off estimator
   - B. The complete estimator
     1. Cannot be taught experience and judgement
     2. Can be taught principles.

III. Cost Analysis Methods
   - A. Detail Method
   - B. Preliminary method

IV. Contract Documents
- A. Working drawings
- B. General conditions
- C. Supplementary to general conditions
- D. Specifications
- E. Agreements
- F. Addenda

V. Bidding Information
- A. Public advertising
- B. Dodge Reports

VI. Availability of Contract Documents

VII. Sources of Estimating Information

VIII. Computers

IX. Review Questions (each chapter, text)
- A. Discuss each question in detail.

Lesson Plan: Excavation Requirements. Chapter Eight, "Excavation".

Time: 240 minutes (four one-hour periods)

References:

Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp., 1968.

Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Instructional Aids: Set of blueprints for each student. Student Handout, "Excavation Requirements".

Lesson Objective: To enable the student to locate and properly utilize information contained in blueprints and specifications on which to base development of the materials take-off for excavation requirements.

Lesson Outline:

I. General

II. Specifications

III. Soil

IV. Excavation (Unit of Measure)
   A. Shrinkage
   B. Swell
      1. Fig. 8-1

V. Equipment

VI. Perimeters and Areas
- A. The perimeter
- B. The area
- C. Discuss example in text.

VII. Topsoil Removal
- A. Depth
- B. 5' to 10' beyond building
- C. 3' to 5' beyond driveways and walk ;
- D. Discuss example in text.

VIII. General Excavation
- A. Review example.

IX. Special Excavation
- A. Review example.

X. Backfill
- A. Explain example.

XI. Earthwork
- A. New site grading
  - 1. Rough grading
- B. Explain example in text in detail.

XII. Excess and Borrow

XIII. Spreading Topsoil, Finish Grade

XIV. Landscaping

XV. Pumping

XVI. Rock Excavation

XVII. Subcontracting

XVIII. Overhead and Profit

XIX. Check List

XX. Review Questions

XXI. Distribute Student Handout, "Excavation Requirements".

STUDENT HANDOUT

"EXCAVATION REQUIREMENTS"

Item 1: Remove topsoil 6" deep 10' beyond building line.

Item 2: Figure amount of soil in all grade beams as shown on blueprint.

Item 3: Spread 6" of topsoil from building to 10' beyond building.

Item 4: Topsoil to be hauled away.

Item 5: 4" sandfill under slab.

Summary:

Item 1 _____ cu. yd.

Item 2 _____ cu. yd.

Item 3 _____ cu. yd.

Item 4 _____ cu. yd.

Item 5 _____ cu. yd.

Lesson Plan: Concrete Requirements, Chapter Nine, "Concrete . . .

Time: 480 minutes (eight one-hour periods)

References:

Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp., 1968.

Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Instructional Aids: Blueprints and information from specifications. Student Handout, "Concrete Requirements".

Lesson Objective: To enable the student to locate and properly utilize information contained in blueprints and specifications on which to base the development of materials take-off for concrete requirements.

Lesson Outline:

I. Concrete Work
   A. Ready mixed
   B. Mixed on the job

II. Estimating Concrete
   A. Cubic yard
   B. Explain and discuss examples used in text.

III. Reinforcing Steel
   A. Size of rods
   B. Weight of rods
   C. Splice requirements
   D. Explain example in text.

IV. Vapor Barrier
   A. Size of rolls
   B. Estimating vapor barriers
      1. Explain example in text.

V. Accessories
   A. Expansion joint covers
   B. Expansion joint fillers
   C. Waterstops

VI. Concrete Finishes
   A. Patch-up work
   B. Types of finishes
   C. Estimating concrete finishes
      1. Man-hours required for different types of finishes

VII. Curing
   A. Time required
   B. How to cure

VIII. Transporting Concrete

IX. Forms
   A. Wood forms
   B. Metal forms
   C. Miscellaneous forms
   D. Estimating forms
      1. Concrete contact area

X. Form Liners
   A. For different patterns
   B. Estimating form liners

XI. Check List for Concrete

XII. Review Questions, text.

XIII. Distribute Student Handout, "Concrete Requirements".

STUDENT HANDOUT

"CONCRETE REQUIREMENTS"

Item 1: Forms required, Bd. ft. of material.

a. Brace at each corner and two feet on centers (one 8-ft. 2x4 needed for each brace)

Item 2: Vapor barrier needed under slab

Item 3: Reinforcing rods

#3

#4

#5

Item 4: Amount of concrete needed for slab

Summary:

Item 1 _____ B.F.

Item 2 _____ sq. ft.

Item 3 _____ ft. _____ lb. #3

_____ ft. _____ lb. #4

_____ ft. _____ lb. #5

Item 4 _____ cu. yds.

Lesson Plan: Masonry Requirements, Chapter 10, "Masonry".

Time: 360 minutes (six one-hour periods)

References:

Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp., 1968.

Instructional Aids: Set of blueprints, and information from specifications. Student Handout, "Masonry Requirements".

Lesson Objective: To enable the student to locate and properly utilize information contained in blueprints and specifications on which to base development of the materials take-off for masonry requirements.

Lesson Outline:

I. General
   A. Description of masonry materials, tasks, and responsibilities.

II. Specifications

III. Bonds (Patterns)

IV. Concrete Masonry
   A. Concrete blocks

V. Estimating Concrete Masonry
   A. Explain examples in book.

VI. Specifications Concrete Masonry

VII. Clay Masonry

VIII. Estimating Brick
- A. Explain example in book.

IX. Specifications Brick

X. Mortar
- A. Explain example.

XI. Accessories
- A. Control joints
- B. Wall ties
- C. Flashing
- D. Weep holes

XII. Review Questions (text)

XIII. Student Handout, "Masonry Requirements".

STUDENT HANDOUT

"MASONRY REQUIREMENTS"

Item 1: Figure number of bricks as shown on blueprint.

Item 2: Mortar for item 1.
7 cu. ft. of mortar for every sq. of brick face

Item 3: Wall ties. One for every 3 sq. ft. of wall, item 1.

Item 4: Masonry wall reinforcing bars. One every four courses of brick.

Summary:

Item 1 _____ Bricks

Item 2 _____ cu. yd. mortar

Item 3 _____ wall ties

Item 4 _____ masonry wall reinforcing bars

Lesson Plan: Requirements, Wood Frame Construction. Chapter Seventeen, "Wood Frame Construction".

Time: 600 minutes (ten one-hour periods)

References:

Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp., 1968.

Instructional Aids: Set of blueprints and specifications. Student Handout, "Wood Frame Construction Requirements".

Lesson Objective: To enable the student to locate and properly utilize information contained in blueprints and specifications on which to base development of the materials take-off for wood frame construction requirements.

Lesson Outline:

I. Frame Construction

II. Board Measure

III. Studs (Wall Framing)
- A. Plates
- B. Studs
- C. Door and window headers
- D. Tees and corners
- E. Trimmers
- F. Sills (window)
- G. Fire blocks
- H. Wind braces

IV. Joists, Ceiling
- A. Size
- B. Spacing
- C. Span
- D. Direction of run
- E. Bridging
- F. Stiff or strong back

V. Rafters
- A. Size
- B. Spacing
- C. Span (length of rafters)
- D. Purlings
- E. Collar beams
- F. Facier backing
- G. Barge rafters

VI. Sheathing (Decking and Wall)
- A. Solid Lumber
  - 1. 1x2
  - 2. 1x4 T&G
  - 3. 1x8 T&G
  - 4. 1x6 and 1x8 Shiplap
- B. Plywood Sheathing
  - 1. Size
  - 2. Thickness
  - 3. Joints on rafter
  - 4. Joints between rafter
- C. Wall Sheathing
  - 1. Lumber
  - 2. Plywood
  - 3. Insulating
    - (a) Structural
    - (b) Non-structural
  - 4. Gyp rock

VII. Insulation
- A. Roll
- B. Batt
- C. Rigid
- D. Blown

VIII. Trim
- A. Exterior
  1. Facier board
  2. Corner boards
  3. Soffits
- B. Interior
  1. Door trim
  2. Base and base shoe
  3. Ceiling molding

IX. Check List

X. Student Handout, "Wood Frame Construction Requirements".

STUDENT HANDOUT

"WOOD FRAME CONSTRUCTION REQUIREMENTS"

Item 1: Wall Framing

a. Studs 16" on center
b. Plates. Two top, one bottom
c. Headers. 2x6 double headers
d. Tees
e. Corners
f. Trimmers
g. Sills. 2x4. Double under window.
h. Fire block, all outside walls. Two rows where vertical siding is used.
i. Wind braces at each corner, where appropriate.

Item 2: Joists, Ceiling. 16" on center. 2x8 ceiling joist. No bridging required.

Item 3: Rafters. 2' centers. Overhang as required on blueprint. One purling if rafter is over 12' long. Collar beam every 4 ft. 2x6 facier backers.

Item 4: Decking
4x8 - 5/8 in. exterior plywood

Item 5: Gyp Wall Sheathing (2x8), Installed Horizontally

Item 6: Insulation (Roll)
3" thick between studs on all outside walls.

Item 7: Trim

Exterior: Facier 1x6 yellow pine
Soffit 3/8 in. exterior plywood

Interior: Base
Ceiling Molding

Summary:

Item 1: Studs _____ B.F.

Plates _____ B.F.

Headers _____ B.F.

Tees _____ B.F. _____ No.

Corners _____ B.F. _____ No.

Trimmers _____ B.F.

Headers _____ B.F.

Sills _____ B.F.

Item 2: Joist _____ B.F.

Stiff back _____ B.F.

Item 3: No. _____ length _____ B.F. _____.

Purling _____ B.F.

Collar beams _____ B.F.

Facier backer _____ B.F.

Item 4: Plywood _____ No. Sheets

Item 5: Gyp rock _____ No. pieces

Item 6: Insulation _____ sq. ft.

Item 7: Trim

Exterior

Facier _____ B.F.

Soffit _____ sq. ft.

200

Item 7: Trim

Interior

Base _____ L.F.

Ceiling Modling _____ L.F.

Lesson Plan: Roofing Requirements. Chapter Sixteen, "Roofing".

Time: 180 minutes (three one-hour periods)

References:

Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp, 1968.

Instructional Aids: Set of blueprints and specifications. Student Handout, "Roofing Requirements".

Lesson Objective: To enable the student to locate and properly utilize information contained in blueprints and specifications on which to base development of the materials take-off for roofing requirements.

Lesson Outline:

I. Roofing
   A. Types of roofing materials

II. Roof Shapes
   A. Roof area

III. Shingles
   A. Asphalt
      1. Size
      2. Weight
      3. Coverage
      4. Exposure
      5. Felt
      6. Nails

B. Asbestos
   1. Size
   2. Weight
   3. Nails
   4. Felt

C. Wood Shingles and Shakes
   1. Size (length)
   2. Sold by square, 10" exposure
   3. Nails

D. Other Roofs
   1. Built-up
   2. Corrugated sheets
   3. Metal roof
   4. Slate
   5. Tile

IV. Check List

V. Student Handout, "Roofing Requirements".

STUDENT HANDOUT

"ROOFING REQUIREMENTS"

Item 1: Shingles
a. Asphalt sningles, square tab, 5" exposure to weather

Item 2: 30 lb. felt
2" lab edge
1' lap end

Item 3: Metal edging

Summary:

Item 1 Shingles _____ sq.

Nails _____ lb.

Item 2 Felt _____ sq.

Nails _____ lb.

Item 3 Metal edging _____ len. ft.

Lesson Plan: Requirements, Drywall and Wetwall Construction. Chapter Thirteen, "Drywall and Wetwall Construction".

Time: 180 minutes (three one-hour periods)

References:

Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp., 1968.

Instructional Aids: Set of blueprints and specifications. Student Handout, "Drywall and Wetwall Requirements".

Lesson Objective: To enable the student to locate and properly utilize information contained in blueprints and specifications on which to base development of the materials take-off for drywall and wetwall construction requirements.

Lesson Outline:

I. Drywall Construction
   A. Sheet Rock
      1. Tape and bed
   B. Wood Paneling
      1. How installed
      2. Types of paneling

II. Student Handout, "Drywall and Wetwall Construction Requirements".

III. Discuss review questions, text.

STUDENT HANDOUT

"DRYWALL AND WETWALL CONSTRUCTION REQUIREMENTS"

Item 1: Sheet rock: 4x8 sheets.
1/2" sheet rock required on all walls and ceilings

Item 2: Paneling: 4x8 sheets.
1/4" paneling on wall in family room and study

Summary:

Item 1 _____ pieces of sheetrock

Item 2 _____ pieces of paneling

Lesson Plan: Requirements for Finishes. Chapter Fifteen, "Finishes".

Time: 360 minutes (six one-hour periods)

References:

Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp., 1968.

Instructional Aids: Set of blueprints and specifications. Student Handout, "Requirements for Finishes".

Lesson Objective: To enable the student to locate and properly utilize information contained in blueprints and specifications on which to base development of the materials take-off for finishing requirements.

Lesson Outline:

I. Flooring
   A. Types
   B. Where used

II. Wood Flooring
   A. Types of wood
   B. Strip flooring
   C. Block flooring
   D. Estimating
   E. Specifications

III. Resilient Flooring
   A. Types
   B. Where used
   C. Estimating
   D. Specifications
   E. Adhesives
      1. Coverage

IV. Carpet
- A. Types
- B. Estimating
- C. Specifications

V. Tiles
- A. Types and sizes
- B. Estimating
- C. Specifications

VI. Painting Interior
- A. Types of paints
- B. Where used
- C. Estimating
- D. Specifications
- E. Take-off of areas
  1. Walls
  2. Ceiling
  3. Doors
  4. Trim

VII. Check List

VIII. Review Questions, text.

IX. Student Handout, "Requirements for Finishes".

STUDENT HANDOUT

"REQUIREMENTS FOR FINISHES"

Item 1: Floorcovering
a. Vinyl Resilient Tile in kitchen, dinette, utility and baths

Item 2: Carpet remainder of house (except garage).

Item 3: Paint Interior
a. Sheet rock walls and ceilings in kitchen and bath. Doors and trim Latex Enamel (three coats).
b. All other sheet rock, Latex (three coats).

Item 4: Tile wainscots, 4 ft. high in baths.

Summary:

Item 1 _____ boxes tile floor covering

_____ gals. mastic

Item 2 _____ sq. yds. carpet

Item 3 _____ gals Latex Enamel

_____ gals. Latex

Item 4 _____ sq. ft. ceramic tile

Lesson Plan: Subcontractor Functions. Chapters Eighteen, Nineteen, and Twenty, "Electrical", "Plumbing", and "HVAC".

Time: 360 minutes (six one-hour periods)

References:

Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp., 1968.

Richter, Herbert P. Practical Electrical Wiring, Residential, Farm, and Industrial, 9th ed. New York: McGraw-Hill Book Co., 1972.

Matthias, A. J., Jr.; Smith, Esles, Sr.; et al. How to Design and Install Plumbing, 4th ed. Chicago: American Technical Society, 1971.

Instructional Aids: Set of blueprints and specifications.

Lesson Objective: To acquaint the student with methods used in developing rough cost estimates for functions which are normally subcontracted in residential construction practices.

Lesson Outline:

I. Electrical
   A. Contractor-subcontractor relationships and procedures

II. Plumbing
   A. Contractor-subcontractor relationships and procedures

III. Heating, Ventilating and Air Conditioning

A. Contractor-subcontractor relationships and procedures.

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: Residential Construction Materials and Processes

Course Objectives: To provide an in-depth study of the materials used in residential construction, and a basic understanding of how these materials are assembled into finished residential units.

Course Description: This course is a broad survey of the materials used in the various processes of residential construction. It is designed to familiarize the student with the components of modern construction so that he can select the materials best suited for the application, whether from the standpoint of durability and serviceability or from that of appearance, or both.

Suggested Primary Text: Watson, Donald A. Construction Materials and Processes. New York: McGraw-Hill Book Co., 1972.

Course Outline:

I. Selection of Materials
   - A. Materials evaluation
   - B. References
   - C. Trade associations
   - D. Reference standards
   - E. Testing laboratories

II. Soils, Site Work, Foundations, and Paving
- A. Soil classification
- B. Soil behavior
- C. Soil investigation
- D. Soil modification
- E. Foundations and piles
- F. Paving and surfacing materials

III. Concrete
- A. Cement
- B. Aggregate
- C. Admixtures
- D. Water
- E. Design of mix
- F. Placing concrete
- G. Joints
- H. Finishing and curing concrete
- I. Reinforced concrete
- J. Precast concrete
- K. Prestressed concrete

IV. Masonry
- A. Stone
- B. Stone masonry
- C. Brick
- D. Brickwork
- E. Structural clay tile
- F. Concrete block
- G. Gypsum block
- H. Glass block

V. Wood and Related Products
- A. Characteristics of wood
- B. Defects in wood
- C. Preparation of lumber
- D. Characteristics of softwoods and hardwoods
- E. Lumber grades
- F. Treated lumber
- G. Glued-laminated timber
- H. Structural plywood
- I. Hardwood plywood
- J. Pressed boards
- K. Composite boards
- L. Wood fasteners

VI. Ferrous Metals and Steel Framing
- A. Iron
- B. Cast iron
- C. Wrought iron
- D. Steel
- E. Shaping steel
- F. Steel pipe, tubing, and wire
- G. Steel castings
- H. Classifications of steels
- I. Steel construction
- J. Steel fasteners
- K. Steel floor and roof framing

VII. Nonferrous Metals and Alloys
- A. Aluminum and aluminum alloys
- B. Aluminum products
- C. Lead
- D. Zinc and zinc coatings
- E. Copper and copper alloys
- F. Nickel, chromium, cadmium, and titanium

VIII. Lath, Plaster, and Accoustical Materials
- A. Plaster
- B. Gypsum plasters
- C. Portland cement plasters
- D. Lath
- E. Lath-and-plaster construction
- F. Accoustics
- G. Accoustical materials

IX. Roofing, Sheet Metal, Dampproofing, and Thermal Insulation
- A. Roofing materials
- B. Bituminous roofing materials
- C. Shingles, tiles, and slate
- D. Wood shingles and shakes
- E. Membrane roofing
- F. Metals
- G. Weatherproofing and drainage
- H. Dampproofing and waterproofing
- I. Thermal insulation

X. Floor and Wall Coverings
- A. Floor coverings
- B. Wood flooring
- C. Resilient flooring
- D. Seamless resilient flooring
- E. Terrazzo
- F. Wall and floor tile
- G. Tilesetting
- H. Wall coverings

XI. Doors, Windows, and Hardware
- A. Doors
- B. Wood doors
- C. Sliding and folding doors
- D. Metal and metal-covered doors
- E. Windows
- F. Glazed walls
- G. Builders' hardware
- H. Cabinet hardware

XII. Glass, Glazing, and Sealants
- A. Glass
- B. Sheet glass
- C. Plate glass
- D. Safety glass
- E. Tinted and coated glass
- F. Mirrors
- G. Plastic glazing materials
- H. Glazing

XIII. Paints and Finishes
- A. Properties of paint
- B. Pigments
- C. Vehicles
- D. Solvents
- E. Clear coatings and stains
- F. Primers and sealers
- G. Special-purpose paints

XIV. Mechanical Equipment
- A. The mechanical trades
- B. Water-distribution systems
- C. Drainage systems
- D. Drain pipe and fittings
- E. Fuel-gas piping
- F. Plumbing fixtures
- G. Heating systems
- H. Air conditioning systems

XV. Electrical Equipment
- A. Electrical energy
- B. Power generation
- C. Services and service equipment
- D. Wiring materials and methods
- E. Junction boxes, outlets, and switches
- F. Lighting

Instructional Recommendations/ Suggestions: The suggested text is abundantly illustrated with photographs and drawings depicting the materials and processes of construction. It is organized in accordance with the sixteen divisions of the Uniform System For Construction Specifications. During the early stages of this course the student should be thoroughly indoctrinated in the content and proper usage of Sweet's Architectural Catalogue File. A virtually unlimited range of supplemental instructional aids and materials is available through building materials manufacturers and distributors. These aids run the gamut from product sample boards through film strips and transparencies (including manufacturers' representatives and guest lecturers). Each major

section of the text includes discussion questions which can well be used to develop a test item bank for examination purposes. This course covers an extremely broad subject area. The instructor, in preparing daily lesson outlines, should plan for limiting discussion to the major aspects of each topic, so as to insure a wider general orientation into the various materials of construction, rather than specific details of selected items.

Additional Instructional Materials:

Manufacturers' Sample Boards, Film Strips, 16MM Films, Product Representatives (for guest lecture purposes), etc. All available through various building materials manufacturers.

Sweet's Architectural Catalogue Files. Outdated copies of these publications (suitable for instructional purposes) may be obtained in sufficient quantities for classroom use through local architects and building contractors (recommend as a minimum one complete set of files for each four students in the class).

Additional References:

Merritt, Frederick S., ed. Building Construction Handbook, 2nd ed. New York: McGraw-Hill Book Co., 1965.

Wass, Alonzo. Methods and Materials of Residential Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

In addition to the general references cited above, a detailed topical listing of references is included at the end of each major section of the recommended text.

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: Communication Skills

Course Objectives: To encourage student understanding of the critical importance of each of the various communication processes in residential construction activities. To provide an opportunity for individual student development of verbal and non-verbal communication skills.

Course Description: A study of the basic skills of writing; foundation work in the principles of grammar, punctuation, and sentence structure. Includes drills in spelling, exercises in vocabulary development, and practice in writing effective sentences. The course should provide analysis of each student's strengths and weaknesses, and instruction should be aimed at remedying the most serious deficiencies.

Suggested Primary Text: To be determined locally.

Course Outline:

I. Communication in Construction Processes
   A. Summary of the technical specialist's need for proficiency in communication
   B. Discussion of written communication as an essential skill
      1. Statements of facts
      2. Expression of ideas
      3. Technical reporting
         a. Formal
         b. Informal
      4. Use of graphics in written communication
   C. Discussion of oral communications as an essential skill
      1. Person-to-person expression of ideas and thoughts
      2. Verbal reporting
   D. Diagnostic testing of students

II. Sentence Structure
   A. Review of basic parts of speech
   B. Study of complete, clear, and correct sentences
   C. Use and placement of modifiers, phrases, and clauses
   D. Study of sentence conciseness
   E. Exercises in sentence structure

III. Written Expression (emphasis on student exercise)
   A. Diagnostic testing of students
   B. Study of paragraph construction
      1. Development
      2. Topic sentence
      3. Unity; coherence
   C. Study of types of expression
      1. Narration, description, exposition
      2. Inductive and deductive reasoning
      3. Figures of speech; analogies; comparisons and contrasts
      4. Cause-and-effect reasoning
      5. Other
   D. Written exercises in paragraph construction

III. Written Expression (emphasis on student exercise) (Continued)
- E. Study of descriptive reporting
  - 1. Organization and planning
  - 2. Emphasis on sequence, continuity, and delimitation to pertinent data or information
- F. Study of letter writing
  - 1. Business letters
  - 2. Personal letters
- G. Review of mechanics
  - 1. Grammar (reviewed as required)
  - 2. Punctuation--when to use
    - a. Period, question mark, exclamation mark
    - b. Comma
    - c. Semicolon
    - d. Colon
    - e. Dash
    - f. Parentheses
    - g. Apostrophe
  - 3. Capitalization
  - 4. Spelling
    - a. Word division--syllables
    - b. Prefixes and suffixes
    - c. Word analysis and meaning--context, clues, and phonetics
- H. Exercises in mechanics of written expression

IV. Talking and Listening (emphasis on student exercises)
- A. Diagnostic testing of students
- B. Organization of topics or subjects
- C. Directness in speaking
- D. Gesticulation and use of objects to illustrate
- E. Conversation courtesies
- F. Listening faults
- G. Taking notes
- H. Understanding words through context clues
- I. Exercises in talking and listening

V. Improving Reading Efficiency
   A. Diagnostic testing of students
   B. Improving reading habits
      1. Correct reading posture
      2. Light sources and intensity
      3. Developing proper eye-span and movement
      4. Developing speed and comprehension appropriate to the purpose
      5. Scanning; sentence reading
      6. Taking notes for careful study
   C. Footnotes, index, bibliography, and cross references
   D. Developing skill in summarizing
      1. Outline
      2. Digest or brief
      3. Criticism
   E. Exercises in reading improvement
      1. Reading for comprehension
      2. Reading for speed

Instructional Recommendations/ Suggestions: This course is basically an intensive review of the fundamental communication processes. Because of the wide differences in levels of individual student development normally found in classes of this type, the use of testing procedures which encourage accelerated progress for the more advanced students is strongly recommended. Most post-secondary institutions will have established courses within the regular curriculum which satisfy the developmental objectives of this course.

Additional Instructional Materials: To be developed locally.

Additional References: To be developed locally.

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: Business Mathematics

Course Objectives: To develop a thorough understanding of the mathematics used in business and in construction-related activities. To build increased student confidence in the practical application of mathematical processes through the experience gained in completing classroom exercises and assignments.

Course Description: A study of the fundamental processes, common and decimal fractions, bank statement reconciliations, aliquot parts percentage, cash and trade discounts, simple and compound interest, notes and drafts, billing procedures, mark-up, commissions, profit and loss, payrolls, social security and other taxes. Emphasis is on practical problems in the various fields of business.

Suggested Primary Text: To be determined locally.

Course Outline: To be developed locally.

Instructional Recommendations/ Suggestions: Most post-secondary institutions will have comparable course offerings within their regular curriculum. It is suggested that these established

courses be utilized to satisfy this requirement for student proficiency in the application of arithmatic processes.

Additional Instructional Materials:	To be developed locally.
Additional References:	To be developed locally.

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: Business Speech

Course Objectives: To develop student proficiency in the basic oral communication skills necessary to those operating in supervisory and management roles. To provide an opportunity to improve speech efficiency, poise, and self-confidence in situations most common to business and professional people.

Course Description: This is designed to be a practical and general course in the basic principles of oral communication. Includes use of body and voice, the speaker-listener relationship, oral reading of literature, group discussion, and parliamentary procedure. Diagnostic testing of students should be included and instruction should be planned to help students improve skills in which they are weak. Stress should be placed on interpersonal relationships, technical reports, speeches to promote sales and services, and business and job interviews.

Suggested Primary Text: To be determined locally.

Course Outline: To be developed locally.

Instructional Recommendations/ Suggestions: Most post-secondary institutions will be able to substitute established courses from within their general curriculum to satisfy the developmental objectives of this course.

Additional Instructional Materials: 16MM Film Series. National Television Film Service, Audio Visual Center, Indiana University, Bloomington, Indiana 47405.

"The Definition of Language", 29 minutes. Produced by Henry Lee Smith (Language in Linguistics Series).

"Dialects", 29 minutes. Produced by Henry Lee Smith (Language in Linguistics Series).

"How to Say What You Mean", 29 minutes. Produced by S. I. Hayakawa (Language in Action Series).

"The Task of the Listener", 29 minutes. Produced by S. I. Hayakawa (Language in Action Series).

Additional References: To be developed locally.

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: Management Processes

Course Objectives: To acquaint the student with the various aspects of planning, organizing, leadership, decision making, and controlling in the conduct of business operations.

Course Description: This is a basic course in the principles of management. It is designed to familiarize the student with the role of the manager in modern business enterprises. Provides instruction in organizational designs, human relations, decision making, communications, leadership techniques, and enterprise control. Emphasizes initiative, individual research, and group discussion.

Suggested Primary Text: Massie, Joseph L., and Douglas, John. Managing: A Contemporary Introduction. Englewood Cliffs, N. J.: Prentice-Hall, Inc., 1973.

Course Outline:

I. The Manager in the Modern World
   A. Forces shaping the manager's job
   B. Defining the manager's job

II. Management Fundamentals: The Knowledge Base
   A. Human motivation
   B. Individual behavior processes
   C. Human groups
   D. Organization structure
   E. Technology, information, and systems
   F. The management of change

III. Management Fundamentals: The Processes for Managing
   A. The decision-making process
   B. Analytical aids for decision-making
   C. Setting objectives
   D. Planning and policy-making
   E. Organizing and staffing: relating people to job structure
   F. Communicating
   G. Leadership
   H. Controlling

IV. Management Fundamentals: The Reality of Managing
   A. The manager in the world of power and politics
   B. Managers in practice: lessons from the leaders
   C. Managerial strategy and tactics

V. The Manager in a Changing World
   A. Organizational and personal value conflicts
   B. The managerial response to value conflict
   C. Managing forces in change

Instructional Recommendations/ Suggestions: The text suggested for use in this course is written in language which can be readily understood by students who have not had prior courses in management. In straightforward terms it defines the

Instructional Recommendations/ Suggestions (Continued):

things managers do, problems managers face, and the knowledge managers need. It identifies specific learning objectives at the beginning of each chapter and provides study questions at the conclusion of the chapter through which the student can determine how well he has achieved the stated objectives. These study questions can serve also as an excellent text item bank for major examination purposes. Numerous 16MM films and sets of transparencies are available which can be effectively used to reinforce the textbook materials. Many of these various teaching aids will be found under functional titles in libraries and learning resource centers (i.e., management . . . leadership . . . communications . . . motivation . . . etc.). Many post-secondary institutions will have introductory management courses in their established curriculums which can satisfy the developmental requirements of this course.

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: Residential Construction Estimating

Course Objectives: To afford the student an opportunity to gain practical experience in preparing material and labor quantity surveys and in developing the types of estimates used in residential construction. To develop student understanding of the relationships between contracts, codes, specifications and working drawings, and how these documents are used in the estimating process.

Course Description: This course requires that the student utilize knowledge gained in previous courses to develop realistic estimates of the cost factors which will ordinarily be experienced in the residential construction process. It provides for the study of estimating from the viewpoint of the general contractor, sub-contractor, general superintendent, and the professional construction estimator.

Prerequisites:

1. "Principles of Residential Construction"
2. "Blueprint Reading"
3. "Introduction to Estimating"

Suggested Primary Text: Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Course Outline:

I. Introduction to Estimating
   A. General introduction
   B. The estimator
   C. Cost analysis methods
   D. The contract documents
   E. Bidding information
   F. Availability of contract documents
   G. Sources of estimating information
   H. Computers

II. Contracts, Bonds and Insurance
   A. The contract system
   B. Types of agreement
   C. Lump-sum agreement
   D. Unit-price agreement
   E. Cost-plus-fee
   F. Agreement provisions
   G. Bonds
   H. Bid bonds
   I. Performance bonds
   J. Labor and material bonds
   K. Miscellaneous bonds
   L. Obtaining bonds
   M. Insurance

III. Specifications
   A. Specifications
   B. Invitation to bid
   C. Instructions to bidders
   D. Bid (Proposal) forms
   E. Form of owner-contractor agreement
   F. General conditions
   G. Supplementary general conditions
   H. Technical trade sections
   I. Alternates
   J. Addenda
   K. Errors in specifications

IV. The Estimate
   A. Organization
   B. Daily log
   C. Notebook
   D. To bid or not to bid
   E. The estimate
   F. Site investigation
   G. Subcontractors

IV. The Estimate (continued)
- H. Materials
- I. Work-up sheets
- J. Summary sheets
- K. Errors and omissions

V. Overhead and Contingencies
- A. Overhead
- B. General overhead
- C. Job overhead
- D. Contingencies
- E. Checklist

VI. Labor
- A. General
- B. Unions--wages and rules
- C. Field reports
- D. Pricing labor
- E. Labor diagrams

VII. Equipment
- A. General
- B. Operation costs
- C. Depreciation
- D. Interest
- E. Ownership costs
- F. Rental costs
- G. Miscellaneous tools
- H. Cost accounting
- I. Mobilization
- J. Checklist

VIII. Excavation
- A. General
- B. Specifications
- C. Soil
- D. Excavation--Unit of Measure
- E. Equipment
- F. Perimeters and areas
- G. Topsoil removal
- H. General excavation
- I. Special excavation
- J. Backfilling
- K. Earthwork
- L. Excess and borrow
- M. Spreading topsoil

VIII. Excavation (continued)
- N. Landscaping
- O. Pumping (De-Watering)
- P. Rock excavation
- Q. Subcontractors
- R. Overhead and profit
- S. Excavation checklist
- T. Piles
- U. Pile checklist
- V. Asphalt paving

IX. Concrete
- A. Concrete work
- B. Estimating concrete
- C. Reinforcing
- D. Vapor barrier
- E. Accessories
- F. Concrete finishing
- G. Curing
- H. Transporting concrete
- I. Forms
- J. Form liners
- K. Concrete checklist

X. Masonry
- A. General
- B. Specifications
- C. Bonds (Patterns)
- D. Concrete masonry
- E. Estimating--concrete masonry
- F. Specifications--concrete masonry
- G. Clay masonry
- H. Estimating brick
- I. Specifications--brick
- J. Estimating tile
- K. Specifications--tile
- L. Stone masonry
- M. Estimating stone
- N. Specifications--stone
- O. Mortar
- P. Accessories
- Q. Reinforcing bars
- R. Cleaning
- S. Equipment
- T. Cold weather
- U. Labor
- V. Subcontractors
- W. Checklist

XI. Waterproofing and Dampproofing
- A. Waterproofing
- B. Membrane waterproofing
- C. Estimating--membrane
- D. Integral method
- E. Metallic method
- F. Dampproofing
- G. Painting method
- H. Estimating--painting
- I. Parging (Plastering)
- J. Estimating--parging
- K. Checklist

XII. Structural Systems
- A. Precast concrete
- B. Estimating
- C. Specifications
- D. Precast tees
- E. Precast slabs
- F. Precast columns and beams
- G. Miscellaneous precast
- H. Precast costs
- I. Precast checklist
- J. Structural steel
- K. Structural steel framing
- L. Steel joists
- M. Steel decking
- N. Miscellaneous structural steel
- O. Steel erection subcontractors
- P. Steel checklist
- Q. Wood systems
- R. Wood trusses
- S. Laminated beams and arches
- T. Wood decking
- U. Plywood systems
- V. Wood checklist

XIII. Drywall and Wetwall Construction
- A. General
- B. Supporting construction
- C. Suspended ceiling systems
- D. Drywall
- E. Types of assemblies
- F. Wallboard types
- G. Column fireproofing
- H. Accessories

XIII. Drywall and Wetwall Construction (continued)
- I. Wetwall construction
- J. Plaster
- K. Lath
- L. Accessories
- M. Checklist

XIV. Windows, Curtainwalls, Doors, and Hardware
- A. Window and curtainwall frames
- B. Accessories
- C. Doors
- D. Fire-rated doors
- E. Acoustical doors
- F. Overhead doors
- G. Folding doors and partitions
- H. Prefitting and machining (premachining)
- I. Prefinishing
- J. Door frames
- K. Hardware
- L. Accessories
- M. Checklist for doors and frames
- N. Glass

XV. Finishes
- A. Flooring
- B. Wood flooring
- C. Resilient flooring
- D. Carpeting
- E. Tile
- F. Painting
- G. Checklist

XVI. Roofing
- A. Roofing
- B. Roof areas
- C. Shingles
- D. Built-up roofing
- E. Corrugated sheets
- F. Metal roofing
- G. Slate
- H. Tile
- I. Sheet, tiles, and shingles formula
- J. Liquid roofing
- K. Flashing
- L. Insulation
- M. Roofing trim
- N. Labor
- O. Equipment
- P. Checklist

XVII. Wood Frame Construction
- A. Frame construction
- B. Board measure
- C. Studs
- D. Wood joists
- E. Rafters
- F. Sheathing
- G. Insulation
- H. Trim
- I. Checklist

XVIII. Electrical
- A. Electrical work
- B. Single contracts
- C. Separate contracts
- D. Coordination requirements
- E. Checklist

XIX. Plumbing
- A. Plumbing work
- B. Single contracts
- C. Separate contracts
- D. Coordination requirements
- E. Checklist

XX. Heating, Ventilating, and Air Conditioning
- A. HVAC work (Heating, Ventilating, and Air Conditioning)
- B. Single contracts
- C. Separate contracts
- D. Coordination requirements
- E. Checklist

XXI. Profit
- A. Profit

Suggested References:

Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp., 1968.

Jones, Raymond P., Sr. Construction Estimating. Albany, N. Y.: Delmar Publishers, Inc., 1967.

Suggested References (continued):

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Instructional Recommendations/ Suggestions:

A basic requirement for conducting a course in estimating is the development of data for use in practice problems. Since production factors vary considerably between geographic areas, the use of approximations is suggested in the completion of simulation exercises. A compilation of the various factors necessary for conducting a simulation exercise in residential construction estimating is included for consideration by other instructors (see attachment, "Simulation Exercise Data"). This data should be used by each student to complete all entries in the "Quantity Survey" (sample format attached) and both the "Simulation Exercise Data" and the completed "Quantity Survey" should be retained for later use in the course entitled "Construction Planning and Control".

The suggested text is arranged according to the sixteen major divisions of the Uniform System for Construction Specifications. The text should be supplemented by use of a set of residential blueprints obtainable through local architects or builders. Sepia

copies of blueprints can frequently be obtained without cost and can be used to reproduce additional copies for individual student distribution. These same blueprints should be retained for later use in the course entitled "Construction Planning and Control".

The first seven chapters of the text deal with general information and are self-explanatory. Chapters Eight through Twenty pertain directly to the divisions used in standard specifications. Suggested practice exercises have been locally developed (copies attached) and may be used by students as an aid in completing the "Quantity Survey".

Additional Instructional Materials:

1. "Simulation Exercise Data". Locally produced. Copy attached.
2. "Quantity Survey". Locally produced. Sample format attached.
3. Residential blueprints. Available through local architects or home builders. Recommend sepia copy for reproduction purposes.

Additional Instructional Materials (Continued):

4. Standard Estimating Pads. Recommended for individual student distribution. Available through local printing and office supply outlets.

5. Suggested "Practice Exercises", Chapters Eight through Seventeen. Locally produced. Copies attached.

SIMULATION EXERCISE DATA

Rough Grading

Labor and Equipment .75 per C.Y. of soil to be moved.
A tractor and one operator will move about 275 yd. of soil per day.
Rent on tractor $20.00 per hr.
Operator's pay $5.00 per hr.

Lay Out

Labor for Laying Out .02 per S.F. of floor space.
Material Cost $150.00 M.F.B.M.
Crew. Two concrete men at $6.00 per hr. ea.

Forming Slab

Labor for forming .05 per S.F. of floor space.
Material Cost $180.00 M.F.B.M.
Material Waste 5%
Crew. Two concrete men at $6.00 per hr. ea.; two laborers at $3.00 per hr. ea.

Filling

Labor for filling .02 per S.F. of floor space.
Material Cost $3.00 C.Y.
Material allowed for tamping 12%
Crew. Two laborers at $3.00 per hr. ea.

Trenching for Beams

Labor and Equipment Cost .03 per S.F. of floor space.
Equipment Rent $6.25 per hr.
Operator's Labor $5.00 per hr.

Fine Grading

Labor for Fine Grading .02 per S.F. of floor space.
Crew. Two laborers at $3.00 per hr. ea.

Vapor Barrier

Labor for Installing Vapor Barrier .005 per S.F. of floor space.
Material Cost _____ S.F.
Material Extra 20% for laps and beams.
Crew. Two laborers at $3.00 per hr. ea.

SIMULATION EXERCISE DATA

Reinforcing Steel

Labor for Installing .05 per S.F. of floor space.
Material Cost _____ lb.
Crew. Two concrete men at $6.00 per hr. ea.; two laborers at $3.00 per hr. ea.
Material Extra 15% for laps.

Weight of Reinforcing Rods.

#3 - 3/8" rods	0.376 lb. per ft.
#4 - 1/2" rods	0.668 lb. per ft.
#5 - 5/8 " rods	1.043 lb. per ft.

Pouring and Finishing Concrete

Labor for Pouring and Finishing Concrete .08 per S.F. of floor space
Curing Time 5 days
Material Cost $18.00 C.Y.
Material Extra 5%
Crew. Two concrete men at $6.00 per hr. ea.; two laborers at $3.00 per hr. ea.

Framing Walls

T and Corners Make Up

Labor .08 per B.F. of material
Crew for all Framing of Walls: Two carpenters at $6.00 per hr. ea.
One carpenter's helper at $4.00 per hr.

Rough Door and Window Bucks (Make Up)

Labor .08 per B.F. of material
Crew. Same.

Beam

Labor .096 per B.F. of material
Crew. Same.
Material Cost $210.00 M.F.B.M.

Plates Out and Lay Out

Labor .12 per B.F. of material
Material Cost $180.00 M.F.B.M.
Material Waste 5%
Crew. Same.

SIMULATION EXERCISE DATA

Studs (Wall Assembly)

Labor .08 per B.F. of material used in wall studs.
Material Cost $180.00 M.F.B.M.
Crew. Same.
Material Waste 5%

Fire Blocks

Labor .24 per B.F. of material
Material Cost $180.00 M.F.B.M.
Crew. Same.

Wind Braces

Labor .48 per B.F. of material
Material Cost $160.00 M.F.B.M.
Crew. Same.

Dead Wood

Labor .096 per B.F. of material
Material Cost $160.00 M.F.B.M.
Crew. Same.

Ceiling Framing

Ceiling Joist

Labor .106 per B.F. of material
Material Cost $180.00 M.F.B.M.
Crew. Same.
Material Waste 10%

Stiff Back

Labor .096 per B.F. of material
Material Cost $180.00 M.F.B.M.
Crew. Same.
Material Waste 2%

Roof Framing

Rafters

Labor .10 per B.F. of material
Material Cost $180.00 M.F.B.M.
Crew. Same.
Material Waste 5%

Purlings
- Labor .096 per B.F. of material
- Material Cost $180.00 M.F.B.M.
- Crew. Same.
- Material Waste 2%

Bracing
- Labor .096 per B.F. of material
- Material Cost $180.00 M.F.B.M.
- Crew. Same.
- Material Waste 2%

Collar Beams
- Labor .096 per B.F. of material
- Material Cost $180.00 M.F.B.M.
- Crew. Same.
- Material Waste 5%

Cornice and Gable End Framing

Cornice Framing
- Labor .14 per B.F. of material
- Material Cost $180.00 M.F.B.M.
- Crew. Same.
- Material Waste 5%

Gable End Framing
- Labor .12 per B.F. of material
- Material Cost $180.00 M.F.B.M.
- Crew. Same.
- Material Waste 10%

Decking
- Labor .06 per S.F. of material
- Material cost _____ S.F.
- Crew. Same.
- Material Waste 10%

Roofing, Including Dry In
- Labor $4.00 per Sq. of roof
- Material Cost $14.50 Sq.
- Crew. Two roofers at $6.00 per hr. ea.; one helper at $4.00 per hr. Crew average, 4 Sq. per hr.
- Material Waste 20%

SIMULATION EXERCISE DATA

Wall Sheathing (Gyp Rock)

Labor .10 per S.F. of wall
Material Cost _____ S.F.
Crew. Carpentry crew.
Material Waste 5%

Insulation

Wall Insulation

Labor .02 per S.F. of wall
Material Cost _____ S.F.
Crew. Two laborers at $3.00 per hr. ea.

Ceiling Insulation

Labor .025 per S.F. of ceiling
Material Cost _____ S.F.
Crew. Two laborers at $3.00 per hr. ea.

Exterior Trim

Doors, Complete

Labor 9.60 ea.
Material Cost $35.00 ea.
Crew. One carpenter at $6.00 per hr.

Windows

Labor 2.25 ea.
Material Cost _____ ea.
Crew. One carpenter at $6.00 per hr. and one laborer at $3.00 per hr.

Windows Fixed

Labor 18.00 ea.
Material Cost $60.00 ea.
Crew. One carpenter at $6.00 per hr. and one laborer at $3.00 per hr.

Facier

Labor .38 per L.F.
Material Cost _____ M.F.B.M.
Crew. Same as soffit.
Material Waste 15%

SIMULATION EXERCISE DATA

Gable End

Labor .16 per S.F. to be covered.
Material Cost _____ B.F./S.F.
Crew. Same as soffit.
Material Waste 10%

Exterior Wall Finish

Brick

Labor $80.00 per M.B.
Material Cost
Brick $80.00 per M
Mortar $30.00 cu. yd.
Wall ties _____ ea.
Wall ties, one every 3 sq. ft.
Crew. Two brick masons at $7.50 per hr. ea. and one laborer at $4.00 per hr. 617 bricks per Sq.; 1/3 yd. of mortar per Sq. of brick. Two masons and one helper lay 1,900 per day. 21 bricks to C.F. of fireplace. 40 hrs. average fireplace. 40 hrs. for helper. Use equal amount face brick and common brick.

Siding

Vertical Siding
Labor .16 per S.F. to be covered.
Material Cost _____ M.F.B.M.
Crew. Two carpenters at $6.00 per hr. ea. and one carpenter's helper at $4.00 per hr.
Material Waste 10%

Interior Wall Finish

Sheet Rock

Labor .04 per S.F. of wall and ceiling.
Material Cost _____ S.F.
Crew. Two sheet rock men at $5.00 per hr. ea.
Material Waste 5%

SIMULATION EXERCISE DATA

Tape and Bed and Texture

Labor .025 per S.F. of walls and ceilings.
Material Cost _____ S.F. of coverage
Crew. Two painters at $4.00 per hr. ea.
Material needed to cover 608 S.F. of walls and ceiling:
1/2 roll tape, cost _____ roll
2 1/2 gal. mud, cost _____ 5 gal.
1 sack texture, cost _____ sack

Paint

Labor .15 per S.F. of walls and ceilings.
Material Cost _____ gal.
Crew. Same as tape and bed.
One gal. paint covers 350 S.F., one coat.

Paneling

Labor 3.00 per sheet.
Material Cost _____ per sheet
Crew. One carpenter at $6.00 per hr.
Material Waste openings

Wall Paper

Labor _____ per double roll
Material Cost _____ per roll
One roll covers 33 sq. ft.

Interior Doors and Windows

Doors, Interior (Complete)

Labor 8.00 ea.
Material Cost _____ ea.
Crew. Two carpenters, at $6.00 per hr. ea.

Window Trim, Interior

Labor 3.00 ea.
Material Cost _____ ea.
Crew. Same as doors.

Base

Labor .075 per L.F.
Material Cost _____ L.F.
Crew. Same as doors.

SIMULATION EXERCISE DATA

Crown and Cove Molding

Labor .08 per L.F.
Material Cost _____ L.F.
Crew. Same as doors.

Cabinets

Lump sum
Kitchen Cabinet $45.00 L.F.
Bath Vanity $20.00 L.F.
Linen Closets $30.00 ea.
Time to set cabinets 2 days

Floor Covering

Lump sum
Carpet installed $6.75 - $12.50 S.Y.
Tile installed .32 - .68 S.Y.
Time to install floor covering 2 days

Electrical

Lump sum
110 V. outlets $ 5.50 ea.
220 V. circuits $20.00 ea.
Service panel $80.00
Time to install electrical
2 days to rough in
1 day to trim out

Plumbing

Lump sum
Material and Labor Cost .95 per sq. ft. living area
1 day - sewer lines
1 day - rough in
1 day - trimming out

Heat and Air

Lump sum
Material and Labor Cost .45 per sq. ft. living area
2 days - rough in
1 day - trimming out

PRACTICE EXERCISE
STUDENT HANDOUT #1
Chapter Eight (ten one-hour periods)

From information contained in Simulation Exercise Data, blueprints and specifications, prepare estimates for items one through four, below.

Item 1: Grade lot to elevation of 103'.
- a. Cu. yd. of dirt to be moved
- b. Cu. yd. of dirt over or needed
- c. Labor for rough grading
- d. Machine cost for rough grading

Item 2:
- a. Determine cu. yd. of sand fill needed to fill forms to bottom of slab.
- b. Labor to fill forms

Item 3:
- a. Determine cu. yd. of dirt to be moved in trenching for beams.
- b. Labor for trenching

Item 4:
- a. Figure the cost of fine grading for the slab.
- b. Labor for fine grading

Summary

Item 1:
- a. _____ cu. yd. of dirt to be moved
- b. _____ cu. yd. of dirt over or needed (to grade to 103')
- c. _____ labor to rough grade
- d. _____ machine cost to rough grade

Item 2:
- a. _____ cu. yd. of sand to fill form to bottom of concrete slab
- b. _____ labor to fill forms

PRACTICE EXERCISE
STUDENT HANDOUT #1
Chapter Eight (ten one-hour periods)
(Continued)

Item 3: a. _____ cu. yd. of dirt to be moved in trenching beams

b. _____ labor for trenching

c. _____ machine cost

Item 4: a. _____ cost of fine grading (labor)

After responses have been checked for accuracy, enter corrected answers in appropriate blocks of the Quantity Survey.

PRACTICE EXERCISE
STUDENT HANDOUT #2
Chapter Nine (twelve one-hour periods)

From information contained in Simulation Exercise Data, blueprints, and specifications, prepare estimates for items one through five, below.

Item 1: Layout. Labor and material. Batter boards will be eight feet long

Item 2: Forming. Labor and material to build forms. Two stakes and kicker will require a 2 x 4 - 8. One stake at each corner and 2' on centers.

Item 3: Vapor Barrier. Labor and material. To install vapor barrier.

Item 4: Reinforcing Steel. Labor and materials. To be used using quantity of steel required.

Item 5: Concrete. Labor and materials. Quantity required.

Summary

Item 1: Layout

_____ B.F. material

_____ Sq. ft. in house

_____ labor to install

_____ cost of material

PRACTICE EXERCISE
STUDENT HANDOUT #2
Chapter Nine (twelve one-hour periods)
(Continued)

Item 2: _____ B.F. material

_____ cost of material

_____ Sq. ft. in house

_____ labor

Item 3: _____ Sq. ft. material

_____ cost of material

_____ Sq. ft. in house

_____ labor

Item 4: Reinforcing Steel

_____ ft. of #3

_____ ft. of #4

_____ ft. of #5

_____ lbs. total of all sizes

_____ cost of materials

_____ Sq. ft. of house

_____ labor

PRACTICE EXERCISE
STUDENT HANDOUT #2
Chapter Nine (twelve one-hour periods)
(Continued)

Item 5: _____ cu. yd. of concrete

_____ cost of concrete

_____ sq. ft. of house

_____ labor

After responses have been checked for accuracy, enter corrected answers in appropriate blocks of the Quantity Survey.

PRACTICE EXERCISE
STUDENT HANDOUT #3
Chapter Seventeen (sixteen one-hour periods)

From information contained in Simulation Exercise Data, blueprints, and specifications, prepare estimates for items one through twelve below.

Item 1: T & Corner Make up. Estimate labor and materials to make up T and Corners.

Item 2: Rough Buck Make up. Estimate labor and materials to make up rough bucks for doors and windows.

Item 3: Beam Make up. Estimate labor and materials to make up all beams.

Item 4: Wall plates. Two top, one bottom plate. Estimate labor and materials required.

Item 5: Studs (Wall Framing). Estimate labor and materials required.

Item 6: Fire Blocks, Wind Braces, and Deadwood. Estimate labor and materials required.

Item 7: Ceiling Joists and Stiff Back. Estimate labor and materials required.

Item 8: Roof Framing. Estimate labor and materials required for rafters, purlings, braces, and collar beams. Collar beams and braces every four feet. Purling if rafter is over twelve feet long.

Item 9: Cornice and Gable End Framing. Estimate labor and materials required to frame cornice and gable end.

Item 10: Decking. Estimate labor and materials used to deck house.

Item 11: Insulation. Estimate amount of materials and labor to insulate walls and ceiling.

Item 12: Gyp Rock. Estimate labor and materials required.

PRACTICE EXERCISE
STUDENT HANDOUT #3
Chapter Seventeen (sixteen one-hour periods)
(Continued)

Summary

Item 1:

_____ number of T

_____ number of corners

_____ B.F. material in T and corners

_____ cost of material

_____ labor to make up T and corners

Item 2:

_____ number of door bucks

_____ number of window bucks

_____ B.F. of material in door and window bucks

_____ cost of material

_____ labor used to make up door and window bucks

Item 3:

_____ len. ft. of beams

_____ B.F. of material in beams

_____ cost of material

_____ labor to make up beams

Item 4:

_____ len. ft. of plates

_____ B.F. of plates

_____ cost of material

_____ labor to install plates

PRACTICE EXERCISE
STUDENT HANDOUT #3
Chapter Seventeen (sixteen one-hour periods)
(Continued)

Item 5: _____ number of studs

_____ B.F. of studs

_____ number of studs less studs in T and corners and door and window bucks

_____ B.F. of studs after deductions

_____ cost of material after deductions

_____ labor using total number of studs

Item 6: _____ B.F. in fire blocks

_____ cost of material

_____ labor

_____ B.F. in windbraces

_____ cost of material

_____ labor

_____ B.F. in deadwood

_____ cost of material

_____ labor

Item 7: _____ B.F. of material ceiling joist

_____ cost of material

_____ labor

_____ B.F. of material stiff back

_____ cost of material

_____ labor

256

PRACTICE EXERCISE
STUDENT HANDOUT #3
Chapter Seventeen (sixteen one-hour periods)
(Continued)

Item 8:

_____ B.F. in rafters (include ridge board and facier nailer)

_____ cost of material

_____ labor

_____ B.F. in collar beams

_____ cost of material

_____ labor

_____ B.F. in bracing

_____ cost of materials

_____ labor

_____ B.F. in purlings

_____ cost of materials

_____ labor

Item 9:

_____ B.F. of material in cornice

_____ cost of material

_____ labor

_____ B.F. to frame gable ends

_____ cost of material

_____ labor

PRACTICE EXERCISE
STUDENT HANDOUT #3
Chapter Seventeen (sixteen one-hour periods)
(Continued)

Item 10: _____ B.F. of material

_____ cost of material

_____ labor

Item 11: _____ Sq. ft. of materials for walls

_____ cost of material

_____ labor

_____ Sq. ft. of materials for ceiling

_____ cost of material

_____ labor

Item 12: _____ Sq. ft. of material

_____ cost of material

_____ labor

After responses have been checked for accuracy, enter corrected answers in appropriate blocks on the Quantity Survey.

PRACTICE EXERCISE
STUDENT HANDOUT #4

Chapter Ten (ten one-hour periods)

From information contained in Simulated Exercise Data, blueprints, and specifications, prepare estimates for items one through three below.

Item 1: Estimate labor and material required to lay brick.

Item 2: Estimate cu. yd. of mortar required to lay brick.

Item 3: Estimate number and cost of wall ties required.

Summary

Item 1: _____ M brick

_____ cost of brick

_____ labor to lay brick

Item 2: _____ cu. yd. of mortar

Item 3: _____ wall ties

_____ cost of wall ties

After responses have been checked for accuracy, enter corrected answers in appropriate blocks of the Quantity Survey.

PRACTICE EXERCISE
STUDENT HANDOUT #5
Chapter Seventeen (six one-hour periods)

From information contained in Simulation Exercise Data, blueprints, and specifications, prepare estimates for items one through three below.

Item 1: Estimate labor and materials required to erect soffit.

Item 2: Estimate labor and materials used to install facier around house.

Item 3: Estimate labor and materials required to trim out gable ends of house.

Summary

Item 1: _____ sq. ft. material

_____ cost of material

_____ labor

Item 2: _____ B.F. of material

_____ cost of material

_____ labor

Item 3: _____ B.F. of material

_____ cost of material

_____ labor

After responses have been checked for accuracy, enter corrected answers in appropriate blocks of the Quantity Survey.

PRACTICE EXERCISE
STUDENT HANDOUT #6
Chapter Sixteen (two one-hour periods)

From information contained in Simulation Exercise Data, blueprints, and specifications, prepare estimates for items one through four below.

Item 1: Estimate number of squares and cost of shingles.

Item 2: Estimate number of squares and cost of felt.

Item 3: Estimate number of pounds and cost of nails (figure two lbs. per sq. of shingles).

Item 4: Estimate number of feet and cost of metal edging.

Summary

Item 1: _____ sq. shingles

_____ cost of shingles

_____ labor to install shingles

Item 2: _____ sq. of felt

_____ cost of felt

Item 3: _____ lbs. of nails

_____ cost of nails

Item 4: _____ ft. of metal edging

_____ cost of metal edging

After responses have been checked for accuracy, enter corrected answers in appropriate blocks of the Quantity Survey.

PRACTICE EXERCISE
STUDENT HANDOUT #7
Chapter Thirteen (eight one-hour periods)

From information contained in Simulation Exercise Data, blueprints, and specifications, prepare estimates for items one and two below.

Item 1: Figure sq. ft. of walls and ceiling for each room.

Living room	_____	sq. ft. walls
	_____	sq. ft. ceiling
Dining room	_____	sq. ft. walls
	_____	sq. ft. ceiling
Service	_____	sq. ft. walls
	_____	sq. ft. ceiling
Kitchen	_____	sq. ft. walls
	_____	sq. ft. ceiling
Family room	_____	sq. ft. walls
	_____	sq. ft. ceiling
Bed Room Right Front	_____	sq. ft. walls
	_____	sq. ft. ceiling
Bed Room Left Front	_____	sq. ft. walls
	_____	sq. ft. ceiling
Master bath and dressing	_____	sq. ft. walls
	_____	sq. ft. ceiling
Bath A	_____	sq. ft. walls
	_____	sq. ft. ceiling

PRACTICE EXERCISE
STUDENT HANDOUT #7
Chapter Thirteen (eight one-hour periods)
(Continued)

Middle Bed Room	_____	sq. ft. walls
	_____	sq. ft. ceiling
Back Bed Room	_____	sq. ft. walls
	_____	sq. ft. ceiling
Halls	_____	sq. ft. walls
	_____	sq. ft. ceiling
Garage	_____	sq. ft. walls
	_____	sq. ft. ceiling

Total sq. ft. walls _____

Total sq. ft. ceiling _____

Item 2: Tape, bed and texture all walls and ceilings.

_____ sq. ft. of walls

_____ sq. ft. of ceilings

_____ Total sq. ft. to be taped, bedded and textured.

PRACTICE EXERCISE
STUDENT HANDOUT #7
Chapter Thirteen (eight one-hour periods)
(Continued)

Summary

Item 1: _____ pieces of sheet rock in walls and ceilings, all rooms

_____ cost of sheet rock

_____ labor to install

Item 2: _____ rolls of tape

_____ cost of materials

_____ gallons of mud

_____ cost of materials

_____ sacks of texture

_____ cost of materials

_____ labor to tape, bed, and texture

Total tape and bed _____ materials

_____ labor

Total texture _____ materials

_____ labor

After responses have been checked for accuracy, enter corrected answers in appropriate blocks of the Quantity Survey.

PRACTICE EXERCISE
STUDENT HANDOUT #8
Chapter Fifteen (six one-hour periods)

From information contained in Simulation Exercise Data, blueprints, and specifications, prepare estimates for items one through five below.

Item 1: Paint all ceilings in house except garage, kitchen and baths with latex. Three coats on all surfaces.

_____ sq. ft. of area

_____ no. of gallons of paint

Item 2: Paint ceilings and walls in baths, kitchen, and garage with latex enamel paint. Three coats on all surfaces.

_____ sq. ft. of area

_____ gallons of paint

Item 3: Paint all remaining walls with latex wall paint (three coats). Exclude living room and master bedroom.

_____ sq. ft. of area

_____ no. of gallons of paint

Item 4: Cover walls in living room and master bedroom with vinyl wall covering.

_____ sq. ft. of area to be covered.

Item 5: Carpet all floors except garage. (Includes bathrooms, kitchen, utility room, etc.)

_____ sq. ft. of floor space

Carpet cost $10.00 sq. yd., installed.

PRACTICE EXERCISE
STUDENT HANDOUT #8
Chapter Fifteen (six one-hour periods)
(Continued)

Summary

Item 1: _____ gallons of latex (for all surfaces included in items one and three)

_____ cost of materials

_____ labor

Item 2: _____ gallons of latex enamel (for surfaces in item 2)

_____ cost of materials

_____ labor

Item 4: _____ no. of double rolls of vinyl wall covering

_____ cost of materials

_____ labor to hang vinyl

Item 5: _____ sq. yd. of carpet

_____ cost of carpet

After responses have been checked for accuracy, enter corrected answers in appropriate blocks of the Quantity Survey.

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: Introduction to Architectural Drawing

Course Objectives: This course is designed to impart to the student basic skills in general drafting techniques such as lettering, line work, and architectural representation. The student also gains experience in the use of structural tables and manufacturers' literature.

Course Description: This course introduces representation in residential construction. It covers the fundamentals of drafting, including projection, sectioning, pictorial drawings, and architectural representation. It is comprised of both lecture (or classroom) periods, wherein fundamentals and principles are introduced, and laboratory periods which provide opportunity to participate in exercises involving these principles.

Suggested Primary Text: Spence, William P. Architecture: Design-Engineering-Drawing, 2nd ed. Bloomington, Ill.: McKnight and McKnight Publishing Co., 1972.

Course Outline:

I. Course Objectives
   A. Materials needed to draw house plans
   B. Kinds of media used

II. Rough Floor Plan
- A. Drawing exterior walls
- B. Drawing interior walls
- C. Drawing door openings
- D. Drawing areas of living

III. Finishing Floor Plan
- A. Electrical Plan
  - 1. Outlets
  - 2. Lights
  - 3. Special electrical devices
- B. Doors
- C. Door schedules
- D. Windows
- E. Window schedules
- F. Fire places
- G. Dimensioning
- H. Room schedules
- I. North arrows
- J. Title block

IV. Foundations
- A. Perimeter beams
- B. Intermediate longitudinal
- C. Intermediate transverse
- D. House - Porch
- E. House - Garage
- F. House - Perimeter
- G. House - Patio
- H. Footings
- I. Details
  - 1. FHA
  - 2. Other
  - 3. Special

V. Elevations
- A. North
  - 1. Slab thickness
  - 2. Exterior walls
    - a. Type materials
  - 3. Windows
    - a. Fixed
    - b. Sliding
    - c. Hinged
  - 4. Roof
    - a. Type materials
    - b. Overhang
    - c. Pitch
  - 5. Chimney

V. Elevations (Continued)
   B. East
   C. South
   D. West
   E. Special

VI. Special Details
   A. Cabinets
      1. Kitchen
      2. Baths
   B. Skylights
   C. Fireplace
   D. Wall

Instructional Recommendations/ Suggestions: This introductory course should be structured around one central goal: to enable the student to graphically communicate ideas and concepts involving residential construction processes. Within minor limitations, the suggested primary text is ideally suited to this purpose. Actual blueprints should be used to supplement the text in developing the principles described. Instructors in this course should be thoroughly familiar with the principles of residential construction, construction materials and methods, and the data contained in architectural blueprints. Laboratory exercises should include practice in locating specifications of materials depicted in working drawings, and the proper use of data included in structural tables and manufacturers' literature. This course should be planned to accommodate varying rates of individual

student progress. To this end it is desirable that the lecture/laboratory periods be consecutively scheduled whenever possible, and that the same instructor conduct both the lecture and the laboratory periods. Transparencies depicting details of construction normally contained in working drawings can be developed locally and used to excellent advantage in presenting this course.

Additional Instructional Materials:

1. Copies of residential blueprints and working drawings. Available through local architects or home builders.
2. Sweet's Architectural Catalogue Files, F. W. Dodge Corp., New York, N. Y., 1974.
3. Copies of architectural specifications. Available through local architects or home builders.
4. Minimum Property Standards for One and Two Family Living Units, U. S. Federal Housing Administration, U. S. Government Printing Office, Washington, D. C.

Additional Instructional Materials (Continued): Transparencies depicting details normally contained in working drawings. To be developed locally (sufficient illustrations available in texts and manuals listed under Additional References, this course).

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: Elements of Structural Design

Course Objectives: This course introduces the student to the basic principles of statics and to the effects of loads and loading on building elements and frames. Methods are developed for determining preliminary sizes of certain key building elements, knowledge of which is essential to proper building layout and design.

Course Description: A course which familiarizes the student with the mechanical properties of materials and the relationship and use of these materials in residential construction processes. Subjects include stress, deformation, member size and investigation, and connections. Typical members used in residential frameworks are studied, analyzed, and discussed. The material presented makes it possible for the student to understand the interaction of the various elements used in a framing system.

Suggested Primary Text: Bassin, Milton G., et al. Statics and Strength of Materials, 2nd ed. New York: McGraw-Hill Book Co., 1969.

Course Outline:

I. Materials, Stress and Deformation
   A. Units of Instruction
      1. Properties of construction materials
      2. Types of stresses in members
      3. Ultimate and allowable stresses
      4. Direct stress; deformation
      5. Elasticity and Hooke's law
      6. Stress-strain diagram

II. Properties of Sections
   A. Units of Instruction
      1. Centroids and moments of area
      2. First moment of area
      3. Second moment of area
      4. Parallel axis theorem
      5. Radius of gyration
      6. Section modulus

III. Gravity Loads on Building Frames
   A. Units of Instruction
      1. Basic framework types
      2. Live loads
      3. Dead loads
      4. Floor and roof loads
      5. Wall and partition loads
      6. Equipment loads
      7. Application of loads to framing members
      8. Uniformly distributed loads
      9. Concentrated loads
      10. Loading diagrams

IV. Shear and Bending in Beams--Statically Determinate
   A. Units of Instruction
      1. Reactions and shear
      2. Symmetrical loading
      3. Nonsymmetrical loading
      4. Shear diagrams
      5. Moment diagrams
      6. Cantilever and overhanging members
      7. Critical sections for moment and shear

V. Stresses in Beams and Beam Sizes
   A. Units of Instruction
      1. Tensile and compressive stresses
      2. Shear stresses
      3. Allowable loads on beams
      4. Timber beam selection
      5. Steel beam selection
      6. Beams without proper lateral support

VI. Beam Deflection
   A. Units of Instruction
      1. Elastic curve, stress, and moment
      2. Moment diagrams by parts
      3. Moment-area principles
      4. Deflection equations by moment-area
      5. Use of deflection equations

VII. Shear and Bending in Beams—Statically Indeterminate
   A. Units of Instruction
      1. Definitions
      2. Three-moment equation
      3. Use of three-moment equation
      4. Fixed-end beams
      5. Reactions and shear
      6. Shear and moment diagrams
      7. Positive and negative moments

VIII. Stresses in Columns and Column Sizes
   A. Units of Instruction
      1. Rolled steel column sections
      2. Builtup column sections
      3. Column-end conditions
      4. Effective length
      5. Allowable stresses for timber columns
      6. Allowable stresses for steel columns
      7. Timber column selection
      8. Steel column selection
      9. Eccentrically loaded columns

IX. Riveted and Welded Connections

A. Units of Instruction

1. Types of riveted connections
2. Allowable stress in shear
3. Allowable stress in bearing
4. Load capacity of riveted connections
5. Number of rivets required
6. Eccentrically loaded riveted connections
7. Types of welds used in connections
8. Allowable stresses in welds
9. Required length of welds

Instructional Recommendations/ Suggestions:

Care should be taken to insure that the focus of this course remains centered on how the principles can be applied in everyday usage in residential construction processes. This is not intended to be a course in physics. Its purpose is to familiarize the student with the need for giving due consideration to the fundamental principles of stress and strength of materials.

Reduced-scale wood members can be locally developed by which to demonstrate principles being investigated. Scale models of standard-dimension wood beams and trusses can be loaded to the bend or break point at a much lower cost than would be required for testing their full-scale counterparts. Scale-model members should be fabricated from materials typical of the full-size components which

they represent. A Conversion Table (based on a scale of 1 1/2" to 1') has been developed to show the scale sizes for commonly used units of dimension lumber (see Conversion Table - Dimension Lumber, attached). Use of these model members should be limited to the demonstration of principles, since they may not be completely representative of the full-scale counterpart item in terms of shearing and bending moments and stress loads.

Additional Instructional Materials:

Conversion Table - Dimension Lumber. Produced locally. Copy attached.

Reduced-Scale Lumber. To be produced locally. Sufficient quantities of sizes representative of standard-dimension lumber for classroom demonstration exercises.

Timber Engineering Co. Timber Design and Construction Handbook. New York: McGraw-Hill Book Co., 1956.

CONVERSION TABLE - DIMENSION LUMBER

(SCALE: $1\frac{1}{2}$" EQUALS 1')

Actual Size	Volume	Scale Size	Volume	Percent
2/4 = $1\frac{1}{2}$ x $3\frac{1}{2}$ =	5.25 sq. in. =	3/16 x 7/16 =	.082 sq. in. =	01.6%
2/6 = $1\frac{1}{2}$ x $2\frac{1}{2}$ =	8.25 sq. in. =	3/16 x 11/16 =	.192 sq. in. =	01.6%
2/8 = $1\frac{1}{2}$ x $7\frac{1}{4}$ =	10.875 sq. in. =	3/16 x 29/32 =	.170 sq. in. =	01.6%
2/10 = $1\frac{1}{2}$ x $9\frac{1}{4}$ =	13.875 sq. in. =	3/16 x 15/32 =	.217 sq. in. =	01.6%
2/12 = $1\frac{1}{2}$ x $11\frac{1}{4}$ =	16.875 sq. in. =	3/16 x 1 13/32 =	.264 sq. in. =	01.6%

Actual Size	Scale Size
$1\frac{1}{2}$"	3/16"
$3\frac{1}{2}$"	7/16"
$5\frac{1}{2}$"	11/16"
$7\frac{1}{4}$"	20/32"
$9\frac{1}{4}$"	1 5/32"
$11\frac{1}{4}$"	1 13/32"

Note: An approximation of the breaking point of the full-scale member can be found by dividing the breaking point of the model by .016. Example: Breaking point of scale model = 40 lbs.

40 ÷ .016 = 2,500

Approximate breaking point, full-scale member = 2,500 lbs.

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: Contracts, Codes, Specifications and Office Practices

Course Objectives: To develop an appreciation for the importance of effective office practices in the coordination and control of construction activities. To familiarize the student with the various legal documents which combine to regulate residential construction practices and procedures.

Course Description: This course explains the organization and operation of a typical small- to medium-size residential construction contractor's office. It includes the study of office practices, bookkeeping and accounting methods, and general office administration Considerable attention is devoted to the study of the codes, restrictions, standards, and the legal documents governing construction. Students are introduced to the interpretation and preparation of specifications, and to the application of CPM as a method for controlling construction projects.

Suggested Primary Text: Royer, King. The Construction Manager. Englewood Cliffs, N. J.: Prentice-Hall, Inc., 1974.

Course Outline:

I. The Construction Firm
   A. Construction management
   B. The contractor's organization
   C. Span of control
   D. Characteristics of supervisors
   E. Sales
   F. Production
   G. Purchasing and subcontracting
   H. Personnel records and hiring

II. The Construction Project
   A. Wages
   B. Theft
   C. Cost control
   D. Function of the cost control system
   E. Cost control and accounting
   F. Identification and classification of cost items
   G. The work order
   H. Accumulation of costs
   I. Action on costs above estimates

III. Estimating
   A. Precision and accuracy
   B. Cost of estimating
   C. Courtesy bids
   D. Collusion
   E. Estimating safety margins
   F. Ethics
   G. Nature of errors
   H. Estimate sheets
   I. Subcontractor's bids
   J. Cutting subcontractor bids
   K. Stipulated subcontractors
   L. Improving industry relationships
   M. Contractors' alternates

IV. Construction Contracts
   A. Essentials of a construction contract
   B. Clauses to avoid
   C. Competitive bidding
   D. Cost-plus contract
   E. Letter of intent
   F. Withdrawal of erroneous bids
   G. Builders' risk insurance
   H. Extra and additional work

IV. Construction Contracts (Continued)
- I. Subcontracts
- J. Owner's liability
- K. Hold-harmless clauses
- L. Breach of contract
- M. Changed conditions
- N. Liquidated damages and delay
- O. Performance and payment bonds
- P. Arbitration
- Q. Final payment
- R. Unit prices
- S. Change orders
- T. Liens
- U. Other payment rights of subcontractors and suppliers
- V. Appeals in disputes
- W. Material and workmanship guarantees

V. Purchasing
- A. Sources of information
- B. The purchase order
- C. Clauses recommended for purchase orders
- D. Purchase order copies
- E. Purchasing subcontracts
- F. Clerical procedure
- G. Billing methods
- H. Delivery slips
- I. The superintendent's purchases
- J. Invoice approval
- K. Subcontract payments
- L. Owner-builder contract
- M. Withholding subcontract payments
- N. Bankruptcy
- O. Recognition of the insolvent firm
- P. Avoiding bankruptcy

VI. Accounting
- A. Bookkeeping and accounting
- B. Income taxes
- C. The necessity for accounts
- D. Accounting terminology
- E. Equipment valuation
- F. The balance sheet
- G. Expense and receipts accounts

VI. Accounting (Continued)
- H. Overhead, profit, and distributed expenses
- I. Sample monthly statement
- J. Cash requirements
- K. Weekly cost items by months
- L. Summary of cash flow by months
- M. Paying monthly bills
- N. Terminology in tax accounting
- O. Influence of depreciation rates on operations
- P. Equipment accounts and replacement
- Q. Fraud
- R. Payroll accounting

VII. Planning and Scheduling
- A. Purposes and types of job plans
- B. Time schedules
- C. The bar chart
- D. Preparing the Gantt chart
- E. The critical path method
- F. CPM nomenclature
- G. CPM and manpower scheduling
- H. Variation in completion time

VII. Labor Unions
- A. Basic policies toward unions
- B. The purposes of union organization
- C. Organizing
- D. The union hiring hall
- E. Training
- F. Licensing
- G. Requirements on U. S. Government construction
- H. Union shops versus closed shops
- I. Support between trades
- J. Recent growth of open-shop work

Instructional Recommendations/ Suggestions: The use of technical specialists and guest lecturers is strongly recommended in the development of material contained in this course. Use of such specialists should be planned and coordinated

well in advance of expected time of presentation. Guest lecturers should, in all cases, be made fully aware of the course and lesson objectives, technical level of competence of the class, and any other special information which would assist in focusing on the central purposes of the instructional unit. The suggested text is divided into eight sections, which makes it readily adaptable to the standard sixteen-week semester. A listing of in-depth discussion questions may be found at the conclusion of each major section of the text. A teacher's manual has been developed for use with the suggested text and is available through the publisher. It should be kept in mind that this is an introductory course and that it is not designed to develop specialists in any of the topic areas covered. Serious students should plan additional specialized personal development in each of these important phases of the construction business. OSHA should be fully developed during presentation of this course.

Additional Instructional Materials: Royer, King. Teacher's Manual, The Construction Manager. Englewood Cliffs, N. J.: Prentice-Hall, Inc., 1974.

Additional Instructional Materials (Continued):

Copies of architectural specifications. Available through local architects or home builders.

U. S. Federal Housing Authority. Minimum Property Standards. Washington, D. C.: U. S. Government Printing Office.

Various city codes. Office of city engineer.

Sample copies of standard insurance policies, as used in construction. Independent insurance agents.

Copies of various bonds (i.e., performance, liquidation, completion, etc.) used in construction. Available through independent insurance agents and regular bonding agencies.

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: Principles of Accounting I

Course Objectives: To provide an introduction to the basic concepts of elementary accounting. To provide practical training in the use of modern bookkeeping and accounting forms and procedures.

Course Description: An introductory accounting course designed to furnish a general knowledge of accounting principles and procedures. Examination of present-day accounting theory and practices with application to the sole proprietorship. This is the first of a two-course series in basic accounting procedures.

Suggested Primary Text: To be determined locally.

Course Outline: To be developed locally.

Instructional Recommendations/ Suggestions: A good working knowledge of accounting principles is of critical importance to almost every job in which graduates of the Residential Construction Management program can expect to become employed. While this course must be viewed as a

non-professional course in basic concepts and principles, the level of competence needed by program graduates is sufficiently high to require a minimum of eight semester hours in principles of accounting. Normally, this should be broken down into two four-hour courses. This introductory course should concentrate on an examination of accounting theory and practices, with applications to the sole proprietorship, since the preponderance of residential construction operations fall into this broad category. The second course should be directed to the application of accounting theory and practice in partnerships and corporations. Most post-secondary institutions will have accounting courses within their standard curriculums which can satisfactorily provide for the developmental needs of the Residential Construction Management program.

Additional Instructional Materials: To be developed locally.

Additional References: To be developed locally.

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: Construction Planning and Control

Course Objectives: To develop an appreciation for the importance of planning and control to the successful completion of construction activities. To provide a working acquaintance with the types of planning and control systems most commonly used in small- to medium-size residential construction enterprises.

Course Description: A course in residential construction planning and control which deals with information on the materials, labor, and equipment necessary in the proper operation of a construction project. The course covers the building construction procedures from preliminary site planning to final job inspection and introduces the most frequently used methods of construction job scheduling. The course shows how the proper combination of men, materials, and machines can be used to construct residential structures successfully.

Suggested Primary Text: Benson, Ben. Critical Path Methods in Building Construction. Englewood Cliffs, N. J.: Prentice-Hall, Inc., 1970.

Course Outline:

I. Preliminary Considerations
   A. Topography of the site
   B. Buildings near the site
   C. Base lines, reference marks, and levels
   D. Fuel, power, and water supplies
   E. Equipment planning and selection
   F. Local ordinances
   G. Bonds and insurance

II. Job Planning and Organization
   A. Field organization
   B. Office organization
   C. Local material and labor supply
   D. Coordination of subcontractors
   E. Types of contracts
   F. Materials delivery and storage
   G. Safety during construction
   H. Public relations
   I. Job supervision
   J. Accounting procedures and forms

III. Earthwork and Excavation
   A. Types of earthwork equipment and costs
   B. Air-operated equipment
   C. Capacity and operation of tractor-type equipment
   D. Operations with clamshell, drag-line, and hoe
   E. Operations with bulldozer and scraper
   F. Excavating-and-hauling units
   G. Recordkeeping on excavation
   H. Soil exploration and types of soil
   I. Compaction and stabilization of soil

IV. Subsurface Work
   A. Pumps and drainage equipment
   B. Cofferdams and caissons
   C. Piles and pile-driving
   D. Sheet piling
   E. Wellpoints
   F. Rock excavation
   G. Underpinning

V. Materials Handling and Placement
- A. Elevator and conveyor systems
- B. Hoisting equipment
- C. Steel frame erection and alignment
- D. Riveting, bolting, and welding equipment
- E. Concrete mixing and batching
- F. Transporting; placing; vibrating equipment
- G. Bending, placing, and supporting reinforcement

VI. Cost Estimating
- A. Preliminary estimates and unit costs
- B. Job analysis and work requirements
- C. Labor and equipment requirements
- D. Labor costs
- E. Equipment costs
- F. Materials and small tool costs
- G. Overhead and other costs

VII. Construction Scheduling
- A. General procedures
- B. Master schedule
- C. Progress reports and charts
- D. Labor schedules
- E. Equipment schedules
- F. Materials schedules
- G. Rescheduling
- H. Job communication

VIII. Introduction to CPM Scheduling
- A. General considerations and application
- B. Comparison with bar charts
- C. Arrow diagrams
- D. Network diagrams
- E. Elapsed time
- F. Float time
- G. Determining critical path
- H. Time related to cost
- I. Setting up a CPM network
- J. Using the CPM network

IX. Job Inspection
- A. Duties and responsibilities
- B. Authority
- C. Inspector's reports
- D. Equipment requirements
- E. Relations with labor and other contractors
- F. Limitations

Instructional Recommendations/ Suggestions: This course is a general survey of the factors which must be considered in the operation of a construction project. The nature of the course material is such that knowledge acquired to date in other courses in this program can be effectively brought into perspective. It is strongly recommended that the same blueprints utilized during the "Residential Construction Estimating" course be continued in use with this course. This will permit utilization of "Quantity Survey" data which students previously developed (materials and labor take offs, etc.). See Instructional Recommendations/Suggestions for the course entitled "Residential Construction Estimating" for details on the development of standardized quantities of materials, unit costs, size and composition of various work crews, etc. ("Simulation Exercise Data"). Emphasis should be placed

on how CPM can most effectively be used for planning and control in small- to medium-size construction operations. Students should be required to demonstrate a working knowledge of the correct use of CPM in the construction of a residence by preparing and explaining a complete CPM chart for the residence described in the previously-mentioned blueprints. Transparencies made from charts depicted in the text can be used to good advantage in developing student understanding of materials covered in this course.

Additional Instructional Materials:

1. Residential blueprints. Recommend continued use of blueprints utilized in the "Residential Construction Estimating" course.
2. Quantity Surveys. See suggested format attached. Details to be filled in from data developed in the "Residential Construction Estimating" course.
3. Transparencies. To be developed from selected illustrations contained in the text and other reference materials.

Additional Instructional Materials (Continued):

4. Residential Critical Path Diagram. Locally developed. Copy attached.

5. Job Logic and Activity Table. Locally developed. Copy attached.

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: Business Communication

Course Objectives: To familiarize the student with current trends in business correspondence. To provide experience in composing the various types of written communications commonly used in business--such as business letters, reports, bulletins, memoranda, telegrams, etc.

Course Description: A detailed study of business communications from the standpoint of arrangement and content of letters of inquiry, orders, credit, applications, sales, claims and adjustments. Emphasis on grammar and mechanics of writing.

Suggested Primary Text: To be determined locally.

Course Outline: To be developed locally.

Instructional Recommendations/ Suggestions: It is recommended that this course be adapted from one of the regular departmental offerings of the institution.

Additional Instructional Materials: To be developed locally.

Additional References: To be developed locally.

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: History of Architecture and Construction

Course Objectives: To acquaint the student with the various architectural styles which have been developed in residential construction, and to create an appreciation for the main advantages and disadvantages of each.

Course Description: This course is designed to afford the student an opportunity to survey all of the major styles of architecture which have been used in residential construction from early times to the present. It focuses special attention on styles which are in current use, and encourages detailed study of residential construction developments in the geographical area where the course is being presented. Opportunity is provided for students to make in-depth studies of selected architectural design or structural methods.

Suggested Primary Text: Fletcher, Sir Banister F. A History of Architecture, 17th ed., rev. New York: Charles Scribner's Sons, 1967.

Course Outline:

I. Introduction: The Science of Architecture
   A. Objectives of course
   B. Influences in architecture
      1. Geographical
      2. Geological
      3. Climatic
      4. Religious
      5. Social
   C. Basic principles of construction
      1. Post and lintel
      2. Corbel and cantilever
      3. Arch and vault
      4. Truss
   D. Architecture as a science as well as an art
      1. Esthetics
      2. Convenience, strength, and beauty
   E. Four categories of religious buildings
      1. Temple
      2. High place
      3. Tomb-like shrine
      4. Meeting place

II. Prehistoric and Tigro-Euphrates Valley civilization
   A. Kinds of shelters built by prehistoric man
   B. Babylonian Period: temples, canals, and irrigation
   C. Hittites: use of stone in architecture and royal palaces
   D. Assyrian Period: house, palace, and temple forms, along with surface decorations
   E. Babylonian Empire: marvels of Babylon
      1. Hanging gardens
      2. Ziggurat
      3. Banks, storehouses, and commercial buildings
   F. Persian Period
      1. Palace platforms at Persopolis
      2. Columns

III. Egyptian Architecture
- A. Egyptian dynasty history
  - 1. Ancient Kingdom
  - 2. Middle Kingdom
  - 3. New Empire
  - 4. Ptolemaic Period
  - 5. Roman Period
- B. Column development
- C. Tombs
  - 1. Mastabas
  - 2. Pyramids
  - 3. Rock-hewn tombs
- D. Temples

IV. Greek Architecture
- A. An order in classic architecture
  - 1. Doric
  - 2. Ionic
  - 3. Corinthian
- B. Proportion of the orders; module
- C. Temples and the Acropolis
  - 1. Parthenon
  - 2. Erechtheum
- D. Civil buildings
- E. Agora
- F. Theatres
- G. Tombs

V. Roman Architecture
- A. Proportions of the orders by Vignola
- B. Etruscan temples and tombs
- C. Roman forums
- D. Roman rectangular temples
- E. Roman circular and polygonal temples
- F. Basilicas
- G. Roman baths
- H. Roman theatres and amphitheatres
- I. Circuses
- J. Triumphal arches
- K. Roman palaces and houses
- L. Aqueducts, bridges, and fountains

VI. Early Christian, Byzantine, and Romanesque Architecture
- A. Development of the pendentive system in dome construction
- B. Santa Sophia, Constantinople
- C. St. Mark's, Venice
- D. Feudal system and structures built
- E. Monastic system and structures built
- F. The Romanesque church

VII. Islamic Architecture
- A. Mohammed's influence in styles of architecture
- B. Mosque architecture
  1. Domes
  2. Arches
- C. Tomb architecture
- D. Surface development on structures

VIII. Gothic Architecture
- A. Departure from classic lines and development of the pointed arch
- B. Stability of Gothic cathedrals
- C. Notre Dame, Paris
- D. Amiens Cathedral
- E. Salisbury Cathedral, Britain
- F. Gothic architecture in Germany; Belgium, Holland, Spain, and Italy

IX. Renaissance Architecture
- A. The dawn of the Renaissance
  1. The dome of the Florence Cathedral
  2. Palaces and churches
- B. The high Renaissance
  1. Leon Batista Alberti: "Beautiful architecture is that from which nothing can be taken away and to which nothing can be added without harming it."
  2. St. Peter's Cathedral, Rome. Architects who worked on this cathedral:
     - a. Bramante
     - b. Peruzzi

c. Sangallo
d. Bernini
e. Michelangelo
f. Others
3. City palaces and villas
C. Renaissance in France
D. Renaissance in Northern Europe
E. Renaissance in Spain

X. Revivals of Architecture
A. The Early Classic Revival
B. Classic Revival ideas
C. Classic Revival in the United States

XI. Eclecticism, Beaux Arts, and Architecture of Today
A. Influence of the Beaux Arts School
B. Science and art of city planning
C. National variations (eclecticism)
1. Germany
2. England
3. France
4. United States
D. Early architects of Modern Architecture and their work
1. Louis Sullivan--"Chicago School"
2. Frank Lloyd Wright--"Organic Architecture"
3. Le Corbusier--"Geometrical Composition"
4. Walter Gropius
5. Mies van der Rohe
6. Eero Saarinen
7. Pier Luigi Nervi
8. Edward Durrell Stone
9. Others

Instructional Recommendations/ Suggestions: One of the main functions of this course should be to provide an opportunity for individual exploration of selected topics within the student's technical field. It is suggested that each student be required to choose a minimum of two topics on which to develop

detailed oral and written reports. Topics for study should be restricted to one or more of the major architectural styles of residential construction, or to one or more of the major construction processes identified with each of these styles of architecture. Reports by students can be an especially effective aid in achieving the fundamental course objective of developing a working knowledge of the advantages and disadvantages of the various styles of architecture used in residential construction. Class discussion periods can be very effectively reinforced by use of the suggested additional instructional materials. The film strip series on the history of architecture developed by Educational Dimensions Corporation is considered to be an exceptionally valuable instructional aid for this course.

Additional Instructional Materials:

1. Transparencies. See locally-developed 60-part series attached. Series depicts architectural styles and significant structural features.

Additional Instructional Materials (Continued):

2. 35MM slides. Three sets of 20 slides each. Teacher's manual available with each set. Developed by Educational Dimensions Corp., Stanford, Conn., 1973:
   a. Survey of World Architecture
   b. 200 Years of American Architecture
   c. Architectural Forms, Origin, and Use
3. 35MM film strips. Developed by Educational Dimensions Corp., Stanford, Conn., 1973. Four sets:
   a. Set 1. American Architecture, three parts:
      (1) 17th and 18th Century
      (2) 19th Century
      (3) 20th Century Trends
   b. Set 2. The New American Architecture
   c. Set 3. Modern Architecture
   d. Set 4. Understanding World Architecture

English Styles

COTSWOLD COTTAGE

Key Distinguishing Characteristics

The smallest of the English styles, the Cotswold, is sometimes described as an Ann Hathaway or Hansel and Gretel Cottage. It is a ground-hugging, always asymmetrical style with a prominent brick or stone chimney in the front or on the side that appears to be very large in relation to the overall size of the house.

Other Distinguishing Characteristics

Walls of the originals were built of materials of the area – brick, stone, wood siding, half timbers
Steep gable roof with complex lines
Casement windows
Dormer windows smaller than other windows
Rooms tend to be small and irregularly shaped
Layout often necessitates walking through one room to get to another (even the bedrooms)
Upper story bedrooms have steep walls and need dormers

History

The Cotswold Cottage was first built in the Cotswold Hills of Gloucester, Hereford and Worcester, England starting about the time of the Norman conquest in 1066. The name is derived from "cot"-cottage and "wold"-wood – cottage in a wood. The romantic design was very popular throughout the U.S. in the 1920's and 1930's.

English Styles

TUDOR

Key Distinguishing Characteristics

The Tudor is an imposing looking house with fortress-like lines. Siding is chiefly stone and brick with some stucco and half timbers. Windows and doors have moulded cement or stone trim around them.

Other Distinguishing Characteristics

Usually 2½ stories
Stone or cement window mullions and transoms
Casement windows with leaded glass (often diamond-shaped)
High, prominent chimneys with protruding chimney pots
Semi-hexagonal bays and turrets
Interior often layed out with odd shaped rooms full of nooks and crannies, large fireplaces, beamed ceilings and rough plaster walls

History

The style started in England in the late 15th century during the reign of the House of Tudor. It did not become popular in the U. S. until the late 1800's.

French Styles

FRENCH PROVINCIAL

Key Distinguishing Characteristics

The French Provincial is a perfectly balanced, formal 1½ to 2½ story house with a high steep hip roof and curved-headed upper windows that break through the cornice.

Other Distinguishing Characteristics

- French windows or shutters on first floor
- Two symmetrical 1 story wings
- Usually made of brick

History

The style originated in France during the reign of Louis XIV (1643-1715) by the rich who wanted showplace homes

French Styles

CREOLE OR LOUISIANA OR NEW ORLEANS

Key Distinguishing Characteristics

A balcony with extensive lacy iron work running across the entire front at the second story level distinguishes this style.

Other Distinguishing Characteristics

Symmetrical
2 to 3 stories

History

The style originated around New Orleans. Although it appears to have been influenced by French, Spanish and West Indian styles, it is not found in these places. Many of these houses were built in the late 1700's and 1800's.

Latin Styles

ITALIAN VILLA

Key Distinguishing Characteristics

This is a massive, 2 or 3 story house of masonry with large overhanging eaves.

Other Distinguishing Characteristics

Many have square or octagonal towers
Quoins at corners
Heavy cornice line with supporting brackets
Decorative iron work

History

First built in the U.S. in 1837, this style was popularized by architect Andrew Jackson Downing in the middle 1800's. Architects Henry Austin and Richard Upjohn used the style extensively. The Bristol House pictured was designed by Austin and built in New Haven, Connecticut in 1845.

English Styles

GEORGIAN

Key Distinguishing Characteristics

The Georgian is a large, formal 2 or 3 story rectangular house characterized by its classic lines and ornamentation.

Other Distinguishing Characteristics

Traditional material is brick.
Some made of masonry, clapboard or shingles.
Gable or hip roof.
Slate shingles or copper roofing.
Two large chimneys rising high above the roof at each end.
A Palladian style set of three windows on the second floor over the front entrance or at each end.
Front entrance with Greek columns.
Glass lights on side and above front entrance door.

History

The style became popular in England during the reign of the four King Georges. They were built in large numbers here in the 1700's and 1800's. The house pictured is Mount Pleasant built in 1750 in Philadelphia. It contained a large number of the features that would be traditionally included in the Georgian style.

English Styles

WILLIAMSBURG GEORGIAN OR EARLY GEORGIAN

Key Distinguishing Characteristics

The houses built in Williamsburg were representative of the early Georgian houses built in America throughout the early 1700's. They had simple exterior lines and generally fewer of the decorative devices characteristic of the later Georgian houses. Most were 2 or 3 story rectangular houses with two large chimneys rising high above the roof at each end.

Other Distinguishing Characteristics

Sliding double hung windows with small panes
Simple front entrances

History

Williamsburg, Virginia was the cultural and political capital of the colonies during most of the 1700's. The houses here were based on the styles developed in England during the reign of the four King Georges. The Williamsburg houses were built in the early 1700's. With gifts of about $40 million, John D. Rockefeller, Jr. has restored the community.

SIMPLE, INFORMAL STYLE

English Styles

REGENCY

Key Distinguishing Characteristics

This is a 2 or 3-story, symmetrical house with a hip roof. A small octagonal window over the front door is traditional.

Other Distinguishing Characteristics

Almost always brick, often painted white
One chimney on side
Double-hung windows
Shutters same size as windows
A simple informal style without the classic lines of the Georgian

History

The style reached its peak of popularity in England between 1810 and 1820. Many of these houses were built in the U.S. in the late 1800's, throughout the 1900's and are still being built today.

Latin Styles

SPANISH VILLA

Key Distinguishing Characteristics

This is an asymmetrical, 1 to 3-story house with painted stucco exterior walls and red tile roof.

Other Distinguishing Characteristics

Oval top windows and doors
Wrought iron exterior decorations
Patio completely enclosed by exterior walls

History

American architecture has been influenced by Spanish styles since the days of the Spanish conquistadores. It is widespread throughout the warm parts of the U.S. and also appears in the north surprisingly frequently considering its basic unsuitability for cold climates.

French Styles

FRENCH FARM HOUSE

Key Distinguishing Characteristics

An informal 1½ to 2-story house made of a variety of building materials, this house has a high hip or gable type roof with steep slopes.

Other Distinguishing Characteristics

Large chimney
Half timbers used as decorative accent
Dormers that break through the cornice
Another common variation of this design (not pictured) is a house built around a courtyard with two symmetrical wings protruding towards the front

History

The style is based on the farm houses found in the various, widespread provinces of France. Because of this, the style varies widely. They were most popular in America in the early 1900's

French Styles

FRENCH NORMANDY

Key Distinguishing Characteristics

The main characteristic of this style is the central turret which is usually a staircase.

Other Distinguishing Characteristics

- 1½ to 2½ stories
- Exterior walls usually brick, stone or stucco
- Asymmetrical shape
- Large chimneys
- High, complicated roofs
- Half timbers for decoration

History

This house style originated in the Normandy area of France where house and barn were one building. The turret was used for storage of grain or ensilage.

English Styles

ELIZABETHAN OR HALF TIMBER

Key Distinguishing Characteristics

This is a 2 or 2½-story house, often with part of the second story overhanging the first. It has less stone work and is less fort-like than the Tudor. Stone and stucco walls with half timbers are most common.

Other Distinguishing Characteristics

Massive sculptured chimneys.
Used brick between half timbers is called "nogging"; when not covered with stucco it is "exposed nogging"
Complicated high peaked roofs which are expensive to install and subject to leaks because of complex valleys.
Small leaded glass casement windows.
Interior often has large halls and a spacious living room with a large fireplace and beamed ceilings.
Bedrooms are on second floor.

History

These houses were erected in England throughout the prosperous reign of Queen Elizabeth (1558-1603), particularly in the London area. The characteristic protruding second story supported by wooden brackets is a carry over from narrow London lots where extra space could be obtained by overhanging the street.

Swiss Style

SWISS CHALET

Key Distinguishing Characteristics

The Swiss Chalet is a 1½ to 2½ story, gable roof house with extensive natural decorative woodwork on the exterior

Other Distinguishing Characteristics

- Open porches
- Large glass windows
- Natural wood look
- Curved cornice

History

The style is a direct copy of the mountain chalets of Switzerland. In this country too, they are built mostly in the mountain areas as ski lodges. The house pictured was designed and built by Paul Manchester.

Early American

NEW ENGLAND COLONIAL

Key Distinguishing Characteristics

The New England Colonial is a 2½-story, generally symmetrical, square or rectangular box-like house with side or rear wings. The traditional material is narrow clapboard siding. The roof is usually the gable type covered with shingles.

Other Distinguishing Characteristics

Originals had chimneys at each end for heating
Modern versions have only one chimney at end or in center
Windows are double-hung type with small glass panes
Shutters same size as windows
Central entrance door often has side lights and a fan light
Elaborate cornice with dentils
First floor has central hallway running from front to rear
Bedrooms are on the second floor

History

These large, roomy houses evolved from the Cape Cod style.

Early American

LOG CABIN

Key Distinguishing Characteristics

This is a house built of unfinished logs.

Other Distinguishing Characteristics

Rectangular shape
Usually one story
Shingle covered gable roof
Chimneys at ends
Few windows
Windows covered with oil soaked paper or small panes of glass

History

The first extensive use of the log cabin in America was by the Swedish immigrants. The log cabin eventually became the favorite house of the early pioneers. There are two basic types of log cabins. One is built with round logs like the traditional Lincoln cabin and the other is built with squared-off logs like the cabin pictured here. The illustration is of the Latta house in Arkansas. Several companies are producing reproductions today.

Early American

CAPE COD COLONIAL

Key Distinguishing Characteristics

This is a small, symmetrical, 1½-story, compact house with a central entrance. The roof is the steep gable type covered with shingles. The authentic types have low central chimneys, but end chimneys are very common in the new versions. Bedrooms are on the first floor. The attic may be finished into additional bedrooms and a bath. A vine covered picket fence is traditional.

Other Distinguishing Characteristics

- Traditionally, exterior walls were white clapboard, natural shingles or brick; modern versions have exterior walls of a wide variety of materials
- Simple double-hung windows
- Shutters same length as windows
- Simple cornice with gutters immediately above first floor windows
- Easy to build, maintain and heat
- Inherent in the design is the necessity to walk through one room to reach another

History

The Cape Cod Colonial is the earliest dwelling type built by the American colonists that is still popular today. The early Cape Cods were very crude. They usually had one room on the first floor and a sleeping loft above. The modern version was the most popular house style in the U.S. from the 1920's through the 1950's.

Early American

NEW ENGLAND FARM HOUSE

Key Distinguishing Characteristics

This is a simple, box-shaped house. The traditional material for the exterior siding is white clapboard. A steep pitched roof is used to shed heavy snow.

Other Distinguishing Characteristics

Central chimney used to support frame
Two square rooms on each floor is typical layout
Interior layout poor by today's standards

History

These simple houses were built in the 1700's and 1800's throughout the New England countryside. They were the favorite style among the farmers who could not afford the more elaborate styles of the times. Simple to construct and maintain, they were designed to use the building materials and techniques of the period.

Early American

GREEK REVIVAL

Key Distinguishing Characteristics

The Greek Revival style is a 2 or 3-story, symmetrical house that is a copy of a Greek temple complete with columns, architraves, friezes and cornices.

Other Distinguishing Characteristics

Windows small and hidden as they are not part of Greek temple architecture.
The interior design is sacrificed for exterior design.

History

There is little difference between a Greek Revival and a Classic Colonial. Many architectural historians consider them to be the same style. For clarity of identification, the houses that look like the traditional Greek temple are generally called Greek Revival. The style became popular in the U.S. in the early 1800's, especially for public buildings.

Early American

CLASSIC COLONIAL

Key Distinguishing Characteristics

A large, impressive showplace, the Classic Colonial is a 2 or 3-story house with a columned exterior. It has more columns than a Georgian Colonial and fewer columns than a Southern Colonial.

Other Distinguishing Characteristics

- Columns have Doric, Ionic or Corinthian capitals
- Pilasters in the walls are common
- Porticos at vehicular entrance with roof supported by columns
- Variety of roof shapes on same house

History

Based on classic Greek architecture, the style was introduced by Thomas Jefferson who built Monticello in 1772 and remodeled it several times up to 1803. There is very little difference between a Classic Colonial and a Greek Revival and many architectural historians use the terms synonomously.

Early American

CAPE ANN COLONIAL

Key Distinguishing Characteristics

A small, symmetrical, 1½ story, compact house with a central entrance, the Cape Ann is distinguished from the Cape Cod style by its gambrel roof. The bedrooms are on the first floor. The attic may be finished into additional bedrooms and a bath.

Other Distinguishing Characteristics

Shingle-covered roof.

Traditionally, the exterior walls are white clapboard or natural shingles.

Simple double hung windows.

Shutters the same length as the windows.

Simple cornice with gutters immediately above the first floor windows.

Easy to build, maintain and heat.

Inherent in the design is the necessity to walk through one room to reach another.

History

A variety of the Cape Cod that started in the Cape Ann area of Massachusetts, it is not nearly as popular as the gable-roofed Cape Cod style.

Early American

PENNSYLVANIA DUTCH COLONIAL OR PENNSYLVANIA GERMAN FARM HOUSE

Key Distinguishing Characteristics

This is a massive 2½-story, gray ledge stone house with a steep gable roof. An unsupported hood over the front entrance is traditional. When wings are added they are usually partly clapboard.

Other Distinguishing Characteristics

Shingle roof
Double hung windows with small panes of glass
Ledge stone siding is long lasting and requires little care

History

The style was first built in the 1600's west of Philadelphia on the Main Line and in Lancaster, Pennsylvania. The name came from the mispronunciation of the word "Deutsch" since those who first built them were of German origin.

Early American

SALT BOX COLONIAL OR CATSLIDE (IN SOUTH)

Key Distinguishing Characteristics

This is 2 or 2½-story square or rectangular house with a steep gable roof that extends down to the first floor in the rear.

Other Distinguishing Characteristics

Exterior walls usually clapboard or shingles
Large central chimney
Large double hung windows with small panes of glass
No windows in rear
Shutters the same size as windows
In order to obtain traditional lean-to look, headroom in the rear must be sacrificed

History

The Salt Box is a Colonial New England farm house that grew in the form of a lean-to shed or room added to the rear of the house. The rear was oriented to the north to ward off cold winter winds. Its name comes from the resemblance to the salt box found in old country stores.

Early American

FRONT GABLE NEW ENGLAND COLONIAL OR CHARLESTON COLONIAL OR ENGLISH COLONIAL

Key Distinguishing Characteristics

This is a 2½-story, symmetrical square or rectangular box-like house with a protruding front wing which distinguishes the style from a New England Colonial.

Other Distinguishing Characteristics

House and wing have gable roofs.
Basic house is usually clapboard.
Wing front is often cut stone.
Cornice on front or on all four sides.
Double-hung windows with small panes of glass.
Shutters same size as windows.
Central entrance in front wing has side light and a fan light.
Wing has stone columns on four corners.
Central hallway runs from wing to rear of house.
Bedrooms on second floor.

History

Like the New England Colonial, this style evolved from the Cape Cod. The first houses of this style were built in the 1700's.

Early American

DUTCH COLONIAL

Key Distinguishing Characteristics

The Dutch Colonial is a moderate sized, 2 to 2½-story house with a gambrel roof and eaves that flare outward.

Other Distinguishing Characteristics

Central entrance
Dutch entrance door
Double-hung windows with small panes of glass
Exterior may be made of a wide variety of material such as clapboard, shingles, cut stone, brick or stucco
Second story dormers through roof are common
Chimney rarely in the center

History

This is an indigenous American style that did not originate in Holland as is commonly believed. The Dutch settlers built them in Pennsylvania starting in the 1600's and soon after in New York.

Early American

GARRISON COLONIAL

Key Distinguishing Characteristics

This is a 2½ story, symmetrical house with the second story overhang in the front. The traditional ornamentation is four carved drops (pine-apple or acorn shape) below the overhang.

Other Distinguishing Characteristics

Exterior chimney at end
Older versions have casement windows with small panes of glass
Later versions have double-hung windows
Second story windows often smaller than those on first floor
Steep gable roof covered with shingles
Dormers often break through the cornice line

History

The Garrison Colonial is reputed to be patterned after colonial block-houses used to fend off Indians, but it is probably an outgrowth of the overhang style of the Elizabethan townhouse. The style probably has been perpetuated because of its pleasant appearance. The carved drops were the ends of the framing beams on early versions of the house. Later they were added on for decoration. Examples of this style built in the 1600's are still standing today.

Early American

FEDERAL

Key Distinguishing Characteristics

The Federal is a multi-story, symmetrical, box-shaped house with a flat roof.

Other Distinguishing Characteristics

Clapboard or brick exterior walls
One or more chimneys protruding through roof.
Windows with small glass panes
Beautiful ornamentation
Belvedere
Balustrade

History

Prevalent throughout the cities in the East in the 1700's, this style takes on many forms. Some consider this and the Adams style to be the same.

Early American

ADAMS COLONIAL

Key Distinguishing Characteristics

A rectangular shaped, multi-story house of classic beauty, the Adams Colonial has large bay windows and a flat roof topped with a balustrade. The overall effect is one of lightness and delicacy.

Other Distinguishing Characteristics

Elaborate windows with small glass panes
Fantail windows on each side and above front entrance door
Chimneys protruding through roof
Carved steps with light iron rails

History

Introduced by Robert Adam in 1759 upon his return from a trip to Europe, the style was launched in New England when it was promoted by Charles Bulfinch and Samuel McIntire, two of America's famous early architects.

Early American

SOUTHERN COLONIAL

Key Distinguishing Characteristics

The Southern Colonial is a large 2 or 3-story, frame house with a characteristic colonnade extending across the front. The roof extends over the colonnade.

Other Distinguishing Characteristics

Hip or gable roof covered with shingles
Symmetrical
Second-story balcony
Balustrade
Belvedere
Double-hung windows with small panes of glass
Shutters same size as windows
Cornices with dentils

History

The style is a southern conception of the New England Colonial and Georgian Colonial modified to suit the warmer climate. The classic example pictured here is Mount Vernon, built in the 1700's.

Nineteenth Century

EASTLAKE

Key Distinguishing Characteristics

The distinctive Eastlake type of ornamentation is the major characteristic of this style. Otherwise these houses look like a Queen Anne or Carpenter Gothic. The ornamentation is very three-dimensional, having been made with a chisel, gouge and lathe rather than the scroll saw. Many of the parts resemble furniture legs and knobs.

Other Distinguishing Characteristics

Rectangular shape
Open front porch
Tower or turret
Gable roof covered with shingles

History

Charles Lock Eastlake, an English architect, wrote a book, *Hints on Household Taste*, first published here in Boston in 1872. The designs in the very popular book became the basis of Eastlake style furniture and houses. The houses, however, were not designed by Eastlake and it was said that he did not like them.

Nineteenth Century

AMERICAN MANSARD OR SECOND EMPIRE STYLE

Key Distinguishing Characteristics

The main and distinguishing characteristic of this style is the roof design. The mansard roof slopes gently back from the wall line and then is topped with an invisible (from the street) section resembling a conventional hip roof. Through the roof protrude multiple dormers.

Other Distinguishing Characteristics

- Decorative iron work
- Decorative mouldings
- Quoins on corners
- Brackets supporting massive cornices
- Colored glass in windows
- Iron castings
- Deep porches
- French doors opening onto the porches

History

The French Second Empire (the reign of Napoleon III from 1852 to 1870) was the period in which the style was popular in the U.S. The mansard roof was originally developed in France in the 1600's by Francois Mansart. It enjoyed wide popularity when revived in the 1800's and now in the 1970's.

Nineteenth Century

EGYPTIAN REVIVAL

Key Distinguishing Characteristics

This is a box-like house with Egyptian columns in the front.

Other Distinguishing Characteristics

Windows appear awkward since they are not part of authentic Egyptian architecture

History

Egyptian architecture was never very popular in America, even in the early 1800's when the fad of copying foreign styles was at its height. The best examples of Egyptian architecture are found in cemetery gates built during the same period.

Nineteenth Century

HIGH VICTORIAN GOTHIC

Key Distinguishing Characteristics

Like the early Gothic architecture, High Victorian Gothic can be identified as being Gothic by the pointed arch which is used extensively over the windows and doors. It is much more elaborate than the early Gothic with a great many colors and materials being visible. The decorative details give an appearance of solidity.

Other Distinguishing Characteristics

Multi-color effect of exterior walls obtained by the use of stone, wood, brick

Exterior wood trim appears to be structural rather than merely trim

History

Most of the High Victorian Gothic houses were built after the Civil War and were based on European Gothic styles popular at the time. The house pictured is the Converse House in Norwich, Connecticut, built in 1870.

Nineteenth Century

OCTAGON HOUSE

Key Distinguishing Characteristics

The most distinguishing characteristic of this style is the octagonal shape.

Other Distinguishing Characteristics

Stone, wood or concrete walls
Flat roofs
Chimney or belevedere in the center
Variety of window and door types used

History

Most of these houses were built around 1850. They were a result of an idea put forth by Orson Squire Fowler, a popular author of the time who wrote about love, marital happiness, sex and phrenology. In several of his popular books he expounded the theory of a happy life in an octagon shaped house. He thought that this design made for good interior circulation, heating and lighting. Octagon houses were built throughout the U.S. and several hundred are still lived in today. The house was explained in detail in his book, *A Home for All, or the Gravel Wall and Octagon Mode of Building, New, Cheap, Convenient, Superior and Adapted to Rich and Poor.*

Nineteenth Century

ROMAN TUSCAN MODE

Key Distinguishing Characteristics

A house in this style is box-like and fills an entire lot, leaving no yard area. Windows on each floor are treated differently. The roof is flat with a massive cornice.

Other Distinguishing Characteristics

Chimneys small and hidden.
Built of stone.

History

The style was brought from Italy in the 1800's and used for several important public buildings and a few houses.

LOOKS LIKE OLD MISSION CHURCH

Nineteenth Century

MISSION

Key Distinguishing Characteristics

These houses look like the old mission churches and houses of Southern California. The doors and windows are arch-shaped.

Other Distinguishing Characteristics

No sculptural ornamentation
Roof often hidden by the parapets
Towers and turrets with pyramid-shaped roofs
Exterior walls made of stucco

History

This is the style developed in the West in the 1800's when the people became aware of their architectural past. It was popularized as a reaction against the conventional custom styles that were being built in the West at the time.

Nineteenth Century

ROMANESQUE

Key Distinguishing Characteristics

This is a massive, stone structure with round, semicircular arched openings.

Other Distinguishing Characteristics

One or more towers topped with a dome
Pyramidal roof

History

This style was very popular in the 1800's for public buildings and churches. Only a few Romanesque houses were ever built in the U.S. Architect Henry Hobson Richardson used the style extensively. The house pictured is the Ayer House in Chicago which, unfortunately, was demolished in 1966.

Nineteenth Century

MONTEREY

Key Distinguishing Characteristics

A 2 story house with a balcony across the front at the second floor level.

Other Distinguishing Characteristics

Asymmetrical shape.
Balcony rail is simple iron work or wood as contrasted with lacy iron work of Creole style.

History

Thomas Larkin, a Boston merchant, moved to Monterey, California and in 1835 built his version of a New England Colonial out of adobe brick. Most of the other houses in Monterey at that time were 1-story. In addition to the second story, his house also introduced to the area the second floor porch, roof shingles and the fireplace. The house was widely copied throughout the West and became known as the Monterey style.

Nineteenth Century

EARLY GOTHIC REVIVAL

Key Distinguishing Characteristics

Gothic architecture can easily be identified by the pointed arch. The windows and doors are often this same pointed shape. Early Gothic revival might have only a few true Gothic characteristics. The house has a Gothic, church like appearance and is asymmetrical. Usually only one color and one material are used.

Other Distinguishing Characteristics

Wood the most common material
Some built of stucco or brick
Fragile appearance, especially tracery and moulding
Pinnacles and battlements
High, massive chimneys

History

Gothic architecture was popular through Europe from the 12th to the 15th centuries. Many great Gothic churches are still standing today. It was one of the many styles copied in the U.S. as part of the fad of the 1700's and 1800's. The house pictured is the Rotch House in New Bedford, Massachusetts, designed by Alexander Jackson Davis in 1846.

Nineteenth Century

SHINGLE STYLE

Key Distinguishing Characteristics

The Shingle Style house is big and box-like with simple lines. The roof and exterior walls are covered with shingles usually stained or painted a dark color.

Other Distinguishing Characteristics

Gable roof
Double-hung windows
Shutters same size as windows
Several chimneys protruding through roof

History

This style developed in New England in the 1880's. It became very popular and many thousands were built. It eventually spread throughout the U.S. and many are in good condition and being lived in today.

Nineteenth Century

WESTERN STICK

Key Distinguishing Characteristics

The Western Stick is a large rectangular house with exposed structural framing.

Other Distinguishing Characteristics

Exterior walls and roof covered with shingles
Many windows have large fixed panes of glass
Roof overhangs the house to take advantage of the sun angles
Sliding glass doors
Small chimney that protrudes through the roof at the end of the house

History

This is a regional version of the Shingle Style that appeared in the late 1800's. One can detect both Oriental and Swiss influence in the design.

Nineteenth Century

WESTERN ROW HOUSE OR WESTERN TOWNHOUSE

Key Distinguishing Characteristics

Like the eastern version of the townhouse, these houses are usually built to cover an entire street or block. They have common side walls with the house on either side.

Other Distinguishing Characteristics

2 or 3 stories
Exterior walls may be wood, stucco or brick
Bay windows
Heavily decorated and painted exteriors
Pitched roof

History

This style is the West's answer to the eastern row house. The main difference is that each unit has its own individual, unique design. They were built starting in the late 1800's and are still popular today. Thousands of these units have been built in San Francisco and other large western cities.

Nineteenth Century

STICK STYLE OR CARPENTER GOTHIC

Key Distinguishing Characteristics

Exposed framing members, high steep roofs, complex silhouettes, diagonal braces and lots of gingerbread trim give this house style its characteristic look.

Other Distinguishing Characteristics

Clapboard siding overlayed with additional boards running horizontally, vertically and diagonally
Complex and ornate windows and doors

History

This style is the result of the advance in the technology of the 1800's. The public had become fascinated with what could be produced cheaply on the automatic bandsaw and they used these mill-cut ornate parts in great abundance on the houses of the period. The name applies to the many gingerbread scrolled houses of the 1800's. It is a very loosely defined style. The culmination of this fad took place in the construction of the house pictured, in Eureka, California, known as the Carson Mansion.

Nineteenth Century

HIGH VICTORIAN ITALIANATE

Key Distinguishing Characteristics

The use of three different kinds of window arches is the primary distinguishing characteristic of this style. They are the straight-sided arch, flat-topped arch and rectangular arch.

Other Distinguishing Characteristics

Square shape
Symmetrical bays in the front
Hip roof
Small chimneys protruding through roof in irregular locations
Entrance way has columns supporting an entablature
Cornice supported with over-size brackets
Exterior appears to be cut up and ornate

History

The style seems to have come to this country from Italy by way of England, where the style was popular in the early 1800's. The house pictured is in Portland, Oregon and was built by Mark Morris in 1882.

Nineteenth Century

QUEEN ANNE

Key Distinguishing Characteristics

Queen Anne has come to be applied to any Victorian house that cannot be otherwise classified. They are all unique looking, multi story houses, irregular in shape with a variety of surface textures, materials and colors.

Other Distinguishing Characteristics

- Half timbering
- Windows of various forms
- Upper stories that project over the lower ones
- Bay windows
- Turrets
- Big chimneys

History

First designed in England by Richard Norman Shaw. Queen Anne was started here as a style by architect Henry Hobson Richardson in the early 1870's.

Nineteenth Century

BROWNSTONE OR BRICK ROW HOUSE OR EASTERN TOWNHOUSE

Key Distinguishing Characteristics

These houses usually cover an entire city block. Most are 4 or 5 stories with a stoop leading up to the first floor. They have common side walls with the house on either side.

Other Distinguishing Characteristics

Built of brick
Often faced or trimmed with chocolate sandstone called brownstone
Flat roof
Simple double-hung windows

History

Brownstones became popular in the late 1800's in New York and other large eastern cities. They tend to develop their individual characteristics in each different city.

Early Twentieth Century

PUEBLO OR ADOBE

Key Distinguishing Characteristics

This house is made of adobe brick or some other material that is made to look like adobe brick. The characteristic projecting roof beams are called vigas.

Other Distinguishing Characteristics

The houses are massive looking
They rarely have arches
Roofs are flat
Long rain water gutters called "canales"

History

Based on the design of the houses of the Indians of New Mexico and Arizona, this became a popular style throughout the Southwest in the early 1900's.

SMALL, COMPACT SHAPE 1 STORY

Early Twentieth Century

CALIFORNIA BUNGALOW

Key Distinguishing Characteristics

A 1-story, small compact house

Other Distinguishing Characteristics

Usually made of wood
Traces of south seas, Spanish and Japanese influences on many

History

At the peak of the Bungalow's popularity, from 1900 to 1920, the name Bungalow and California Bungalow were often used synonymously although one writer of the time classified Bungalows into nine different types. The name comes from the Indian word "bangla" – of Bengal.

Early Twentieth Century

PRAIRIE HOUSE

Key Distinguishing Characteristics

A long, low roof line, continuous row of windows and an unornamented exterior distinguish this house. Designed to satisfy the physical and psychological needs of the inhabitants, it is unlike the traditional concept of a house that is *a* box subdivided into smaller boxes (rooms) each with some doors and windows.

Other Distinguishing Characteristics

Made up of individual areas in size, lighting and function, yet all under one roof

Many feel it is housing at its best

History

Frank Lloyd Wright, the designer of this house, dominated the architectural scene for the first half of the 20th century. His total impact is yet to be fully measured. Unlike many contemporary architects, he was vitally interested in humn design. His principal concern was the organization of space. The Robie House pictured here was built in Chicago in 1909 and is one of the most famous Frank Lloyd Wright houses.

Early Twentieth Century

INTERNATIONAL

Key Distinguishing Characteristics

This design is very simple, with no ornamentation. The windows appear to be continuous rather than appearing to be holes in the walls.

Other Distinguishing Characteristics

Flat roofs.
Smooth, uniform wall surfaces.
Windows that turn the corner of the house.

History

The style was started in Europe in the 1920's by Walter Gropius, Ludwig Mies van der Rohe and the architects of the Bauhaus. It was introduced in the U.S. in the 1930's and is the basis of much modern architecture.

Early Twentieth Century

BUNGALOW

Key Distinguishing Characteristics

A Bungalow is a small, 1-story house that usually has an open or enclosed front porch.

Other Distinguishing Characteristics

Siding usually wood
Roof usually shingled
Many different regional types

History

Most Bungalows were built in the early 1900's and their popularity reached its peak around 1920. The terms, Bungalow and California Bungalow, were often used synonymously. Many Bungalow style houses are now called Ranch style. They are very popular in the shore communities of the east and west coasts.

Post World War II

FUNCTIONAL MODERN OR CONTEMPORARY

Key Distinguishing Characteristics

The exterior style of a contemporary house is an integral part of the overall design. Its function is to enclose some living areas with modern materials yet integrate the indoor and outdoor space into one unit.

Other Distinguishing Characteristics

Modern building materials
Extensive use of glass
Lack of ornamentation

History

The Contemporary is today's version of the revolution in house styles started by the great American architects Frank Lloyd Wright and Henry Hobson Richardson, the German architects of the Bauhaus and other architects around the world in the past 100 years.

Post World War II

MOBILE HOME

Key Distinguishing Characteristics

This is a relocatable house that averages 12 feet wide and 60 feet long. It is produced in a factory and towed by truck or shipped by flat car to the site and often installed upon a prepared base.

Other Distinguishing Characteristics

Wheels and axles used to transport it are removed after installation
Siding and roof often metal

History

During the past 25 years the camping trailer has evolved into today's mobile home. The ongoing argument of whether the mobile home is a trailer or a house is still not settled. Whatever they are, their look is unique and they are considered here to be an architectural style. The American housing industry, for a variety of complex reasons, has failed to provide adequate housing for all Americans at a reasonable cost. This gap has been filled in part by the mobile home industry which produced about 600,000 mobile homes in 1972.

Post World War II

SOLAR HOUSE

Key Distinguishing Characteristics

This house has large overhanging eaves over the windows on both floors. A great portion of the exterior walls consists of large glass windows and doors. The house is positioned on the site to take advantage of the high summer sun and the low winter sun.

Other Distinguishing Characteristics

Some have eyebrow eaves that can be removed in the winter
Some experimental models have machinery that turns them so the front always faces the sun

History

The idea of a house that would utilize the changing position of the sun became popular after World War II. Several books and many articles were written on the subject. Many Solar Houses were built throughout the country and the principles of their design are still being used today by many architects.

Post World War II

NORTHWESTERN OR PUGET SOUND

Key Distinguishing Characteristics

This is a low ranch type house with generous overhangs at eaves and gables. The exterior walls are often redwood.

Other Distinguishing Characteristics

Roof shape reflects south sea island influence
Large glass windows
Wood shingle roof covering

History

The style was first developed in 1908 by Ellsworth Storey, a young architect who designed a group of these cottages. The style did not really become popular until after World War II.

Post World War II

CALIFORNIA RANCH

Key Distinguishing Characteristics

A California Ranch is a 1-story, ground-hugging house with a low, pitched roof.

Other Distinguishing Characteristics

Large double-hung, sliding and picture windows
Sliding glass doors leading onto patios

History

The ranch house of the West has spread in popularity throughout the U. S. Today the term is commonly used to describe a wide variety of 1-story houses including many smaller ones which used to be called Bungalows.

Post World War II

PLASTIC HOUSE

Key Distinguishing Characteristics

A major portion of the exterior siding of this house is fiberglass or other plastic material.

Other Distinguishing Characteristics

Moulded lines and new shapes
Use of new materials
Little or no ornamentation

History

The Plastic House is not an architectural style in the traditional concept. Many new styles may develop using plastic, but the experimental plastic houses being built today do look different from the traditional styles. This house is included to represent them all. The house pictured was designed by architect Valerie Batorewicz of New Haven, Connecticut.

Post World War II

"A" FRAME

Key Distinguishing Characteristics

In this style, the frame is the shape of one or more "A's".

Other Distinguishing Characteristics

Steep gable roof covered with shingles
Front and rear have large glass windows
Interior often only roughly finished
Sleeping area often is semi-enclosed or sometimes is a loft area

History

With the explosive growth in vacation homes since World War II, millions of families now own second homes that are used primarily for recreational purposes. The simple "A" frame style has been popular in the mountains and near lakes and oceans for this purpose.

A great many Classic Colonial, Greek Revival and other house styles exhibit Greek columns, capitals, entablatures and other Greek ornamentations. This illustration is a simple guide to Greek architecture and terminology.

RESIDENTIAL CONSTRUCTION MANAGEMENT

Name of Course: Principles of Accounting II

Course Objectives: To afford an opportunity for further development of accounting principles and practices initiated in "Principles of Accounting I". To acquaint the student with the function of accounting practices in the management of larger-scale business enterprises.

Course Description: A continuation of "Principles of Accounting I". This course extends the application of accounting theory and practice to partnerships and corporations, manufacturing operations, cost determination, and financial statement analysis.

Prerequisite: "Principles of Accounting I"

Suggested Primary Text: To be determined locally.

Course Outline: To be developed locally.

Instructional Recommendations/ Suggestions: See comments, this heading, "Principles of Accounting I".

Additional Instructional Materials:	To be developed locally.
Additional References:	To be developed locally.

APPENDIX B

Curriculum Guides for Residential Construction Technology

RESIDENTIAL CONSTRUCTION TECHNOLOGY

A RECOMMENDED PROGRAM

The Residential Construction Technology program is designed to equip the successful graduate with technical knowledge, a practical outlook, and management ability as applied to the residential construction industry. Development of basic/entry level skill in one of the principal occupational areas of the residential construction industry (carpentry, plumbing, electrical) is made possible through the cooperative training phase. Relatively long-term exposure to the construction site, in an actual working employee status, affords an opportunity to observe the inter-relationships which exist among the various crafts operating on a construction site. Practical experience is gained in understanding construction site problems, how they develop and how they are resolved.

PRIMARY OBJECTIVES

Provide enhanced employment opportunities through the development of basic/entry level skills which are directly related to the residential construction industry.

Prepare students to assume supervisory/management positions in the residential construction industry upon completion of commensurate periods of experience.

RESIDENTIAL CONSTRUCTION TECHNOLOGY

SUGGESTED CURRICULUM

First Semester	Semester Hours
Principles of Residential Construction	3
Blueprint Reading	3
Fundamentals of Mathematics	3
Construction Surveying	4
Construction Practicum I	6
	19

Second Semester	
Introduction to Estimating	3
Residential Construction Materials and Processes	3
Communication Skills	3
Introduction to Business	3
Construction Practicum II	6
	18

Third Semester	
Residential Construction Estimating	4
Business Mathematics	3
Introduction to Architectural Drawing	4
Elements of Structural Design	3
Contracts, Codes, Specifications, and Office Practices	3
	17

Fourth Semester	
Construction Planning and Controls	3
Business Speech	3
History of Architecture and Construction	3
Business Communication	3
Elective	3
	15

Program total	69 hours

RESIDENTIAL CONSTRUCTION TECHNOLOGY

Name of Course: Principles of Residential Construction

Course Objective: To equip the student with a basic understanding of the principles of construction, the tools and terminology of the building trades, and the relationships between the crafts involved in residential construction processes.

Course Description: This course entails a study of the basic principles involved in residential construction. It introduces the student to the principal factors which must be considered during each of the major phases of the residential construction process from bare lot to the finished structure. Topics include: location and excavation, concrete and masonry, framing, exterior and interior finish, roofing, wall and floor coverings, electrical, heating, and air conditioning systems and plumbing.

Suggested Primary Text: Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp., 1968.

Course Outline:

I. Design of a House
   A. One story
   B. Two story
   C. Split level
   D. Traffic through house
   E. How to locate house on lot
   F. Plot plan

II. Excavation and Foundation
   A. Layout of house
      1. Batter boards
      2. How to square a house
   B. Types of soil
      1. Wet line
      2. Frost line
   C. Types of foundations
      1. Equipment used to excavate
   D. Forming
      1. Materials
      2. Types of forms
      3. Basement
      4. Slab
   E. Foundations
      1. Concrete
      2. Brick
      3. Concrete blocks
      4. Pier and beams

III. Sills, Girders, Joists and Subflooring
   A. Types of sills
      1. Box
      2. Balloon framing sill
      3. Platform framing sill
   B. Girders
      1. Use
      2. How to construct
      3. Strength

III. Sills, Girders, Joists and Subflooring (Continued)
- C. Joists
  - 1. Wood
  - 2. Steel
  - 3. Concrete
  - 4. Use of each
  - 5. Bridging
    - a. Types
    - b. How to install
    - c. Purpose
- D. Subflooring
  - 1. Types of material used
  - 2. How to install
  - 3. Size of materials

IV. Wall Construction (Framing)
- A. Material used
  - 1. Size of materials
- B. Balloon framing
- C. Platform framing
- D. Post and beam construction
- E. "Ts" and corners
- F. Door and window bucks
  - 1. Trimmers
  - 2. Headers
- G. Wind braces
  - 1. Cut in
  - 2. Let in
- H. Sheathing

V. Roof Construction
- A. Type of roof design
- B. Rafters
- C. Trusses
- D. Dormers
- E. Roofing materials

VI. Exterior Trim
- A. Cornices
- B. Door and window trim
- C. Porch and patio trim
- D. Atriums

VII. Windows
- A. Types
  - 1. Wood
  - 2. Aluminum
  - 3. Glass blocks

VIII. Doors
- A. Exterior
- B. Interior
- C. Pockets
- D. Sliding glass
- E. Garage doors

IX. Exterior Wall Covering
- A. Wood
- B. Brick
- C. Stone
- D. Stucco
- E. Plywood
- F. Asbestos siding
- G. Simulated stone and brick
- H. Aluminum
- I. Glass block

X. Interior Wall and Ceiling Covering
- A. Lath and plaster
- B. Sheetrock
- C. Paneling
- D. Wall paper and vinyl
- E. Tiles--wall and ceiling
- F. Suspended ceilings

XI. Insulation
- A. Purpose
- B. Types and use of each type
- C. Advantages of types

XII. Stair Construction
- A. Open
- B. Closed
- C. Disappearing
- D. Winding

XIII. Hardware
- A. Hinges
- B. Locks
- C. Door checks
- D. Special hardware
- E. Holding hardware
  - 1. Nails
  - 2. Screws and bolts
  - 3. Corrugated fasteners
  - 4. Split-ring fasteners

XIV. Closets and Shelves
- A. Clothes closets
- B. Storage closets
- C. Cabinets
  - 1. Kitchen
  - 2. Bath

XV. Floor Covering
- A. Wood
- B. Vinyl
- C. Carpet

XVI. Chimneys and Fireplaces
- A. Materials

XVII. Scaffolding
- A. Safety
- B. Types

XVIII. Heating and Air Conditioning
- A. Hot water
- B. Hot air
- C. Cold air

XIV. Electricity
- A. Circuits
- B. Wire
- C. Devices
- D. Service panel

XX. Plumbing
- A. Hot water
- B. Cold water
- C. Sewer

Instructional Recommendations/ Suggestions:

During the conduct of this course continuous emphasis should be placed on describing the relationships between the classroom topics and the work experiences occurring in the "Construction Practicum" course. The text suggested for use with this course is excellent. It contains a wealth of photographs, illustrations, and drawings which are used to emphasize and reinforce the ideas and concepts involved in the various topics presented. It is suggested that the instructor augment these materials with 35MM color slides made up from actual photographs of local construction which are representative of the construction processes being studied. Transparencies for use with an overhead projector should be made from illustrations contained in the text (or from other reference books) to support classroom presentations. The course outline developed for this course follows the sequence of the normal construction process from the initial planning and design of a residence through completion of the final product. Materials contained in chapters of the text which are not reflected in the course

outline have been incorporated into other lesson topics as appropriate (i.e., "Building Materials" . . . this topic is of such importance that it is tied into the main subject matter of each class period throughout the course rather than attempting to treat it as a separate lesson topic). The course outline should be modified to provide special opportunity for the thorough study of building materials and processes which are of special interest to the geographic area in which the course is presented (i.e., types of foundations used in the local area, basements, two-story construction, etc.). It is suggested that plumbing and electrical installation be taught along with inside wall and ceiling framing (Chapter Five, text), since this is the point in the actual construction process where these two functions normally are begun.

Because of the importance of materials contained in this course for persons planning to be engaged in residential construction, a "Pre-Test/ Post-Test" has been developed, and its use is strongly recommended. Test items included in the examination

are designed to evaluate the students' understanding of the principles and fundamentals as described in the classroom instruction, and practical application as actually used in the construction industry. It is recommended that the test be administered to each student at the beginning of the course and again at the close of the semester. Analysis of test results can provide excellent indicators of both class achievement and individual student development. A copy of the suggested "Pre-Test/Post-Test" is included.

It is recommended that the suggested primary text for this course (House Construction Details) be retained by each student for use as a principal reference during the remainder of the Residential Construction program.

Additional Instructional Materials:

1. Transparencies:

   a. Building Construction Transparencies, DCA Educational Products Inc., Philadelphia, 1970. A set of 24 transparencies depicting various phases of construction processes.

   b. Locally-developed transparencies

      (1) Typical Wall Section, Brick Veneer Residence on Slab Foundation. For use with Chapters Two, Four, and Ten, text.

Additional Instructional Materials (Continued):

b. Locally-developed transparencies (Continued)

(2) Water Pipe Installation, Concrete Slab Foundations. For use with Chapters Two and Five, text.

2. 16MM Films:

a. "Foundation and Concrete", 26 min. (MN6719-A) Available from: National Archives and Records Service, National Audiovisual Center, Washington, D. C. 20409 for approximately $48.

b. "Framing Floor Joists and Walls", 25 min. (MN6719-B) Available from: National Archives and Records Service, National Audio-visual Center, Washington, D. C. 20409 for approximately $44.

c. "Framing Rafters", 15 min. (MN6719-C) Available from: National Archives and Records Service, National Audio-visual Center, Washington, D. C. 20409 for approximately $27.

d. "Interior and Exterior Walls", 12 min. (MN6719-E) Available from: National Archives and Records Service, National Audiovisual Center, Washington, D. C. 20409 for approximately $23.

e. "Fundamentals of Stair Layout", 11 min. (MN6719-F) Available from: National Archives and Records Service, National Audio-visual Center, Washington, D. C. 20409 for approximately $20.

Additional Instructional Materials (Continued):

3. Film Loops (Motion Pictures):

a. The Third Wire Can Save Your Life. 4 min., 8MM. Fairfield Associates. Released by Jam Handy School Service, 1968.

b. Wiring an Attachment Plug. ¾ min., 8MM, Fairfield Associates. Released by Jam Handy School Service, 1968.

c. Outlet Box Installation. 4 min., 8MM, Fairfield Associates. Released by Jam Handy School Service, 1968.

d. Basic Wiring: Receptacles and Fixture Circuits. 4 min., 8MM, Moreland-Latchford Productions, Toronto. Released in the U.S. by Universal Education and Visual Arts, 1971.

e. Basic Wiring: Household Service. 4 min., 8 MM, Moreland-Latchford Productions, Toronto. Released in the U.S. by Universal Education and Visual Arts, 1971.

f. Basic Wiring: Domestic Distribution Systems. 4 min., 8MM, Moreland-Latchford Productions, Toronto. Released in the U.S. by Universal Education and Visual Arts, 1971.

g. Basic Wiring: Low Voltage Circuits. 4 min., 8MM, Moreland-Latchford Productions, Toronto. Released in the U.S. by Universal Education and Visual Arts, 1971.

Additional Instructional Materials (Continued):

h. Basic Wiring: Domestic Service Conductors. 2 motion pictures, 4 min. each, 8MM, Moreland-Latchford Productions, Toronto. Released in the U.S. by Universal Education and Visual Arts, 1971.

i. Connecting Wires in an Outlet Box. 4 min., 8MM, Fairfield Associates. Released by Jam Handy School Service, 1968.

j. Basic Wiring: Switch Wiring. 4 min., 8MM, Moreland-Latchford Productions, Toronto. Released in the U. S. by Universal Education and Visual Arts, 1971.

4. Building Materials Samples. Available through local building materials centers, manufacturers, representatives, etc.

5. Recommended "Pre-Test/Post-Test". (See attachment.)

389

RESIDENTIAL CONSTRUCTION TECHNOLOGY

Name of Course: Blueprint Reading

Course Objectives: To provide a basic understanding of the standard symbols, abbreviations, format, and other data contained in blueprints. To enable the student to interpret working drawings and visualize the finished product intended by the architect.

Course Description: This course is designed to acquaint the student with the purpose, function and proper use of blueprints. Topics include: Working drawings, reading drawings, elevations, floor plans, symbols, scales and dimensions, structural information, reading detail drawings and plot plans.

Special emphasis is placed on such subjects as: How blueprints reflect architectural progress, how specifications amplify blueprints, how blueprints vary with the purpose of the structure, how material variations affect blueprints.

Suggested Primary Text: Sundberg, Elmer W., et al. Building Trades Blueprint Reading, 5th ed., Part I: Fundamentals. Chicago: American Technical Society, 1973.

Supplemental Text: Sundberg, Elmer W., et al. Building Trades Blueprint Reading, 2nd ed., Part II: Residential and Light Commercial Construction. Chicago: American Technical Society, 1974.

Course Outline:

I. Working Drawings and Blueprints
   A. How blueprints are made

II. Reading Elevation Drawings
   A. Information depicted on elevation drawings
   B. Building design
   C. Roof design
   D. Openings
   E. Dimensions
   F. Exterior finishes
   G. Exterior materials

III. Reading Floor Plans
   A. Importance of floor plan
   B. How to read floor plans
   C. Dimensions depicted on floor plans

IV. Symbols and Notations Used on Floor Plans
   A. Symbols for materials
   B. Symbols for parts of building
   C. Abbreviations

V. Scaling and Dimensions
   A. How to use the architect's scale
   B. Use of folding rule to scale blueprint
   C. Types of construction

VI. Reading Blueprints for Structural Information
   A. Finding structural information on blueprints
   B. Types of construction

VII. Reading Detail Drawings
   A. Scales used for details
   B. How to locate details

VIII. Plot Plan
- A. The survey plot
- B. Scale used by surveyor
- C. Elevations
- D. Contour lines
- E. The plot plan

IX. Reading Blueprints for Trade Information
- A. Electrical
- B. Plumbing
- C. Masonry
- D. Concrete
- E. Heating and air conditioning

Instructional Recommendations/ Suggestions:

The two texts recommended for use in this course were designed by the author to be used in conjunction with each other in developing an ability to read and understand blueprints. Principles and fundamentals are presented in Part I. Extensive opportunity to actually apply these principles and fundamentals is afforded by the exercises contained in Part II. The texts are flexible and may be used for individual study or for several distinct classroom organizational formats. Four distinct methods of presenting the course material are described for the convenience of prospective instructors.

House Construction Details (suggested for use as the primary text in "Principles of Residential Construction") provides an excellent reference source for

understanding the details of construction as depicted in the blueprints to be studied in this course.

In the interest of competency testing, it is recommended that the final examination in the course be developed through use of an actual blueprint which the students will not have had an opportunity to study or review prior to the testing period. (Copies of such blueprints can be obtained from local architects and/or home builders.) This procedure will provide a more valid measure of the students' ability to apply the concepts and principles of blueprint reading to a realistic work situation. An example of a suggested final examination, constructed along the lines of this recommendation, is included. The answers shown on the sample examination should be changed, as necessary, to correspond to the blueprint ultimately selected for testing purposes.

Additional Instructional Materials:

1. Supplemental blueprint for final examination purposes. May be obtained through local architects or home builders.

2. Selected Transparencies. To be developed locally. From the List of Transparencies suggested for use in the course entitled "Principles of Residential Construction".

FINAL EXAMINATION

BLUEPRINT READING

(Questions 1-68 based on general information.)

1. Blueprints are copies of working drawings made by placing tracings over light-sensitive paper and exposing them to light. T F

2. A tracing can only be used a few times to make blueprints. T F

3. Orthographic projection is another name for the three-view concept. T F

4. Working drawings for a building are made to scale because it would be impossible to draw them full size. T F

5. Dimensions should be shown in each room on a floor plan giving its exact size. T F

6. A dimension should only be shown once on the same sheet. T F

7. A center line and a cutting plane line are drawn with the same symbol. T F

8. All of the basic window types are included among swinging and sliding windows. T F

9. Awning windows swing outward. T F

10. Package doors include the door frames and hardware. T F

11. Door dimensions 2'8" x 6'8" x 1 3/8" indicate width, height and thickness in that order. T F

12. Hollow core doors have a core of wood blocks. T F

13. Straight stairs are preferred to winding stairs for safety. T F

14. A steep stair would have a wide tread and low riser height. T F

15. Provisions for the disposal of storm water from the roof is decided by the builder. T F

16. Anyone who can assemble pipe is qualified to do plumbing work. T F

FINAL EXAMINATION

BLUEPRINT READING

17. The electrician working on a small building makes his own sketch to show arrangement of circuits. T F

18. The electrician must be familiar with the electrical code. T F

19. The craftsman should never guess about the meaning of an abbreviation. T F

20. Working drawings include floor plans, elevations, section views and detail views. T F

21. Concrete walks and drives should be shown on plot plans. T F

22. The architect shows details on the blueprints for the rough framing around windows and doors. T F

23. A 2x6 plank actually measures 1 1/2" x 5 1/2". T F

24. Concrete footings vary in size according to the bearing properties of the soil and the weight of the building. T F

25. All footings and foundation walls have steel reinforcing bars in them. T F

26. A brick window sill laid in rowlock fashion shows the 2x4 inch (nominal size) end of the brick arranged in a vertical row. T F

27. A brick veneer wall is ventilated by a one-inch air space. T F

28. Common concrete block has nominal dimensions of 8" x 8" x 16". T F

29. Steel is the only metal of any importance in the construction industry. T F

30. Aluminum structural shapes are supplied in various sizes. T F

31. All reinforcing bars are the same except for diameter. T F

32. Electric wires are carried through special steel pipe called conduit. T F

33. A built-up roof is made of several layers of saturated felt with tar or asphalt spread over each layer. T F

FINAL EXAMINATION

BLUEPRINT READING

34. The working drawings show how the rough openings for windows should be framed. T F

35. Dimensions for interior partitions are nominal dimensions to the face of studs. T F

36. Chimney footing needs no reinforcing bars. T F

37. Cross-bridging and solid bridging are the same thing. T F

38. Windows are moved by the builder to fall in line with stud spacing. T F

39. Clearance is allowed between the rough-frame opening and the window frame to permit adjustment. T F

40. Siding can be nailed directly to plywood sheathing. T F

41. Members of platform framing are always placed on 16 inch centers. T F

42. The A frame can only be used for plans with single floor. T F

43. The mix of concrete is varied for different applications. T F

44. Steel reinforcing bars are used in concrete footings. T F

45. Voids in concrete are filled with the aid of a vibrator. T F

46. Cavity walls are brick walls made of two wythes with an air space between. T F

47. Brick veneer is combined with wood platform framing. T F

48. The brick part of a brick veneer wall supports the rafters or trusses. T F

49. Earthquake damage can be minimized by making the framework as rigid as possible. T F

50. Snow and ice damage to roofs can be counteracted by increasing the strength of roof supports. T F

FINAL EXAMINATION

BLUEPRINT READING

51. Regarding the three-view concept,
    A. a set of working drawings is based on the idea of three views: top, front and side, or plan views and elevation views.
    B. each drawing is worked out to show information in three dimensions.
    C. a floor plan is a slice through a building taken a few inches above the floor.
    D. pictorial drawings are included in the working drawings to show details of very complex problems.

52. The word scale is used correctly as follows:
    A. a triangular scale is a ruler with six faces and twelve types of graduations.
    B. an architect can draw everything in a set of working drawings using a scale of 1/4 inch equals one foot.
    C. in order to be meaningful, preliminary sketches should be drawn to scale (in proportion).
    D. using a scale, such as 1/4 inch equals one foot, will automatically bring about good proportions and design in a drawing.

53. Scales used in making drawings include:
    A. six inches per foot for moldings.
    B. 1/4 inch per foot for elevation and plan views.
    C. 1 1/2 inch per foot for section views through exterior walls.
    D. 3/4 inch foot for details to be drawn 3/4 size.

54. Regarding dimensioning,
    A. a dimension for the same measurement can be shown twice or on two sheets if it will make it easier to locate.
    B. 4-inch and 6-inch partition thickness dimensions are actual measurements.
    C. buildings should be built with such precision that dimensions should be given in feet, inches and fractions of an inch.
    D. dimensions should be shown in a continuous row, whenever possible, with the figures shown above the dimension line.

55. Regarding symbols
    A. all architects use the same symbols.
    B. symbols are used because the scale is too small to show the object in complete detail, and they save drafting time.
    C. all lines on plan and elevation views are shown as object lines.
    D. a break line shows where cuts are to be made.

BLUEPRINT READING

56. Regarding the alphabet of lines,
    A. cutting plane line shows where the cutting plane passes and the direction in which the section view is to be viewed.
    B. the architect may devise his own alphabet of lines.
    C. all lines on plan and elevation views are shown as object lines.
    D. a break line shows where cuts are to be made.

57. Regarding types of windows,
    A. there are three basic types of windows--casement, hopper and awning.
    B. all swinging windows swing outward.
    C. hopper windows have hinges at the bottom of the sash.
    D. screens are on the outside of all windows which have screens.

58. Regarding door types,
    A. the three basic types are flush, hollow core, and solid core.
    B. accordion doors are the same as bi-fold doors.
    C. panel doors are only used as interior doors.
    D. solid-core doors are used for exterior doors.

59. A floor plan shows
    A. a designation such as 14 R Down, which means 14 risers from the floor of the plan to the floor below.
    B. both the top and bottom riser of a flight of stairs.
    C. how two flights above one another have starting points which line up.
    D. construction details for rough structural members around stairwells.

60. Regarding plumbing and electrical work for residences,
    A. the working drawings show plumbing fixtures and piping for the water supply.
    B. the plumber makes his own layout of drainage piping, including venting through the roof.
    C. electrical and plumbing symbols resemble the units they represent.
    D. electrical circuits are shown on floor plans.

61. Regarding verbal information,
    A. specifications are of minor importance for verbal information.
    B. the title block serves mainly to identify the building.
    C. specific notes are shown near where they apply.
    D. mistakes due to misreading verbal information are not the fault of the craftsman.

FINAL EXAMINATION

BLUEPRINT READING

62. Regarding abbreviations,
    A. abbreviations are all standardized.
    B. abbreviations should be used everywhere to save time.
    C. abbreviations should have meaning even when not associated to parts of a drawing with an arrow or by its location.
    D. when two abbreviations may be used for the same thing, the architect can use either as long as the description is clear.

63. The relationship between the house and the lot include:
    A. the use of an official survey which gives a legal description of the property.
    B. the use of a plot plan which only has value for town or city property.
    C. the use of a city datum point or bench mark which is located on the property.
    D. compliance with zoning ordinances which specify details of construction.

64. The plot plan
    A. shows a point of beginning which is used to find the bench mark or city datum point.
    B. shows lot dimensions and angles at each corner.
    C. shows contour lines which help the concrete workers decide on the depth of the foundation.
    D. shows designations such as +4' 0", which means that the elevation is 4' 0" above sea level.

65. Regarding structural lumber,
    A. the craftsman chooses the right size members to be used to support floors and roofs.
    B. the actual size of a 2x4 is 1" x 3", arrived at by subtracting 1/2 inch from each surface.
    C. structural lumber is sold in two-foot intervals within certain lengths and described by nominal dimensions such as 2x4 or 2x8.
    D. the architect and the builder together decide on how openings shall be framed.

66. Regarding plywood,
    A. finish wood paneling is actually plywood.
    B. plywood is excellent for covering large surfaces but has little strength.
    C. the glue used in plywood is waterproof.
    D. the main use of plywood in light construction is for wall sheathing.

FINAL EXAMINATION

BLUEPRINT READING

67. Concrete
    A. in monolithic form is reinforced concrete.
    B. symbol consists of small dots.
    C. with a mix of 1:3 1/2:5 means that one part cement, 3 1/2 parts sand, and five parts gravel are used.
    D. reaches full strength in three days.

68. Regarding roofing,
    A. shingles can be used on a roof which has any slope.
    B. most asphalt shingles are single-tab shingles.
    C. roll roofing is used exclusively for built-up roofs.
    D. a square of roofing covers 100 square feet when it is laid.

(Questions 69-143, based on information contained in blueprint.)

69. The kitchen has
    A. a pass-through opening to the family room.
    B. a soffit all around the room at the ceiling.
    C. horizontal slider window
    D. stock cabinets to be fitted by the carpenter on the job.

70. The family room has
    A. a pair of sliding glass doors, both of which open.
    B. three warm air registers and no return air register.
    C. two sets of casement windows which are alike in size.
    D. a doorway leading to the kitchen.

71. Regarding the bedroom wing, (bedrooms 18 and 22)
    A. each bedroom has a closet with bi-fold doors.
    B. the bathrooms are identical but reversed, except for the placement of the doors and switches.
    C. the bedroom doors are all sliding doors.
    D. warm air is supplied to the bathroom by a ceiling fan.

72. Regarding doors,
    A. the front entrance door is a wood panel door with nine lights.
    B. doors are all 6' 8" tall--except doors 1 and 6.
    C. the basement door is a wood panel door with six lights.
    D. closet doors in bedrooms and hall are either sliding or bi-fold doors.

FINAL EXAMINATION

BLUEPRINT READING

73. Regarding brick veneer walls,
   A. the brick veneer part of the wall is erected before the frame part.
   B. a one-inch air space is provided for ventilation.
   C. the brick veneer is set back one inch from the face of the foundation.
   D. anchors on two-foot centers between each course hold the brick tight against the sheathing.

74. Regarding the fireplace and chimney,
   A. flue liners are not permitted to extend above the top of the chimney masonry.
   B. a fireplace ash drop opens into the carport.
   C. the round flue shown on the floor plan is for the furnace.
   D. details to build the chimney are given in vertical and plans section through fireplace.

75. The plot plan (sheet 1) shows:
   A. a point of beginning which is also a local bench mark.
   B. a difference in elevation of 1.33 feet between the grade at the northwest corner of the building and the first-floor elevation.
   C. the length of each side of the lot, and angles at the corners.
   D. the location of the driveway and walks.

76. The foundation plan and details on sheet 2 show:
   A. information about steel reinforcing bars in the footings under the house and in the pad under the fireplace.
   B. dimensions for the size and location of the footings under the retaining wall.
   C. dimensions locating the stepped footings.
   D. location of the depressed slabs for brick floors and areas for tubs.

77. The south elevations (sheet 6) show:
   A. the living-room windows as fixed glass.
   B. the footing for the chimney with hidden lines.
   C. that both doors of the pair of glass doors slide open.
   D. dimensions of the fascia member.

78. The door schedule on sheet 1 shows:
   A. that the doors are typical 6' 8" doors (except doors 1 and 6).
   B. that doors are either swinging or sliding.
   C. that window sills for plate-glass windows are at the floor level.
   D. interior wall finish held back 1/2 inch from the door jambs.

FINAL EXAMINATION

BLUEPRINT READING

79. Electrical plan (sheet 9) shows:
    A. a 200 amp service.
    B. a gas outlet in the utility room.
    C. three-way switches to control the electric garage-door operator.

80. Regarding carpentry,
    A. joists over the garage and those over the kitchen and bedroom No. 22 have the same length.
    B. the wall studs are eight feet long.
    C. window and door openings in exterior walls are framed to exactly fit the window and door frames.
    D. cross bridging is unnecessary for the roof joists because of the 3/4-inch plywood sheathing.

81. Regarding interior finish (sheet 1),
    A. a vinyl tile floor is required in the bath and linen closets.
    B. interior door jambs are flush with the wall surface.
    C. wood trim base is specified for all rooms except bathrooms and kitchen.
    D. gypsum board wall finish on exterior walls is applied over furring strips.

82. What type of roof does the house have?
    A. hip roof.
    B. gable roof.
    C. shed roof.
    D. shed and hip roof.

83. The house has
    A. a full basement
    B. no basement.
    C. a half basement.
    D. two levels.

84. The living room
    A. is separated from the dining room by a room divider.
    B. has direct access to the kitchen.
    C. has a fireplace on the west wall.
    D. is part of a living-dining room area.

BLUEPRINT READING

85. The dining area
    A. has direct access to the breezeway.
    B. has a swinging door to the kitchen.
    C. has glass sliding doors to the patio.
    D. has fixed windows.

86. The kitchen
    A. has cabinets on three sides.
    B. has two doors.
    C. has an exit to the patio.
    D. serves also as a laundry.

87. The hallway
    A. opens to all of the rooms but bath #2 and dining room.
    B. has no door which swings outward into it.
    C. is L-shaped.
    D. has all sliding doors.

88. Regarding closets,
    A. bedroom No. 11 has three closets.
    B. the linen closet has a sliding door.
    C. bedrooms No. 18 and 22 have closets of equal size.
    D. no closet is provided in the kitchen.

89. Regarding plumbing,
    A. all of the plumbing fixtures in the bathrooms are arranged along the same wall.
    B. bath #21 has a shower.
    C. the kitchen sink is located under the kitchen window.
    D. the washing machine is located on the east kitchen wall.

90. The south elevation will have what type of windows?
    A. sliding and fixed sash.
    B. awning type and horizontal sliding.
    C. hopper and casement.
    D. double hung and casement.

91. The east elevation will have what type of windows?
    A. single hung and fixed.
    B. casement.
    C. awning.
    D. horizontal sliding.

FINAL EXAMINATION

BLUEPRINT READING

92. The north elevation will have what type of windows?
    A. horizontal sliding and double hung.
    B. horizontal sliding and casement.
    C. single hung and fixed.
    D. awning and double hung.

93. Exterior doors for the house (excluding garage doors)
    A. are all alike.
    B. are two flush doors and one pair of sliding doors.
    C. are flush doors which have the same light arrangement.
    D. all swing in the same direction.

94. Regarding interior doors,
    A. all are swinging or sliding.
    B. all closet doors are sliding.
    C. all closet doors are swinging, sliding, or bi-fold.
    D. all doors to rooms from the hall are swinging.

95. Regarding floor levels,
    A. the living and garage areas are the same level.
    B. the garage floor is lower than the living area.
    C. the garage and entry passage floor levels are the same.

96. Closets
    A. have louvered doors.
    B. have shelves and rods.
    C. have shelves.
    D. have lights with pull switches.

97. The kitchen
    A. has a drop-in range.
    B. has ceramic tile floor and base.
    C. has a gas oven.
    D. has upper cabinets on two walls only.

98. The dimensions of the lot are _____ x _____.

99. The corners are each _____ degrees.

100. The long dimension of the lot is in a _____ compass direction.

101. The greatest dimensions of the house are _____ x _____.

FINAL EXAMINATION

BLUEPRINT READING

102. The house is located _____ from the west property line.

103. It is located _____ from the south property line.

104. The greatest difference in the natural grade elevations of all points on the lot is_____.

105. The floor elevation is _____.

106. What type of roof does this house have? _____

107. What material is used for roofing? _____

108. What is the slope of the roof? _____

109. How far does cornice project beyond face of brick? _____

110. What type window is window A? _____

111. What type window is window E? _____

112. What type exterior wall covering is used on garage? _____

113. How many hose bibs are shown? _____

114. How many amps is main disconnect? _____

115. How many light circuits in this house? _____

116. Total circuits used _____

117. How many spare slots for future circuits? _____

118. How many three-way switches? _____

119. How many water-proof plugs are shown? _____

120. How high above floor is wall plug on circuit #2? _____

121. Where are the lights on circuit #1? _____

122. How many switches control circuit #6? _____

123. How many freeze-proof water hydrants are shown? _____

BLUEPRINT READING

124. How many cleanouts are shown? _____

125. How many 4" stacks are shown and what do they vent? _____

_____

126. How many hot-air supply ducts in living room? _____

127. How many cold-air return ducts are shown? _____

128. What is size of master bedroom? _____

129. What is the size of garage in east-west direction? _____

130. How thick is wall where commode and bathtub is vented in bathroom #21? _____

131. What size and how thick are doors #9? _____

132. What type is door #3? _____

133. What materials are window sills made of? _____

134. Describe the material used to trim out the eaves: _____

135. Describe the material used in soffit: _____

136. What size material is used for collar beams? _____

137. What type of material is used in gable ends? _____

138. How many windows are shown on the north elevation? _____

139. What type of windows are shown on the north elevation? _____

140. What room does the skylight open into? _____

141. Where is the outside opening to the ash pit? _____

142. How large is the flue? _____

143. How many drawers are in the desk shown on detail 7? _____

RESIDENTIAL CONSTRUCTION TECHNOLOGY

Name of Course: Fundamentals of Mathematics

Course Objectives: To emphasize the importance of a thorough understanding of the mathematics of the construction trades for students planning careers in construction. To encourage maximum development of student skills in the practical application of the mathematical processes used in residential construction.

Course Description: This course provides an in-depth review and additional refinement of the use of whole numbers, fractions, percentages, ratio and proportion, areas and volumes. It introduces various short methods for rapid calculations and explains the advantages and disadvantages of their use in construction-related activities. It provides a basic review of algebra and the algebraic functions used in construction. Emphasis throughout the course is on the understanding of basic processes.

Suggested Primary Text: To be determined locally.

Course Outline: To be determined locally.

Instructional Recommendations/ Suggestions: This course is basically an intensive review of the fundamental mathematical processes. Because of the wide variations which normally exist in the mathematical background of individual students in classes of this type, testing procedures should be developed to allow accelerated progress for more advanced students. Recommend student evaluation be based on demonstrated proficiency in the required processes. Most post-secondary institutions will have comparable course offerings within their regular curriculum which can satisfy the requirements of this course.

Additional Instructional Materials: To be developed locally.

Additional References: To be developed locally.

RESIDENTIAL CONSTRUCTION TECHNOLOGY

Name of Course: Construction Surveying

Course Objective: To provide the student with a working knowledge of the fundamentals of surveying and to develop basic skills in the use of surveying information as applied to the home-building industry.

Course Description: This is an introductory course in the principles of surveying which focuses on the elements of surveying most directly related to residential construction. Some of the major areas of concern in this course are: principles and use of the engineer's transit, theory and practice of leveling, the proper maintenance and use of field notebooks, field layout of structures and field staking for earthwork.

Suggested Primary Text: Brinker, Russell C. Elementary Surveying, 5th ed. Scranton, Pa.: Intext Educational Publishers, 1969.

Course Outline:

I. Angles, Bearings, and Azimuths
   - A. General
   - B. Units of angle measurement
   - C. Measurement of angles
   - D. Measurement of distance
   - E. Calculations of bearings

II. Traversing
- A. Methods of running a traverse
- B. Traversing by deflection angles
- C. Traversing by azimuths
- D. Measurement of lengths
- E. Angle closure
- F. Sources of error

III. Leveling
- A. Curvature and refraction
- B. Methods of determining differences of elevation
- C. Types of leveling instruments
- D. Theory of leveling
- E. Profile leveling
- F. Cross sectioning
- G. Signals

IV. The Transit
- A. Upper plate, lower plate, and leveling head
- B. Method of reading a vernier
- C. Operation of the transit
- D. Laying off an angle
- E. Deflection angles and azimuths
- F. Measurement of a vertical angle

V. Area
- A. Methods of measuring
- B. Area by division into triangles
- C. Area by offsets
- D. Area by double meridian distances
- E. Area by coordinates
- F. Area by planimeter

VI. Topographic Surveys
- A. Control for topographic surveys
- B. Topographic details
- C. Locating points in the field
- D. Contours and method of obtaining
- E. Transit tape method
- F. Coordinate squares
- G. Sources of errors in topographic surveys

VII. Construction Surveys
- A. General
- B. Pipelines
- C. Staking out a roadway
- D. Staking out a building
- E. Sources of error

VIII. Parabolic Curves
- A. General
- B. Computations for an equal-tangent curve
- C. Computations for an unequal-tangent curve
- D. Vertical curves
- E. Sight distance
- F. Sources of error

IX. Mapping
- A. General
- B. Mapping agencies
- C. Map drafting
- D. Plotting the traverse
- E. Plotting details
- F. Plotting contours
- G. Topographic symbols
- H. Locating the traverse on the map sheet
- I. Title
- J. Notes
- K. Sources of error in mapping

Instructional Recommendations/ Suggestions: Surveying is an outside activity and field work is an absolutely essential requirement for this course. In geographic areas where extreme or inclement weather conditions can be expected during certain portions of a semester, instructors may need to alter the sequence of subject matter depicted in the suggested course outline. Field

work should approximate industrial practice with special emphasis being placed on the degrees of precision required in good surveying practice. Field notebooks should be kept according to good professional practice and field notes should be reduced to a convenient form for the plotting or calculation of distances and volumes. It is recommended that laboratory/field survey periods comprise a minimum of three hours, once each week, with a one-hour period for class lectures and problem solving.

Additional Instructional Materials:

Surveying equipment normally used in residential construction practice (engineer's transits, surveying rods and chains, stakes, etc.); quantities commensurate with size of class.

Surveyor's field notebooks. Obtainable through retail bookstores, printing and office supply outlets.

American Society of Civil Engineers, Committee of the Surveying and Mapping Division on Definition of Surveying Terms. Definitions of Surveying, Mapping, and Related Terms. New York: American Society of Civil Engineers, 1954.

Additional References (Continued): Davis, Raymond E., et al. Surveying: Theory and Practice, 5th ed. New York and London: McGraw-Hill Book Co., 1966.

RESIDENTIAL CONSTRUCTION TECHNOLOGY

Name of Course: Construction Practicum I

Course Objective: To provide practical on-the-job experience in an actual employment status on the construction site. To encourage development of an entry-level skill in one of the principal crafts of residential construction.

Course Description: The Construction Practicum is designed to provide students with an opportunity to gain first-hand knowledge of work processes as they actually occur in residential construction. Satisfactory completion of both Practicum I and Practicum II should be a positive program requirement for all students electing the Technology option, either in the Certificate program or the Associate Degree program. The Practicum also serves as the skill development phase of the Certificate program and the Associate Degree programs in Residential Construction Technology. Through the use of on-the-job training measures, the Practicum provides an opportunity for each student to develop a basic entry-level skill in one of the principal crafts of the residential construction industry.

Suggested Primary Text: Textbooks and reference materials suggested for use in other courses comprising the Residential Construction Technology Program should serve as continuous cross-references during both semesters of the Construction Practicum.

Course Outline: Individual training guides should be used by on-the-job supervisors to insure that essential skill requirements are included in student development. Examples of suggested training guides for Carpentry, Electrical, and Plumbing crafts are included in the Additional Instructional Materials Section.

Instructional Recommendations/ Suggestions: The construction practicum is designed specifically for the student who plans to be engaged in the physical processes of construction. Successful completion of both semesters of the practicum should provide enhanced employment opportunity in two key ways:

1. Through the development of an entry-level skill in one of the principal crafts of construction, and
2. Through the development of an actual employment record for future job reference purposes.

Students should be in an actual paid-employee status during both semesters of the practicum. Training on the construction site should be under the direct supervision and tutelage of a fully-qualified craftsman. Training guides for each craft should be used on the job to ensure that the student is afforded an opportunity to acquire the necessary level of skill in the various tasks of his craft. Suggested Training Guides have been prepared for Carpentry, Plumbing, and Electrical, and are attached. Training guides for other crafts should be prepared locally, as required.

In furtherance of usable skill development, each student should elect to specialize in one of the primary crafts serving the industry and should pursue that same craft during both semesters of the practicum. This is considered necessary in order to provide sufficient time for the student to develop his skill to a productive level. (The first-year apprentice level is considered to be a realistic minimum goal.)

A member of the Residential Construction faculty should serve as Program Coordinator and should work with the on-the-job supervisor to assure that training

requirements listed on the training guide are satisfactorily completed by each student. Visits by the Coordinator to the construction site should be planned so as not to interfere with normal work progress. Satisfactory skill acquisition and/or knowledge of required job functions will be noted on the student training guide by the on-the-job supervisor. Determination of course grades for each student should be a responsibility of the Program Coordinator/Instructor.

Additional Instructional Materials:

Student Training Guides: Locally developed.

Suggested Training Guides attached for:

A. Carpentry

B. Plumbing

C. Electrical

STUDENT TRAINING GUIDE AND PROGRESS RECORD

FOR CARPENTRY

NOTE TO ON-THE-JOB SUPERVISORS: This form should be used to ensure that each student has developed the skill or understanding required of a "First-Year Apprentice" carpenter. After the student has acquired the necessary level of competency in each task, please place a check-mark in the appropriate column indicating the manner in which his qualification was attained.

Student's Name _____ Supervisor's Name _____

WORK PROCESSES PERFORMED/OBSERVED	Performed	Observed
I. Modern Carpentry Tools		
a. Electric saws		
b. Electric sanders		
c. Air & Electric nailers		
II. Job-Made Equipment		
a. Door jack		
b. Meter box		
c. Saw horses		
III. Framing Square		
a. Use to square corners		
b. Use to cut rafters		
c. Use for plate layout		
d. Use in cutting braces		
IV. Principal Woods		
a. Types		
b. Sizes		
c. Grades		
V. Insulation		
a. Thickness		
b. How to install

STUDENT TRAINING GUIDE AND PROGRESS RECORD

FOR ELECTRICITY

NOTE TO ON-THE-JOB SUPERVISORS: This form should be used to ensure that each student has developed the skill or understanding required of a "First-Year Apprentice" electrician. After the student has acquired the necessary level of competency in each task, please place a check-mark in the appropriate column indicating the manner in which his qualification was attained.

_____ Student's Name

_____ Supervisor's Name

WORK PROCESSES PERFORMED/OBSERVED	Performed	Observed
I. Electrical Wiring		
a. National and local electrical codes		
b. Care and use of tools		
c. Safety precautions		
II. Outlet Boxes		
a. Planning the job		
b. Location of outlet		
c. Set boxes		
d. Bore studs for wire		
III. Circuits		
a. Kinds of wire		
b. Wire sizes		
c. Determining wire size needs		
d. Voltage drop		
e. Kinds of solder		
f. Kinds of splices		
g. Maximum outlets per circuit		
h. Run circuits		
i. Splice joints		
j. Solder splices		
k. Tape splices

RESIDENTIAL CONSTRUCTION TECHNOLOGY

Name of Course: Introduction to Estimating

Course Objectives: To introduce the student to the techniques and procedures used in determining the probable cost of any given construction project. To provide a basic understanding of bidding procedures and the interrelationships between contract documents and the quantity take-off of materials.

Course Description: This course introduces the student to the basic methods of estimating and develops a system for doing quantity surveys. The course also prepares the student to make some of the kinds of estimates that are commonly used in residential construction.

Prerequisites:

1. "Principles of Residential Construction"
2. "Blueprint Reading"

Suggested Primary Text: Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Course Outline:

I. Estimating and the Estimator
   - A. What is estimating?
   - B. Kinds of estimating
   - C. How to prepare an estimate

II. Specifications
- A. Format

III. Excavation Estimating
- A. Cubic yard
- B. Plot plan

IV. Estimating Concrete
- A. Cubic yard
- B. Reinforcement steel
- C. Form work
  - (a) Materials used

V. Estimating Wall Framing
- A. Studs (spacing)
- B. Plates
- C. Door and window bucks
- D. Board feet of lumber

VI. Estimating Ceiling Joist
- A. Spacing
- B. Size of materials
- C. Board feet of lumber
- D. Stiff back (strong back)

VII. Roof Framing
- A. Spacing of rafters
- B. Length of rafters
- C. Collar beam
- D. Purlings
- E. Decking

VIII. Exterior Wall Covering
- A. Brick
- B. Siding wood

IX. Interior Wall and Ceiling Covering
- A. Sheet rock
- B. Paneling
- C. Wall paper
  - (a) Vinyl
- D. Tiles

X. Electrical
   A. Size of wire
   B. Electrical devices
   C. Circuits
   D. Appliance circuits

XI. Plumbing
   A. Water lines
      (a) Hot
      (b) Cold
   B. Sewer systems

Instructional Recommendations/ Suggestions: The fundamental concepts of construction estimating should be developed during an introductory series of classroom presentations. It is recommended that blueprints be obtained from local architects or building contractors for use in presenting the portions of this course which deal with quantity take-offs of material. These same blueprints should be used to develop the materials take-off for units of work reflected in the course outline. Care should be taken to insure that the introductory nature of this course is given positive consideration in selection of class projects. Suggested lesson plans and student handout materials for each phase contained in the course outline have been prepared and are included for use, as appropriate, by other instructors. (Note: Some items of information on these handouts will have to be altered to

correspond to the actual data depicted in the blueprints selected for use by other instructors.)

Satisfactory completion of the courses entitled "Principles of Residential Construction" and "Blueprint Reading" should be an absolute prerequisite for admitting students to this course.

Additional Instructional Materials:

1. Residential blueprints for use in determining materials requirements, types of work to be performed, etc. Obtainable through local area architects or building contractors. Individual copies of the complete set of blueprints should be provided to each student.

2. Lesson plans and Student Handouts, Lessons Two through Eight (copies attached).

Weaver, Michael K., and Kirkpatrick, James M. Environmental Control. New York: Harper and Row, 1974.

Lesson Plan: Building Construction Estimating, Chapters One through Four, text, "Introduction to Estimating".

Time: 90 minutes (one and one-half one-hour periods)

References:

Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Instructional Aids: Set of blueprints and specifications.

Lesson Objective: To introduce the student to the purpose and type of estimates used in residential construction. To acquaint the student with the various forms, documents, and contractor data used in developing estimates.

Lesson Outline:

I. General Introduction
   - A. Building construction estimating
   - B. Estimating cost before construction begins
   - C. Estimate prepared from working drawings and specifications
   - D. Variables in estimating

II. The Estimator
   - A. Quantity take-off estimator
   - B. The complete estimator
     1. Cannot be taught experience and judgement
     2. Can be taught principles.

III. Cost Analysis Methods
   - A. Detail Method
   - B. Preliminary method

IV. Contract Documents
- A. Working drawings
- B. General conditions
- C. Supplementary to general conditions
- D. Specifications
- E. Agreements
- F. Addenda

V. Bidding Information
- A. Public advertising
- B. Dodge Reports

VI. Availability of Contract Documents

VII. Sources of Estimating Information

VIII. Computers

IX. Review Questions (each chapter, text)
- A. Discuss each question in detail.

Lesson Plan: Excavation Requirements. Chapter Eight, "Excavation".

Time: 240 minutes (four one-hour periods)

References:

Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp., 1968.

Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Instructional Aids: Set of blueprints for each student. Student Handout, "Excavation Requirements".

Lesson Objective: To enable the student to locate and properly utilize information contained in blueprints and specifications on which to base development of the materials take-off for excavation requirements.

Lesson Outline:

I. General

II. Specifications

III. Soil

IV. Excavation (Unit of Measure)
   A. Shrinkage
   B. Swell
      1. Fig. 8-1

V. Equipment

VI. Perimeters and Areas
- A. The perimeter
- B. The area
- C. Discuss example in text.

VII. Topsoil Removal
- A. Depth
- B. 5' to 10' beyond building
- C. 3' to 5' beyond driveways and walks
- D. Discuss example in text.

VIII. General Excavation
- A. Review example.

IX. Special Excavation
- A. Review example.

X. Backfill
- A. Explain example.

XI. Earthwork
- A. New site grading
  - 1. Rough grading
- B. Explain example in text in detail.

XII. Excess and Borrow

XIII. Spreading Topsoil, Finish Grade

XIV. Landscaping

XV. Pumping

XVI. Rock Excavation

XVII. Subcontracting

XVIII. Overhead and Profit

XIX. Check List

XX. Review Questions

XXI. Distribute Student Handout, "Excavation Requirements".

STUDENT HANDOUT

"EXCAVATION REQUIREMENTS"

Item 1: Remove topsoil 6" deep 10' beyond building line.

Item 2: Figure amount of soil in all grade beams as shown on blueprint.

Item 3: Spread 6" of topsoil from building to 10' beyond building.

Item 4: Topsoil to be hauled away.

Item 5: 4" sandfill under slab.

Summary:

Item 1 _____ cu. yd.

Item 2 _____ cu. yd.

Item 3 _____ cu. yd.

Item 4 _____ cu. yd.

Item 5 _____ cu. yd.

Lesson Plan: Concrete Requirements, Chapter Nine, "Concrete".

Time: 480 minutes (eight one-hour periods)

References:

Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp., 1968.

Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Instructional Aids: Blueprints and information from specifications. Student Handout, "Concrete Requirements".

Lesson Objective: To enable the student to locate and properly utilize information contained in blueprints and specifications on which to base the development of materials take-off for concrete requirements.

Lesson Outline:

I. Concrete Work
   A. Ready mixed
   B. Mixed on the job

II. Estimating Concrete
   A. Cubic yard
   B. Explain and discuss examples used in text.

III. Reinforcing Steel
   A. Size of rods
   B. Weight of rods
   C. Splice requirements
   D. Explain example in text.

IV. Vapor Barrier
   A. Size of rolls
   B. Estimating vapor barriers
      1. Explain example in text.

V. Accessories
   A. Expansion joint covers
   B. Expansion joint fillers
   C. Waterstops

VI. Concrete Finishes
   A. Patch-up work
   B. Types of finishes
   C. Estimating concrete finishes
      1. Man-hours required for different types of finishes

VII. Curing
   A. Time required
   B. How to cure

VIII. Transporting Concrete

IX. Forms
   A. Wood forms
   B. Metal forms
   C. Miscellaneous forms
   D. Estimating forms
      1. Concrete contact area

X. Form Liners
   A. For different patterns
   B. Estimating form liners

XI. Check List for Concrete

XII. Review Questions, text.

XIII. Distribute Student Handout, "Concrete Requirements".

STUDENT HANDOUT

"CONCRETE REQUIREMENTS"

Item 1: Forms required, Bd. ft. of material.

a. Brace at each corner and two feet on centers (one 8-ft. 2x4 needed for each brace)

Item 2: Vapor barrier needed under slab

Item 3: Reinforcing rods

#3
#4
#5

Item 4: Amount of concrete needed for slab

Summary:

Item 1 _____ B.F.

Item 2 _____ sq. ft.

Item 3 _____ ft. _____ lb. #3

_____ ft. _____ lb. #4

_____ ft. _____ lb. #5

Item 4 _____ cu. yds.

Lesson Plan: Masonry Requirements, Chapter 10, "Masonry".

Time: 360 minutes (six one-hour periods)

References:

Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp., 1968.

Instructional Aids: Set of blueprints, and information from specifications. Student Handout, "Masonry Requirements".

Lesson Objective: To enable the student to locate and properly utilize information contained in blueprints and specifications on which to base development of the materials take-off for masonry requirements.

Lesson Outline:

I. General
   A. Description of masonry materials, tasks, and responsibilities.

II. Specifications

III. Bonds (Patterns)

IV. Concrete Masonry
   A. Concrete blocks

V. Estimating Concrete Masonry
   A. Explain examples in book.

VI. Specifications Concrete Masonry

VII. Clay Masonry

VIII. Estimating Brick
- A. Explain example in book.

IX. Specifications Brick

X. Mortar
- A. Explain example.

XI. Accessories
- A. Control joints
- B. Wall ties
- C. Flashing
- D. Weep holes

XII. Review Questions (text)

XIII. Student Handout, "Masonry Requirements".

STUDENT HANDOUT

"MASONRY REQUIREMENTS"

Item 1: Figure number of bricks as shown on blueprint.

Item 2: Mortar for item 1.
7 cu. ft. of mortar for every sq. of brick face

Item 3: Wall ties. One for every 3 sq. ft. of wall, item 1.

Item 4: Masonry wall reinforcing bars. One every four courses of brick.

Summary:

Item 1 _____ Bricks

Item 2 _____ cu. yd. mortar

Item 3 _____ wall ties

Item 4 _____ masonry wall reinforcing bars

Lesson Plan: Requirements, Wood Frame Construction. Chapter Seventeen, "Wood Frame Construction".

Time: 600 minutes (ten one-hour periods)

References:

Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp., 1968.

Instructional Aids: Set of blueprints and specifications. Student Handout, "Wood Frame Construction Requirements".

Lesson Objective: To enable the student to locate and properly utilize information contained in blueprints and specifications on which to base development of the materials take-off for wood frame construction requirements.

Lesson Outline:

I. Frame Construction

II. Board Measure

III. Studs (Wall Framing)
- A. Plates
- B. Studs
- C. Door and window headers
- D. Tees and corners
- E. Trimmers
- F. Sills (window)
- G. Fire blocks
- H. Wind braces

IV. Joists, Ceiling
- A. Size
- B. Spacing
- C. Span
- D. Direction of run
- E. Bridging
- F. Stiff or strong back

V. Rafters
- A. Size
- B. Spacing
- C. Span (length of rafters)
- D. Purlings
- E. Collar beams
- F. Facier backing
- G. Barge rafters

VI. Sheathing (Decking and Wall)
- A. Solid Lumber
  - 1. 1x2
  - 2. 1x6 T&G
  - 3. 1x8 T&G
  - 4. 1x6 and 1x8 Shiplap
- B. Plywood Sheathing
  - 1. Size
  - 2. Thickness
  - 3. Joints on rafter
  - 4. Joints between rafter
- C. Wall Sheathing
  - 1. Lumber
  - 2. Plywood
  - 3. Insulating
    - (a) Structural
    - (b) Non-structural
  - 4. Gyp rock

VII. Insulation
- A. Roll
- B. Batt
- C. Rigid
- D. Blown

VIII. Trim
- A. Exterior
  1. Facier board
  2. Corner boards
  3. Soffits
- B. Interior
  1. Door trim
  2. Base and base shoe
  3. Ceiling molding

IX. Check List

X. Student Handout, "Wood Frame Construction Requirements".

STUDENT HANDOUT

"WOOD FRAME CONSTRUCTION REQUIREMENTS"

Item 1: Wall Framing

a. Studs 16" on center
b. Plates. Two top, one bottom
c. Headers. 2x6 double headers
d. Tees
e. Corners
f. Trimmers
g. Sills. 2x4. Double under window.
h. Fire block, all outside walls. Two rows where vertical siding is used.
i. Wind braces at each corner, where appropriate.

Item 2: Joists, Ceiling. 16" on center. 2x8 ceiling joist. No bridging required.

Item 3: Rafters. 2' centers. Overhang as required on blueprint. One purling if rafter is over 12' long. Collar beam every 4 ft. 2x6 facier backers.

Item 4: Decking
4x8 - 5/8 in. exterior plywood

Item 5: Gyp Wall Sheathing (2x8), Installed Horizontally

Item 6: Insulation (Roll)
3" thick between studs on all outside walls.

Item 7: Trim

Exterior: Facier 1x6 yellow pine
Soffit 3/8 in. exterior plywood

Interior: Base
Ceiling Molding

Summary:

Item 1: Studs _____ B.F.

Plates _____ B.F.

Headers _____ B.F.

Tees _____ B.F. _____ No.

Corners _____ B.F. _____ No.

Trimmers _____ B.F.

Headers _____ B.F.

Sills _____ B.F.

Item 2: Joist _____ B.F.

Stiff back _____ B.F.

Item 3: No. _____ length _____ B.F. _____.

Purling _____ B.F.

Collar beams _____ B.F.

Facier backer _____ B.F.

Item 4: Plywood _____ No. Sheets

Item 5: Gyp rock _____ No. pieces

Item 6: Insulation _____ sq. ft.

Item 7: Trim

Exterior

Facier _____ B.F.

Soffit _____ sq. ft.

Item 7: Trim

Interior

Base _____ L.F.

Ceiling Molding _____ L.F.

Lesson Plan: Roofing Requirements. Chapter Sixteen, "Roofing".

Time: 180 minutes (three one-hour periods)

References:

Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp, 1968.

Instructional Aids: Set of blueprints and specifications. Student Handout, "Roofing Requirements".

Lesson Objective: To enable the student to locate and properly utilize information contained in blueprints and specifications on which to base development of the materials take-off for roofing requirements.

Lesson Outline:

I. Roofing
   A. Types of roofing materials

II. Roof Shapes
   A. Roof area

III. Shingles
   A. Asphalt
      1. Size
      2. Weight
      3. Coverage
      4. Exposure
      5. Felt
      6. Nails

B. Asbestos
   1. Size
   2. Weight
   3. Nails
   4. Felt

C. Wood Shingles and Shakes
   1. Size (length)
   2. Sold by square, 10" exposure
   3. Nails

D. Other Roofs
   1. Built-up
   2. Corrugated sheets
   3. Metal roof
   4. Slate
   5. Tile

IV. Check List

V. Student Handout, "Roofing Requirements".

STUDENT HANDOUT

"ROOFING REQUIREMENTS"

Item 1: Shingles

a. Asphalt shingles, square tab, 5" exposure to weather

Item 2: 30 lb. felt
2" lap edge
1' lap end

Item 3: Metal edging

Summary:

Item 1 Shingles _____ sq.

Nails _____ lb.

Item 2 Felt _____ sq.

Nails _____ lb.

Item 3 Metal edging _____ len. ft.

Lesson Plan: Requirements, Drywall and Wetwall Construction. Chapter Thirteen, "Drywall and Wetwall Construction".

Time: 180 minutes (three one-hour periods)

References:

Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp., 1968.

Instructional Aids: Set of blueprints and specifications. Student Handout, "Drywall and Wetwall Requirements".

Lesson Objective: To enable the student to locate and properly utilize information contained in blueprints and specifications on which to base development of the materials take-off for drywall and wetwall construction requirements.

Lesson Outline:

I. Drywall Construction
   A. Sheet Rock
      1. Tape and bed
   B. Wood Paneling
      1. How installed
      2. Types of paneling

II. Student Handout, "Drywall and Wetwall Construction Requirements".

III. Discuss review questions, text.

STUDENT HANDOUT

"DRYWALL AND WETWALL CONSTRUCTION REQUIREMENTS"

Item 1: Sheet rock: 4x8 sheets.
1/2" sheet rock required on all walls and ceilings

Item 2: Paneling: 4x8 sheets.
1/4" paneling on wall in family room and study

Summary:

Item 1 _____ pieces of sheetrock

Item 2 _____ pieces of paneling

Lesson Plan: Requirements for Finishes. Chapter Fifteen, "Finishes".

Time: 360 minutes (six one-hour periods)

References:

Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp., 1968.

Instructional Aids: Set of blueprints and specifications. Student Handout, "Requirements for Finishes".

Lesson Objective: To enable the student to locate and properly utilize information contained in blueprints and specifications on which to base development of the materials take-off for finishing requirements.

Lesson Outline:

I. Flooring
   A. Types
   B. Where used

II. Wood Flooring
   A. Types of wood
   B. Strip flooring
   C. Block flooring
   D. Estimating
   E. Specifications

III. Resilient Flooring
   A. Types
   B. Where used
   C. Estimating
   D. Specifications
   E. Adhesives
      1. Coverage

IV. Carpet
- A. Types
- B. Estimating
- C. Specifications

V. Tiles
- A. Types and sizes
- B. Estimating
- C. Specifications

VI. Painting Interior
- A. Types of paints
- B. Where used
- C. Estimating
- D. Specifications
- E. Take-off of areas
  1. Walls
  2. Ceiling
  3. Doors
  4. Trim

VII. Check List

VIII. Review Questions, text.

IX. Student Handout, "Requirements for Finishes".

STUDENT HANDOUT

"REQUIREMENTS FOR FINISHES"

Item 1: Floorcovering
a. Vinyl Resilient Tile in kitchen, dinette, utility and baths

Item 2: Carpet remainder of house (except garage).

Item 3: Paint Interior
a. Sheet rock walls and ceilings in kitchen and bath. Doors and trim Latex Enamel (three coats).
b. All other sheet rock, Latex (three coats).

Item 4: Tile wainscots, 4 ft. high in baths.

Summary:

Item 1 _____ boxes tile floor covering

_____ gals. mastic

Item 2 _____ sq. yds. carpet

Item 3 _____ gals Latex Enamel

_____ gals. Latex

Item 4 _____ sq. ft. ceramic tile

Lesson Plan: Subcontractor Functions. Chapters Eighteen, Nineteen, and Twenty, "Electrical", "Plumbing", and "HVAC".

Time: 360 minutes (six one-hour periods)

References:

Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp., 1968.

Richter, Herbert P. Practical Electrical Wiring, Residential, Farm, and Industrial, 9th ed. New York: McGraw-Hill Book Co., 1972.

Matthias, A. J., Jr.; Smith, Esles, Sr.; et al. How to Design and Install Plumbing, 4th ed. Chicago: American Technical Society, 1971.

Instructional Aids: Set of blueprints and specifications.

Lesson Objective: To acquaint the student with methods used in developing rough cost estimates for functions which are normally subcontracted in residential construction practices.

Lesson Outline:

I. Electrical
   A. Contractor-subcontractor relationships and procedures

II. Plumbing
   A. Contractor-subcontractor relationships and procedures

III. Heating, Ventilating and Air Conditioning

A. Contractor-subcontractor relationships and procedures.

RESIDENTIAL CONSTRUCTION TECHNOLOGY

Name of Course: Residential Construction Materials and Processes

Course Objective: To provide an in-depth study of the materials used in residential construction, and a basic understanding of how these materials are assembled into finished residential units.

Course Description: This course is a broad survey of the materials used in the various processes of residential construction. It is designed to familiarize the student with the components of modern construction so that he can select the materials best suited for the application, whether from the standpoint of durability and serviceability or from that of appearance, or both.

Suggested Primary Text: Watson, Donald A. Construction Materials and Processes. New York: McGraw-Hill Book Co., 1972.

Course Outline:

I. Selection of Materials
   - A. Materials evaluation
   - B. References
   - C. Trade associations
   - D. Reference standards
   - E. Testing laboratories

II. Soils, Site Work, Foundations, and Paving
- A. Soil classification
- B. Soil behavior
- C. Soil investigation
- D. Soil modification
- E. Foundations and piles
- F. Paving and surfacing materials

III. Concrete
- A. Cement
- B. Aggregate
- C. Admixtures
- D. Water
- E. Design of mix
- F. Placing concrete
- G. Joints
- H. Finishing and curing concrete
- I. Reinforced concrete
- J. Precast concrete
- K. Prestressed concrete

IV. Masonry
- A. Stone
- B. Stone masonry
- C. Brick
- D. Brickwork
- E. Structural clay tile
- F. Concrete block
- G. Gypsum block
- H. Glass block

V. Wood and Related Products
- A. Characteristics of wood
- B. Defects in wood
- C. Preparation of lumber
- D. Characteristics of softwoods and hardwoods
- E. Lumber grades
- F. Treated lumber
- G. Glued-laminated timber
- H. Structural plywood
- I. Hardwood plywood
- J. Pressed boards
- K. Composite boards
- L. Wood fasteners

VI. Ferrous Metals and Steel Framing
- A. Iron
- B. Cast iron
- C. Wrought iron
- D. Steel
- E. Shaping steel
- F. Steel pipe, tubing, and wire
- G. Steel castings
- H. Classifications of steels
- I. Steel construction
- J. Steel fasteners
- K. Steel floor and roof framing

VII. Nonferrous Metals and Alloys
- A. Aluminum and aluminum alloys
- B. Aluminum products
- C. Lead
- D. Zinc and zinc coatings
- E. Copper and copper alloys
- F. Nickel, chromium, cadmium, and titanium

VIII. Lath, Plaster, and Accoustical Materials
- A. Plaster
- B. Gypsum plasters
- C. Portland cement plasters
- D. Lath
- E. Lath-and-plaster construction
- F. Accoustics
- G. Accoustical materials

IX. Roofing, Sheet Metal, Dampproofing, and Thermal Insulation
- A. Roofing materials
- B. Bituminous roofing materials
- C. Shingles, tiles, and slate
- D. Wood shingles and shakes
- E. Membrane roofing
- F. Metals
- G. Weatherproofing and drainage
- H. Dampproofing and waterproofing
- I. Thermal insulation

X. Floor and Wall Coverings
- A. Floor coverings
- B. Wood flooring
- C. Resilient flooring
- D. Seamless resilient flooring
- E. Terrazzo
- F. Wall and floor tile
- G. Tilesetting
- H. Wall coverings

XI. Doors, Windows, and Hardware
- A. Doors
- B. Wood doors
- C. Sliding and folding doors
- D. Metal and metal-covered doors
- E. Windows
- F. Glazed walls
- G. Builders' hardware
- H. Cabinet hardware

XII. Glass, Glazing, and Sealants
- A. Glass
- B. Sheet glass
- C. Plate glass
- D. Safety glass
- E. Tinted and coated glass
- F. Mirrors
- G. Plastic glazing materials
- H. Glazing

XIII. Paints and Finishes
- A. Properties of paint
- B. Pigments
- C. Vehicles
- D. Solvents
- E. Clear coatings and stains
- F. Primers and sealers
- G. Special-purpose paints

XIV. Mechanical Equipment
- A. The mechanical trades
- B. Water-distribution systems
- C. Drainage systems
- D. Drain pipe and fittings
- E. Fuel-gas piping
- F. Plumbing fixtures
- G. Heating systems
- H. Air conditioning systems

XV. Electrical Equipment
- A. Electrical energy
- B. Power generation
- C. Services and service equipment
- D. Wiring materials and methods
- E. Junction boxes, outlets, and switches
- F. Lighting

Instructional Recommendations/ Suggestions: The suggested text is abundantly illustratrd with photographs and drawings depicting the materials and processes of construction. It is organized in accordance with the sixteen divisions of the Uniform System For Construction Specifications. During the early stages of this course the student should be thoroughly indoctrinated in the content and proper usage of Sweet's Architectural Catalogue File. A virtually unlimited range of supplemental instructional aids and materials is available through building materials manufacturers and distributors. These aids run the gamut from product sample boards through film strips and transparencies (including manufacturers' representatives and guest lecturers). Each major

section of the text includes discussion questions which can well be used to develop a test item bank for examination purposes. This course covers an extremely broad subject area. The instructor, in preparing daily lesson outlines, should plan for limiting discussion to the major aspects of each topic, so as to insure a wider general orientation into the various materials of construction, rather than specific details of selected items.

Additional Instructional Materials:

Manufacturers' Sample Boards, Film Strips, 16MM Films, Product Representatives (for guest lecture purposes), etc. All available through various building materials manufacturers.

Sweet's Architectural Catalogue Files. Outdated copies of these publications (suitable for instructional purposes) may be obtained in sufficient quantities for classroom use through local architects and building contractors (recommend as a minimum one complete set of files for each four students in the class).

Additional References:

Merritt, Frederick S., ed. Building Construction Handbook, 2nd ed. New York: McGraw-Hill Book Co., 1965.

Wass, Alonzo. Methods and Materials of Residential Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

In addition to the general references cited above, a detailed topical listing of references is included at the end of each major section of the recommended text.

RESIDENTIAL CONSTRUCTION TECHNOLOGY

Name of Course: Communication Skills

Course Objectives: To encourage student understanding of the critical importance of each of the various communication processes in residential construction activities. To provide an opportunity for individual student development of verbal and non-verbal communication skills.

Course Description: A study of the basic skills of writing; foundation work in the principles of grammar, punctuation, and sentence structure. Includes drills in spelling, exercises in vocabulary development, and practice in writing effective sentences. The course should provide analysis of each student's strengths and weaknesses, and instruction should be aimed at remedying the most serious deficiencies.

Suggested Primary Text: To be determined locally.

Course Outline:

I. Communication in Construction Processes
   A. Summary of the technical specialist's need for proficiency in communication
   B. Discussion of written communication as an essential skill
      1. Statements of facts
      2. Expression of ideas
      3. Technical reporting
         a. Formal
         b. Informal
      4. Use of graphics in written communication
   C. Discussion of oral communications as an essential skill
      1. Person-to-person expression of ideas and thoughts
      2. Verbal reporting
   D. Diagnostic testing of students

II. Sentence Structure
   A. Review of basic parts of speech
   B. Study of complete, clear, and correct sentences
   C. Use and placement of modifiers, phrases, and clauses
   D. Study of sentence conciseness
   E. Exercises in sentence structure

III. Written Expression (emphasis on student exercise)
   A. Diagnostic testing of students
   B. Study of paragraph construction
      1. Development
      2. Topic sentence
      3. Unity; coherence
   C. Study of types of expression
      1. Narration, description, exposition
      2. Inductive and deductive reasoning
      3. Figures of speech; analogies; comparisons and contrasts
      4. Cause-and-effect reasoning
      5. Other
   D. Written exercises in paragraph construction

III. Written Expression (emphasis on student exercise) (Continued)

- E. Study of descriptive reporting
  - 1. Organization and planning
  - 2. Emphasis on sequence, continuity, and delimitation to pertinent data or information
- F. Study of letter writing
  - 1. Business letters
  - 2. Personal letters
- G. Review of mechanics
  - 1. Grammar (reviewed as required)
  - 2. Punctuation—when to use
    - a. Period, question mark, exclamation mark
    - b. Comma
    - c. Semicolon
    - d. Colon
    - e. Dash
    - f. Parentheses
    - g. Apostrophe
  - 3. Capitalization
  - 4. Spelling
    - a. Word division—syllables
    - b. Prefixes and suffixes
    - c. Word analysis and meaning—context, clues, and phonetics
- H. Exercises in mechanics of written expression

IV. Talking and Listening (emphasis on student exercises)

- A. Diagnostic testing of students
- B. Organization of topics or subjects
- C. Directness in speaking
- D. Gesticulation and use of objects to illustrate
- E. Conversation courtesies
- F. Listening faults
- G. Taking notes
- H. Understanding words through context clues
- I. Exercises in talking and listening

V. Improving Reading Efficiency
   A. Diagnostic testing of students
   B. Improving reading habits
      1. Correct reading posture
      2. Light sources and intensity
      3. Developing proper eye-span and movement
      4. Developing speed and comprehension appropriate to the purpose
      5. Scanning; sentence reading
      6. Taking notes for careful study
   C. Footnotes, index, bibliography, and cross references
   D. Developing skill in summarizing
      1. Outline
      2. Digest or brief
      3. Criticism
   E. Exercises in reading improvement
      1. Reading for comprehension
      2. Reading for speed

Instructional Recommendations/ Suggestions: This course is basically an intensive review of the fundamental communication processes. Because of the wide differences in levels of individual student development normally found in classes of this type, the use of testing procedures which encourage accelerated progress for the more advanced students is strongly recommended. Most post-secondary institutions will have established courses within the regular curriculum which satisfy the developmental objectives of this course.

Additional Instructional Materials:	To be developed locally.
Additional References:	To be developed locally.

RESIDENTIAL CONSTRUCTION TECHNOLOGY

Name of Course: Introduction to Business

Course Objectives: To familiarize the student with the economic, social, and legal environments in which business is conducted in our present-day society. To provide an opportunity for the student to learn what capitalism is and how it functions. To encourage the student to acquire a usable vocabulary of business terms and to gain an understanding of the methods and procedures used by businessmen to arrive at decisions.

Course Description: This is a survey-type course which examines the characteristics of business organization, the records of business, problems of marketing, personnel, finance, decision making, and the legal and regulatory environment of business. Special emphasis is placed on defining the responsibilities of business in regard to such nonprofitable activities as employing the disadvantaged, promoting civic and educational projects and fighting pollution.

Suggested Primary Text: Glos, Raymond E., and Baker, Harold A. Business: Its Nature and Environment; An Introduction, 7th ed. Cincinnati, Ohio: South-Western Publishing Co., 1972.

Course Outline:

I. Business and Society
   A. Nature of business
   B. Economic business environment
   C. Ethics and social responsibilities

II. Ownership, Organization, and Management
   A. Unincorporated businesses
   B. Incorporated businesses
   C. Organization for management
   D. Management activities

III. Marketing
   A. Marketing--nature and scope
   B. Wholesaling and retailing
   C. Prices and pricing
   D. Advertising
   E. International trade

IV. Personnel
   A. Employee selection and training
   B. Employee compensation
   C. Labor problems and legislation

V. Production
   A. Materials management
   B. Production problems

VI. Finance
   A. Short-term financing
   B. Long-term financing
   C. Financial problems and policies
   D. Security markets and financial news
   E. Risks and insurance

VII. Quantitative Controls
   A. Accounting and financial statements
   B. Data processing
   C. Business statistics and reports
   D. Forecasting and budgeting

VIII. Legal and Regulatory Environment of Business
   A. Business law
   B. Governmental regulation of business
   C. Business and taxes

Instructional Recommendations/ Suggestions:

The text suggested for use in this course is designed to provide a general familiarization with the whole area of activity known as business. This complete view will provide a framework into which the student can fit the segments he subsequently studies in greater detail (Business Mathematics, Accounting, Management, etc.). The stress on environmental factors is considered to be of special importance for those students planning careers in construction. The suggested text is well suited to the purposes of this course. It also serves as the nucleus around which the authors have developed a complete teaching materials package. The various parts of the total package are listed in the section on Additional Instructional Materials, below.

Additional Instructional Materials:

"Student Supplement" to suggested primary text (Questions, Problems, Readings, Incidents). Available through the publisher.

"Instructor's Manual" for use with suggested text. Available through the publisher.

"Transparency Masters" for use with the suggested text. Contains a series of several masters for each chapter of the text. Available through the publisher.

Additional Instructional Materials (Continued):

"Objective Tests" for use with the suggested text. Contains a set of ten complete objective examinations over materials contained in the text. Available through the publisher.

RESIDENTIAL CONSTRUCTION TECHNOLOGY

Name of Course: Construction Practicum II

Course Objective: To provide opportunity for the student to gain a wider range of work experiences on the construction site. To provide continued opportunity for skill development in the craft selected for specialized study during Construction Practicum I.

Course Description: This course is a continuation of the student development concepts initiated in Construction Practicum I. The work experiences gained during Construction Practicum I and II should result in student acquisition of an entry-level skill in one of the principal areas of employment in residential construction, and serve as a base for further individual development as each student acquires additional experience within the industry.

Suggested Primary Text: See comments, this topic, Construction Practicum I.

Course Outline: Continuation of Construction Practicum I.

Instructional Recommendations/ Suggestions:	See comments, this topic, Construction Practicum I.
Additional Instructional Materials:	Guides for each craft should be sufficiently broad to provide for continued development of skills selected for specialized study during Construction Practicum I.
Additional References:	Recommend continued study and application of additional references listed in Construction Practicum I.

RESIDENTIAL CONSTRUCTION TECHNOLOGY

Name of Course: Residential Construction Estimating

Course Objectives: To afford the student an opportunity to gain practical experience in preparing material and labor quantity surveys and in developing the types of estimates used in residential construction. To develop student understanding of the relationships between contracts, codes, specifications and working drawings, and how these documents are used in the estimating process.

Course Description: This course requires that the student utilize knowledge gained in previous courses to develop realistic estimates of the cost factors which will ordinarily be experienced in the residential construction process. It provides for the study of estimating from the viewpoint of the general contractor, sub-contractor, general superintendent, and the professional construction estimator.

Prerequisites:

1. "Principles of Residential Construction"
2. "Blueprint Reading"
3. "Introduction to Estimating"

Suggested Primary Text: Dagostino, Frank R. Estimating in Building Construction. Reston, Va.: Reston Publishing Co., Inc., 1973.

Course Outline:

I. Introduction to Estimating
   A. General introduction
   B. The estimator
   C. Cost analysis methods
   D. The contract documents
   E. Bidding information
   F. Availability of contract documents
   G. Sources of estimating information
   H. Computers

II. Contracts, Bonds and Insurance
   A. The contract system
   B. Types of agreement
   C. Lump-sum agreement
   D. Unit-price agreement
   E. Cost-plus-fee
   F. Agreement provisions
   G. Bonds
   H. Bid bonds
   I. Performance bonds
   J. Labor and material bonds
   K. Miscellaneous bonds
   L. Obtaining bonds
   M. Insurance

III. Specifications
   A. Specifications
   B. Invitation to bid
   C. Instructions to bidders
   D. Bid (Proposal) forms
   E. Form of owner-contractor agreement
   F. General conditions
   G. Supplementary general conditions
   H. Technical trade sections
   I. Alternates
   J. Addenda
   K. Errors in specifications

IV. The Estimate
   A. Organization
   B. Daily log
   C. Notebook
   D. To bid or not to bid
   E. The estimate
   F. Site investigation
   G. Subcontractors

IV. The Estimate (continued)
- H. Materials
- I. Work-up sheets
- J. Summary sheets
- K. Errors and omissions

V. Overhead and Contingencies
- A. Overhead
- B. General overhead
- C. Job overhead
- D. Contingencies
- E. Checklist

VI. Labor
- A. General
- B. Unions--wages and rules
- C. Field reports
- D. Pricing labor
- E. Labor diagrams

VII. Equipment
- A. General
- B. Operation costs
- C. Depreciation
- D. Interest
- E. Ownership costs
- F. Rental costs
- G. Miscellaneous tools
- H. Cost accounting
- I. Mobilization
- J. Checklist

VIII. Excavation
- A. General
- B. Specifications
- C. Soil
- D. Excavation--Unit of Measure
- E. Equipment
- F. Perimeters and areas
- G. Topsoil removal
- H. General excavation
- I. Special excavation
- J. Backfilling
- K. Earthwork
- L. Excess and borrow
- M. Spreading topsoil

VIII. Excavation (continued)
- N. Landscaping
- O. Pumping (De-Watering)
- P. Rock excavation
- Q. Subcontractors
- R. Overhead and profit
- S. Excavation checklist
- T. Piles
- U. Pile checklist
- V. Asphalt paving

IX. Concrete
- A. Concrete work
- B. Estimating concrete
- C. Reinforcing
- D. Vapor barrier
- E. Accessories
- F. Concrete finishing
- G. Curing
- H. Transporting concrete
- I. Forms
- J. Form liners
- K. Concrete checklist

X. Masonry
- A. General
- B. Specifications
- C. Bonds (Patterns)
- D. Concrete masonry
- E. Estimating--concrete masonry
- F. Specifications--concrete masonry
- G. Clay masonry
- H. Estimating brick
- I. Specifications--brick
- J. Estimating tile
- K. Specifications--tile
- L. Stone masonry
- M. Estimating stone
- N. Specifications--stone
- O. Mortar
- P. Accessories
- Q. Reinforcing bars
- R. Cleaning
- S. Equipment
- T. Cold weather
- U. Labor
- V. Subcontractors
- W. Checklist

XI. Waterproofing and Dampproofing
- A. Waterproofing
- B. Membrane waterproofing
- C. Estimating--membrane
- D. Integral method
- E. Metallic method
- F. Dampproofing
- G. Painting method
- H. Estimating--painting
- I. Parging (Plastering)
- J. Estimating--parging
- K. Checklist

XII. Structural Systems
- A. Precast concrete
- B. Estimating
- C. Specifications
- D. Precast tees
- E. Precast slabs
- F. Precast columns and beams
- G. Miscellaneous precast
- H. Precast costs
- I. Precast checklist
- J. Structural steel
- K. Structural steel framing
- L. Steel joists
- M. Steel decking
- N. Miscellaneous structural steel
- O. Steel erection subcontractors
- P. Steel checklist
- Q. Wood systems
- R. Wood trusses
- S. Laminated beams and arches
- T. Wood decking
- U. Plywood systems
- V. Wood checklist

XIII. Drywall and Wetwall Construction
- A. General
- B. Supporting construction
- C. Suspended ceiling systems
- D. Drywall
- E. Types of assemblies
- F. Wallboard types
- G. Column fireproofing
- H. Accessories

XIII. Drywall and Wetwall Construction (continued)
- I. Wetwall construction
- J. Plaster
- K. Lath
- L. Accessories
- M. Checklist

XIV. Windows, Curtainwalls, Doors, and Hardware
- A. Window and curtainwall frames
- B. Accessories
- C. Doors
- D. Fire-rated doors
- E. Acoustical doors
- F. Overhead doors
- G. Folding doors and partitions
- H. Prefitting and machining (premachining)
- I. Prefinishing
- J. Door frames
- K. Hardware
- L. Accessories
- M. Checklist for doors and frames
- N. Glass

XV. Finishes
- A. Flooring
- B. Wood flooring
- C. Resilient flooring
- D. Carpeting
- E. Tile
- F. Painting
- G. Checklist

XVI. Roofing
- A. Roofing
- B. Roof areas
- C. Shingles
- D. Built-up roofing
- E. Corrugated sheets
- F. Metal roofing
- G. Slate
- H. Tile
- I. Sheet, tiles, and shingles formula
- J. Liquid roofing
- K. Flashing
- L. Insulation
- M. Roofing trim
- N. Labor
- O. Equipment
- P. Checklist

XVII. Wood Frame Construction
- A. Frame construction
- B. Board measure
- C. Studs
- D. Wood joists
- E. Rafters
- F. Sheathing
- G. Insulation
- H. Trim
- I. Checklist

XVIII. Electrical
- A. Electrical work
- B. Single contracts
- C. Separate contracts
- D. Coordination requirements
- E. Checklist

XIX. Plumbing
- A. Plumbing work
- B. Single contracts
- C. Separate contracts
- D. Coordination requirements
- E. Checklist

XX. Heating, Ventilating, and Air Conditioning
- A. HVAC work (Heating, Ventilating, and Air Conditioning)
- B. Single contracts
- C. Separate contracts
- D. Coordination requirements
- E. Checklist

XXI. Profit
- A. Profit

Suggested References:

Burbank, Nelson L., and Pfister, Herbert R. House Construction Details, 6th ed. New York: Simmons-Boardman Publishing Corp., 1968.

Jones, Raymond P., Sr. Construction Estimating. Albany, N. Y.: Delmar Publishers, Inc., 1967.

Suggested References (continued):

Steinberg, Joseph, and Stempel, Martin. Estimating for the Building Trades, 2nd ed. Chicago: American Technical Society, 1973.

Instructional Recommendations/ Suggestions:

A basic requirement for conducting a course in estimating is the development of data for use in practice problems. Since production factors vary considerably between geographic areas, the use of approximations is suggested in the completion of simulation exercises. A compilation of the various factors necessary for conducting a simulation exercise in residential construction estimating is included for consideration by other instructors (see attachment, "Simulation Exercise Data"). This data should be used by each student to complete all entries in the "Quantity Survey" (sample format attached) and both the "Simulation Exercise Data" and the completed "Quantity Survey" should be retained for later use in the course entitled "Construction Planning and Control".

The suggested text is arranged according to the sixteen major divisions of the Uniform System for Construction Specifications. The text should be supplemented by use of a set of residential blueprints obtainable through local architects or builders. Sepia

copies of blueprints can frequently be obtained without cost and can be used to reproduce additional copies for individual student distribution. These same blueprints should be retained for later use in the course entitled "Construction Planning and Control".

The first seven chapters of the text deal with general information and are self-explanatory. Chapters Eight through Twenty pertain directly to the divisions used in standard specifications. Suggested practice exercises have been locally developed (copies attached) and may be used by students as an aid in completing the "Quantity Survey".

Additional Instructional Materials:

1. "Simulation Exercise Data". Locally produced. Copy attached.
2. "Quantity Survey". Locally produced. Sample format attached.
3. Residential blueprints. Available through local architects or home builders. Recommend sepia copy for reproduction purposes.

Additional Instructional Materials (Continued):

4. Standard Estimating Pads. Recommended for individual student distribution. Available through local printing and office supply outlets.

5. Suggested "Practice Exercises", Chapters Eight through Seventeen. Locally produced. Copies attached.

SIMULATION EXERCISE DATA

Rough Grading

Labor and Equipment .75 per C.Y. of soil to be moved.
A tractor and one operator will move about 275 yd. of soil per day.
Rent on tractor $20.00 per hr.
Operator's pay $5.00 per hr.

Lay Out

Labor for Laying Out .02 per S.F. of floor space.
Material Cost $150.00 M.F.B.M.
Crew. Two concrete men at $6.00 per hr. ea.

Forming Slab

Labor for forming .05 per S.F. of floor space.
Material Cost $180.00 M.F.B.M.
Material Waste 5%
Crew. Two concrete men at $6.00 per hr. ea.; two laborers at $3.00 per hr. ea.

Filling

Labor for filling .02 per S.F. of floor space.
Material Cost $3.00 C.Y.
Material allowed for tamping 12%
Crew. Two laborers at $3.00 per hr. ea.

Trenching for Beams

Labor and Equipment Cost .03 per S.F. of floor space.
Equipment Rent $6.25 per hr.
Operator's Labor $5.00 per hr.

Fine Grading

Labor for Fine Grading .02 per S.F. of floor space.
Crew. Two laborers at $3.00 per hr. ea.

Vapor Barrier

Labor for Installing Vapor Barrier .005 per S.F. of floor space.
Material Cost _____ S.F.
Material Extra 20% for laps and beams.
Crew. Two laborers at $3.00 per hr. ea.

SIMULATION EXERCISE DATA

Reinforcing Steel

Labor for Installing .05 per S.F. of floor space.
Material Cost _____ lb.
Crew. Two concrete men at $6.00 per hr. ea.; two laborers at $3.00 per hr. ea.
Material Extra 15% for laps.

Weight of Reinforcing Rods.

#3 - 3/8" rods	0.376 lb. per ft.
#4 - 1/2" rods	0.668 lb. per ft.
#5 - 5/8 " rods	1.043 lb. per ft.

Pouring and Finishing Concrete

Labor for Pouring and Finishing Concrete .08 per S.F. of floor space
Curing Time 5 days
Material Cost $18.00 C.Y.
Material Extra 5%
Crew. Two concrete men at $6.00 per hr. ea.; two laborers at $3.00 per hr. ea.

Framing Walls

T and Corners Make Up

Labor .08 per B.F. of material
Crew for all Framing of Walls: Two carpenters at $6.00 per hr. ea.
One carpenter's helper at $4.00 per hr.

Rough Door and Window Bucks (Make Up)

Labor .08 per B.F. of material
Crew. Same.

Beam

Labor .096 per B.F. of material
Crew. Same.
Material Cost $210.00 M.F.B.M.

Plates Cut and Lay Out

Labor .12 per B.F. of material
Material Cost $180.00 M.F.B.M.
Material Waste 5%
Crew. Same.

SIMULATION EXERCISE DATA

Studs (Wall Assembly)

Labor .08 per B.F. of material used in wall studs.
Material Cost $180.00 M.F.B.M.
Crew. Same.
Material Waste 5%

Fire Blocks

Labor .24 per B.F. of material
Material Cost $180.00 M.F.B.M.
Crew. Same.

Wind Braces

Labor .48 per B.F. of material
Material Cost $160.00 M.F.B.M.
Crew. Same.

Dead Wood

Labor .096 per B.F. of material
Material Cost $160.00 M.F.B.M.
Crew. Same.

Ceiling Framing

Ceiling Joist

Labor .106 per B.F. of material
Material Cost $180.00 M.F.B.M.
Crew. Same.
Material Waste 10%

Stiff Back

Labor .096 per B.F. of material
Material Cost $180.00 M.F.B.M.
Crew. Same.
Material Waste 2%

Roof Framing

Rafters

Labor .10 per B.F. of material
Material Cost $180.00 M.F.B.M.
Crew. Same.
Material Waste 5%

Purlings

Labor .096 per B.F. of material
Material Cost $180.00 M.F.B.M.
Crew. Same.
Material Waste 2%

Bracing

Labor .096 per B.F. of material
Material Cost $180.00 M.F.B.M.
Crew. Same.
Material Waste 2%

Collar Beams

Labor .096 per B.F. of material
Material Cost $180.00 M.F.B.M.
Crew. Same.
Material Waste 5%

Cornice and Gable End Framing

Cornice Framing

Labor .14 per B.F. of material
Material Cost $180.00 M.F.B.M.
Crew. Same.
Material Waste 5%

Gable End Framing

Labor .12 per B.F. of material
Material Cost $180.00 M.F.B.M.
Crew. Same.
Material Waste 10%

Decking

Labor .06 per S.F. of material
Material cost _____ S.F.
Crew. Same.
Material Waste 10%

Roofing, Including Dry In

Labor $4.00 per Sq. of roof
Material Cost $14.50 Sq.
Crew. Two roofers at $6.00 per hr. ea.; one helper at $4.00 per hr. Crew average, 4 Sq. per hr.
Material Waste 20%

SIMULATION EXERCISE DATA

Wall Sheathing (Gyp Rock)
- Labor .10 per S.F. of wall
- Material Cost _____ S.F.
- Crew. Carpentry crew.
- Material Waste 5%

Insulation

Wall Insulation
- Labor .02 per S.F. of wall
- Material Cost _____ S.F.
- Crew. Two laborers at $3.00 per hr. ea.

Ceiling Insulation
- Labor .025 per S.F. of ceiling
- Material Cost _____ S.F.
- Crew. Two laborers at $3.00 per hr. ea.

Exterior Trim

Doors, Complete
- Labor 9.60 ea.
- Material Cost $35.00 ea.
- Crew. One carpenter at $6.00 per hr.

Windows
- Labor 2.25 ea.
- Material Cost _____ ea.
- Crew. One carpenter at $6.00 per hr. and one laborer at $3.00 per hr.

Windows Fixed
- Labor 18.00 ea.
- Material Cost $60.00 ea.
- Crew. One carpenter at $6.00 per hr. and one laborer at $3.00 per hr.

Facier
- Labor .38 per L.F.
- Material Cost _____ M.F.B.M.
- Crew. Same as soffit.
- Material Waste 15%

SIMULATION EXERCISE DATA

Gable End

Labor .16 per S.F. to be covered.
Material Cost _____ B.F./S.F.
Crew. Same as soffit.
Material Waste 10%

Exterior Wall Finish

Brick

Labor $80.00 per M.B.
Material Cost
Brick $80.00 per M
Mortar $30.00 cu. yd.
Wall ties _____ ea.
Wall ties, one every 3 sq. ft.
Crew. Two brick masons at $7.50 per hr. ea. and one laborer at $4.00 per hr. 617 bricks per Sq.; 1/3 yd. of mortar per Sq. of brick. Two masons and one helper lay 1,900 per day. 21 bricks to C.F. of fireplace. 40 hrs. average fireplace. 40 hrs. for helper. Use equal amount face brick and common brick.

Siding

Vertical Siding

Labor .16 per S.F. to be covered.
Material Cost _____ M.F.B.M.
Crew. Two carpenters at $6.00 per hr. ea. and one carpenter's helper at $4.00 per hr.
Material Waste 10%

Interior Wall Finish

Sheet Rock

Labor .04 per S.F. of wall and ceiling.
Material Cost _____ S.F.
Crew. Two sheet rock men at $5.00 per hr. ea.
Material Waste 5%

SIMULATION EXERCISE DATA

Tape and Bed and Texture

Labor .025 per S.F. of walls and ceilings.
Material Cost _____ S.F. of coverage
Crew. Two painters at $4.00 per hr. ea.
Material needed to cover 608 S.F. of walls and ceiling:
1/2 roll tape, cost _____ roll
2 1/2 gal. mud, cost _____ 5 gal.
1 sack texture, cost _____ sack

Paint

Labor .15 per S.F. of walls and ceilings.
Material Cost _____ gal.
Crew. Same as tape and bed.
One gal. paint covers 350 S.F., one coat.

Paneling

Labor 3.00 per sheet.
Material Cost _____ per sheet
Crew. One carpenter at $6.00 per hr.
Material Waste openings

Wall Paper

Labor _____ per double roll
Material Cost _____ per roll
One roll covers 33 sq. ft.

Interior Doors and Windows

Doors, Interior (Complete)

Labor 8.00 ea.
Material Cost _____ ea.
Crew. Two carpenters, at $6.00 per hr. ea.

Window Trim, Interior

Labor 3.00 ea.
Material Cost _____ ea.
Crew. Same as doors.

Base

Labor .075 per L.F.
Material Cost _____ L.F.
Crew. Same as doors.

SIMULATION EXERCISE DATA

Crown and Cove Molding

Labor .08 per L.F.
Material Cost _____ L.F.
Crew. Same as doors.

Cabinets

Lump sum
Kitchen Cabinet $45.00 L.F.
Bath Vanity $20.00 L.F.
Linen Closets $30.00 ea.
Time to set cabinets 2 days

Floor Covering

Lump sum
Carpet installed $6.75 - $12.50 S.Y.
Tile installed .32 - .68 S.Y.
Time to install floor covering 2 days

Electrical

Lump sum
110 V. outlets $ 5.50 ea.
220 V. circuits $20.00 ea.
Service panel $80.00
Time to install electrical
2 days to rough in
1 day to trim out

Plumbing

Lump sum
Material and Labor Cost .95 per sq. ft. living area
1 day - sewer lines
1 day - rough in
1 day - trimming out

Heat and Air

Lump sum
Material and Labor Cost .45 per sq. ft. living area
2 days - rough in
1 day - trimming out

PRACTICE EXERCISE
STUDENT HANDOUT #1
Chapter Eight (ten one-hour periods)

From information contained in Simulation Exercise Data, blueprints and specifications, prepare estimates for items one through four, below.

Item 1: Grade lot to elevation of 103'.
- a. Cu. yd. of dirt to be moved
- b. Cu. yd. of dirt over or needed
- c. Labor for rough grading
- d. Machine cost for rough grading

Item 2:
- a. Determine cu. yd. of sand fill needed to fill forms to bottom of slab.
- b. Labor to fill forms

Item 3:
- a. Determine cu. yd. of dirt to be moved in trenching for beams.
- b. Labor for trenching

Item 4:
- a. Figure the cost of fine grading for the slab.
- b. Labor for fine grading

Summary

Item 1:
- a. _____ cu. yd. of dirt to be moved
- b. _____ cu. yd. of dirt over or needed (to grade to 103')
- c. _____ labor to rough grade
- d. _____ machine cost to rough grade

Item 2:
- a. _____ cu. yd. of sand to fill form to bottom of concrete slab
- b. _____ labor to fill forms

PRACTICE EXERCISE
STUDENT HANDOUT #1
Chapter Eight (ten one-hour periods)
(Continued)

Item 3: a. _____ cu. yd. of dirt to be moved in trenching beams

b. _____ labor for trenching

c. _____ machine cost

Item 4: a. _____ cost of fine grading (labor)

After responses have been checked for accuracy, enter corrected answers in appropriate blocks of the Quantity Survey.

PRACTICE EXERCISE
STUDENT HANDOUT #2
Chapter Nine (twelve one-hour periods)

From information contained in Simulation Exercise Data, blueprints, and specifications, prepare estimates for items one through five, below.

Item 1: Layout. Labor and material. Batter boards will be eight feet long.

Item 2: Forming. Labor and material to build forms. Two stakes and kicker will require a 2 x 4 - 8. One stake at each corner and 2' on centers.

Item 3: Vapor Barrier. Labor and material. To install vapor barrier.

Item 4: Reinforcing Steel. Labor and materials. To be used using quantity of steel required.

Item 5: Concrete. Labor and materials. Quantity required.

Summary

Item 1: Layout

_____ B.F. material

_____ Sq. ft. in house

_____ labor to install

_____ cost of material

PRACTICE EXERCISE
STUDENT HANDOUT #2
Chapter Nine (twelve one-hour periods)
(Continued)

Item 2: _____ B.F. material

_____ cost of material

_____ Sq. ft. in house

_____ labor

Item 3: _____ Sq. ft. material

_____ cost of material

_____ Sq. ft. in house

_____ labor

Item 4: Reinforcing Steel

_____ ft. of #3

_____ ft. of #4

_____ ft. of #5

_____ lbs. total of all sizes

_____ cost of materials

_____ Sq. ft. of house

_____ labor

PRACTICE EXERCISE
STUDENT HANDOUT #2
Chapter Nine (twelve one-hour periods)
(Continued)

Item 5: _____ cu. yd. of concrete

_____ cost of concrete

_____ sq. ft. of house

_____ labor

After responses have been checked for accuracy, enter corrected answers in appropriate blocks of the Quantity Survey.

PRACTICE EXERCISE
STUDENT HANDOUT #3
Chapter Seventeen (sixteen one-hour periods)

From information contained in Simulation Exercise Data, blueprints, and specifications, prepare estimates for items one through twelve below.

Item 1: T & Corner Make up. Estimate labor and materials to make up T and Corners.

Item 2: Rough Buck Make up. Estimate labor and materials to make up rough bucks for doors and windows.

Item 3: Beam Make up. Estimate labor and materials to make up all beams.

Item 4: Wall plates. Two top, one bottom plate. Estimate labor and materials required.

Item 5: Studs (Wall Framing). Estimate labor and materials required.

Item 6: Fire Blocks, Wind Braces, and Deadwood. Estimate labor and materials required.

Item 7: Ceiling Joists and Stiff Back. Estimate labor and materials required.

Item 8: Roof Framing. Estimate labor and materials required for rafters, purlings, braces, and collar beams. Collar beams and braces every four feet. Purling if rafter is over twelve feet long.

Item 9: Cornice and Gable End Framing. Estimate labor and materials required to frame cornice and gable end.

Item 10: Decking. Estimate labor and materials used to deck house.

Item 11: Insulation. Estimate amount of materials and labor to insulate walls and ceiling.

Item 12: Gyp Rock. Estimate labor and materials required.

PRACTICE EXERCISE
STUDENT HANDOUT #3
Chapter Seventeen (sixteen one-hour periods)
(Continued)

Summary

Item 1:

_____ number of T

_____ number of corners

_____ B.F. material in T and corners

_____ cost of material

_____ labor to make up T and corners

Item 2:

_____ number of door bucks

_____ number of window bucks

_____ B.F. of material in door and window bucks

_____ cost of material

_____ labor used to make up door and window bucks

Item 3:

_____ len. ft. of beams

_____ B.F. of material in beams

_____ cost of material

_____ labor to make up beams

Item 4:

_____ len. ft. of plates

_____ B.F. of plates

_____ cost of material

_____ labor to install plates

PRACTICE EXERCISE
STUDENT HANDOUT #3
Chapter Seventeen (sixteen one-hour periods)
(Continued)

Item 5:

_____ number of studs

_____ B.F. of studs

_____ number of studs less studs in T and corners and door and window bucks

_____ B.F. of studs after deductions

_____ cost of material after deductions

_____ labor using total number of studs

Item 6:

_____ B.F. in fire blocks

_____ cost of material

_____ labor

_____ B.F. in windbraces

_____ cost of material

_____ labor

_____ B.F. in deadwood

_____ cost of material

_____ labor

Item 7:

_____ B.F. of material ceiling joist

_____ cost of material

_____ labor

_____ B.F. of material stiff back

_____ cost of material

_____ labor 507

PRACTICE EXERCISE
STUDENT HANDOUT #3
Chapter Seventeen (sixteen one-hour periods)
(Continued)

Item 8:

_____ B.F. in rafters (include ridge board and facier nailer)

_____ cost of material

_____ labor

_____ B.F. in collar beams

_____ cost of material

_____ labor

_____ B.F. in bracing

_____ cost of materials

_____ labor

_____ B.F. in purlings

_____ cost of materials

_____ labor

Item 9:

_____ B.F. of material in cornice

_____ cost of material

_____ labor

_____ B.F. to frame gable ends

_____ cost of material

_____ labor

PRACTICE EXERCISE
STUDENT HANDOUT #3
Chapter Seventeen (sixteen one-hour periods)
(Continued)

Item 10: _____ B.F. of material

_____ cost of material

_____ labor

Item 11: _____ Sq. ft. of materials for walls

_____ cost of material

_____ labor

_____ Sq. ft. of materials for ceiling

_____ cost of material

_____ labor

Item 12: _____ Sq. ft. of material

_____ cost of material

_____ labor

After responses have been checked for accuracy, enter corrected answers in appropriate blocks on the Quantity Survey.

PRACTICE EXERCISE
STUDENT HANDOUT #4
Chapter Ten (ten one-hour periods)

From information contained in Simulated Exercise Data, blueprints, and specifications, prepare estimates for items one through three below.

Item 1: Estimate labor and material required to lay brick.

Item 2: Estimate cu. yd. of mortar required to lay brick.

Item 3: Estimate number and cost of wall ties required.

Summary

Item 1: _____ M brick

_____ cost of brick

_____ labor to lay brick

Item 2: _____ cu. yd. of mortar

Item 3: _____ wall ties

_____ cost of wall ties

After responses have been checked for accuracy, enter corrected answers in appropriate blocks of the Quantity Survey.

PRACTICE EXERCISE
STUDENT HANDOUT #5
Chapter Seventeen (six one-hour periods)

From information contained in Simulation Exercise Data, blueprints, and specifications, prepare estimates for items one through three below.

Item 1: Estimate labor and materials required to erect soffit.

Item 2: Estimate labor and materials used to install facier around house.

Item 3: Estimate labor and materials required to trim out gable ends of house.

Summary

Item 1: _____ sq. ft. material

_____ cost of material

_____ labor

Item 2: _____ B.F. of material

_____ cost of material

_____ labor

Item 3: _____ B.F. of material

_____ cost of material

_____ labor

After responses have been checked for accuracy, enter corrected answers in appropriate blocks of the Quantity Survey.

PRACTICE EXERCISE
STUDENT HANDOUT #6
Chapter Sixteen (two one-hour periods)

From information contained in Simulation Exercise Data, blueprints, and specifications, prepare estimates for items one through four below.

Item 1: Estimate number of squares and cost of shingles.

Item 2: Estimate number of squares and cost of felt.

Item 3: Estimate number of pounds and cost of nails (figure two lbs. per sq. of shingles).

Item 4: Estimate number of feet and cost of metal edging.

Summary

Item 1: _____ sq. shingles

_____ cost of shingles

_____ labor to install shingles

Item 2: _____ sq. of felt

_____ cost of felt

Item 3: _____ lbs. of nails

_____ cost of nails

Item 4: _____ ft. of metal edging

_____ cost of metal edging

After responses have been checked for accuracy, enter corrected answers in appropriate blocks of the Quantity Survey.

PRACTICE EXERCISE
STUDENT HANDOUT #7
Chapter Thirteen (eight one-hour periods)

From information contained in Simulation Exercise Data, blueprints, and specifications, prepare estimates for items one and two below.

Item 1: Figure sq. ft. of walls and ceiling for each room.

Living room	_____	sq. ft. walls
	_____	sq. ft. ceiling
Dining room	_____	sq. ft. walls
	_____	sq. ft. ceiling
Service	_____	sq. ft. walls
	_____	sq. ft. ceiling
Kitchen	_____	sq. ft. walls
	_____	sq. ft. ceiling
Family room	_____	sq. ft. walls
	_____	sq. ft. ceiling
Bed Room Right Front	_____	sq. ft. walls
	_____	sq. ft. ceiling
Bed Room Left Front	_____	sq. ft. walls
	_____	sq. ft. ceiling
Master bath and dressing	_____	sq. ft. walls
	_____	sq. ft. ceiling
Bath A	_____	sq. ft. walls
	_____	sq. ft. ceiling

PRACTICE EXERCISE
STUDENT HANDOUT #7
Chapter Thirteen (eight one-hour periods)
(Continued)

Middle Bed Room	_____	sq. ft. walls
	_____	sq. ft. ceiling
Back Bed Room	_____	sq. ft. walls
	_____	sq. ft. ceiling
Halls	_____	sq. ft. walls
	_____	sq. ft. ceiling
Garage	_____	sq. ft. walls
	_____	sq. ft. ceiling

Total sq. ft. walls _____

Total sq. ft. ceiling _____

Item 2: Tape, bed and texture all walls and ceilings.

_____ sq. ft. of walls

_____ sq. ft. of ceilings

_____ Total sq. ft. to be taped, bedded and textured.

PRACTICE EXERCISE
STUDENT HANDOUT #7
Chapter Thirteen (eight one-hour periods)
(Continued)

Summary

Item 1: _____ pieces of sheet rock in walls and ceilings, all rooms

_____ cost of sheet rock

_____ labor to install

Item 2: _____ rolls of tape

_____ cost of materials

_____ gallons of mud

_____ cost of materials

_____ sacks of texture

_____ cost of materials

_____ labor to tape, bed, and texture

Total tape and bed _____ materials

_____ labor

Total texture _____ materials

_____ labor

After responses have been checked for accuracy, enter corrected answers in appropriate blocks of the Quantity Survey.

PRACTICE EXERCISE
STUDENT HANDOUT #8
Chapter Fifteen (six one-hour periods)

From information contained in Simulation Exercise Data, blueprints, and specifications, prepare estimates for items one through five below.

Item 1: Paint all ceilings in house except garage, kitchen and baths with latex. Three coats on all surfaces.

_____ sq. ft. of area

_____ no. of gallons of paint

Item 2: Paint ceilings and walls in baths, kitchen, and garage with latex enamel paint. Three coats on all surfaces.

_____ sq. ft. of area

_____ gallons of paint

Item 3: Paint all remaining walls with latex wall paint (three coats). Exclude living room and master bedroom.

_____ sq. ft. of area

_____ no. of gallons of paint

Item 4: Cover walls in living room and master bedroom with vinyl wall covering.

_____ sq. ft. of area to be covered.

Item 5: Carpet all floors except garage. (Includes bathrooms, kitchen, utility room, etc.)

_____ sq. ft. of floor space

Carpet cost $10.00 sq. yd., installed.

PRACTICE EXERCISE
STUDENT HANDOUT #8
Chapter Fifteen (six one-hour periods)
(Continued)

Summary

Item 1: _____ gallons of latex (for all surfaces included in items one and three)

_____ cost of materials

_____ labor

Item 2: _____ gallons of latex enamel (for surfaces in item 2)

_____ cost of materials

_____ labor

Item 4: _____ no. of double rolls of vinyl wall covering

_____ cost of materials

_____ labor to hang vinyl

Item 5: _____ sq. yd. of carpet

_____ cost of carpet

After responses have been checked for accuracy, enter corrected answers in appropriate blocks of the Quantity Survey.

RESIDENTIAL CONSTRUCTION TECHNOLOGY

Name of Course: Business Mathematics

Course Objectives: To develop a thorough understanding of the mathematics used in business and in construction-related activities. To build increased student confidence in the practical application of mathematical processes through the experience gained in completing classroom exercises and assignments.

Course Description: A study of the fundamental processes, common and decimal fractions, bank statement reconciliations, aliquot parts percentage, cash and trade discounts, simple and compound interest, notes and drafts, billing procedures, mark-up, commissions, profit and loss, payrolls, social security and other taxes. Emphasis is on practical problems in the various fields of business.

Suggested Primary Text: To be determined locally.

Course Outline: To be developed locally.

Instructional Recommendations/ Suggestions: Most post-secondary institutions will have comparable course offerings within their regular curriculum. It is suggested that these established

courses be utilized to satisfy this requirement for student proficiency in the application of arithmatic processes.

Additional Instructional Materials: To be developed locally.

Additional References: To be developed locally.

RESIDENTIAL CONSTRUCTION TECHNOLOGY

Name of Course: Introduction to Architectural Drawing

Course Objective: This course is designed to impart to the student basic skills in general drafting techniques such as lettering, line work, and architectural representation. The student also gains experience in the use of structural tables and manufacturers' literature.

Course Description: This course introduces representation in residential construction. It covers the fundamentals of drafting, including projection, sectioning, pictorial drawings, and architectural representation. It is comprised of both lecture (or classroom) periods, wherein fundamentals and principles are introduced, and laboratory periods which provide opportunity to participate in exercises involving these principles.

Suggested Primary Text: Spence, William P. Architecture: Design-Engineering-Drawing, 2nd ed. Bloomington, Ill.: McKnight and McKnight Publishing Co., 1972.

Course Outline:

I. Course Objectives
   A. Materials needed to draw house plans
   B. Kinds of media used

II. Rough Floor Plan
- A. Drawing exterior walls
- B. Drawing interior walls
- C. Drawing door openings
- D. Drawing areas of living

III. Finishing Floor Plan
- A. Electrical Plan
  - 1. Outlets
  - 2. Lights
  - 3. Special electrical devices
- B. Doors
- C. Door schedules
- D. Windows
- E. Window schedules
- F. Fire places
- G. Dimensioning
- H. Room schedules
- I. North arrows
- J. Title block

IV. Foundations
- A. Perimeter beams
- B. Intermediate longitudinal
- C. Intermediate transverse
- D. House - Porch
- E. House - Garage
- F. House - Perimeter
- G. House - Patio
- H. Footings
- I. Details
  - 1. FHA
  - 2. Other
  - 3. Special

V. Elevations
- A. North
  - 1. Slab thickness
  - 2. Exterior walls
    - a. Type materials
  - 3. Windows
    - a. Fixed
    - b. Sliding
    - c. Hinged
  - 4. Roof
    - a. Type materials
    - b. Overhang
    - c. Pitch
  - 5. Chimney

V. Elevations (Continued)
   B. East
   C. South
   D. West
   E. Special

VI. Special Details
   A. Cabinets
      1. Kitchen
      2. Baths
   B. Skylights
   C. Fireplace
   D. Wall

Instructional Recommendations/ Suggestions:

This introductory course should be structured around one central goal: to enable the student to graphically communicate ideas and concepts involving residential construction processes. Within minor limitations, the suggested primary text is ideally suited to this purpose. Actual blueprints should be used to supplement the text in developing the principles described. Instructors in this course should be thoroughly familiar with the principles of residential construction, construction materials and methods, and the data contained in architectural blueprints. Laboratory exercises should include practice in locating specifications of materials depicted in working drawings, and the proper use of data included in structural tables and manufacturers' literature. This course should be planned to accommodate varying rates of individual

student progress. To this end it is desirable that the lecture/laboratory periods be consecutively scheduled whenever possible, and that the same instructor conduct both the lecture and the laboratory periods. Transparencies depicting details of construction normally contained in working drawings can be developed locally and used to excellent advantage in presenting this course.

Additional Instructional Materials:

1. Copies of residential blueprints and working drawings. Available through local architects or home builders.
2. Sweet's Architectural Catalogue Files, F. W. Dodge Corp., New York, N. Y., 1974.
3. Copies of architectural specifications. Available through local architects or home builders.
4. Minimum Property Standards for One and Two Family Living Units, U. S. Federal Housing Administration, U. S. Government Printing Office, Washington, D. C.

Additional Instructional Materials (Continued):

Transparencies depicting details normally contained in working drawings. To be developed locally (sufficient illustrations available in texts and manuals listed under Additional References, this course).

RESIDENTIAL CONSTRUCTION TECHNOLOGY

Name of Course: Elements of Structural Design

Course Objective: This course introduces the student to the basic principles of statics and to the effects of loads and loading on building elements and frames. Methods are developed for determining preliminary sizes of certain key building elements, knowledge of which is essential to proper building layout and design.

Course Description: A course which familiarizes the student with the mechanical properties of materials and the relationship and use of these materials in residential construction processes. Subjects include stress, deformation, member size and investigation, and connections. Typical members used in residential frameworks are studied, analyzed, and discussed. The material presented makes it possible for the student to understand the interaction of the various elements used in a framing system.

Suggested Primary Text: Bassin, Milton G., et al. Statics and Strength of Materials, 2nd ed. New York: McGraw-Hill Book Co., 1969.

Course Outline:

I. Materials, Stress and Deformation
   A. Units of Instruction
      1. Properties of construction materials
      2. Types of stresses in members
      3. Ultimate and allowable stresses
      4. Direct stress; deformation
      5. Elasticity and Hooke's law
      6. Stress-strain diagram

II. Properties of Sections
   A. Units of Instruction
      1. Centroids and moments of area
      2. First moment of area
      3. Second moment of area
      4. Parallel axis theorem
      5. Radius of gyration
      6. Section modulus

III. Gravity Loads on Building Frames
   A. Units of Instruction
      1. Basic framework types
      2. Live loads
      3. Dead loads
      4. Floor and roof loads
      5. Wall and partition loads
      6. Equipment loads
      7. Application of loads to framing members
      8. Uniformly distributed loads
      9. Concentrated loads
      10. Loading diagrams

IV. Shear and Bending in Beams--Statically Determinate
   A. Units of Instruction
      1. Reactions and shear
      2. Symmetrical loading
      3. Nonsymmetrical loading
      4. Shear diagrams
      5. Moment diagrams
      6. Cantilever and overhanging members
      7. Critical sections for moment and shear

V. Stresses in Beams and Beam Sizes
   A. Units of Instruction
      1. Tensile and compressive stresses
      2. Shear stresses
      3. Allowable loads on beams
      4. Timber beam selection
      5. Steel beam selection
      6. Beams without proper lateral support

VI. Beam Deflection
   A. Units of Instruction
      1. Elastic curve, stress, and moment
      2. Moment diagrams by parts
      3. Moment-area principles
      4. Deflection equations by moment-area
      5. Use of deflection equations

VII. Shear and Bending in Beams--Statically Indeterminate
   A. Units of Instruction
      1. Definitions
      2. Three-moment equation
      3. Use of three-moment equation
      4. Fixed-end beams
      5. Reactions and shear
      6. Shear and moment diagrams
      7. Positive and negative moments

VIII. Stresses in Columns and Column Sizes
   A. Units of Instruction
      1. Rolled steel column sections
      2. Builtup column sections
      3. Column-end conditions
      4. Effective length
      5. Allowable stresses for timber columns
      6. Allowable stresses for steel columns
      7. Timber column selection
      8. Steel column selection
      9. Eccentrically loaded columns

IX. Riveted and Welded Connections

A. Units of Instruction

1. Types of riveted connections
2. Allowable stress in shear
3. Allowable stress in bearing
4. Load capacity of riveted connections
5. Number of rivets required
6. Eccentrically loaded riveted connections
7. Types of welds used in connections
8. Allowable stresses in welds
9. Required length of welds

Instructional Recommendations/ Suggestions:

Care should be taken to insure that the focus of this course remains centered on how the principles can be applied in everyday usage in residential construction processes. This is not intended to be a course in physics. Its purpose is to familiarize the student with the need for giving due consideration to the fundamental principles of stress and strength of materials.

Reduced-scale wood members can be locally developed by which to demonstrate principles being investigated. Scale models of standard-dimension wood beams and trusses can be loaded to the bend or break point at a much lower cost than would be required for testing their full-scale counterparts. Scale-model members should be fabricated from materials typical of the full-size components which

they represent. A Conversion Table (based on a scale of 1 1/2" to 1') has been developed to show the scale sizes for commonly used units of dimension lumber (see Conversion Table - Dimension Lumber, attached). Use of these model members should be limited to the demonstration of principles, since they may not be completely representative of the full-scale counterpart item in terms of shearing and bending moments and stress loads.

Additional Instructional Materials:

Conversion Table - Dimension Lumber. Produced locally. Copy attached.

Reduced-Scale Lumber. To be produced locally. Sufficient quantities of sizes representative of standard-dimension lumber for classroom demonstration exercises.

Timber Engineering Co. Timber Design and Construction Handbook. New York: McGraw-Hill Book Co., 1956.

CONVERSION TABLE - DIMENSION LUMBER

(SCALE: $1\frac{1}{2}$" EQUALS 1')

Actual Size	Volume	Scale Size	Volume	Percent
2/4 = $1\frac{1}{2}$ x $3\frac{1}{2}$ =	5.25 sq. in. =	3/16 x 7/16 =	.082 sq. in. =	01.6%
2/6 = $1\frac{1}{2}$ x $2\frac{1}{2}$ =	8.25 sq. in. =	3/16 x 11/16 =	.192 sq. in. =	01.6%
2/8 = $1\frac{1}{2}$ x $7\frac{1}{4}$ =	10.875 sq. in. =	3/16 x 29/32 =	.170 sq. in. =	01.6%
2/10 = $1\frac{1}{2}$ x $9\frac{1}{4}$ =	13.875 sq. in. =	3/16 x 15/32 =	.217 sq. in. =	01.6%
2/12 = $1\frac{1}{2}$ x $11\frac{1}{4}$ =	16.875 sq. in. =	3/16 x 1 13/32 =	.264 sq. in. =	01.6%

Actual Size	Scale Size
$1\frac{1}{2}$"	3/16"
$3\frac{1}{2}$"	7/16"
$5\frac{1}{2}$"	11/16"
$7\frac{1}{4}$"	20/32"
$9\frac{1}{4}$"	1 5/32"
$11\frac{1}{4}$"	1 13/32"

Note: An approximation of the breaking point of the full-scale member can be found by dividing the breaking point of the model by .016. Example: Breaking point of scale model = 40 lbs.

40 ÷ .016 = 2,500

Approximate breaking point, full-scale member = 2,500 lbs.

RESIDENTIAL CONSTRUCTION TECHNOLOGY

Name of Course: Contracts, Codes, Specifications and Office Practices

Course Objectives: To develop an appreciation for the importance of effective office practices in the coordination and control of construction activities. To familiarize the student with the various legal documents which combine to regulate residential construction practices and procedures.

Course Description: This course explains the organization and operation of a typical small- to medium-size residential construction contractor's office. It includes the study of office practices, bookkeeping and accounting methods, and general office administration. Considerable attention is devoted to the study of the codes, restrictions, standards, and the legal documents governing construction. Students are introduced to the interpretation and preparation of specifications, and to the application of CPM as a method for controlling construction projects.

Suggested Primary Text: Royer, King. The Construction Manager. Englewood Cliffs, N. J.: Prentice-Hall, Inc., 1974.

Course Outline:

I. The Construction Firm
   A. Construction management
   B. The contractor's organization
   C. Span of control
   D. Characteristics of supervisors
   E. Sales
   F. Production
   G. Purchasing and subcontracting
   H. Personnel records and hiring

II. The Construction Project
   A. Wages
   B. Theft
   C. Cost control
   D. Function of the cost control system
   E. Cost control and accounting
   F. Identification and classification of cost items
   G. The work order
   H. Accumulation of costs
   I. Action on costs above estimates

III. Estimating
   A. Precision and accuracy
   B. Cost of estimating
   C. Courtesy bids
   D. Collusion
   E. Estimating safety margins
   F. Ethics
   G. Nature of errors
   H. Estimate sheets
   I. Subcontractor's bids
   J. Cutting subcontractor bids
   K. Stipulated subcontractors
   L. Improving industry relationships
   M. Contractors' alternates

IV. Construction Contracts
   A. Essentials of a construction contract
   B. Clauses to avoid
   C. Competitive bidding
   D. Cost-plus contract
   E. Letter of intent
   F. Withdrawal of erroneous bids
   G. Builders' risk insurance
   H. Extra and additional work

IV. Construction Contracts (Continued)
- I. Subcontracts
- J. Owner's liability
- K. Hold-harmless clauses
- L. Breach of contract
- M. Changed conditions
- N. Liquidated damages and delay
- O. Performance and payment bonds
- P. Arbitration
- Q. Final payment
- R. Unit prices
- S. Change orders
- T. Liens
- U. Other payment rights of subcontractors and suppliers
- V. Appeals in disputes
- W. Material and workmanship guarantees

V. Purchasing
- A. Sources of information
- B. The purchase order
- C. Clauses recommended for purchase orders
- D. Purchase order copies
- E. Purchasing subcontracts
- F. Clerical procedure
- G. Billing methods
- H. Delivery slips
- I. The superintendent's purchases
- J. Invoice approval
- K. Subcontract payments
- L. Owner-builder contract
- M. Withholding subcontract payments
- N. Bankruptcy
- O. Recognition of the insolvent firm
- P. Avoiding bankruptcy

VI. Accounting
- A. Bookkeeping and accounting
- B. Income taxes
- C. The necessity for accounts
- D. Accounting terminology
- E. Equipment valuation
- F. The balance sheet
- G. Expense and receipts accounts

VI. Accounting (Continued)
- H. Overhead, profit, and distributed expenses
- I. Sample monthly statement
- J. Cash requirements
- K. Weekly cost items by months
- L. Summary of cash flow by months
- M. Paying monthly bills
- N. Terminology in tax accounting
- O. Influence of depreciation rates on operations
- P. Equipment accounts and replacement
- Q. Fraud
- R. Payroll accounting

VII. Planning and Scheduling
- A. Purposes and types of job plans
- B. Time schedules
- C. The bar chart
- D. Preparing the Gantt chart
- E. The critical path method
- F. CPM nomenclature
- G. CPM and manpower scheduling
- H. Variation in completion time

VII. Labor Unions
- A. Basic policies toward unions
- B. The purposes of union organization
- C. Organizing
- D. The union hiring hall
- E. Training
- F. Licensing
- G. Requirements on U. S. Government construction
- H. Union shops versus closed shops
- I. Support between trades
- J. Recent growth of open-shop work

Instructional Recommendations/ Suggestions: The use of technical specialists and guest lecturers is strongly recommended in the development of material contained in this course. Use of such specialists should be planned and coordinated

well in advance of expected time of presentation. Guest lecturers should, in all cases, be made fully aware of the course and lesson objectives, technical level of competence of the class, and any other special information which would assist in focusing on the central purposes of the instructional unit. The suggested text is divided into eight sections, which makes it readily adaptable to the standard sixteen-week semester. A listing of in-depth discussion questions may be found at the conclusion of each major section of the text. A teacher's manual has been developed for use with the suggested text and is available through the publisher. It should be kept in mind that this is an introductory course and that it is not designed to develop specialists in any of the topic areas covered. Serious students should plan additional specialized personal development in each of these important phases of the construction business. OSHA should be fully developed during presentation of this course.

Additional Instructional Materials: Royer, King. Teacher's Manual, The Construction Manager. Englewood Cliffs, N. J.: Prentice-Hall, Inc., 1974.

Additional Instructional Materials (Continued):

Copies of architectural specifications. Available through local architects or home builders.

U. S. Federal Housing Authority. Minimum Property Standards. Washington, D. C.: U. S. Government Printing Office.

Various city codes. Office of city engineer.

Sample copies of standard insurance policies, as used in construction. Independent insurance agents.

Copies of various bonds (i.e., performance, liquidation, completion, etc.) used in construction. Available through independent insurance agents and regular bonding agencies.

RESIDENTIAL CONSTRUCTION TECHNOLOGY

Name of Course: Construction Planning and Control

Course Objectives: To develop an appreciation for the importance of planning and control to the successful completion of construction activities. To provide a working acquaintance with the types of planning and control systems most commonly used in small- to medium-size residential construction enterprises.

Course Description: A course in residential construction planning and control which deals with information on the materials, labor, and equipment necessary in the proper operation of a construction project. The course covers the building construction procedures from preliminary site planning to final job inspection and introduces the most frequently used methods of construction job scheduling. The course shows how the proper combination of men, materials, and machines can be used to construct residential structures successfully.

Suggested Primary Text: Benson, Ben. Critical Path Methods in Building Construction. Englewood Cliffs, N. J.: Prentice-Hall, Inc., 1970.

Course Outline:

I. Preliminary Considerations
   A. Topography of the site
   B. Buildings near the site
   C. Base lines, reference marks, and levels
   D. Fuel, power, and water supplies
   E. Equipment planning and selection
   F. Local ordinances
   G. Bonds and insurance

II. Job Planning and Organization
   A. Field organization
   B. Office organization
   C. Local material and labor supply
   D. Coordination of subcontractors
   E. Types of contracts
   F. Materials delivery and storage
   G. Safety during construction
   H. Public relations
   I. Job supervision
   J. Accounting procedures and forms

III. Earthwork and Excavation
   A. Types of earthwork equipment and costs
   B. Air-operated equipment
   C. Capacity and operation of tractor-type equipment
   D. Operations with clamshell, drag-line, and hoe
   E. Operations with bulldozer and scraper
   F. Excavating-and-hauling units
   G. Recordkeeping on excavation
   H. Soil exploration and types of soil
   I. Compaction and stabilization of soil

IV. Subsurface Work
   A. Pumps and drainage equipment
   B. Cofferdams and caissons
   C. Piles and pile-driving
   D. Sheet piling
   E. Wellpoints
   F. Rock excavation
   G. Underpinning

V. Materials Handling and Placement
- A. Elevator and conveyor systems
- B. Hoisting equipment
- C. Steel frame erection and alignment
- D. Riveting, bolting, and welding equipment
- E. Concrete mixing and batching
- F. Transporting; placing; vibrating equipment
- G. Bending, placing, and supporting reinforcement

VI. Cost Estimating
- A. Preliminary estimates and unit costs
- B. Job analysis and work requirements
- C. Labor and equipment requirements
- D. Labor costs
- E. Equipment costs
- F. Materials and small tool costs
- G. Overhead and other costs

VII. Construction Scheduling
- A. General procedures
- B. Master schedule
- C. Progress reports and charts
- D. Labor schedules
- E. Equipment schedules
- F. Materials schedules
- G. Rescheduling
- H. Job communication

VIII. Introduction to CPM Scheduling
- A. General considerations and application
- B. Comparison with bar charts
- C. Arrow diagrams
- D. Network diagrams
- E. Elapsed time
- F. Float time
- G. Determining critical path
- H. Time related to cost
- I. Setting up a CPM network
- J. Using the CPM network

IX. Job Inspection
- A. Duties and responsibilities
- B. Authority
- C. Inspector's reports
- D. Equipment requirements
- E. Relations with labor and other contractors
- F. Limitations

Instructional Recommendations/ Suggestions:

This course is a general survey of the factors which must be considered in the operation of a construction project. The nature of the course material is such that knowledge acquired to date in other courses in this program can be effectively brought into perspective. It is strongly recommended that the same blueprints utilized during the "Residential Construction Estimating" course be continued in use with this course. This will permit utilization of "Quantity Survey" data which students previously developed (materials and labor take offs, etc.). See Instructional Recommendations/Suggestions for the course entitled "Residential Construction Estimating" for details on the development of standardized quantities of materials, unit costs, size and composition of various work crews, etc. ("Simulation Exercise Data"). Emphasis should be placed

on how CPM can most effectively be used for planning and control in small- to medium-size construction operations. Students should be required to demonstrate a working knowledge of the correct use of CPM in the construction of a residence by preparing and explaining a complete CPM chart for the residence described in the previously-mentioned blueprints. Transparencies made from charts depicted in the text can be used to good advantage in developing student understanding of materials covered in this course.

Additional Instructional Materials:

1. Residential blueprints. Recommend continued use of blueprints utilized in the "Residential Construction Estimating" course.
2. Quantity Surveys. See suggested format attached. Details to be filled in from data developed in the "Residential Construction Estimating" course.
3. Transparencies. To be developed from selected illustrations contained in the text and other reference materials.

Additional Instructional Materials (Continued):

4. Residential Critical Path Diagram. Locally developed. Copy attached.

5. Job Logic and Activity Table. Locally developed. Copy attached.

RESIDENTIAL CONSTRUCTION TECHNOLOGY

Name of Course: Business Speech

Course Objective: To develop student proficiency in the basic oral communication skills necessary to those operating in supervisory and management roles. To provide an opportunity to improve speech efficiency, poise, and self-confidence in situations most common to business and professional people.

Course Description: This is designed to be a practical and general course in the basic principles of oral communication. Includes use of body and voice, the speaker-listener relationship, oral reading of literature, group discussion, and parliamentary procedure. Diagnostic testing of students should be included and instruction should be planned to help students improve skills in which they are weak. Stress should be placed on interpersonal relationships, technical reports, speeches to promote sales and services, and business and job interviews.

Suggested Primary Text: To be determined locally.

Course Outline: To be developed locally.

Instructional Recommendations/ Suggestions: Most post-secondary institutions will be able to substitute established courses from within their general curriculum to satisfy the developmental objectives of this course.

Additional Instructional Materials: 16MM Film Series. National Television Film Service, Audio Visual Center, Indiana University, Bloomington, Indiana 47405.

- "The Definition of Language", 29 minutes. Produced by Henry Lee Smith (Language in Linguistics Series).
- "Dialects", 29 minutes. Produced by Henry Lee Smith (Language in Linguistics Series).
- "How to Say What You Mean", 29 minutes. Produced by S. I. Hayakawa (Language in Action Series).
- "The Task of the Listener", 29 minutes. Produced by S. I. Hayakawa (Language in Action Series).

Additional References: To be developed locally.

RESIDENTIAL CONSTRUCTION TECHNOLOGY

Name of Course: History of Architecture and Construction

Course Objectives: To acquaint the student with the various architectural styles which have been developed in residential construction, and to create an appreciation for the main advantages and disadvantages of each.

Course Description: This course is designed to afford the student an opportunity to survey all of the major styles of architecture which have been used in residential construction from early times to the present. It focuses special attention on styles which are in current use, and encourages detailed study of residential construction developments in the geographical area where the course is being presented. Opportunity is provided for students to make in-depth studies of selected architectural design or structural methods.

Suggested Primary Text: Fletcher, Sir Banister F. A History of Architecture, 17th ed., rev. New York: Charles Scribner's Sons, 1967.

Course Outline:

I. Introduction: The Science of Architecture
   A. Objectives of course
   B. Influences in architecture
      1. Geographical
      2. Geological
      3. Climatic
      4. Religious
      5. Social
   C. Basic principles of construction
      1. Post and lintel
      2. Corbel and cantilever
      3. Arch and vault
      4. Truss
   D. Architecture as a science as well as an art
      1. Esthetics
      2. Convenience, strength, and beauty
   E. Four categories of religious buildings
      1. Temple
      2. High place
      3. Tomb-like shrine
      4. Meeting place

II. Prehistoric and Tigro-Euphrates Valley civilization
   A. Kinds of shelters built by prehistoric man
   B. Babylonian Period: temples, canals, and irrigation
   C. Hittites: use of stone in architecture and royal palaces
   D. Assyrian Period: house, palace, and temple forms, along with surface decorations
   E. Babylonian Empire: marvels of Babylon
      1. Hanging gardens
      2. Ziggurat
      3. Banks, storehouses, and commercial buildings
   F. Persian Period
      1. Palace platforms at Persopolis
      2. Columns

III. Egyptian Architecture
- A. Egyptian dynasty history
  - 1. Ancient Kingdom
  - 2. Middle Kingdom
  - 3. New Empire
  - 4. Ptolemaic Period
  - 5. Roman Period
- B. Column development
- C. Tombs
  - 1. Mastabas
  - 2. Pyramids
  - 3. Rock-hewn tombs
- D. Temples

IV. Greek Architecture
- A. An order in classic architecture
  - 1. Doric
  - 2. Ionic
  - 3. Corinthian
- B. Proportion of the orders; module
- C. Temples and the Acropolis
  - 1. Parthenon
  - 2. Erechtheum
- D. Civil buildings
- E. Agora
- F. Theatres
- G. Tombs

V. Roman Architecture
- A. Proportions of the orders by Vignola
- B. Etruscan temples and tombs
- C. Roman forums
- D. Roman rectangular temples
- E. Roman circular and polygonal temples
- F. Basilicas
- G. Roman baths
- H. Roman theatres and amphitheatres
- I. Circuses
- J. Triumphal arches
- K. Roman palaces and houses
- L. Aqueducts, bridges, and fountains

VI. Early Christian, Byzantine, and Romanesque Architecture
- A. Development of the pendentive system in dome construction
- B. Santa Sophia, Constantinople
- C. St. Mark's, Venice
- D. Feudal system and structures built
- E. Monastic system and structures built
- F. The Romanesque church

VII. Islamic Architecture
- A. Mohammed's influence in styles of architecture
- B. Mosque architecture
  1. Domes
  2. Arches
- C. Tomb architecture
- D. Surface development on structures

VIII. Gothic Architecture
- A. Departure from classic lines and development of the pointed arch
- B. Stability of Gothic cathedrals
- C. Notre Dame, Paris
- D. Amiens Cathedral
- E. Salisbury Cathedral, Britain
- F. Gothic architecture in Germany; Belgium, Holland, Spain, and Italy

IX. Renaissance Architecture
- A. The dawn of the Renaissance
  1. The dome of the Florence Cathedral
  2. Palaces and churches
- B. The high Renaissance
  1. Leon Batista Alberti: "Beautiful architecture is that from which nothing can be taken away and to which nothing can be added without harming it."
  2. St. Peter's Cathedral, Rome. Architects who worked on this cathedral:
     - a. Bramante
     - b. Peruzzi

c. Sangallo
d. Bernini
e. Michelangelo
f. Others
3. City palaces and villas
C. Renaissance in France
D. Renaissance in Northern Europe
E. Renaissance in Spain

X. Revivals of Architecture
A. The Early Classic Revival
B. Classic Revival ideas
C. Classic Revival in the United States

XI. Eclecticism, Beaux Arts, and Architecture of Today
A. Influence of the Beaux Arts School
B. Science and art of city planning
C. National variations (eclecticism)
1. Germany
2. England
3. France
4. United States
D. Early architects of Modern Architecture and their work
1. Louis Sullivan—"Chicago School"
2. Frank Lloyd Wright—"Organic Architecture"
3. Le Corbusier—"Geometrical Composition"
4. Walter Gropius
5. Mies van der Rohe
6. Eero Saarinen
7. Pier Luigi Nervi
8. Edward Durrell Stone
9. Others

Instructional Recommendations/ Suggestions: One of the main functions of this course should be to provide an opportunity for individual exploration of selected topics within the student's technical field. It is suggested that each student be required to choose a minimum of two topics on which to develop

detailed oral and written reports. Topics for study should be restricted to one or more of the major architectural styles of residential construction, or to one or more of the major construction processes identified with each of these styles of architecture. Reports by students can be an especially effective aid in achieving the fundamental course objective of developing a working knowledge of the advantages and disadvantages of the various styles of architecture used in residential construction. Class discussion periods can be very effectively reinforced by use of the suggested additional instructional materials. The film strip series on the history of architecture developed by Educational Dimensions Corporation is considered to be an exceptionally valuable instructional aid for this course.

<u>Additional Instructional Materials:</u>

1. Transparencies. See locally-developed 60-part series attached. Series depicts architectural styles and significant structural features.

Additional Instructional Materials (Continued):

2. 35MM slides. Three sets of 20 slides each. Teacher's manual available with each set. Developed by Educational Dimensions Corp., Stanford, Conn., 1973:
   a. Survey of World Architecture
   b. 200 Years of American Architecture
   c. Architectural Forms, Origin, and Use
3. 35MM film strips. Developed by Educational Dimensions Corp., Stanford, Conn., 1973. Four sets:
   a. Set 1. American Architecture, three parts:
      (1) 17th and 18th Century
      (2) 19th Century
      (3) 20th Century Trends
   b. Set 2. The New American Architecture
   c. Set 3. Modern Architecture
   d. Set 4. Understanding World Architecture

English Styles

COTSWOLD COTTAGE

Key Distinguishing Characteristics

The smallest of the English styles, the Cotswold, is sometimes described as an Ann Hathaway or Hansel and Gretel Cottage. It is a ground-hugging, always asymmetrical style with a prominent brick or stone chimney in the front or on the side that apoears to be very large in relation to the overall size of the house.

Other Distinguishing Characteristics

Walls of the originals were built of materials of the area – brick, stone, wood siding, half timbers
Steep gable roof with complex lines
Casement windows
Dormer windows smaller than other windows
Rooms tend to be small and irregularly shaped
Layout often necessitates walking through one room to get to another (even the bedrooms)
Upper story bedrooms have steep walls and need dormers

History

The Cotswold Cottage was first built in the Cotswold Hills of Gloucester, Hereford and Worcester, England starting about the time of the Norman conquest in 1066. The name is derived from "cot"-cottage and "wold"-wood – cottage in a wood. The romantic design was very popular throughout the U.S. in the 1920's and 1930's.

English Styles

TUDOR

Key Distinguishing Characteristics

The Tudor is an imposing looking house with fortress-like lines. Siding is chiefly stone and brick with some stucco and half timbers. Windows and doors have moulded cement or stone trim around them.

Other Distinguishing Characteristics

Usually 2½ stories
Stone or cement window mullions and transoms
Casement windows with leaded glass (often diamond-shaped)
High, prominent chimneys with protruding chimney pots
Semi-hexagonal bays and turrets
Interior often layed out with odd-shaped rooms full of nooks and crannies, large fireplaces, beamed ceilings and rough plaster walls

History

The style started in England in the late 15th century during the reign of the House of Tudor. It did not become popular in the U. S. until the late 1800's.

French Styles

FRENCH PROVINCIAL

Key Distinguishing Characteristics

The French Provincial is a perfectly balanced, formal 1½ to 2½ story house with a high steep hip roof and curved-headed upper windows that break through the cornice.

Other Distinguishing Characteristics

French windows or shutters on first floor
Two symmetrical 1-story wings
Usually made of brick

History

The style originated in France during the reign of Louis XIV (1643-1715) by the rich who wanted showplace homes.

French Styles

CREOLE OR LOUISIANA OR NEW ORLEANS

Key Distinguishing Characteristics

A balcony with extensive lacy iron work running across the entire front at the second story level distinguishes this style.

Other Distinguishing Characteristics

Symmetrical
2 to 3 stories

History

The style originated around New Orleans. Although it appears to have been influenced by French, Spanish and West Indian styles, it is not found in those places. Many of these houses were built in the late 1700's and 1800's.

Latin Styles

ITALIAN VILLA

Key Distinguishing Characteristics

This is a massive, 2 or 3-story house of masonry with large overhanging eaves.

Other Distinguishing Characteristics

Many have square or octagonal towers
Quoins at corners
Heavy cornice line with supporting brackets
Decorative iron work

History

First built in the U.S. in 1837, this style was popularized by architect Andrew Jackson Downing in the middle 1800's. Architects Henry Austin and Richard Upjohn used the style extensively. The Bristol House pictured was designed by Austin and built in New Haven, Connecticut in 1845.

564/565

English Styles

GEORGIAN

Key Distinguishing Characteristics

The Georgian is a large, formal 2 or 3-story rectangular house characterized by its classic lines and ornamentation.

Other Distinguishing Characteristics

Traditional material is brick
Some made of masonry, clapboard or shingles
Gable or hip roof
Slate shingles or copper roofing
Two large chimneys rising high above the roof at each end
A Paladian style set of three windows on the second floor over the front entrance or at each end
Front entrance with Greek columns
Glass lights on side and above front entrance door

History

The style became popular in England during the reign of the four King Georges. They were built in large numbers here in the 1700's and 1800's. The house pictured is Mount Pleasant built in 1750 in Philadelphia. It contained a large number of the features that would be traditionally included in the Georgian style.

English Styles

WILLIAMSBURG GEORGIAN OR EARLY GEORGIAN

Key Distinguishing Characteristics

The houses built in Williamsburg were representative of the early Georgian houses built in America throughout the early 1700's. They had simple exterior lines and generally fewer of the decorative devices characteristic of the later Georgian houses. Most were 2 or 3 story rectangular houses with two large chimneys rising high above the roof at each end.

Other Distinguishing Characteristics

Sliding double-hung windows with small panes
Simple front entrances

History

Williamsburg, Virginia was the cultural and political capital of the colonies during most of the 1700's. The houses here were based on the styles developed in England during the reign of the four King Georges. The Williamsburg houses were built in the early 1700's. With gifts of about $40 million, John D. Rockefeller, Jr. has restored the community.

SIMPLE, INFORMAL STYLE

English Styles

REGENCY

Key Distinguishing Characteristics

This is a 2 or 3-story, symmetrical house with a hip roof. A small octagonal window over the front door is traditional.

Other Distinguishing Characteristics

Almost always brick, often painted white
One chimney on side
Double-hung windows
Shutters same size as windows
A simple informal style without the classic lines of the Georgian

History

The style reached its peak of popularity in England between 1810 and 1820. Many of these houses were built in the U. S. in the late 1800's, throughout the 1900's and are still being built today.

Latin Styles

SPANISH VILLA

Key Distinguishing Characteristics

This is an asymmetrical, 1 to 3-story house with painted stucco exterior walls and red tile roof.

Other Distinguishing Characteristics

Oval top windows and doors
Wrought iron exterior decorations
Patio completely enclosed by exterior walls

History

American architecture has been influenced by Spanish styles since the days of the Spanish conquistadores. It is widespread throughout the warm parts of the U.S. and also appears in the north surprisingly frequently considering its basic unsuitability for cold climates.

French Styles

FRENCH FARM HOUSE

Key Distinguishing Characteristics

An informal 1½ to 2-story house made of a variety of building materials, this house has a high hip or gable type roof with steep slopes.

Other Distinguishing Characteristics

Large chimney
Half timbers used as decorative accent
Dormers that break through the cornice
Another common variation of this design (not pictured) is a house built around a courtyard with two symmetrical wings protruding towards the front.

History

The style is based on the farm houses found in the various, widespread provinces of France. Because of this, the style varies widely. They were most popular in America in the early 1900's.

French Styles

FRENCH NORMANDY

Key Distinguishing Characteristics

The main characteristic of this style is the central turret which is usually a staircase.

Other Distinguishing Characteristics

- 1½ to 2½ stories
- Exterior walls usually brick, stone or stucco
- Asymmetrical shape
- Large chimneys
- High, complicated roofs
- Half timbers for decoration

History

This house style originated in the Normandy area of France where house and barn were one building. The turret was used for storage of grain or ensilage.

English Styles

ELIZABETHAN OR HALF TIMBER

Key Distinguishing Characteristics

This is a 2 or 2½-story house, often with part of the second story overhanging the first. It has less stone work and is less fort-like than the Tudor. Stone and stucco walls with half timbers are most common.

Other Distinguishing Characteristics

Massive sculptured chimneys
Used brick between half timbers is called "nogging"; when not covered with stucco it is "exposed nogging"
Complicated high peaked roofs which are expensive to install and subject to leaks because of complex valleys
Small leaded glass casement windows
Interior often has large halls and a spacious living room with a large fireplace and beamed ceilings
Bedrooms are on second floor

History

These houses were erected in England throughout the prosperous reign of Queen Elizabeth (1558-1603), particularly in the London area. The characteristic protruding second story supported by wooden brackets is a carry-over from narrow London lots where extra space could be obtained by overhanging the street.

Swiss Style

SWISS CHALET

Key Distinguishing Characteristics

The Swiss Chalet is a 1½ to 2½-story, gable roof house with extensive natural decorative woodwork on the exterior.

Other Distinguishing Characteristics

Open porches
Large glass windows
Natural wood look
Curved cornice

History

The style is a direct copy of the mountain chalets of Switzerland. In this country too, they are built mostly in the mountain areas as ski lodges. The house pictured was designed and built by Paul Manchester.

Early American

NEW ENGLAND COLONIAL

Key Distinguishing Characteristics

The New England Colonial is a 2½-story, generally symmetrical, square or rectangular box-like house with side or rear wings. The traditional material is narrow clapboard siding. The roof is usually the gable type covered with shingles.

Other Distinguishing Characteristics

Originals had chimneys at each end for heating
Modern versions have only one chimney at end or in center
Windows are double-hung type with small glass panes
Shutters same size as windows
Central entrance door often has side lights and a fan light
Elaborate cornice with dentils
First floor has central hallway running from front to rear
Bedrooms are on the second floor

History

These large, roomy houses evolved from the Cape Cod style.

Early American

LOG CABIN

Key Distinguishing Characteristics

This is a house built of unfinished logs.

Other Distinguishing Characteristics

Rectangular shape
Usually one story
Shingle-covered gable roof
Chimneys at ends
Few windows
Windows covered with oil soaked paper or small panes of glass

History

The first extensive use of the log cabin in America was by the Swedish immigrants. The log cabin eventually became the favorite house of the early pioneers. There are two basic types of log cabins. One is built with round logs like the traditional Lincoln cabin and the other is built with squared-off logs like the cabin pictured here. The illustration is of the Latta house in Arkansas. Several companies are producing reproductions today.

Early American

CAPE COD COLONIAL

Key Distinguishing Characteristics

This is a small, symmetrical, 1½ story, compact house with a central entrance. The roof is the steep gable type covered with shingles. The authentic types have low central chimneys, but end chimneys are very common in the new versions. Bedrooms are on the first floor. The attic may be finished into additional bedrooms and a bath. A vine covered picket fence is traditional.

Other Distinguishing Characteristics

- Traditionally, exterior walls were white clapboard, natural shingles or brick; modern versions have exterior walls of a wide variety of materials
- Simple double-hung windows
- Shutters same length as windows
- Simple cornice with gutters immediately above first floor windows
- Easy to build, maintain and heat
- Inherent in the design is the necessity to walk through one room to reach another

History

The Cape Cod Colonial is the oldest dwelling type built by the American colonists that is still popular today. The early Cape Cods were very crude. They usually had one room on the first floor and a sleeping loft above. The modern version was the most popular house style in the U.S. from the 1920's through the 1950's.

Early American

NEW ENGLAND FARM HOUSE

Key Distinguishing Characteristics

This is a simple, box-shaped house. The traditional material for the exterior siding is white clapboard. A steep pitched roof is used to shed heavy snow.

Other Distinguishing Characteristics

Central chimney used to support frame
Two square rooms on each floor is typical layout
Interior layout poor by today's standards

History

These simple houses were built in the 1700's and 1800's throughout the New England countryside. They were the favorite style among the farmers who could not afford the more elaborate styles of the times. Simple to construct and maintain, they were designed to use the building materials and techniques of the period.

Early American

GREEK REVIVAL

Key Distinguishing Characteristics

The Greek Revival style is a 2 or 3-story, symmetrical house that is a copy of a Greek temple complete with columns, architraves, friezes and cornices.

Other Distinguishing Characteristics

Windows small and hidden as they are not part of Greek temple architecture.

The interior design is sacrificed for exterior design.

History

There is little difference between a Greek Revival and a Classic Colonial. Many architectural historians consider them to be the same style. For clarity of identification, the houses that look like the traditional Greek temple are generally called Greek Revival. The style became popular in the U.S. in the early 1800's, especially for public buildings.

Early American

CLASSIC COLONIAL

Key Distinguishing Characteristics

A large, impressive showplace, the Classic Colonial is a 2 or 3-story house with a columned exterior. It has more columns than a Georgian Colonial and fewer columns than a Southern Colonial.

Other Distinguishing Characteristics

Columns have Doric, Ionic or Corinthian capitals
Pilasters in the walls are common
Porticos at vehicular entrance with roof supported by columns
Variety of roof shapes on same house

History

Based on classic Greek architecture, the style was introduced by Thomas Jefferson who built Monticello in 1772 and remodeled it several times up to 1803. There is very little difference between a Classic Colonial and a Greek Revival and many architectural historians use the terms synonomously.

Early American

CAPE ANN COLONIAL

Key Distinguishing Characteristics

A small, symmetrical, 1½ story, compact house with a central entrance, the Cape Ann is distinguished from the Cape Cod style by its gambrel roof. The bedrooms are on the first floor. The attic may be finished into additional bedrooms and a bath.

Other Distinguishing Characteristics

Shingle covered roof
Traditionally, the exterior walls are white clapboard or natural shingles
Simple double-hung windows
Shutters the same length as the windows
Simple cornice with gutters immediately above the first floor windows
Easy to build, maintain and heat
Inherent in the design is the necessity to walk through one room to reach another

History

A variety of the Cape Cod that started in the Cape Ann area of Massachusetts, it is not nearly as popular as the gable-roofed Cape Cod style.

Early American

PENNSYLVANIA DUTCH COLONIAL OR PENNSYLVANIA GERMAN FARM HOUSE

Key Distinguishing Characteristics

This is a massive, 2½-story, gray ledge stone house with a steep gable roof. An unsupported hood over the front entrance is traditional. When wings are added they are usually partly clapboard.

Other Distinguishing Characteristics

Shingle roof
Double-hung windows with small panes of glass
Ledge stone siding is long lasting and requires little care

History

The style was first built in the 1600's west of Philadelphia on the Main Line and in Lancaster, Pennsylvania. The name came from the mispronunciation of the word "Deutsch" since those who first built them were of German origin.

Early American

SALT BOX COLONIAL OR CATSLIDE (IN SOUTH)

Key Distinguishing Characteristics

This is 2 or 2½-story, square or rectangular house with a steep gable roof that extends down to the first floor in the rear.

Other Distinguishing Characteristics

Exterior walls usually clapboard or shingles
Large central chimney
Large double-hung windows with small panes of glass
No windows in rear
Shutters, the same size as windows
In order to obtain traditional lean-to look, headroom in the rear must be sacrificed

History

The Salt Box is a Colonial New England farm house that grew in the form of a lean-to shed or room added to the rear of the house. The rear was oriented to the north to ward off cold winter winds. Its name comes from the resemblance to the salt box found in old country stores.

Early American

FRONT GABLE NEW ENGLAND COLONIAL OR CHARLESTON COLONIAL OR ENGLISH COLONIAL

Key Distinguishing Characteristics

This is a 2½-story, symmetrical square or rectangular box-like house with a protruding front wing which distinguishes the style from a New England Colonial.

Other Distinguishing Characteristics

House and wing have gable roofs
Basic house is usually clapboard
Wing front is often cut stone
Cornice on front or on all four sides
Double-hung windows with small panes of glass
Shutters same size as windows
Central entrance in front wing has side light and a fan light
Wing has stone columns on four corners
Central hallway runs from wing to rear of house
Bedrooms on second floor

History

Like the New England Colonial, this style evolved from the Cape Cod. The first houses of this style were built in the 1700's.

Early American

DUTCH COLONIAL

Key Distinguishing Characteristics

The Dutch Colonial is a moderate sized, 2 to 2½-story house with a gambrel roof and eaves that flare outward.

Other Distinguishing Characteristics

Central entrance
Dutch entrance door
Double-hung windows with small panes of glass
Exterior may be made of a wide variety of material such as clapboard, shingles, cut stone, brick or stucco
Second story dormers through roof are common
Chimney rarely in the center

History

This is an indigenous American style that did not originate in Holland as is commonly believed. The Dutch settlers built them in Pennsylvania starting in the 1600's and soon after in New York.

Early American

GARRISON COLONIAL

Key Distinguishing Characteristics

This is a 2½-story, symmetrical house with the second story overhang in the front. The traditional ornamentation is four carved drops (pineapple or acorn shape) below the overhang.

Other Distinguishing Characteristics

Exterior chimney at end
Older versions have casement windows with small panes of glass
Later versions have double-hung windows
Second story windows often smaller than those on first floor
Steep gable roof covered with shingles
Dormers often break through the cornice line

History

The Garrison Colonial is reputed to be patterned after colonial blockhouses used to fend off Indians, but it is probably an outgrowth of the overhang style of the Elizabethan townhouse. The style probably has been perpetuated because of its pleasant appearance. The carved drops were the ends of the framing beams on early versions of the house. Later they were added on for decoration. Examples of this style built in the 1600's are still standing today.

Early American

FEDERAL

Key Distinguishing Characteristics

The Federal is a multi-story, symmetrical, box-shaped house with a flat roof.

Other Distinguishing Characteristics

- Clapboard or brick exterior walls
- One or more chimneys protruding through roof
- Windows with small glass panes
- Beautiful ornamentation
- Belvedere
- Balustrade

History

Prevalent throughout the cities in the East in the 1700's, this style takes on many forms. Some consider this and the Adams style to be the same.

Early American

ADAMS COLONIAL

Key Distinguishing Characteristics

A rectangular shaped, multi-story house of classic beauty, the Adams Colonial has large bay windows and a flat roof topped with a balustrade. The overall effect is one of lightness and delicacy.

Other Distinguishing Characteristics

Elaborate windows with small glass panes
Fantail windows on each side and above front entrance door
Chimneys protruding through roof
Carved steps with light iron rails

History

Introduced by Robert Adam in 1759 upon his return from a trip to Europe, the style was launched in New England when it was promoted by Charles Bulfinch and Samuel McIntire, two of America's famous early architects.

Early American

SOUTHERN COLONIAL

Key Distinguishing Characteristics

The Southern Colonial is a large 2 or 3-story, frame house with a characteristic colonnade extending across the front. The roof extends over the colonnade

Other Distinguishing Characteristics

Hip or gable roof covered with shingles
Symmetrical
Second-story balcony
Balustrade
Belvedere
Double-hung windows with small panes of glass
Shutters same size as windows
Cornices with dentils

History

The style is a southern conception of the New England Colonial and Georgian Colonial modified to suit the warmer climate. The classic example pictured here is Mount Vernon, built in the 1700's.

Nineteenth Century

EASTLAKE

Key Distinguishing Characteristics

The distinctive Eastlake type of ornamentation is the major characteristic of this style. Otherwise these houses look like a Queen Anne or Carpenter Gothic. The ornamentation is very three-dimensional, having been made with a chisel, gouge and lathe rather than the scroll saw. Many of the parts resemble furniture legs and knobs.

Other Distinguishing Characteristics

Rectangular shape
Open front porch
Tower or turret
Gable roof covered with shingles

History

Charles Lock Eastlake, an English architect, wrote a book, *Hints on Household Taste*, first published here in Boston in 1872. The designs in the very popular book became the basis of Eastlake style furniture and houses. The houses, however, were not designed by Eastlake and it was said that he did not like them.

Nineteenth Century

AMERICAN MANSARD OR SECOND EMPIRE STYLE

Key Distinguishing Characteristics

The main and distinguishing characteristic of this style is the roof design. The mansard roof slopes gently back from the wall line and then is topped with an invisible (from the street) section resembling a conventional hip roof. Through the roof protrude multiple dormers.

Other Distinguishing Characteristics

- Decorative iron work
- Decorative mouldings
- Quoins on corners
- Brackets supporting massive cornices
- Colored glass in windows
- Iron castings
- Deep porches
- French doors opening onto the porches

History

The French Second Empire (the reign of Napoleon III from 1852 to 1870) was the period in which the style was popular in the U.S. The mansard roof was originally developed in France in the 1600's by Francois Mansart. It enjoyed wide popularity when revived in the 1800's and now in the 1970's.

Nineteenth Century

EGYPTIAN REVIVAL

Key Distinguishing Characteristics

This is a box-like house with Egyptian columns in the front.

Other Distinguishing Characteristics

Windows appear awkward since they are not part of authentic Egyptian architecture

History

Egyptian architecture was never very popular in America, even in the early 1800's when the fad of copying foreign styles was at its height. The best examples of Egyptian architecture are found in cemetery gates built during the same period.

Nineteenth Century

HIGH VICTORIAN GOTHIC

Key Distinguishing Characteristics

Like the early Gothic architecture, High Victorian Gothic can be identified as being Gothic by the pointed arch which is used extensively over the windows and doors. It is much more elaborate than the early Gothic with a great many colors and materials being visible. The decorative details give an appearance of solidity.

Other Distinguishing Characteristics

Multi-color effect of exterior walls obtained by the use of stone, wood, brick

Exterior wood trim appears to be structural rather than merely trim

History

Most of the High Victorian Gothic houses were built after the Civil War and were based on European Gothic styles popular at the time. The house pictured is the Converse House in Norwich, Connecticut, built in 1870.

Nineteenth Century

OCTAGON HOUSE

Key Distinguishing Characteristics

The most distinguishing characteristic of this style is the octagonal shape.

Other Distinguishing Characteristics

Stone, wood or concrete walls
Flat roofs
Chimney or beleveder in the center
Variety of window and door types used

History

Most of these houses were built around 1850. They were a result of an idea put forth by Orson Squire Fowler, a popular author of the time who wrote about love, marital happiness, sex and phrenology. In several of his popular books he expounded the theory of a happy life in an octagon-shaped house. He thought that this design made for good interior circulation, heating and lighting. Octagon houses were built throughout the U.S. and several hundred are still lived in today. The house was explained in detail in his book, *A Home for All, or the Gravel Wall and Octagon Mode of Building, New, Cheap, Convenient, Superior and Adapted to Rich and Poor.*

Nineteenth Century

ROMAN TUSCAN MODE

Key Distinguishing Characteristics

A house in this style is box-like and fills an entire lot, leaving no yard area. Windows on each floor are treated differently. The roof is flat with a massive cornice.

Other Distinguishing Characteristics

Chimneys small and hidden
Built of stone

History

The style was brought from Italy in the 1800's and used for several important public buildings and a few houses.

LOOKS LIKE OLD MISSION CHURCH

Nineteenth Century

MISSION

Key Distinguishing Characteristics

These houses look like the old mission churches and houses of Southern California. The doors and windows are arch-shaped.

Other Distinguishing Characteristics

No sculptural ornamentation
Roof often hidden by the parapets
Towers and turrets with pyramid-shaped roofs
Exterior walls made of stucco

History

This is the style developed in the West in the 1800's when the people became aware of their architectural past. It was popularized as a reaction against the conventional eastern styles that were being built in the West at the time.

Nineteenth Century

ROMANESQUE

Key Distinguishing Characteristics

This is a massive, stone structure with round, semicircular arched openings.

Other Distinguishing Characteristics

One or more towers topped with a dome
Pyramidal roof

History

This style was very popular in the 1800's for public buildings and churches. Only a few Romanesque houses were ever built in the U.S. Architect Henry Hobson Richardson used the style extensively. The house pictured is the Ayer House in Chicago which, unfortunately, was demolished in 1966.

Nineteenth Century

MONTEREY

Key Distinguishing Characteristics

A 2-story house with a balcony across the front at the second floor level.

Other Distinguishing Characteristics

Asymmetrical shape
Balcony rail is simple iron work or wood as contrasted with lacy iron work of Creole style.

History

Thomas Larkin, a Boston merchant, moved to Monterey, California and in 1835 built his version of a New England Colonial out of adobe brick. Most of the other houses in Monterey at that time were 1-story. In addition to the second story, his house also introduced to the area the second floor porch, roof shingles and the fireplace. The house was widely copied throughout the West and became known as the Monterey style.

Nineteenth Century

EARLY GOTHIC REVIVAL

Key Distinguishing Characteristics

Gothic architecture can easily be identified by the pointed arch. The windows and doors are often this same pointed shape. Early Gothic revival might have only a few true Gothic characteristics. The house has a Gothic, church-like appearance and is asymmetrical. Usually only one color and one material are used.

Other Distinguishing Characteristics

Wood the most common material
Some built of stucco or brick
Fragile appearance, especially tracery and moulding
Pinnacles and battlements
High, massive chimneys

History

Gothic architecture was popular through Europe from the 12th to the 15th centuries. Many great Gothic churches are still standing today. It was one of the many styles copied in the U.S. as part of the fad of the 1700's and 1800's. The house pictured is the Rotch House in New Bedford, Massachusetts, designed by Alexander Jackson Davis in 1846.

Nineteenth Century

SHINGLE STYLE

Key Distinguishing Characteristics

The Shingle Style house is big and box-like with simple lines. The roof and exterior walls are covered with shingles usually stained or painted a dark color.

Other Distinguishing Characteristics

Gable roof
Double-hung windows
Shutters same size as windows
Several chimneys protruding through roof

History

This style developed in New England in the 1880's. It became very popular and many thousands were built. It eventually spread throughout the U.S. and many are in good condition and being lived in today.

Nineteenth Century

WESTERN STICK

Key Distinguishing Characteristics

The Western Stick is a large rectangular house with exposed structural framing.

Other Distinguishing Characteristics

Exterior walls and roof covered with shingles
Many windows have large fixed panes of glass
Roof overhangs the house to take advantage of the sun angles
Sliding glass doors
Small chimney that protrudes through the roof at the end of the house

History

This is a regional version of the Shingle Style that appeared in the late 1800's. One can detect both Oriental and Swiss influence in the design.

Nineteenth Century

WESTERN ROW HOUSE OR WESTERN TOWNHOUSE

Key Distinguishing Characteristics

Like the eastern version of the townhouse, these houses are usually built to cover an entire street or block. They have common side walls with the house on either side.

Other Distinguishing Characteristics

2 or 3 stories
Exterior walls may be wood, stucco or brick
Bay windows
Heavily decorated and painted exteriors
Pitched roof

History

This style is the West's answer to the eastern row house. The main difference is that each unit has its own individual, unique design. They were built starting in the late 1800's and are still popular today. Thousands of these units have been built in San Francisco and other large western cities.

Nineteenth Century

STICK STYLE OR CARPENTER GOTHIC

Key Distinguishing Characteristics

Exposed framing members, high steep roofs, complex silhouettes, diagonal braces and lots of gingerbread trim give this house style its characteristic look.

Other Distinguishing Characteristics

Clapboard siding overlayed with additional boards running horizontally, vertically and diagonally
Complex and ornate windows and doors

History

This style is the result of the advance in the technology of the 1800's. The public had become fascinated with what could be produced cheaply on the automatic bandsaw and they used these mill-cut ornate parts in great abundance on the houses of the period. The name applies to the many gingerbread scrolled houses of the 1800's. It is a very loosely defined style. The culmination of this fad took place in the construction of the house pictured, in Eureka, California, known as the Carson Mansion.

Nineteenth Century

HIGH VICTORIAN ITALIANATE

Key Distinguishing Characteristics

The use of three different kinds of window arches is the primary distinguishing characteristic of this style. They are the straight-sided arch, flat-topped arch and rectangular arch.

Other Distinguishing Characteristics

Square shape
Symmetrical bays in the front
Hip roof
Small chimneys protruding through roof in irregular locations
Entrance-way has columns supporting an entablature
Cornice supported with over-size brackets
Exterior appears to be cut up and ornate

History

The style seems to have come to this country from Italy by way of England, where the style was popular in the early 1800's. The house pictured is in Portland, Oregon and was built by Mark Morris in 1882.

Nineteenth Century

QUEEN ANNE

Key Distinguishing Characteristics

Queen Anne has come to be applied to any Victorian house that cannot be otherwise classified. They are all unique looking, multi-story houses, irregular in shape with a variety of surface textures, materials and colors.

Other Distinguishing Characteristics

Half timbering
Windows of various forms
Upper stories that project over the lower ones
Bay windows
Turrets
Big chimneys

History

First designed in England by Richard Norman Shaw, Queen Anne was started here as a style by architect Henry Hobson Richardson in the early 1870's.

Nineteenth Century

BROWNSTONE OR BRICK ROW HOUSE OR EASTERN TOWNHOUSE

Key Distinguishing Characteristics

These houses usually cover an entire city block. Most are 4 or 5 stories with a stoop leading up to the first floor. They have common side walls with the house on either side.

Other Distinguishing Characteristics

Built of brick
Often faced or trimmed with chocolate sandstone called brownstone
Flat roof
Simple double-hung windows

History

Brownstones became popular in the late 1800's in New York and other large eastern cities. They tend to develop their individual characteristics in each different city.

Early Twentieth Century

PUEBLO OR ADOBE

Key Distinguishing Characteristics

This house is made of adobe brick or some other material that is made to look like adobe brick. The characteristic projecting roof beams are called viga.

Other Distinguishing Characteristics

The houses are massive looking
They rarely have arches
Roofs are flat
Long rain water gutters called "canales"

History

Based on the design of the houses of the Indians of New Mexico and Arizona, this became a popular style throughout the Southwest in the early 1900's.

SMALL, COMPACT SHAPE 1 STORY

Early Twentieth Century

CALIFORNIA BUNGALOW

Key Distinguishing Characteristics

A 1-story, small compact house.

Other Distinguishing Characteristics

Usually made of wood
Traces of south seas, Spanish and Japanese influences on many

History

At the peak of the Bungalow's popularity, from 1900 to 1920, the name Bungalow and California Bungalow were often used synonymously although one writer of the time classified Bungalows into nine different types. The name comes from the Indian word "bangla" – of Bengal.

Early Twentieth Century

PRAIRIE HOUSE

Key Distinguishing Characteristics

A long, low roof line, continuous row of windows and an unornamented exterior distinguish this house. Designed to satisfy the physical and psychological needs of the inhabitants, it is unlike the traditional concept of a house that is a box subdivided into smaller boxes (rooms) each with some doors and windows.

Other Distinguishing Characteristics

- Made up of individual areas in size, lighting and function, yet all under one roof
- Many feel it is housing at its best

History

Frank Lloyd Wright, the designer of this house, dominated the architectural scene for the first half of the 20th century. His total impact is yet to be fully measured. Unlike many contemporary architects, he was vitally interested in home design. His principal concern was the organization of space. The Robie House pictured here was built in Chicago in 1909 and is one of the most famous Frank Lloyd Wright houses.

608

Early Twentieth Century

INTERNATIONAL

Key Distinguishing Characteristics

This design is very simple, with no ornamentation. The windows appear to be continuous rather than appearing to be holes in the walls.

Other Distinguishing Characteristics

Flat roofs
Smooth, uniform wall surfaces
Windows that turn the corner of the house.

History

The style was started in Europe in the 1920's by Walter Gropius, Ludwig Mies van der Rohe and the architects of the Bauhaus. It was introduced in the U.S. in the 1930's and is the basis of much modern architecture.

Early Twentieth Century

BUNGALOW

Key Distinguishing Characteristics

A Bungalow is a small, 1-story house that usually has an open or enclosed front porch.

Other Distinguishing Characteristics

Siding usually wood
Roof usually shingled
Many different regional types

History

Most Bungalows were built in the early 1900's and their popularity reached its peak around 1920. The terms Bungalow and California Bungalow, were often used synonymously. Many Bungalow style houses are now called Ranch style. They are very popular in the shore communities of the east and west coasts.

Post World War II

FUNCTIONAL MODERN OR CONTEMPORARY

Key Distinguishing Characteristics

The exterior style of a contemporary house is an integral part of the overall design. Its function is to enclose some living areas with modern materials yet integrate the indoor and outdoor space into one unit.

Other Distinguishing Characteristics

Modern building materials
Extensive use of glass
Lack of ornamentation

History

The Contemporary is today's version of the revolution in house styles started by the great American architects Frank Lloyd Wright and Henry Hobson Richardson, the German architects of the Bauhaus and other architects around the world in the past 100 years.

Post World War II

MOBILE HOME

Key Distinguishing Characteristics

This is a relocatable house that averages 12 feet wide and 60 feet long. It is produced in a factory and towed by truck or shipped by flat car to the site and often installed upon a prepared base.

Other Distinguishing Characteristics

Wheels and axles used to transport it are removed after installation.
Siding and roof often metal

History

During the past 25 years the camping trailer has evolved into today's mobile home. The ongoing argument of whether the mobile home is a trailer or a house is still not settled. Whatever they are, their look is unique and they are considered here to be an architectural style. The American housing industry, for a variety of complex reasons, has failed to provide adequate housing for all Americans at a reasonable cost. This gap has been filled in part by the mobile home industry which produced about 600,000 mobile homes in 1972.

Post World War II

SOLAR HOUSE

Key Distinguishing Characteristics

This house has large overhanging eaves over the windows on both floors. A great portion of the exterior walls consists of large glass windows and doors. The house is positioned on the site to take advantage of the high summer sun and the low winter sun.

Other Distinguishing Characteristics

Some have eyebrow eaves that can be removed in the winter
Some experimental models have machinery that turns them so the front always faces the sun

History

The idea of a house that would utilize the changing position of the sun became popular after World War II. Several books and many articles were written on the subject. Many Solar Houses were built throughout the country and the principles of their design are still being used today by many architects.

Post World War II

NORTHWESTERN OR PUGET SOUND

Key Distinguishing Characteristics

This is a low ranch type house with generous overhangs at eaves and gables. The exterior walls are often redwood.

Other Distinguishing Characteristics

Roof shape reflects south sea island influence
Large glass windows
Wood shingle roof covering

History

The style was first developed in 1908 by Ellsworth Storey, a young architect who designed a group of these cottages. The style did not really become popular until after World War II.

Post World War II

CALIFORNIA RANCH

Key Distinguishing Characteristics

A California Ranch is a 1-story, ground-hugging house with a low, pitched roof.

Other Distinguishing Characteristics

Large double-hung, sliding and picture windows
Sliding glass doors leading onto patios

History

The ranch house of the West has spread in popularity throughout the U. S. Today the term is commonly used to describe a wide variety of 1-story houses including many smaller ones which used to be called Bungalows.

Post World War II

PLASTIC HOUSE

Key Distinguishing Characteristics

A major portion of the exterior siding of this house is fiberglass or other plastic material.

Other Distinguishing Characteristics

Moulded lines and new shapes
Use of new materials
Little or no ornamentation

History

The Plastic House is not an architectural style in the traditional concept. Many new styles may develop using plastic, but the experimental plastic houses being built today do look different from the traditional styles. This house is included to represent them all. The house pictured was designed by architect Valerie Batorewicz of New Haven, Connecticut.

Post World War II

"A" FRAME

Key Distinguishing Characteristics

In this style, the frame is the shape of one or more "A's".

Other Distinguishing Characteristics

Steep gable roof covered with shingles
Front and rear have large glass windows
Interior often only roughly finished
Sleeping area often is semi-enclosed or sometimes is a loft area

History

With the explosive growth in vacation homes since World War II, millions of families now own second homes that are used primarily for recreational purposes. The simple "A" frame style has been popular in the mountains and near lakes and oceans for this purpose.

A great many Classic Colonial, Greek Revival and other house styles exhibit Greek columns, capitals, entablatures and other Greek ornamentations. This illustration is a simple guide to Greek architecture and terminology.

602

RESIDENTIAL CONSTRUCTION TECHNOLOGY

Name of Course: Business Communication

Course Objectives: To familiarize the student with current trends in business correspondence. To provide experience in composing the various types of written communications commonly used in business—such as business letters, reports, bulletins, memoranda, telegrams, etc.

Course Description: A detailed study of business communications from the standpoint of arrangement and content of letters of inquiry, orders, credit, applications, sales, claims and adjustments. Emphasis on grammar and mechanics of writing.

Suggested Primary Text: To be determined locally.

Course Outline: To be developed locally.

Instructional Recommendations/ Suggestions: It is recommended that this course be adapted from one of the regular departmental offerings of the institution.

Additional Instructional Materials: To be developed locally.

Additional References: To be developed locally.

APPENDIX C

Societies and Agencies Pertinent to Building Construction Technology

SOCIETIES AND AGENCIES PERTINENT TO BUILDING CONSTRUCTION TECHNOLOGY

Some of the professional and technical societies or associations concerned with architectural and building construction and its applications are useful sources of instructional information and reference data.

Teachers and others desiring information from the organizations listed below should address their inquiries to "The Executive Secretary" of the organization. A request for information about the organization and its services or for specific information will usually be answered promptly.

AMERICAN CONCRETE INSTITUTE, Post Office Box 4754, Redford Station, Detroit, Michigan 48219.

History: Founded 1905: A technical society of engineers, architects, contractors, educators, and others interested in its purpose.

Purpose: To improve techniques of design, construction, and maintenance of concrete products and structures.

Total membership: 11,600. Publications: Journal of the ACI, monthly.

AMERICAN PLYWOOD ASSOCIATION, 1119 A Street, Tacoma, Wash. 98400

History: Founded 1936; formerly Douglas Fir Plywood Association. Members are manufacturers of fir plywood and allied products. Sponsors Plywood Research Foundation and Plywood Fabricator Service.

Purpose: Conducts trade promotion through advertising, publicity, merchandising, and field promotion; maintains quality control in accordance with the commercial standards and grade techniques.

Total membership: 118.

Publications: Production Report, weekly; Forecast of Demand, monthly.

ASSOCIATED GENERAL CONTRACTORS OF AMERICA,

1957 E St., N.W., Washington, D. C. 20006

History: The Association is the only organization of general contractors representing all principal types of construction. Serves every element of the industry; building, highway, heavy, and utility in the U. S. Mainland, Alaska, Hawaii, and Puerto Rico.

Purpose: Provides guidance to its members in the fields of labor relations, public relations, legislation, costs, contracts, bidding procedures and similar matters. Responsibilities assumed by the Association to serve the interest of its members include the development of a common approach to problems of apprenticeship training, accident prevention, research in methods and materials, ethics and trade practices and market development. Actively promotes establishment and maintenance of construction education programs in secondary schools, community colleges, and full 4-year colleges.

Total membership: More than 9,000 members, with approximately 135 chapters and branches throughout the country.

Publications: The Constructor, published monthly. The AGC Newsletter, published weekly. Both publications distributed on a membership basis.

CONSTRUCTION SPECIFICATIONS INSTITUTE (CSI), 632 Dupont Circle Building, Washington, D.C. 20006

Founded: 1948. Persons who are concerned with the specifications and documents used in connection with the design, construction, maintenance, and equipment for construction projects; includes architects, professional engineers, teachers and research workers in architectural and engineering fields, representatives of architects and engineers who are supervising construction projects, specification writers, building maintenance engineers, technical representative of nonprofit organizations of the construction industry.

Total membership: 5,300; staff 6 local groups, 50.

Publications: Construction Specific, monthly.

Convention/Meeting: Annual.

NATIONAL ASSOCIATION OF HOME BUILDERS, 1625 L Street, N.W., Washington, D. C. 20036

History: NAHB is a federation of chartered affiliated state and local associations united to serve the housing industry. Includes more than 535 affiliated state and local organizations and chapters. More than 40 of the nations leading suppliers of building materials, equipment, and services are represented on NAHB's influential National Housing Center Council.

Purpose: To provide a common voice for the highly diversified elements of the homebuilding industry. Provides its members with management aids, analysis of federal legislation and regulations, public relations materials, economic data affecting housing, and numerous other similar services.

Total membership: More than 73,000. National Staff - 175.

Publications: NAHB Journal-Scope, published weekly. Subscription is included in membership dues. Also has developed a wide range of professional publications, tape cassettes, visuals, and promotional and public relations materials which are available for sale to association members. NAHB publication lists more than 75 titles. Subjects run the gamut of the industry.

NATIONAL FOREST PRODUCTS ASSOCIATION, (formerly National Lumber Manufacturers' Association), 1619 Massachusetts Ave., Washington, D. C. 20036.

History: Founded 1902; Federation of 17 regional lumber manufacturers' associations, representing major regional, species, and product groups in the industry.

Purpose: To promote use of forest products through National Wood Promotion Program; conservation and renewal of forest properties and uses of wood and wood products through its affiliated Timber Engineering Company. Sponsors Economic Council of the Lumber Industry, which

considers economic problems of the industry on a national basis.

Total membership: 17.

Publications: Lumber Letter, weekly; Promotion Progress; Monthly Statistical Report of Lumber and Hardwood Flooring; also publishes booklets, pamphlets for home owners.

PORTLAND CEMENT ASSOCIATION, 33 W. Grand Ave., Chicago, Ill. 20660.

History: Founded 1916; Members are manufacturers of portland cement. Gives lectures and demonstrations for architects, contractors, and others; provides information to schools, colleges, farm organizations, and technical groups; assists with instruction on improved methods of concrete design and construction.

Purpose: To improve and extend the uses of portland cement and concrete through scientific research and engineering field work.

Total membership: 75; staff: 750.

Publications: 400 booklets which are circulated, along with motion picture film and other materials on used of cement and concrete in road paving, structures, conservation, housing and farm buildings.

UNITED STATES OF AMERICA STANDARDS INSTITUTE, 10 E. 40th St., New York, N. Y. 10016.

History: Founded 1918; formerly the American Standards Association. Composed of industrial firms, trade associations, technical societies, consumer organizations, and government agencies.

Purpose: Serves as a clearinghouse on nationally coordinated voluntary safety, engineering and industrial standards. Gives status as "USA Standard" to projects developed by agreement from all groups concerned in such areas as definitions, terminology, symbols, and abbreviations; materials, performance characteristics, procedure and methods of rating; methods of testing and analysis; size, weight, volume and rating; practices; safety; health; and building construction. Provides information on foreign standards and represents United States interests in international standardization work.

Total membership: 2,300.

Publications: Magazine of Standards, monthly; Newsletter, monthly Proceedings, annual; individual standards.

SOUTHERN PINE ASSOCIATION, Post Office Box 1170, National Bank of Commerce Building, New Orleans, La. 70100.

History: Fourded 1914; Members are manufacturers of Southern pine lumber. Affiliated with Southern Pine Inspection Bureau; Southern Pine Industry Committee.

Purpose: To conduct research programs in product improvement, timber, design, gluing of lumber, exterior and interior finishes, wood quality effects of spacing in plantations. Promotes public education in improved land use in protection, growing and harvesting trees.

Total membership: 152.

Publications: Manual and textbook on timber engineering and specifications.

APPENDIX D

U. S. Bureau of the Budget

Standard Industrial Classification of Construction

U. S. BUREAU OF THE BUDGET STANDARD INDUSTRIAL CLASSIFICATION OF CONSTRUCTION

The Standard Industrial Classification includes establishments engaged in contract construction according to the following groupings.

Major Group 15 - Building Construction

This major group includes general contractors primarily engaged in the construction of residential, farm, industrial, commercial, public, or other buildings.

Group No.	Industry No.	
151		General Building Contractor
	1511	General Building Contractors

Major Group 16 - Construction Other Than Building Construction

This major group includes general contractors engaged in heavy construction, such as highways and streets, bridges, sewers, railroads, irrigation projects, flood control projects and marine construction, and miscellaneous types of construction work other than buildings.

Group No.	Industry No.	
161		Highway and Street Construction
	1611	Highway and Street Construction
161		Heavy Construction
	1612	Heavy Construction (Excludes Highways and Streets)

Major Group 17 - Special Trade Construction

This group includes contractors specializing in activities such as plumbing plastering, and carpentering. Special trade contractors may work on subcontract from the general contractor, performing only part of the work covered by the general contract; or they may work directly for the owner. Special trade contractors, for the most part, perform their work at the site of construction though they also may have shops where they perform work incidental to the site job. Special trade contractors primarily engaged in engineering projects are classified as engineering contractors in Major Group 16.

Group No.	Industry No.	
171		Plumbing, Heating, and Air Conditioning
	1711	Plumbing, heating, and air conditioning
172		Painting, Paper Hanging and Decorating
	1721	Painting, paper hanging and decorating
173		Electrical Work
	1731	Electrical work
174		Masonry, Stonework, Tile Setting, and Plastering
	1741	Masonry, stonesetting, and other stonework
	1742	Plastering and lathing
	1743	Terrazzo, tile, marble, and mosaic work

634

Group No.	Industry No.	
175		Carpentering and Wood Flooring
	1751	Carpentering
	1752	Floor laying and other floorwork not elsewhere classified
176		Roofing and Sheet Metal Work
	1761	Roofing and sheet metal work
177		Concrete Work
	1771	Concrete work
178		Water Well Drilling
	1781	Water well drilling
179		Miscellaneous Special Trade Contractors
	1791	Structural steel erection
	1792	Ornamental metal work
	1793	Glass and glazing work
	1794	Excavating and foundation work
	1795	Wrecking and demolition work
	1796	Installation or erection of building equipment not elsewhere classified.
	1797	Special trade contractors, not elsewhere classified.

TITLE: A SECURITY PROGRAM FOR PUBLIC HOUSING.

DESCRIPTOR: *PUBLIC HOUSING; LOCAL HOUSING AUTHORITIES; *TEACHING GUIDES; CAREER LADDERS; JOB DESCRIPTIONS; *SECURITY; *HOUSING MANAGEMENT AIDES; *GUIDELINES

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 80P.

ABSTRACT: THIS GUIDE IS CONCERNED WITH THE DEVELOPMENT OF A PROGRAM FOR TRAINING PUBLIC-HOUSING RESIDENTS IN PARAPROFESSIONAL SECURITY OCCUPATIONS. FOLLOWING AN INTRODUCTORY SECTION, CONTENTS OF THE GUIDE ARE ORGANIZED INTO THREE PARTS. PART ONE DEFINES THE ESSENTIAL COMPONENTS OF A SECURITY SYSTEM, PRESENTS THE CAREER LADDER DEVELOPED, AND DISCUSSES THE POSSIBLE STRUCTURES FOR SECURITY DEPARTMENTS BASED ON THE CAREER LADDER. PART TWO CONTAINS JOB DESCRIPTIONS, TRAINING NEEDS, AND CURRICULUMS FOR FOUR PARAPROFESSIONAL JOBS: RESIDENT SECURITY AIDE, RESIDENT SECURITY OFFICER, SECURITY OFFICER, AND COMMUNITY SECURITY AIDE. PART III DISCUSSES THE INTER-RELATIONSHIP BETWEEN THE HOUSING AUTHORITY, MUNICIPAL POLICE, AND THE COMMUNITY. (RG)

ACKNOWLEDGEMENTS

We would like to acknowledge the cooperation we received from a number of persons involved in developing this document.

From Shaw University, Mr. Robert Powell and Mr. Fred Jones.

From the United States Department of Housing and Urban Development, Dr. Morton Leeds, Mr. Phillip Stillman and Mr. Harold Caden. Their patience and editorial assistance were invaluable to the completion of the final product.

To our clerical staff, Mrs. Theresa Perretta, Mrs. Mildred C. Barbour, and Mrs. Queenye James, special thanks for your persistent efforts in the face of deadlines.

Special thanks to:

Mr. Leo J. Gulinello, Boston Housing Authority, Boston, Massachusetts
Mr. Boston Daniels, Kansas City Housing Authority, Kansas City, Missouri
Dr. Don Engle, Center for the Administration of Justice, Temple University, Philadelphia, Pennsylvania
Dr. Gordon Misner, University of Missouri, St. Louis, Missouri
Mr. L.A. Dougherty, Executive Director, Kansas City Housing Authority, Kansas City, Missouri
Dr. Oscar Newman, Institute of Planning and Housing, New York, New York
Mr. John Carman, Carman and Associates, Cleveland, Ohio
Mr. James Reaves, Philadelphia Housing Authority Security Department, Philadelphia, Pennsylvania
Mr. Paul Estaver, Law Enforcement Assistance Agency, Washington, D.C.
Philadelphia Police Department

To Mr. Alan J. Zuckerman, our former project director, and Mrs. Marie E. Adams, National Urban League Development Foundation, Washington, D.C. many thanks for your conceptualizations.

To the rest of the staff at the Center for Social Policy and Community Development for their ideas.

The ideas presented in this document are the results of many collaborations with persons involved in some aspect of security in public housing. However, the authors of this document maintain total responsibility for the ideas presented herein.

Seymour J. Rosenthal, Director
Archibald Allen, III, Project Director
Pleasant L. Hailey, Jr., Curriculum Specialist

	A discussion of the importance of the relationship between the local housing authority security force and municipal police force and problems that arise out of such relationships.	
VII	SUMMARY	67

INTRODUCTION

Background

This document has been prepared for Shaw University by the Center for Social Policy and Community Development under contract with the United States Department of Housing and Urban Development. It is a continuation of our work with para-professional training in public housing as expressed in "Curricula and Training Techniques for the Training of Para-professional Employees of Public Housing Authorities" (referred to as "master document").

Process Statement

This document was prepared at the request of HUD in response to the increasing crime rate and lack of security in local housing authorities. The basic principles upon which it is based were derived from interviews with prominent individuals in the field of public housing security, local housing authority administrative personnel and municipal police personnel. From these interviews, job responsibilities were enumerated and the job descriptions were developed. Training needs were defined, (see "training needs" at the end of each job description). These training needs became the basis for content areas found in the curricula.

Purpose of This Document

The purpose of this document is four-fold:

1. to recognize the importance of resident groups in assisting local housing authorities to offer better services to residents in public housing given the limits of the local housing authority's financial status

2. to prepare residents to become better citizens in public housing and to prepare para-professionals to do their jobs more effectively

3. to create para-professional jobs which offer career opportunities

4. to increase the sense of community among the public housing residents such that a safer and more "secure" environment is created.

This document is specifically focused on these needs in terms of security issues. We have defined "security" in such a way that community involvement, citizenship in the community and community allegiance are essential elements in the establishment of a security system in public housing.

This document with its emphasis on in-house training designs, provides the local housing authority with a training and career ladder development competence that will not have to be otherwise commissioned or contracted. This decreases the cost of training within a local housing authority and more adequately defines training as a vehicle to be utilized for the development of employees who will perform their jobs better.

Overview

There are 4 (four) basic assumptions necessary to understanding the framework within which these curricula were developed:

1. Principle of Resident Involvement

   Underlying the notion of para-professional training in public housing is the realization that residents of local housing authorities can creatively assist in resolving problems of their community.

2. The Nature of Resident Involvement

   A way to improve the economic and social conditions of local housing authority residents is through offering career opportunities. It must be emphasized that we use the term "career opportunity" rather than "job opportunity". This is consistent with the belief that the creation of job opportunities for para-professional employees is not enough. There must be a program designed which offers a prospective para-professional employee a career opportunity--a chance to learn and grow. Most importantly, however,

is the para-professional's opportunity to achieve personal and family stability through creative work.

Housing authorities should provide career opportunities for their residents. This program (and the program found in the "master document") provides a basis for that kind of opportunity to residents of local housing authorities. Personal motivation is a built-in, integral component of the system. It offers a person alternative courses of action such that he might recognize the "American Dream" of "starting at the bottom and rising through the ranks to the top".

3. Conditions of Resident Involvement: Learning Theory

The assumption here is that people must learn in order to perform their jobs adequately. They must learn how to make connections between knowledge acquired from their experience and other types of formal learning situations. Our theory of learning states that people learn best 1) by discovery and 2) in task-oriented, experience connected situations. This suggests that the best learning environment in most instances is the on-the-job scene. Thus our emphasis is placed heavily on in-service skill training. The premise is that a person must be given ample opportunities to make connections between his on-the-job performance and the related, simultaneous training. This leads us to a series of other assumptions which must be translated into operational activities:

a. There must be a complementary relationship between the training session and work-day procedures.

b. On-the-job supervisors of trainees must have substantial in-put into the training process.

c. Training becomes an "in-house" function (as much as possible according to the nature of the content of the proposed training program) involving all agency employees who share their knowledge at an appropriate point in the training process.

4. Connecting with Outside Educational Resources

The final assumption is that training within a local housing authority has implications for career opportunities outside of the local housing authority system as well as within it. This implies a training program design which will make the necessary connections with existing outside educational resources. It also implies that the local housing authority training program should look to develop an outside educational resource when an adequate one is not in existence.

For example: A resident might begin employment as a resident security aide and via merit promotion, become a security officer or member of the administrative staff of the local housing authority security division. He might then become interested in other aspects of law, such as corrections. He may be given credit for the kind of training he received for his present job and enter another kind of training program designed specifically for the aspect of law in which he is interested, or he may be accepted in a program similar to the "University Without Walls" where he might obtain the necessary academic background and/or degree to become accredited in his "new" field of endeavor. In this manner an aspirant's potential will not be limited to the confines of a single project or local housing authority.

CHAPTER I

SECURITY DEFINED

SECURITY DEFINED

In this document we discuss concepts and methods of developing 1) security systems in public housing which will employ para-professionals and 2) related training programs for these para-professional personnel. We have discussed the importance of the utilization of para-professional personnel (especially housing residents) in this system. The foundation of this system must be a clear understanding of what is meant by security. Out of this definition must come an understanding of the issues involved so that essential organizational components of the security system become defined. Then, must come the necessary components of the related training program. By this process we can be relatively certain that the end product will reflect an adequate problem-solving response to the issues addressed in the definition.

Traditionally the connotation of the word "security" has been "insecurity". That is, a person addressing himself to security concerns generally means criminal concerns. He wants to deal with a more effective way of deterring criminal acts. However, this is not the total concern of security, and a system built on this foundation cannot be a total system.

Security involves more than planning for and developing a system whereby perpetrators of criminal acts are apprehended. This involves planning and developing systems which will speak to 1) the right to be free from criminal victimization and 2) the psychological needs of people to feel secure.

We define criminal victimization as the actual perpetration of criminal acts against person or property. It can be analyzed, evaluated and documented by some systematic or objective methodology i.e., burglaries, murders, assaults and rapes are quantifiable.

We define the psychological needs of people to be secure as "the state or feeling of being free from fear, etc.; safety or a sense of safety". Though this is more difficult to quantify, it is nevertheless as much a reality

as the quantifiable aspects of security (criminal acts, etc.) and must be dealt with extensively as an integral part of any security system that might be developed.

This represents our two-track approach to the development of a total security system:

1. To deter criminal victimization, the system must include effective police personnel and techniques. To this end we have developed the "A" track of the security system, (see chart next page). One track of the security system is developed with major emphasis on the development of skills in using the most modern and effective police techniques available.

2. To develop a system that will achieve the goal of creating and maintaining a sense of safety, there must be included widespread community involvement, community planning and program development. We have developed, then, a "B" track in the system--one which places major emphasis on dealing with groups and individuals around program planning and development to meet the needs that may arise out of a "security" context. The basis for this assumption is relatively simple:

   a. impersonalization breeds complacency and subsequently an environment where crimes against both person and property can flourish.

   b. familiarization breeds a sense of belonging, commitment and, subsequently a decrease in environments susceptible to criminal activity.

If more people in the community become involved in activities in the community, citizenship in the community becomes more easily defined. Strangers become more susceptible to question and observation.

Another important aspect of "security" in local housing authority communities is physical planning. The connection between physical planning and security concerns is a relatively new endeavor. Although that concern is not within the scope of this document, we suggest that local housing authorities currently in the planning stages for security systems either in existing or new facilities include this consideration. However, accommodations have not been made in this document for this aspect of security.

NOTE: For further explanation of this chart, see Chapter VI: "Local Housing Authority Security Department Career Ladder".

CHAPTER II

LOCAL HOUSING AUTHORITIES ORGANIZATIONAL STRUCTURES: TWO PATTERNS FOR SECURITY SYSTEMS IN PUBLIC HOUSING

LOCAL HOUSING AUTHORITIES ORGANIZATIONAL STRUCTURES

It is important to understand the organizational structure the local housing authority prior to planning a security system.

1. Internal relationship

   Each division of the local housing authority has an impact on the functions of other divisions. This requires a clear understanding of the following issues:

   a. the locus for decision-making

   b. the actual impact of one specific unit upon another

   c. clearly defined supervisory lines

   d. development of support for security concerns.

2. External relationship

   The problem that is addressed here is how housing authority personnel will relate to agencies outside of the housing authority and how that is impacted by the nature of the housing authority organizational structure. This becomes critical, in terms of security concerns, when decisions are made regarding what employees in the housing authority will be responsible for relating to outside organizations (as the municipal police, social agencies, or community groups) around concerns of security.

There are basically two kinds of organizational structures that might be found in a housing authority:

1. Administrative structure (see Organizational Chart I)

   This structure is based on administrative priorities, i.e., according to the housing authority, project management is the basic administrative unit. Many local housing authorities define all operational activities as a function of the project manager. In terms of organizational structure, management becomes primary and

all other related functions become subordinate to it by being a part of it. As can easily be seen, problems of supervisory responsibility and professional loyalty are inherent in this kind of a structure. When security department personnel are directly responsible to a project manager (as in Chart I) it is possible that a role conflict* might arise--the project manager will be interpreting issues and problems from his managerial perspective rather than security's perspective.

There is the related problem of allegiance. If the security department personnel is directly supervised by the project manager then it is clear that allegiance to the administrative structure (project manager) rather than one's own field of endeavor (security department personnel) will take priority. This is not an insurmountable problem but it does point to the necessity to have as many people in the local housing authority involved in the training process such that clear understanding of different perspectives on specific issues may be made.

Another problem should become evident with this kind of structure: that is adequately dealing with external systems with respect to security issues. Here we should be able to see the possibility of outside agencies dealing with the housing authority around these concerns and not ever having to relate directly to someone employed in the security department. It should not be difficult to see how this can be problematic to the development of an effective security program.

---

* We are not suggesting that this should not exist. We merely suggest that these issues be considered in terms of developing priorities for a training program.

ORGANIZATIONAL CHART I - ADMINISTRATIVE STRUCTURE

2. Functional structure (see Organizational Chart II)

This is an organizational structure of independent sub-systems based on the function that they perform. Each sub-system is organizationally equal. Here the problem of professional loyalty is not alleviated, but redefined. The problem inherent with this structure is of another nature. In the preceding case there was the possibility of role conflict, there was at least administrative integrity at the project level. With this structure, however, that is not the case. Project managers will not be given the responsibility of regulating and officiating over activities in his project though he will be held accountable for activities in the project. This can only be defined as a deterrant toward the development of a security system in this kind of local housing structure.

A plus for this structure is that external agencies would be mandated to deal with local housing authority security department personnel around issues of security.

There is another kind of problem which becomes evident with this kind of structure. In the event of disagreement between departments, the ultimate mediator or supervisor for such disagreement is the executive director. This may or may not be an idealistically sound way of getting at these kinds of problems. But one thing is certain, organizationally it is a problem in that the time constraints and other administrative responsibilities of the executive director most likely would not allow him to deal in detail with the majority of these problems.

It should be clear that we are not recommending a comprehensive organizational structure change for any housing authority. However, it is necessary that each person concerned with developing a security program understand the total housing authority organizational structure in which the security program is to be developed. In this manner problems can be anticipated and provisions for the solutions to these problems can be built into the security system.

We have identified three elements of an effective security system which remain constant throughout all models of organizational structures. They are:

1. a close working relationship with the municipal police (on whatever level the organizational structure provides)

2. a very high degree of resident involvement - from employment to volunteer services.

3. a close and effective relationship with other divisions within the local housing authority.

Without these conditions, it will be difficult for any organizational structure to implement a sound security program.

ORGANIZATIONAL CHART II - FUNCTIONAL STRUCTURE

23

CHAPTER III

LOCAL HOUSING AUTHORITY

SECURITY DEPARTMENT

CAREER LADDER

LOCAL HOUSING AUTHORITY SECURITY DEPARTMENT
CAREER LADDER

The career ladder concept is valuable in developing a security system composed of para-professional personnel. Every attempt must be made to avoid the traditional error of creating "dead-end jobs" for para-professionals. The following career ladder chart represents a way of structuring a security system which addresses the security needs of local housing authorities while offering career opportunities both within and beyond the security system.*

---

* In the following explanation of the career ladder chart please note that the numbers (1 through 7) refer to and correspond with the numbered positions on the career ladder chart. This is not an organization chart (see Chapter VI). We are now beginning to look at possibilities of employing para-professionals in a system wherein they might realize a career.

CAREER LADDER CHART

NOTE: Consider title "Order Maintenance Force" as alternative to "Resident Force".

* See: Curricula and Training Techniques for Training of Para-Professional Employees of Public Housing; "The Career Ladders", prepared by the Center for Social Policy and Community Development of the School of Social Administration, Temple University for further detailed information.

Explanation: Career Ladder Chart

We are now in the beginning stages of defining job titles, job roles and job responsibilities.

1. Resident Security Aide

This is the entry level position. The duties will be equally distributed in two subject areas.

a. Program Development

This area deals with basic principles of community organization, program planning and program development. The programs will deal with security concerns. A resident security aide might be responsible for organizing a series of open-house or block (street) affairs with the major objective being that residents become aware of who their neighbors are. In this manner strangers and intruders are more easily identifiable.

b. Order Maintenance Procedures

Functionally, these responsibilities for this position will translate as a monitoring or reporting duty. The resident security aide will not be given major responsibility for investigating crime and apprehending criminals. However, the Resident Security Aide will be given basic training in these procedures. The purpose is that the Resident Security Aide maintain a comprehensive perspective of the system within which he will be working. This is not a police position. The responsibilities will be basically the same as those of any true citizen, namely to report a crime to the police, report suspicious events or situations that are suspected to be embryonic to criminal activity and assist investigating officers by giving them whatever pertinent information that they (resident security aides) may have.

It is essential that this position be held by a resident and it is recommended that he be allowed to work in his own project/development. However, this is not to be conceived of as an absolute necessity.

2. Resident Security Officer

This is the first level position which begins to have a major focus on the duties, responsibilities and procedures involved in the investigation of crime and apprehension of criminals. Program planning and development will be a part of the job description but with minor emphasis.

It may not be either feasible, or wise to mandate that this position be filled by a resident of the same development in which he lives It is suggested that the selection process here should carefully consider specific personnel, their relationship to the community and their ability to effectively relate to people in the community.

3. Community Security Aide

The major emphasis for this level position is program planning and development (around concerns of security). Very minor emphasis will be given to procedures, duties and responsibilities of criminal investigation and apprehension. It is further suggested that this position, because of its focus, be an entrance into the management/social service career ladder. This is not to be understood as a necessary pre-requisite to that career ladder, but rather an alternative way of entering that system.

4. Management

It is suggested that personnel in the position of community security aide might move from there into the management career sequence developed in the master document. Point of entry in this sequence may be determined in accordance with the individual's competence, i.e. The employee will not necessarily have to enter at the "Management Aid II" level.

5. Social Service

It is suggested that personnel in the position of community security aide might move from there into the social service career sequence developed in the master document. As in the preceding paragraph, similar skills and duties will allow this. Point of entry into this sequence may be determined in accordance with the individual's competence and/or interest, i.e. the employee

will not necessarily have to enter at the "Homemaker" level.

6. Security Officer

This is the professional police officer position whose major concern is order maintenance and law enforcement. Minimal concern is maintained here for program development and planning. Supervisory responsibilities for the resident security officer may represent the extent of involvement in program planning and development.

7. Security Department Administration

These positions represent the operationalizing and policy-making body of the security system. Duties and responsibilities will include all aspects of the security system.

NOTE: See Curricula and Training Techniques for the Training of Para-Professional Employees of Public Housing Authorities: "The Career Ladders", prepared by the Center for Social Policy and Community Development of the School of Social Administration of Temple University, under contract with the U.S. Department of Housing and Urban Development, pp vii and 59.

CHAPTER IV

PUBLIC HOUSING SECURITY DEPARTMENT

ORGANIZATIONAL STRUCTURES

The preceding career ladder structure has implications for the organizational structure of the security department. Though there are many alternatives that might be presented here, we are suggesting that there are two major factors which will determine the priority of one system over the other.

The first consideration is the number of personnel hired in the security department. If an authority is large then separation of responsibilities in the security system may be possible. It means that jobs in the security department can be more specifically defined. The Security Officer would have more time to deal with techniques and procedures of "order maintenance". Community security officers would be able to utilize the majority of their time working with the community. However, if the local housing authority is small, then the different aspects of the security system would become the function of the same employee.

The second consideration regardless of staffing patterns, is the degree of emphasis placed on separating the program development and order maintenance elements of a security program. A decision, must be made with respect to how separate the resident security force should be from the "professional" (police) security force. Should security officers have supervisory and administrative (in terms of planning, evaluation and program development) responsibilities over community security aides? Or, should the relationship between the two be more functional than administrative?

We differentiate between functional and administrative relationships as follows:

1. "functional relationship" - a natural one which develops as two or more persons perform their separate but related tasks.

2. "administrative relationship" - one which is mandated by policy and involves supervisory responsibilities.

Following are representations of these two kinds of differences.

PUBLIC HOUSING SECURITY DEPARTMENT
ALTERNATIVE ORGANIZATIONAL STRUCTURES

A.

In a smaller authority it is feasible to have the entire resident security force (resident security aide, resident security officer, community security aide) coordinated and supervised by the "professional security officer--those qualified policemen certified and commissioned by state and/or municipal authorities. However, caution must be taken to insure that the security officer does not nullify the functions of the resident security force, i.e. community and program development within the community around concerns of security.

PUBLIC HOUSING SECURITY DEPARTMENT
ALTERNATIVE ORGANIZATIONAL STRUCTURES

B.

This is probably the more ideal of the two structures. The separation between police (order maintenance) functions and community functions has clearly been made. The relationship between the security officer and personnel in the resident force is functional as opposed to administrative.

This is not to suggest that these are the only structures for a security department in a local housing authority. We are suggesting, however, that regardless of the organizational structure, effective implementation requires resolution of the issues surrounding the relationship between the security officer and the resident force.

PART TWO

CHAPTER		PAGE
V	JOB DESCRIPTIONS, TRAINING NEEDS AND CURRICULA	25
.....	Resident Security Aide	26
.....	Resident Security Officer	34
.....	Security Officer	43
.....	Community Security Aide	52

Now that we have developed the possible environments for a total security system, developed the career ladder concepts for the system, developed the security department organization from the career ladder concepts while simultaneously beginning to identify job titles, roles and responsibilities, it is necessary that we become more specific with regard to actual duties and responsibilities of these jobs.

This section includes job descriptions which reflect the ideas used for career ladder development. These job descriptions may or may not respond to those which may be developed in other local housing authorities. However, it is the process of creating them which is important to comprehend.

The next step in the process is to translate responsibilities and duties into job descriptions. Once adequate job descriptions are obtained, we must identify what the para-professional brings to the job and what the job description mandates. These items become defined as training needs--what the para-professional will have to know to be able to do the job effectively.

Finally, these training needs become translated into content items for the curricula.

The following section contains job descriptions, training needs and curricula for each of the following positions:

1. Resident Security Aide

2. Resident Security Officer

3. Security Officer

4. Community Security Aide

RESIDENT SECURITY AIDE - JOB DESCRIPTION

A. Job Analysis

1. Nature of Work

   a. Assist security officer personnel and other resident security personnel in organizing residents, planning and implementing programs around concerns of security

   b. Assists in the interpretation of security programs to the residents and the identification and articulation of security concerns of residents to the security division of the local housing authority.

2. Duties to be performed

   a. To assist in identifying and articulating to the Security Department the security concerns of the residents

   b. To assist in the organization of resident groups for the support of security programs

   c. To assist in implementing community based security programs

   d. To interpret the security program(s) to the residents

   e. To make verbal and written reports to supervisors.

3. Skills required

   a. Ability to meet and get along with people

   b. Basic reading and writing skills

   c. Ability to learn program development skills

d. Ability to engender participation and interest from the residents for the security program

e. Ability to identify problems in security and recommend solutions.

f. Ability to understand the organizational structure, function and purpose of the Public Housing Authority

g. Ability to utilize resources to their maximum effectiveness.

4. Level of skill required

a. Ability to read, comprehend and write reports

b. Ability to translate security needs into programmatic plans of action and to be able to advocate those programs through written and verbal communication

c. Ability to recognize the need for local initiative and local responsibility in planning programs around security concerns as well as being able to recognize the need for close guidance and supervision; and to be able to recognize the points in time when one method should be used over the other

d. Ability to understand the organizational structure, functions and purpose of the Public Housing Authority and to be able to develop plans and programs consistent with goals of the agency.

5. Supervision

a. The resident security aide will be supervised according to the structure of the local housing authority and, subsequently, the security division of the local housing authority. (See sections on "Public Housing Security Department Alternative Organizational Structures" and "The Public Housing Authority's Organizational Structure").

B. Job Specifications

1. Attitudes

a. Respect for individual resident's rights

b. Respect for the purpose of the Public Housing Authority and interest in directly serving that purpose

c. Interest in assisting residents' organizations and groups in planning and organizing community programs to serve security needs

d. Openness to alternative solutions to problems

e. Willingness to accept supervision

f. Willingness to accept some supervisory responsibilities

g. Desire to learn new skills

h. Willingness to work afternoons and evenings

2. Experience

a. Residents of Public Housing will be given preference

b. Involvement in community organizations and programs

3. Education

Completion of the 10th grade or its equivalent

4. Health

a. Good physical condition

b. Ability to stand and walk for long periods of time.

Resident Security Aide

(Training Needs)

1. Understanding of security department policy and program
2. Understanding basic community organization skills
3. Understanding of basic program development skills
4. Understanding of report writing skills
5. Understanding of communication skills
6. Ability to identify security problems
7. Understanding of basic polic practives
8. Understanding of local housing authority organizational structure
9. Understanding resident's needs.

RESIDENT SECURITY AIDE

LHA ORIENTATION

CONTENT	KEY SECTION	METHOD	RESOURCE PERSON	OBJECTIVE
History, Philosophy and Organization of LHA	1	Lecture and Discussion	Some knowledgeable employee of the LHA(preferably of administrative staff) who is able to deliver this kind of information in a comprehensible manner.	The employee will need to know how and why the LHA has developed to the point of his entry into the system. This should assist the employee in understanding his role in the system.
The Security Force a) Philosophy and History	2	Lecture and Discussion	An employee in the LHA security division who is knowledgeable with this information and able to deliver it in a comprehensible manner.	To provide the employee with an understanding of security as a comprehensive concept which involves the total community.
b) Organization	3	Lecture, Discussion and Demonstration		To provide the employee with an understanding of his specific role and place in the security system of LHA.

THE POLICE PROFESSION

History, Philosophy and Organization of local, municipal police force	4	Lecture and Discussion	An employee of the municipal police system - preferably one involved in training - and an employee of the LHA security force.	The Resident Security Aide will need to know how and why the municipal police force has developed to this point with special emphasis on the relationship of the municipal police to the LHA security division. This should assist the employee in understanding his relationship to the police and to the LHA.

RESIDENT SECURITY AIDE

THE POLICE PROFESSION

CONTENT	KEY SECTION	METHOD	RESOURCE PERSON	OBJECTIVE
Basic skills in self defense	5	Lecture and Discussion Demonstration	An employee of the municipal police system preferably one involved in training.	To provide employee with basic skills of self-protection such that he or she might be able to move among the residents, meet with them in different places at night as well as day without trepidation. Also this will provide a beginning understanding of the responsibility connected with the use of certain "police" tactics.

WORKING WITH GROUPS

Youth and their problems	6	Lecture, Case Studies and Role Play	A social services delivery person experienced in dealing with the problems of youth.	To provide the employee with an understanding of how to identify assess and list in order of priority the problems of youth. To provide employee with understanding of how to begin moving in the direction of program planning as a method of problem resolution.
Human relations training	7	Lecture, Case Studies, role play	A social services delivery person experienced in human relations training and group dynamics.	To provide employee with a beginning understanding of how people behave and react in certain situations.
Group Dynamics	8			

RESIDENT SECURITY AIDE

WORKING WITH GROUPS

CONTENT	KEY SECTION	METHOD	RESOURCE PERSON	OBJECTIVE
Bringing People Together	9	Lecture, Case Studies, role play	An employee experienced in dealing with groups.	To provide employee with an understanding of 1)how to structure a group around program issues 2)how to be a resource person to the group such that the group can begin to make initial decisions 3)how to effectively gain the kind of respect of the group which accompanies the leadership role.
Getting a Group Functioning	10			
Leading a Meeting	11			
Developing Group Goals	12			

COMMUNICATION SKILLS

Report writing techniques	13	Lecture and Demonstration	An employee of the security division who is experienced in the record keeping techniques required of security personnel.	To provide employee with an understanding of the techniques and importance of records keeping. To provide employee with a familiarization of the forms and records used in his particular job.
Record keeping techniques	14			
Keeping community resources and technical assistance files	15			

PROGRAM DEVELOPMENT

Problem Identification	16	Lecture, Case Studies, role play	An employee experienced in working with groups with a background in program development and/or planning.	To provide employee with an understanding of the process involved in moving from the assessment of issues to the achievement of goals via program planning and development.
Planning and Goal Setting	17			
Selecting Issues around which to organize and plan	18			
Exploring Alternatives	19			
Making Decisions	20			

RESIDENT SECURITY AIDE

PROGRAM DEVELOPMENT

CONTENT	KEY SECTION	METHOD	RESOURCE PERSON	OBJECTIVE
Technical Assistance	21	Lecture, Demonstration and role play	An employee experienced in working with groups in the community and using community resources.	To provide employee with an understanding of how and when to seek technical assistance and how he might be able to utilize resources in the community in this manner.
Community Resources	22			

RESIDENT SECURITY OFFICER - JOB DESCRIPTION

A. Job Analysis

1. Nature of Work

a. To assist security officer personnel and other resident security personnel in organizing residents and planning and implementing programs around security concerns

b. To assist security officer personnel in the maintenance of order and the deterrence of criminal activity. This includes assisting in the identification and apprehension of criminals

c. To interpret security programs to the residents and identify and articulate security concerns of residents to the security division of the local housing authority.

2. Duties to be performed

a. To assist security officer personnel in patroling and police duties within the local housing authority community in accordance with regulations set by the governing bodies of the local municipal police and the local housing authority

b. To assist in the supervision of residents security aide personnel

c. To assist in the organization of residents groups for the support of the security division and its programs

d. To assist in implementing community-based security programs

e. To maintain a liaison position between the residents and the security division, interpreting each other's needs, and translating those needs into programs.

f. To assist the maintenance department by identifying maintenance problems that may be translated as security problems, e.g. inoperable locks, broken or vandalized doorways, broken or missing light bulbs in commonways, etc.

g. To make verbal and written reports to supervisors.

3. Skills required

a. Ability to meet and get along with people

b. Basic reading and writing skills

c. Ability to learn program development skills

d. Ability to identify security problems and recommend solutions

e. Ability to understand organizational structure, function and purpose of local housing authority

f. Ability to utilize resources to their maximum effectiveness

g. Ability to use authority effectively.

4. Level of skills required

a. Ability to meet minimum requirements of local and/or state authorities re: certification and/or commissioning of office

b. Ability to read, comprehend and write reports

c. Ability to translate security needs into programmatic plans of action and be able to advocate those programs through written and verbal communications.

d and e. (same as Security Officer - Job Description under this heading, see page 45)

f. Ability to understand his role as an assistant to the local housing authority security officer and how that relates to the role of the municipal police; ability to understand the limitations of that role in accordance with state, local and local housing authority regulations.

g and h. (same as Security Officer - Job Description under these headings, see page 45)

5. Supervision

a. (same as Security Officer - Job Description under this heading)

b. The resident security officer will have supervisory responsibility for the resident security aide.

B. Job Specifications

1. Attitudes

(same as section for Resident Security Aide under this heading)

2. Experience

a. Resident of public housing will be given preference

b. Minimum requirement of 1 year's experience as a resident security aide or equivalent

3 and 4. (same as resident security aide under these headings)

Resident Security Officer

(Training Needs)

1. Advanced techniques in maintenance of order, crisis orientation skills and crime prevention skills
2. Understanding of security department policy and program
3. Understanding of basic community organization skills
4. Advanced program development skills
5. Report writing skills
6. Advanced communication skills
7. Basic supervisory skills
8. Problem solving skills--identification of security problems and working toward solutions
9. Understanding of local housing authority organizational structure

RESIDENT SECURITY OFFICER

LHA ORIENTATION

CONTENT	KEY SECTION	METHOD	RESOURCE PERSON	OBJECTIVE
History, Philosophy and Organization of LHA	1	Lecture and Discussion	Some knowledgeable employee of the LHA(preferably of administrative staff) who is able to deliver this kind of information in a comprehensible manner.	The employee will need to know how and why the LHA has developed to the point of his entry into the system. This should assist the employee in understanding his role in the system.
The Security Force a) Philosophy and History	2	Lecture and Discussion	An employee in the LHA security division who is knowledgeable with this information and able to deliver it in a comprehensible manner.	To provide the employee with an understanding of security as a comprehensive concept which involves the total community.
b) Organization	3	Lecture, Discussion and Demonstration		To provide the employee with an understanding of his specific role and place in the security system of LHA.

THE POLICE PROFESSION

History, Philosophy and Organization of local, municipal police force	4	Lecture and Discussion	An employee of the municipal police system - preferably one involved in training - and an employee of the LHA security force.	To provide employee with information re: how the municipal police force has developed with special emphasis on the relationship of the municipal police to the LHA security division.
Patrol Techniques	5	Lecture, Demonstration	An employee of the municipal police system - preferably one involved in training - and an employee of the LHA security force.	To provide employee with skills necessary to perform the technical aspects of patrolling public housing development.
Baton training	6	Lecture, Demonstration	An employee of the municipal police system - preferably one involved in training - and an employee of the LHA security force.	To provide employee with understanding of the use of the 26 inch baton.

RESIDENT SECURITY OFFICER

THE POLICE PROFESSION

CONTENT	KEY SECTION	METHOD	RESOURCE PERSON	OBJECTIVE
Self-Defense	7	Lecture, Demonstration	An employee of the municipal police system - preferably one involved in training and an employee of the LHA security force.	To provide employee with spontaneous skill in the use of basic restraint holds.
Legal Training	8	Lecture, Demonstration	An employee of the municipal police system - preferably one involved in training and an employee of the LHA security force.	To provide employee with a thorough understanding of his legal limitations, right of arrest and use of force that they possess as an employee in this security system.
Family Crisis Intervention	9	Lecture, Case Studies, role play, demonstration	An employee of the municipal police force or an employee of the LHA security force and a social worker.	To provide employee with skills in dealing with crisis type situations particularly in a family situation. Major emphasis here is placed on being able to simultaneously decrease violence and assist those involved in the crisis in dealing with their own problems.
Administration of Justice Systems	10	Lecture, Case studies	A member of municipal police training team and/or an employee in the administration of justice system (as a lawyer, court clerk, judge etc.)	To provide employee with a thorough understanding of the operations of the administrstion of justice system in his city or town.

RESIDENT SECURITY OFFICER

WORKING WITH GROUPS

CONTENT	KEY SECTION	METHOD	RESOURCE PERSON	OBJECTIVE
Human Relations Training	11	Lecture, Case Studies, role play	A social services delivery person experienced in human relations training and group dynamics.	To provide employee with understanding of how people react and behave in certain situations with specific emphasis on group interaction.
Group Dynamics	12			
Youth and their Problems	13	Lecture, Case Studies, role play	A social services delivery person experienced in dealing with the problems of youth.	To provide employee with understanding of how to identify, assess and list in order of priority the problems of youth.
Bringing People Together	14	Lecture, Case Studies, role play	An employee experienced in dealing with groups.	To provide employee with an understanding of 1)how to structure a group around program issues. 2)how to be a resource person to the group while simultaneously developing group independence. 3)how to effectively gain the kind of respect of the group which accompanies the leadership role.
Getting a Group Functioning	15			
Developing Group Goals	16			
Leading a Meeting	17			

PROGRAM DEVELOPMENT

Problem Identification	18	Lecture, Case Studies, role play	An employee experienced in working with groups with a background in program development and/or planning.	To provide employee with an understanding of the process involved in moving from the assessment of issues to the achievement of goals via program planning and development.
Planning and Goal Setting	19			
Selecting Issues Around which to Organize and Plan	20			
Exploring Alternatives	21			
Making Decisions	22			

RESIDENT SECURITY OFFICER

PROGRAM DEVELOPMENT

CONTENT	KEY SECTION	METHOD	RESOURCE PERSON	OBJECTIVE
Technical Assistance	23	Lecture, Demonstration, role play	An employee experienced in working with goups in the community and using community resources.	To provide employee with an understanding of how and when to seek technical assistance and how he might be able to utilize resources in the community in this manner.
Community Resources	24			

SUPERVISORY SKILLS

What is supervision?	25	Lecture, Case Studies, role play	An employee experienced in supervisory techniques	To provide employee with an understanding of the skills necessary to become an effective supervisor. This will deal with one to one supervision as well as supervision of group activities.
Developing a work plan for supervisors	26			
Making effective use of time	27			
Assigning roles and responsibilities clearly	28			

COMMUNICATION SKILLS

Report writing techniques	29	Lecture and Demonstration	An employee of the security division who is experienced in the record-keeping techniques required of security personnel.	To provide employee with an understanding of the techniques and importance of record-keeping. To provide employee with a familiarization of the forms and records used in his particular job.
Record Keeping techniques	30			
Keeping Community Resource and Technical Assistance files	31			
Evaluation forms and reports for supervisors.	32			

RESIDENT SECURITY OFFICER

SPECIFIC INFORMATION

CONTENT	KEY SECTION	METHOD	RESOURCE PERSON	OBJECTIVE
Identification of Maintenance problems in terms of security problems. ex.electrical system, plumbing system, physical structure of buildings, household equipment, security systems	33	Lecture and Discussion	An employee of the security division and an employee of the maintenance division of the LHA.	To provide employee with a clearly defined relationship between maintenance and security problems and issues.
Red Cross, First Aid and Heart Attack Training	34	Lecture, Demonstration, role play	An employee of some health installation experienced in first aid and heart attack training.	To provide employee with basic skills in first aid and emergency treatment skills for coronary attack.

SECURITY OFFICER - JOB DESCRIPTION

A. Job Analysis

1. Nature of Work

a. To maintain order in and around local housing authority grounds. This includes involvement in crime prevention programs as well as identifying and apprehending criminals

b. To maintain liaison responsibilities with the local municipal police (precincts)

c. To supervise personnel in the resident security force in the areas of planning, development, and organization of programs dealing with security concerns

d. To keep the executive director of the security department informed of the programs and activities of the resident and the security officer forces.

2. Duties to be performed

a. To patrol and perform all police duties for the local housing authority community within the limits set by the governing bodies of the local municipal police and the local housing authority

b. To supervise personnel in the resident security force in the areas of planning, development and organization of programs dealing with security programs

c. To organize (through the resident security force) resident groups for the support of the security division and its programs

d. To assist in implementing community based security programs

e. To maintain liaison responsibilities with the local municipal police (precincts)

f. To assist the maintenance department by identifying, during his regular tour of duty, maintenance problems that may be translated as security problems, e.g. inoperable locks, broken or vandalized doorways, broken or missing light bulbs in commonways

g. To make verbal and written reports to supervisors.

3. Skills required

a. Ability to meet minimum requirements of local and/or state authorities re: certification and/or commissioning of officers

b. Ability to meet and get along with people

c. Basic reading and writing skills

d. Ability to learn program development skills

e. Ability to identify problems in security and recommend solutions

f. Ability to understand the organization structure, function and purpose of the local housing authority

g. Ability to utilize resources to their maximum effectiveness

h. Ability to use authority effectively.

4. Level of skills required

a. Ability to meet minimum requirements of local and/or state authorities re: certification and/or commissioning of officers

b. Ability to read, comprehend and write reports

c. Ability to translate security needs into programmatic plans of action and to be able to advocate those programs through written and verbal communications

d. Ability to recognize the need for local initiative and local responsibility in planning programs around security concerns as well as being able to recognize the points in time when one method should be used over the other

e. Ability to plan security programs that will be in accordance with the limitations set by the general philosophy, purpose, function and organizational structure of the local housing authority

f. Ability to understand his role as a local housing authority security officer and how that relates to the role of the municipal police; ability to understand the limitations of that role according to state, local and local housing regulations

g. Ability to engender interest and participation from residents for the security program

h. Ability to properly, responsibly and maturely exercise the authority which accompanies this position.

5. Supervision

a. The security officer will be supervised in accordance with the organizational structure of the local housing authority and subsequently, the organizational structure of the security division of the local housing authority (see sections of "Public Housing Security Department Alternative Organizational Structures", and the "Public Housing Authority's Organizational Structure")

b. The security officer will have supervisory responsibilities for the resident security force.

B. Job Specifications

1. Attitudes

a. Respect for individual resident's rights

b. Respect for the purpose of the Public Housing

Authority and interest in directly serving that purpose

c. Interest in assisting residents' organizations and groups in planning and organizing community programs to serve security needs

d. Openness to alternative solutions to problems

e. Willingness to accept supervision

f. Willingness to accept some supervisory responsibilities

g. Desire to learn new skills

h. Willingness to work afternoons and evenings.

2. Experience

a. Residents of public housing will be given preference

b. Minimum requirement of 1 year's experience as a resident security officer or two years experience in security or law enforcement work.

3. Education

Completion of the 10th grade or its equivalent

4. Health

a. Good physical condition

b. Ability to stand and walk for long periods of time.

Security Officer

(Training Needs)

1. Completion of police academy or whatever other kind of course is required for the certification or commissioning of police officers
2. Understanding of security department policy and program
3. Understanding the relationship of this position to the municipal police
4. Understanding community organization skills
5. Working knowledge of program development skills
6. Working knowledge of communication skills
7. Working knowledge of supervisory skills
8. Working knowledge of problem solving skills--specifically, the identification of security problems and working toward solutions via program development, etc.
9. Understanding of local housing authority organizational structure.

SECURITY OFFICER

LHA ORIENTATION

CONTENT	KEY SECTION	METHOD	RESOURCE PERSON	OBJECTIVE
History, Philosophy and Organization of LHA	1	Lecture and Discussion	Some knowledgeable employee of the LHA (preferably of administrative staff) who is able to deliver this kind of information in a comprehensible manner.	The employee will need to know how and why the LHA has developed to the point of his entry into the system. This should assist the employee in understanding his role in the system.
The Security Force a) Philosophy and History	2	Lecture and Discussion	An employee in the LHA security division who is knowledgeable with this information and able to deliver it in a comprehensible manner.	To provide the employee with an understanding of security as a comprehensive concept which involves the total community.
b) Organization	3	Lecture, Discussion and Demonstration		To provide the employee with an understanding of his specific role and place in the security system of LHA.

THE POLICE PROFESSION

Police Practice This will include all aspects of techniques and procedures involved in the successful and effective performance of police duties/responsibilities.	4		The local police academy or whatever agent or agency is responsible for the training of the local municipal police force.	To provide the employee with skills necessary to adequately perform the total function and duties of a policeman.

SECURITY OFFICER

WORKING WITH GROUPS

CONTENT	KEY SECTION	METHOD	RESOURCE PERSON	OBJECTIVE

To provide employee with an understanding of the techniques and importance of record keeping. To provide employee with a familiarization of the forms and records used in his particular job.
Record Keeping techniques	24			
Keeping Community Resource and technical assistance files.	25			
Evaluation forms and reports for supervisors.	26			

SECURITY OFFICER

SPECIFIC INFORMATION

CONTENT	KEY SECTION	METHOD	RESOURCE PERSON	OBJECTIVE
Identification of Maintenance problems in terms of security problems. ex.electrical system, plumbing system, physical structure of buildings, household equipment, security systems	27	Lecture and Discussion	An employee of the security division and an employee of the maintenance division of the LHA.	To provide employee with a clearly defined relationship between maintenance and security problems and issues.
Red Cross, First Aid and Heart Attack Training	28	Lecture, Demonstration, role play	An employee of some health installation experienced in first aid and heart attack training.	To provide employee with basic skills in first aid and emergency treatment skills for coronary attack.

COMMUNITY SECURITY AIDE - JOB DESCRIPTION

A. Job Analysis

1. Nature of Work

   a. To plan and develop programs to meet the security needs of the community

   b. To organize residents around concerning security

   c. To coordinate similar efforts of other departments within the local housing authority or other social service agencies in the community with those of the security department under the supervision of the security officer.

2. Duties to be performed

   a. To organize resident groups for the support of the security division and its programs

   b. To plan and implement (along with residents) community based security programs

   c. To maintain a liaison position between the residents and the security division, interpreting each others needs, and translating those needs into programs

   d. To assist in the supervision of resident security aide personnel

   e. To coordinate similar efforts of other departments within the local housing authority or other social service agencies in the community with those of the security department

   f. To make verbal and written reports to supervisors.

3. Skills required

a. Ability to meet and get along with people

b. Basic reading and writing skills

c. Ability to learn advanced program development skills

d. Ability to learn advanced community organization skills

e. Ability to identify security problems and recommend solutions

f. Ability to understand organizational structure, function and purpose of local housing authority

g. Ability to utilize resources to their maximum effectiveness

h. Ability to use authority effectively.

4. Level of skills required

a. Ability to read, comprehend and write reports

b. Ability to engender interest and participation in residents for the security programs

c, d and e. (same as security officer - job description under these headings, see page)

f. Ability to understand the functions and purposes of other local housing authority departments and other social service agencies such that their similar efforts might be coordinated to those of the security department to lend support to it.

5. Supervision

a. The community security officer will be supervised according to the structure of the local housing authority and, subsequently, the structure of the local housing authority security department (see sections on "Public Housing

Security Department Alternative Organizational Structures" and "The Public Housing Authority's Organizational Structure")

b. The community security officer will assist in supervising activities of the resident security aide.

B. Job Specifications

1. Attitudes

(same as resident security aide - job description under this heading, see page)

2. Experience

a. Residents of public housing will be given preference

b. One year's experience as resident security aide or equivalent involvement in community organizations and programs.

3. Education

Completion of 10th grade or its equivalent

4. Health

a. Good physical condition

b. Ability to stand and walk for long periods of time.

Community Security Aide

(Training Needs)

1. Understanding of security department policy and program
2. Understanding of basic community organizational skills
3. Advanced program development skills
4. Advanced communication skills
5. Report writing skills
6. Basic supervisory skills
7. Problem solving skills--identification of security problems and working toward solutions
8. Understanding of local housing authority organizational structure

CHAPTER		PAGE
VI	INTER-RELATIONSHIP BETWEEN HOUSING AUTHORITY, MUNICIPAL POLICE AND COMMUNITY	62
VII	SUMMARY	67

CHAPTER VI

INTER-RELATIONSHIP BETWEEN HOUSING AUTHORITY, MUNICIPAL POLICE AND COMMUNITY

INTER-RELATIONSHIP BETWEEN HOUSING AUTHORITY, MUNICIPAL POLICE DEPARTMENT AND COMMUNITY

One of the primary concerns to be dealt with in the development of a security system for public housing is the relationship of the local housing authority security force to the municipal police. The following guide is a check list for action in the process of developing a para-professional security system.

1. Identify the relationship between the local housing authority security force and the municipal police in terms of organizational agreements and policies regarding police authority.

   a. Comparable arresting powers

   b. Geographic jurisdiction of both forces--Is there overlap? Is there conflict?

2. Identify the issues involved in allowing for comparability in:

   a. pre-requisites for employment

   b. salary scales

   c. training

   d. certification

The purpose of the above is to reduce duplication of services and enhance cooperation between the local housing authority security system and the municipal police and lay the basis for a para-professional system.

The following chart represents a model for the relationship of these two organizations. In the following explanation the numbers (1 through 8) refer to the numbered relationship on the chart. In the explanation the term "Resident Force" is similar to that which we have previously defined as the "B" track in the career ladder system (see Chapter V). "Security Officer Force" is used synonymously with the "A" track previously described.

INTER-RELATIONSHIP BETWEEN HOUSING AUTHORITY, MUNICIPAL POLICE DEPARTMENT AND COMMUNITY

Explanation: Inter-relationship Between Housing Authority, Municipal Police Department and Community

1. The municipal police department will have the responsibility of commissioning public housing security personnel. The credentialing process is of prime importance to the legitimation of the career ladder system. The housing authority will remain responsible for the selection and dismissal of security personnel.

2. The public housing security department will relate to the housing authority administration on matters of program and policy.

3. The local housing authority security department will relate to the training division of the municipal police on matters concerned with training security personnel. There is a degree of commonality of function and responsibility between the security force and the municipal police as well as a distinct difference. They will have to work effectively with a greater number of hidden and inaccessible common areas (lobbies, entrances, stairways, elevators, courts etc.). These differences imply the need for a degree of specialization for public housing security personnel. Therefore, it is suggested that these commonalities and differences be identified at this level such that security personnel might receive that training from the municipal police which speaks to the commonalities and, in addition, receive from other appropriate sources training which speaks to the differences.

4. The Security Officer Force will relate to the Security Department administration mainly on matters of operation (program implementation) and program development. This may be done through the project manager if the local housing authority structure mandates that security personnel be personally responsible to him.

5. The Resident Force will relate to the Security Department administration on matters of operation and program development.

6. The Security Officer Force will relate to the local precincts on matters of operation. This will generally be in terms of arrest, incarceration, criminal investigation and reporting. It is suggested here that security personnel in each housing project coordinate operational policy and procedure with its neighborhood precinct.

   a. This does not negate the possibility of a relationship between the precincts (on a city-wide basis) and the Security Department administration. Although a decentralized structure is more effective in terms of engendering better and more effective service, some degree of centralization is necessary in terms of administration and/or operation.

7. The Resident Force will relate to the Security Officer Force on matters of operation and program development.

8. The Resident Council will relate to the Housing Authority administration and the Security Department administration on matters of operation, tenant rights and tenant responsibilities. The Resident Council will also work closely with the Personnel Selection Board.

CHAPTER VII

SUMMARY

SUMMARY

There are no absolute answers for the development of a para-professional security system for all local housing authorities. One has to understand the nature of decision-making processes and administrative priorities in his local housing authority. In this manner, problems can be anticipated, resolved and integrated into the security system.

If this document is to be of help to anyone in developing an effective security program, the steps toward that end must be clearly defined. This process may be capsulized as follows:

1. Define security in accordance to the needs of your specific local housing community.

2. Assess the local housing authority environment

   a. What kind of organizational structure exists?

   b. How does the local housing authority relate to external agencies, groups etc.?

   c. What kinds of considerations must be taken before a security system is developed?

3. Develop career ladder system

   a. Develop a system that creates entry level positions for para-professionals.

4. Develop Security Department Organizational Structure

   a. Define general job responsibilities in terms of competence levels and supervisory responsibilities.

5. Develop job descriptions

   a. Define in detail job responsibilities and duties of specific job titles.

6. Define training needs

   a. Define specific areas that will need to be taught to each trainee.

7. Develop curricula

   a. Translate training needs into content areas for the curricula.

There are two steps which we have not touched upon:

1. Implementation of training

   a. It is suggested in the body of the curricula who might do some of the training, with what methods and according to which objectives. However, no schedule has been developed. It is suggested that this is a function of individual local housing authority circumstances. There are several factors to consider in this regard.

      1) Availability of time for trainee to spend in training. e.g., A large authority that is able to employ a large number of security personnel will be able to allow more time per person per week for training.

      2) Availability of trainers

      3) Availability of appropriate training space.

      4) The time of day that a specific subject is taught.

         a) It may not be advisable to bring trainees to a subject that is taught generally by lecture immediately after lunch.

2. Development of an evaluation system

   a. To assure continued effectiveness of the program an adequate evaluation tool must be developed. This may not have to be a tool adhering to the rigid principles of statistics. However, it must

reflect the responsiveness of the training program and work program toward meeting the stated objectives. Again, it is suggested that this system will be more complex in some local housing authorities than others according to their specific situations.

*U.S. GOVERNMENT PRINTING OFFICE:1976 624-397/339 1-3

ACCESSION NUMBER: VT103217

PUBLICATION DATE: 30JUN76

TITLE: A HANDBOOK FOR THE PREPARATION OF EDUCATIONAL PERSONNEL IN CAREER EDUCATION. FINAL REPORT.

PERSONAL AUTHOR: MCCORMACK, EDWARD J.; AND OTHERS

DESCRIPTOR: *CAREER EDUCATION; *PRESERVICE EDUCATION; *TEACHER EDUCATION CURRICULUM; RESOURCE GUIDES; *COURSE DESCRIPTIONS; VOCATIONAL DEVELOPMENT; MODELS; BEHAVIORAL OBJECTIVES; HIGHER EDUCATION

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 233P.

ABSTRACT: DESIGNED FOR THE UNIVERSITY LEVEL PRACTITIONER, THIS HANDBOOK IDENTIFIES AND DISCUSSES SOME BASIC ELEMENTS NEEDED TO DEVELOP A PRESERVICE CAREER EDUCATION PROGRAM FOR EDUCATIONAL PERSONNEL. BASIC CAREER DEVELOPMENT NEEDS OF SOCIETY ARE IDENTIFIED BY ABSTRACTING SOME PRINCIPLES FROM THE WRITINGS OF FOUR MAJOR CAREER DEVELOPMENT THEORISTS. THE STATUS OF CAREER DEVELOPMENT IN THE U.S. IS DISCUSSED ALONG WITH HOW CAREER EDUCATION CAN SERVE TO MEET CAREER DEVELOPMENT NEEDS. A CAREER DEVELOPMENT PROCESS MODEL IS PRESENTED FROM WHICH ARE DERIVED A CAREER DEVELOPMENT PROGRAM MODEL AND AN INTERPERSONAL CAREER FACILITATION MODEL. SUGGESTIONS ARE ALSO OFFERED FOR THE MANAGEMENT OF UNIVERSITY LEVEL CAREER EDUCATION PROGRAMS AS WELL AS FOR AN ORGANIZED SELECTION OF APPROPRIATE PRESERVICE CAREER EDUCATION GOALS AND OBJECTIVES WITH SOME REFERENCES TO COMPREHENSIVE GUIDES TO CAREER EDUCATION INSTRUCTIONAL MATERIAL. BRIEF DESCRIPTIONS OF SIX PRESERVICE CAREER EDUCATION COURSES IMPLEMENTED AT NORTHERN ILLINOIS UNIVERSITY ARE INCLUDED WITH AN OUTLINE OF THE SUBJECT MATTER, COMPETENCIES, ACTIVITIES, EVALUATION, AND REFERENCES. SAMPLE LESSON PLANS FOLLOW EACH OUTLINE. THE COURSES ARE ENTITLED: FOUNDATIONS OF CAREER EDUCATION, CAREER DEVELOPMENT THEORY, SEMINAR ON RESEARCH IN CAREERS, TEACHING FOR CAREER DEVELOPMENT IN THE ELEMENTARY SCHOOL, CAREER EDUCATION TECHNIQUES, AND ORGANIZATION AND ADMINISTRATION OF CAREER EDUCATION. A 12-PAGE BIBLIOGRAPHY COMPLETES THE HANDBOOK. (NJ)

PREFACE

We are pleased to present this Handbook for the Preparation of Educational Personnel in Career Education. The handbook contains a set of related elements designed to assist persons in higher education who are concerned with preparing educational personnel in career education.

There is a societal and state mandate for the incorporation of career education in each of today's educational institutions, including those in higher education. It is also true that the derivation and presentation of instruction in higher education is the cherished prerogative of each professor. Accordingly, we have conceived a handbook to assist professors to meet the career development needs of our society, which at the same time respects their professional judgement in particular university settings.

The content of this handbook is based partly on our experience at Northern Illinois University, and partly on prior experience in career education.

The authors assume full responsibility for the organization and presentation of this handbook, and for the positions taken herein on various matters, but of course the work is not solely our creation. The work proceeded in collaboration with many of our colleagues at Northern Illinois University.

What finally emerged as the basic career development

model was greatly assisted in process by creative dialogue with members of the Counselor Education Division at Northern Illinois University. This faculty is currently experimenting with procedures for implementing the model. Members of this faculty are: Ronald Anderson, John Axelson, Betty Bosdell, George Holden, Harry Husa, Bruce Kremer, Edward J. McCormack, Keith McDonald, Anna Miller-Tiedeman, Robert J. Nejedlo, Cornelius Patterson, Wesley Schmidt, and David V. Tiedeman. Graduate students in Counselor Education who assisted materially were Jim Jorgensen, Linda Pool, and Linda Price.

The courses developed and taught during this one-year project involved the following members of the Colleges of Business, Education, Liberal Arts and Sciences, and Professional Studies at Northern Illinois University: Richard C. Erickson, Michael A. MacDowell, Edward J. McCormack, Anna Miller-Tiedeman, Robert J. Nejedlo, David V. Tiedeman, Walter J. Wernick and Ruth Woolschlager.

The overall preservice career education program at Northern Illinois University, which so materially affected the administrative recommendations in this handbook, was developed in collaboration with the following members of the Colleges of Business, Education, Liberal Arts and Sciences, and Professional Studies at Northern Illinois University: Bruno J. D'Alonzo, Richard C. Erickson, Keith Getschman, E. Edward Harris, James E. Heald, Betty J. Johnston, Michael A. MacDowell, Edward J.

McCormack, Robert J. Nejedlo, Cornelius Patterson, Edwin L. Simpson, William D. Stark, Howard Swan, David Terry, David V. Tiedeman, James C. Warner, Walter J. Wernick, Jerome C. Winn and Ruth Woolschlager.

We express our appreciation to Mr. William E. Reynolds, Mr. Richard Hofstrand, and Ms. Peggy Pool, of the Illinois Office of Education, for administrative assistance, confidence, and genuine academic freedom concerning our work.

Our thanks to members of the Illinois University Occupational Education Coordinators Council, and particularly to Northern Illinois University's own representative, Dr. Richard Erickson, for consultation services.

We make particular mention of the management-by-objectives handbook M/BE/OH!, published by the State Department of Vocational and Technical Education, Stillwater, Oklahoma, and the handbook, Supervision in Teaching, published by the Teacher Development Program of the Church of Jesus Christ of Latter-Day Saints, as valuable resources in the conceptualization of this work.

Our gratitude to Ms. Jan Shapiro, who served as secretary throughout the project.

DeKalb, Illinois
June 30, 1976

Edward J. McCormack

CHAPTER 1

RATIONALE FOR THIS HANDBOOK

This handbook addresses the question of how to prepare educational personnel to accomplish career development in the schools. For the past few years, great effort has been put forth by school districts in the fifty states to conduct inservice training in career education. This has advanced career development in the public schools. However, the fact that most school districts have new personnel every year has naturally led to the desire for preservice training to complement inservice training. A recent national survey conducted by the American Institutes for Research clearly identified a desire for preservice preparation of educational personnel in career education.[1] States were asked to rate priorities of specific actions that might be undertaken by the federal government in support of career education. Table 1.1 summarizes the responses received.

The highest priority was given to support for the development of preservice teacher training programs. The next highest priority was to provide a unifying leadership for career education activities throughout all states. The need to support the inser-

Table 1.1

Rated Priorities of Specific Actions That Might Be Undertaken by the Federal Government

vice development of local school district staff was the third highest priority reported.

This handbook identifies and discusses some basic elements needed to create a preservice career education program on a university campus. In the aggregate, the elements mentioned constitute a sufficient number of things to permit a campus to get involved productively in career education training. Some may suggest one or more inclusions or exclusions, and that is good. We undoubtedly do need their advocacy or denial to improve our view of things, and we wish we had the benefit of it as of this writing.

This handbook is intended for university level practitioners in preservice career education. We hope that our approach will make an adequate basic statement, help university personnel implement preservice career education with relative ease in a fast-moving daily life, and leave professional personnel free to develop and enrich local curricula as their resources, interests, and opportunities permit.

In writing this handbook, we have tried to be brief, simple, direct, and clear.

We wish to be brief because we know that university personnel are extremely busy people. They are also good readers and do not require or desire elaborations beyond what is needed

to get the job done. We wish to cooperate with this reality by offering concise statements of our basic understandings and suggested procedures.

We wish to be simple because simplification of complexity effectively guides practice, when such simplicity remains true to the complexity it embodies.

We wish to speak directly to the core of what is wanted to do preservice career education and to be free of lengthy persuasions, obvious qualifications, and side issues.

We wish also to be clear so that our basic concepts and specific suggestions will be immediately obvious.

If we can be brief, simple, direct, and clear, and also make a useful statement on conditions necessary to do preservice career education on university campuses similar to ours, we shall be pleased with this first edition.

In addition to the above criteria concerning this handbook, the following comments concerning the transportability of our work are appropriate. We think all recognize, with us, that diversity in offerings, organization, and personnel will make creative work a necessity on each campus where this handbook might be read. No finished instructional pattern is transportable from any one of our associated universities to any other one for use intact. Therefore, we are not

attempting to send "the" instructional system to our associated campuses. Our effort is to help capacitate those creative individuals who may undertake the development of preservice preparation in career education on their respective campuses. Accordingly our stance is not to send a completed instructional system, but to specify and discuss elements of such a system which contributors here at Northern Illinois University believe are necessary for developing and implementing a preservice preparation program in career education.

Though we include a Resources section, it is not our purpose to redo the many fine pieces of work done and being done in many states and universities in and out of Illinois on objectives and materials in career education. Our central purpose rather, is to create a working handbook to guide the organization of existing resources, including instructional objectives and materials, into a preservice preparation program in career education.

We hope that people on other campuses will find our handbook useful as a reference in their own work of finding, creating, and arranging elements locally for the purpose of creating a preservice preparation program in career education.

Career Development Needs in Our Society

Donald E. Super

Donald Super, a professor in Counseling and Guidance at Teacher's College, Columbia University, formulated ten propositions to organize his thinking about career development. The propositions are reproduced here for ease of reference.

Super's Ten Propositions on Vocational Development

1. People differ in their abilities, interests and personalities.

2. They are qualified, by virtue of these characteristics, each for a number of occupations.

3. Each of these occupations requires a characteristic pattern of abilities, interests, and personality traits, with tolerances wide enough, however, to allow both some variety of occupations for each individual and some variety of individuals in each occupation.

4. Vocational preferences and competencies, the situations in which people live and work and hence their self-concepts, change with time and experience (although self-concepts are generally fairly stable from late adolescence until late maturity), making choice and adjustment a continuous process.

5. This process may be summed up in a series of life stages characterized as those of growth, exploration, establishment, maintenance, and decline, and these stages may in turn be subdivided into the fantasy, tentative, and realistic phases of the establishment stage.

6. The nature of the career pattern (that is, the occupational level attained and the sequence, frequency, and duration of trial and stable jobs) is determined by the individual's parental socio-economic level, mental ability, and personality characteristics, and by the opportunities to which he is exposed.

7. Development through the life stages can be guided, partly by facilitating the process of maturation of abilities and interests and partly by aiding in reality testing and in the development of the self-concept.

8. The process of vocational development is essentially that of developing and implementing a self-concept. It is a compromise process in which the self-concept is a product of the interaction of inherited aptitudes, neural and endocrine make-up, opportunity to play various roles, and evaluations of the extent to which the results of role playing meet with the approval of superiors and fellows.

9. The process of a compromise between individual and social factors, between self-concept and reality, is one of role playing, whether the role is played in fantasy, in the counseling interview, or in real life activities such as school classes, clubs, part-time work, and entry jobs.

10. Work satisfactions and life satisfactions depend upon the extent to which the individual finds adequate outlets for his abilities, interests, personality traits, and values; they depend upon his establishment in a type of work, a work situation, and a way of life in which he can play the kind of role which his growth and exploratory experiences have led him to consider congenial and appropriate.[1]

---

[1]Donald E. Super, "A Theory of Vocational Development," American Psychologist 8 (1953): pp. 189-190.

Propositions one, two, and three, for the most part, affirm the necessity of taking the psychology of individual differences into account when thinking about career development.

The psychology of self-concepts is introduced in proposition four and related to developmental psychology in proposition five.

Proposition six draws attention to factors with which the psychological self interacts. Commonly, we organize these factors under "heredity and environment." Under heredity, we include things such as aptitudes, neural and endocrine makeup, and mental ability. For our purposes in this disucssion, we shall include these inherited, biological factors within the concept of self, along with psychological factors, and continue on to the environment. Under environment, factors such as parental socio-economic level, the opportunities to play various roles to which the person is exposed, flux in the socio-economic system, approval of supervisors and peers, and characteristics of occupations are mentioned. The environmental factors listed here are often collectively referred to as "the socio-economic system." Therefore, we may abstract two broad considerations from these first six propositions--self and system.

All of the other considerations in the ten propositions pertain to the integration of self and system, for the mutual

satisfaction of both self and the system. Reference is made in propositions four, six, seven, and eight to the fact that the system plays a variety of roles in shaping career. Reference is made in propositions four, five, and ten, in particular, to the fact that choice is operating in the self in shaping one's career. Finally, propositions eight, nine, and ten are especially explicit about the "compromise" between the self and the system that is and becomes a career. That is, the self meets the system in a position held by the self. And, the position to be held by the self, and the role(s) to be played by the self in the position held, are both matters of "compromise" between the self and the system or the self and society.

So the main considerations in career development are self, system, and compromise in a position/role. For complete information on Super's work, we refer the reader to the Super reference in the attached bibliography.

John L. Holland

Another popular line of thought in career development concerns the possibility of there being types of people and types of work environments. Happiness, here, is the reasonably good fit of a person with a certain personality type to a congruent work environment. John Holland, for example, postulates six personality types among people, and six corresponding types of work environments.

The types of personalities and corresponding work environments postulated by Holland are as follows: realistic, investigative, social, conventional, enterprising and artistic.[2]

The point of commonality within types is that people of the same type are thought to prefer similar types of work activities by which to meet the career needs common to all of us: income, recognition, personal growth, service, etc. If this be so then it follows that people of similar type will come together to create, and work in, environments where their preferred activities can be engaged in, and where people of similar type can associate together. This process, it is postulated, creates work environment types corresponding to the six personality types.

The drama in the line of thought, once again, is in its implications for the problem of integrating the self and system, to the satisfaction of both the self and the system. For example, one way to use John Holland's line of thought to look at self-system integration is shown in figure 2.1. The points we wish to emphasize in conceiving figure 2.1 are:

1. The self meets the system in a role setting.

2. The work setting itself, and the role(s) carried out by the self in that setting, are creations of both the self and the system.

3. The career setting and the role(s) played by the self

Figure 2.1

A Self-System Interpretation of Holland's Theory of Vocational Choice

in that setting are the result of compromises between the needs of the self and the needs of the system to the extent that the role expectations of the self and system are not exactly congruent.

The broad assumptions again are that there are six types of personality based on types of coping styles, and that there are six types of career environments created by people of these six personality types. A high integration of self and system, to the satisfaction of both, occurs when congruent matching of personality and environment is achieved.

In practice the six types are used as "ideal types," not assertions that reality fits the types precisely. Also, allowance is made for a given person displaying more than one of the dominant types of coping patterns in career. However, our purpose here is not to explicate the theory elaborately, but simply to show that it is concerned with self and system, and self-system integration. For further information on the theory we refer the reader to the Holland references in the attached bibliography.

David V. Tiedeman and Robert P. O'Hara

A third line of thought about career development, developed by Tiedeman and O'Hara, draws on systems thinking and social-psychological concepts concerning ego-identity formation.[3]

---

[3]David V. Tiedeman and Robert P. O'Hara, Career Development: Choice and Adjustment (Princeton: College Entrance Examination Board, 1963), passim.

Ego identities are thought to evolve from psycho-social (or self-system) interactions. Career development, or the formation of one's career identity, occurs in those psycho-social interactions that are experienced in one's vocational life.

Two complementary psycho-social processes are thought to contribute heavily to ego-identity formation--differentiation and integration. These concepts are related to systems thinking and can be briefly conceptualized as follows.

1. A system may be conceived of as two or more parts constituting a whole, by virtue of some functional relationship between those parts.

2. The parts of a system may be in a state of dynamic equilibrium one with another. This may be referred to as an "integrated" state.

3. Should the parts of the system lose their state of dynamic equilibrium and enter into a more "fluid" state; i. e., when, for the present, the parts are no longer standing in functional relationships one to another, the system may be referred to as "differentiated."

4. If persons are seen as parts of a social system with their functional relationships one to another defined by positions and roles, then it can be said that as career roles change people are simultaneously differentiating and integrating, depending on which system involved you have reference to. For example, the typical public school student is differentiated from the high

school social system at the end of the twelfth public school year and is integrated into some other social system. The drop-out may be viewed as prematurely differentiated from high school and possibly as not well integrated with a post high school system as a result. As such differentiations and integrations occur, the career-related ego-identity is formed, which is the essence of career development for Tiedeman and O'Hara. Once again we see that the universe of discourse revolves around the timeless question of self-system integration. How can the self and system be integrated to the satisfaction of both?

The complete line of thought details the decision-making processes that are thought to accompany social differentiation and integration, but that line is beyond the purpose of this discussion. For these elaborations we refer the reader to the Tiedeman and O'Hara references in the attached bibliography.

The brief synopses of only three lines of thinking about career development are included here to introduce "the need for career education" at its most fundamental level.

Having abstracted the elements of self, system, and integration of the two from the career development thinking of Super, Holland, Tiedeman and O'Hara and their associates, we see that they are engaged in a dialogue revolving around one basic question. How can we integrate self and system to the satisfaction of both?

Precisely speaking then, we do not "need" career education.

What we need, like all societies, is a harmonious and fertile integration of self and system. Career education is part of this society's attempt to meet its need for self-system integration.

The Career Development Scene in America

Having identified the basic career development problem all societies have in common, it remains to ask, "How is this country doing in self-system integration? Is our need for such integration being adequately met, or not?" We attempt a concise answer to these assessment questions by including some recent commentary by informed observers.

Robert L. Darcy and Phillip E. Powell

> Technological advance and automation provide a dramatic illustration of what is happening to jobs in a changing economy. It is estimated that every year some 2 million jobs are affected by technological change. During the 1970's, more than 20 million jobs will be either altered or eliminated by technology.[4]
>
> The fact is that not even a panel of vocational education experts set up by the President of the United States a few years ago could determine what skill training people should have so they could be usefully employed 10 years hence. The nation has reached a point in its economic life where it is not possible to tell whether a given form of training will be adequate for a man or a woman as much as 10 years in the future.[5]
>
> Young people entering the manpower market in the 1970's can expect to have 6 or more different jobs during their productive lifetimes.[6]

[6]ibid., p. 327.

The National Advisory Council for Career Education

The following are excerpts from the first formal report of the National Advisory Council for Career Education.

Public Attitudes and Career Education

Gallup Polls and National Institute of Education (NIE) surveys have repeatedly demonstrated that Americans value education primarily as preparation for work, better jobs and economic success. A 1972 Gallup Poll, for example, concluded that Americans are practical people 'who firmly believe that education is the royal road to success in life.' When asked why they wanted their children to get an education, 44 percent replied 'to get better jobs;' 38 percent answered 'to make more money, achieve financial success.' A 1973 Gallup Poll asked 'Should Public Schools give more emphasis to a study of trades, professions, and businesses to help students decide on their careers?' The responses were:

Yes, more emphasis	90%
No	7%
No opinion	3%

A 1973 study for the NIE found 'a strong and consistent preference for job skills above all other outcomes' of a high school education. Virtually all subgroups of the population agreed on the primary importance of job skills. What makes this evidence even more compelling is that these polls were taken before the decline in the economy became most apparent. A recent Department of Labor study indicated that of 55,000 students graduating with Bachelor's degrees in psychology next spring, only 4,500 will find jobs related to their field. The uncertainty of the economy and the worsened employment picture suggest that such factors will increase public support for career education.[7]

Conditions Calling for Educational Reform

The criticism currently leveled against American education for failing to prepare students for the world of work are identified in the Office of Education policy statement on career education.

1. Too many persons leaving our educational system are deficient in the basic academic skills required for adaptability in today's rapidly changing society.

2. Too many students fail to see meaningful relationships between what they are being asked to learn in school and what they will do when they leave the educational system. This is true of both those who remain to graduate and those who drop out of the educational system.

3. American education, as currently structured, best meets the educational needs of that minority of persons who will someday become college graduates. It fails to place equal emphasis on meeting the educational needs of that vast majority of students who will never be college graduates.

4. American education has not kept pace with the rapidity of change in the postindustrial occupational society. As a result, when worker qualifications are compared with job requirements, we find overeducated and undereducated workers present in large numbers. Both the boredom of the overeducated worker and the frustration of the undereducated worker have contributed to growing worker alienation in the total occupational society.

5. Too many persons leave our educational system at both the secondary and collegiate levels unequipped with the vocational skills, the self-understanding and career decisionmaking skills, or the work attitudes that are essential for making a successful transition from school to work.

6. The growing need for and presence of women in the work force has not been reflected adequately in either the educational or the career options typically pictured for girls enrolled in our educational system.

7. The growing needs for continuing and recurrent education of adults are not being met adequately by our current systems of public education.

8. Insufficient attention has been given to learning opportunities which exist outside the structure of formal education and are increasingly needed by both young and adults in our society.

9. The general public, including parents and the business-industry-labor community, has not been given an adequate role in formulation of educational policy.

10. American education, as currently structured, does not adequately meet the needs of minority or economically disadvantaged persons in our society.

11. Post high school education has given insufficient emphasis to occupational educational programs in harmony with academic programs.

Each of these criticisms centers on the relationship between education and future employment opportunities of individuals.[8]

The National Advisory Council on Vocational Education

The following are excerpts from the national policy on career education which was adopted in September 1974 by the National Advisory Council on Vocational Education.

A National Policy on Career Education

Three years ago, the Commissioner of Education made a courageous appeal for a new sense of purpose in American education. He proposed that we reorder our whole education effort around the new concept which he chose to call 'career education.'

His call triggered a quiet revolution in American education. The Commissioner said:

> Education's most serious failing is its self-induced voluntary fragmentation. The strong tendency of education's several parts to separate from one another, to divide the enterprise against itself....
>
> I propose that the universal goal of American education, starting now, be this: that every young person completing our school program at grade twelve be ready to enter higher education or to enter useful or rewarding employment....

This appeal has been widely misconstrued by educational policy makers, and thus its far-reaching nature has been misunderstood. 'Career education' is NOT simply a new name for what we now call 'vocational education.' The Commissioner was

---

[8] ibid., pp. 17-19.

not saying that our concept of vocational education should be somewhat enlarged and the enlarged concept called 'career education.' Nor was he saying that new programs in something called 'career education' should be developed at the cost of vocational education.

He was saying something much different and much more fundamental. He was saying that the old distinctions which have crippled our educational effort should be forever laid aside and a new unity of purpose be expressed by a new universal term: 'career education.'

Right now we have a bewildering variety of designations within the educational system, but the principle ones are these:

College preparatory education
Vocational education
General education

These terms have come to suggest choices which need not be made, distinctions which have no meaning, divisions of what is really indivisible, and conflicts where none need exist.

Our thought and our practice about education should at last be integrated. The result of this integration should be called 'career education.' It would come about when American education emphasizes preparation for work as a prominent and permanent objective of the public schools. We are not appealing for 'separate but equal' attention to vocational education in the overall system. We are insisting, rather, that career education is a UNIVERSAL necessity, and requires the integration of ALL our educational resources. Moreover, the concept has been extended to include unpaid work as well as the world of paid employment. The concept has swept the country. There is hardly a state in the nation that is not experimenting with some form of career education. The Commissioner simply verbalized a nearly universal conviction: that American education has drifted away from any sensible intention, and needs--desparately--to be brought back on course. He provided a vital point of focus, and gave a thwarted movement a sense of direction and legitimacy. The consequences--by any measure--have been enormous. But not nearly enough.

There is still a deepening public discontent. Antagonism to the educational establishment is becoming epidemic.

Late last year, the Harris Organization released some updated measures of the people's confidence in the leadership of American institutions. The results were hair-raising. As recently as 1966, sixty-one percent of the people expressed 'a great deal of confidence' in education's leadership. Since then, that figure has fallen to an alarming thirty-three percent, and it is still falling.

The reasons for this headlong erosion of confidence seem

clear enough on the surface. People want something from the educational establishment that it is not now delivering. The message is unmistakable. If education is to regain the confidence of the people, it must produce results that make sense to people.

We believe that the public wants two things: one very consciously, the other more subconsciously. The public's conscious demand is a demand that education be made relevant to the world of work. What vocational educators have known for years--that America is miseducating a good number of its young people--has, at last, become an article of the conventional wisdom. But the public's subconscious demand is another matter altogether. It is a demand that education be made more relevant to the achievement of the good life.

Today, most people are aspiring to examine and experience a range of life's possibilities that has been an option to no more than a tiny handful. We have educated large numbers of people in the liberal arts, but the practical arts and the fine arts have been reserved for a few. That must now change. The education of isolated, specialized elites is a thing of the past. A new mass aristocracy is demanding preparation for participation in the larger human experience, and educators must provide it. The need, clearly, is for the prompt integration of our fractured system of education around the concept of career education. And the people know it.

Encouraged only by official rhetoric and some largely symbolic Federal action, local communities are responding to the obvious need for reform with remarkable imagination and determination. The grass roots activities in this area have overwhelmed educational policymakers at the state and federal levels as no other movement in the history of American education. They are doing it largely with vocational education money, but unfortunately, too often at the cost of vocational education's own needs.

In the last three years close to a third of all school districts in America have initiated career educational efforts. Over thirty-five state departments of education have appointed career education coordinators. At least twenty state boards of education have passed resolutions supporting career education.

Clearly, the career education movement has powerful momentum. But it has been, so far, largely a state and local movement. It has the support of a dramatically inclusive cross-section of the country: business and labor, rich and poor, black and white, urban and rural. The opposition is coming, predictably from a few educational elites. But their response is largely hysterical, and based on an irrational fear that the demand is to fire the philo-

> sophers and expand the machine shops. Other critics refuse to recognize that the diversity of definitions about career education is, in fact, a positive force that encourages a variety of responses, reflecting more accurately local needs.
>
> Still other barriers need to be overcome. Most activities in career education to date have taken place at the elementary school. Little has happened at the high school or community college or university level.
>
> What we most need now is ACTION. We have an unmistakable sense of direction. We now need a united, cohesive effort to make career education, in which all the arts of education are integrated, a universal reality, and we need it now.
>
> Frankly, we are getting tired of the endless talk of change. We are tired of all the studies that simply restate the need for change. We are getting tired of exhortations to change. We must stop talking about change and start changing. We must come to understand the processes which permit us to resist the kind of changes we know are absolutely essential. We must somehow repeal irrelevance in American education.[9]

This brief assessment of our situation, by social statistics and commentary, reveals that our country has partially succeeded in integrating its members into the whole in socially and personally satisfying ways. What remains is to expand the great integrative success story of this country to include the many other individuals yet to find socially and personally rewarding positions and roles to play in our society. This is one of our great needs in America in 1976.

Career Education: A Partial Solution

Career education is one sector's attempt to address the need in our social system for congenial self-society integration.

---

[9]National Advisory Council on Vocational Education, A National Policy in Career Education (Washington, D. C.: Government Printing Office, 1974), pp. 1-4 and p. 8.

Broadly conceived, the thrust of career education is to increase the power of individuals to live their own lives; i. e., to develop their decision-making powers, to increase their life-skills, and to facilitate the implementation of their career decisions.

Decision Making

Many people have observed that a person will decide to treat a thing the way (s)he defines it. In the case of career decision making, this means that a person will base his or her decision about a career alternative on his or her own definition of that alternative.

Before we can define any alternative so that we'll know how we want to treat it, we must develop a model of the ideal alternative. Let us pursue the example of the decision made in a house purchase. One meets with a real estate salesperson and is shown, let's say, five alternative houses. What does one do? The astute buyer has a model in mind. How so? He or she has gathered together the salient features of a "good" house. These are commonly understood to be sound construction, beauty, economy, convenient location, and the like. Also, some personal criteria have usually been added to the commonly held criteria to create a personal model of a "good" house. The buyer operates <u>from</u> the model <u>to</u> the alternative, comparing each alternative to the model while also allowing the alternatives to suggest new criteria for the model. Those alternatives that satisfy the

model are defined as "good," and treated that way, i. e., considered for purchase. Those alternatives that do not fit the model are defined as "bad" and are treated that way, i. e., they are rejected. When a given alternative satisfies most of the salient criteria of the model, and no other obvious contradictions appear, that home is purchased.

The buyer has two main problems. First she or he must identify the criteria of a "good" house so as to be able to build a model of one. Second, the buyer must get enough accurate information about a given alternative house to be able to tell whether it satisfies the criteria in the model or not. Until the buyer can accurately define the alternative by comparing it to an ideal, she or he doesn't really know what decision to make about it.

The above paradigm holds true in career decision-making, and it helps to clarify the task of the educator interested in career development. A career decision may be defined as a decision by an individual about alternative ways of integrating him or herself with the system. Again, the person must define a career alternative before he or she knows what to decide about it. And, the person must have a model to use to define the alternative(s). If each career alternative is actually some alternative integration of self and society, then two kinds of models are needed to evaluate each career alternative, models of self and models of the system. Models of the self are built from self-concepts; i. e., a model of self is a collection of concepts about one's

physical attributes, mental attributes, social attributes, and philosophical-spiritual attributes. Similarly, a model of the system is a collection of concepts about various subsystems of society, such as: the economic system, the political system, the educational system, the military system, the business and industry system, the employment system, the ecclesiastical system, the entertainment system, the transportation system, and others.

The task of the career decision-maker is two fold. First, the person must learn enough about his or her own self, and the system, to identify the criteria for a "good" career alternative for him or her to elect.

Second, he or she must get enough accurate information about a given career alternative to be able to tell whether or not it actually satisfies the criteria for a "good" career alternative.

When a decision must be made, the person will assemble whatever knowledge he or she possesses of the self and the system and develop correct or incorrect criteria for a "good" career choice. The person will use these criteria to define the available self-system integration alternatives by comparing each alternative to the criteria. Finally the person will decide about each alternative according to his or her definition of it.

A moment's reflection will bring most of us to the conclusion, we think, that very many of our citizens, at all ages, are not adequately prepared to make such informed decisions. In

fact, professional career counselors frequently meet people who are not even conscious of having this model-building and decision-making ability and who regard themselves as mere "pawns of fate," as it were. They are waiting for someone to fit them in rather than doing their part of the creative work required to integrate their selves with the system to the great satisfaction of self and system. Such participation is one of the great liberties of the self in America. And herein lies the task of career education.

Suppose one were to start on the first of the month to build a personal model of a "good" home so that a home could be purchased within the month. Many people probably would not have the capability to build and use the model within that time limit. As simple a model as that is, it takes time to build it. And it takes more time to become skilled in using it. Many people benefit by paying an appraisor to help in the process because time is short or because they themselves may forget (or not know) some of the criteria to be included. They use such models infrequently, and they may not be sufficiently skilled in getting accurate information about particular houses offered for sale to know if they satisfy the criteria of the model or not. Or they simply may not care to personally invest themselves in the model building process in a thorough enough way.

Imagine then, the compounded problem and the relative futility in trying to build and use models of self and society,

which are more complex than models of self and housing, when one is about to graduate from school or one is suddenly out of work from some turnabout in the economic system!

Very few people, even with experienced professional assistance, have the time, money, or determination to undertake such a task in a matter of months only. Such persons as do succeed at it in a short time are, in our opinion, already expereinced, well informed, and articulate. Their models of self and society are already well developed, and their previously developed models serve as the basis for further clarification and specification at times of career crisis.

Model building takes time. The process of identifying, and understanding, and selecting possible criteria to include for the purpose of self-system integration decisions must go on over quite a long period of time to be done well. Actually, functional models of self and functional models of the social system are developed over a number of years. Elements are gradually abstracted from the total reality and organized in the mind, are tested for experienced validity and reliability, and are continuously rearranged in a series of mental reconstructions of reality. All of this process naturally takes time. Therefore one broad function of career education is to facilitate, over a span of years, the model building faculties of the student's mind in regard to his or her self and the system by: (1) helping the student become conscious of his or her internal decision-making

faculties, (2) providing accurate and extensive knowledge of his or her self and of the social system for use in personal model building, and (3) giving experience in the use of models for decision-making.

A social studies example of how this can be done is as follows:

We are all familiar with the social studies assignment which requires the student to research one or more of the United States and to report on its natural resources, agriculture, economic base, population, transportation, government, etc. We know that such assignments do achieve a level of learning. Consider the possibility of teaching model building and decision making in that same assignment. Suppose that we have students work in teams. Each team is to imagine itself the board of directors of a large woolen mill which is to be moved from Lynn, Massachusetts, let us say, to some other city and state because of current labor and cost problems in Lynn. The team may select three cities from a list of possible locations provided by the teacher. The team will research those three cities and states in terms of their respective suitability as a location for this hypothetical plant. The teacher will provide data on the hypothetical plant so that the students will understand the requirements of such a facility. This will form the basis for the development of the criteria to be satisfied by an ideal location. Researching particular locations may suggest other criteria to be

satisfied. The students will research the three selected locations and recommend one of the three to locate the plant in. The team report will contain a description of the preferred location and a point-by-point justification for the decision. The two locations not selected will also be mentioned in the report, citing the advantages that did exist at these locations, and also the limitations of each that resulted in their being rejected. In order to complete such a report, it will be necessary for the student to do much of the usual research, including writing to state and city governments concerning tax structures, work force, transportation, and the like. They will also be under the necessity of building a model of an ideal location, and they will have to compare at least three alternatives to their model and make a decision. The thinking skills developed in such a process will have transfer value to career decision-making, especially if the instructor calls explicit attention to the thought processes involved and to their usefulness in personal life decision-making. University professors may illustrate vividly the differences in the two assignments compared above by having prospective educators actually do the two assignments themselves as part of a university course, to experience the two different mental patterns involved in carrying them out.

Life Skills

A second task for career education is the continued development of all the "life-skills" needed by persons to implement

their career decisions. This dimension concerns all of the coping skills developed in persons in addition to the cultivation of their decision-making abilities. We include the "three R's," public speaking, vocational skills, human relations skills, study skills, skills for obtaining favorable career placements, self-assessment and planning skills, and anything else that capacitates personally effective living. Life-skill development goes on concurrently in the school with the increase in awareness of self and system needed for effective model-building and decision-making, and with explicit training in the model building and decision-making processes themselves.

Placement and Follow-up

A third function of career education is to facilitate the implementation of the student's decision. This area of student services represents primarily the placement and follow-up functions of a school. Placement functions include information concerning location of educational and/or employment opportunities and assistance in making the transition from school to the world of work or to other subsystems in society. Any work done with the individual in terms of resumes, interviews, locating of available positions, career-related counseling, and the like as well as work done with the larger community on such things as school-to-school or school-to-work linkages are all included in placement work. Follow-up includes all activities designed to

determine how effective the career development process and the placement service have been for a given person in a given social system. Results of such follow-up studies can become the major source of feedback to a given system for continual renewal of the system in terms of its results, i. e., current satisfaction of graduates and the system with the preparation given those graduates.

Chapter Summary

A diagram summarizing this discussion is presented in figure 2.2. The K-12 time line on the left represents the public school years of model building via expanding awareness going on concurrently with the development of life-skills, including decision-making skills. This diagram can be readily adapted to apply to higher education by changing the developmental time line from K-12 to K-X. The +1 extension of a time line represents the placement and follow-up activity of a school in reference to its most recent graduates. The data feedback loops represent the management information being fed back to the school by effective follow-up studies.

Figure 2.2

A K-Adult Career Education Program Model

CHAPTER 3

A MODEL FOR THE PREPARATION OF EDUCATIONAL PERSONNEL IN CAREER EDUCATION

Definition of "Career"

The first necessary conceptual element for doing preservice career education is a working definition of "career." Throughout this handbook, we understand career as having a subjective dimension and an objective dimension. The outer or objective career is that series of positions held and roles played in the social system. The inner or subjective career is that series of life purposes and definitions of self and system which are developed and acted on during one's objective career. These two conceptions we incorporate in the one word "career." More briefly, career refers to the union of one's subjective and objective experience in self-system interaction.

Model of Career Development

The second conceptual element necessary to a preservice program in career education is for the persons involved to make a decision as to how they think careers develop in people and to specify the procedural implications of such a concept. This model, along with the definition of career, will be the basis for

all that is subsequently done to capacitate career education practice in preservice personnel.

We recommend the adoption of a career development model which reflects the phenomenon of self-system integration introduced in chapter 2 of this handbook. One such model is presented in figure 3.1. A brief commentary on the career development model suggested in figure 3.1 is as follows:

Environment

The environment consists of all persons and situations, structured or unstructured, planned or unplanned, with which the learner interacts to formulate and implement life career goals and objectives. Obviously, educational personnel, with their planned and structured environments, are only part of the total environment of the learner. The environment inlcudes the total bio-physical and socio-economic system of which the learner is part.

Personal Career Goals and Objectives

Personal career goals and objectives are formulated as the learner interacts with the environment. All environments in this regard are "educational." But the learner and society also participate together in structuring environments for the learner to interact with, in the belief that such structured interaction will result in socially and personally significant learnings.

Figure 3.1

A Basic Career Development Process Model

Career goals and objectives are arrived at in this self-system negotiation.

(Re)assessment

While remembering his or her interests, abilities, present personality, and needs, the learner assesses his or her position in terms of social system expectations and personally formulated career goals and objectives.

Plan

The learner initiates a search for ways to move from his or her present position to the desired position indicated by a personal career goal or objective and specifies and schedules steps to be taken to achieve that movement.

Effective Professional Practice

The student implements the planned steps. The student learns to sometimes act while knowledge is incomplete and to exercise the necessary attention to consequences in action that may signal the need to adjust the plan in process. Effective career action is the central concern reflected in the model. Everything in the model is to be understood in terms of the capacitation of effective action toward and in a career.

Data Report

The student reports to self and system concerning the out-

comes of actions taken in the environment to promote personal career goals and objectives, then moves into reassessment in view of goals and this report.

An Interpersonal Career Facilitation Model

Inherent in the basic career development process model shown in figure 3.1 are the elements for an interpersonal career facilitation model which further clarifies the self-system nature of career development. This model for interpersonal career facilitation is shown in figure 3.2. It is followed by commentary on the role of the student (facilitated person), the role of the faculty member (facilitating person), and the assumptions underlying the model.

Role of the Student

1. The student maintains a high degree of self-direction in his or her career by:
   a. selecting personal career goals and personal program objectives consistent with professional guidelines for students in preparation
   b. proposing some appropriate learning experiences and carrying them out
   c. taking an active role in creating curriculum content and other educational environments to interact with, in order to experience personally selected learnings

Figure 3.2

An Interpersonal
Career Facilitation Model

2. The student meets regularly, by appointment, with his or her faculty member to review program expectations and personal career goals and to (re)assess the relationship between the two.
3. In addition to scheduled meetings, the student initiates to the faculty member whenever additional helps are needed and mutual convenience can be arranged.

Role of the Faculty Member

1. The faculty member acts as a helping person throughout the learning process, playing supportive and clarifying roles to enhance the student's control over his or her learning.
   a. the faculty member orients the student to the norms and expectations of the profession in general, and of the program being pursued in particular
   b. the faculty member welcomes and facilitates the decision-making participation of the student in personal program planning and review
   c. the faculty member prepares him or herself to be perceived as a source of help to students seeking clarification of personal and social career goals and means to implement those goals
   d. the faculty member prepares him or herself to provide direct career assistance to students
2. The faculty member meets regualrly, by appointment with the student, to assist the student's review of program expectations

and personal career goals, and the student's (re)assessment of the relationship between the two.

3. In addition to scheduled meetings, the faculty member initiates to the student whenever additional helps can be offered and mutual convenience can be arranged.

The (Re)assessment Meeting

The student and faculty member act in mutually supporting ways, in all circumstances, to enhance the career development of each other, i. e., to promote positive definitions of self, and personally and socially satisfying achievements of self in system.

The faculty person and student may be involved with each other at many times and places in their respective cycles, and usually are, but it is in this scheduled (re)assessment meeting, especially, where the self meets the system (in the form of another individual playing a key reciprocal role in the system) for the purposes of deliberate and considered career decision making which takes into account the expectations of both self and system.

During this meeting, the data from previous action is reviewed, goals are clarified, orientation to the immediate social system is enhanced, plans are refined, and support for action in pursuit of personal goals is sought and offered. The meeting provides the student with the continuous orientation of self to system and system to self which is so favorable to a satisfactory and continuous integration of self with the immediate

system. Also, the university person has opportunity to facilitate the career of the prospective educator by assessing and teaching the personal skills involved in the individual career development process.

The frequency of such meetings varies with the situation, but probably should not be held any less frequently than every thirty days.

Some Assumptions of the Interpersonal Career Facilitation Model

1. Career development as it occurs in the individual is the product of the interaction of the self with environments, including society.

2. The self has legitimate needs which must be met in the career development of the individual.

3. Society has legitimate needs which must be met in the career development of the individual.

4. The responsibility for, and control of, the career development of the individual, is shared by the self and society.

5. The self and society must participate together in creating the environments the self will interact with to experience career development. There must be a positive collaboration between inner and outer career guidance. There must be a personally and socially acceptable merger, within the student, of social career goals and objectives ("The student will...") with personal career goals and objectives ("I will...").

6. Establishment of personal career goals and objectives enables the student to design his or her own life. This is possible because personal career goals and career objectives tell where he or she is now, give guidance to where he or she might be going, suggest where to search for means to reach the personally selected objectives, and give knowledge of when he or she arrives.

7. Programs of study may be unique and personally satisfying and may satisfy professional standards at the same time.

8. One's own career ("definition of self" and "self acting in system") is the core of the curriculum in education.

9. Career guidance, within and without, is to develop a consciousness of personal decision-making power, clarify activity that will fulfill personal decisions made, facilitate personally chosen action, and provide for on-going supportive (re)assessment of life goals, plans, and action.

10. The structure of career development consists of those environments created by the self and society for the individual to interact with in order to experience learning. The process of career development is the assessment, planning, acting on plan, reviewing of plan and action, and (re)assessment cycle that goes on within the person as he or she interacts with learning environments in terms of personal and social career goals and objectives.

11. "The structure of education" is the same as "the structure of career development."

12. "The process of education" is the same as "the process of career development."

13. Persons prefer and need on-going involvement of society with them in the career development process, rather than occasional or periodic monitoring by society only.

14. The essence of career development is an ever-increasing quantity and quality of effective action, along a line of endeavor chosen by the individual in self-system negotiation, resulting in self-system satisfaction.

15. A primary role of the educator is to facilitate the student's career development, as defined in assumption fourteen.

16. There is an implied responsibility of the faculty member to allow the student to experience both roles in the model. That is, the student should have opportunity, under supervision, to facilitate the career development of another person in order to become familiar with how the career development processes represented by the model occur in other people. In this way, the prospective educator will learn a model of career development, will experience being facilitated in his or her own career activity according to that model, and will experience facilitating the career development activity of others according to the model. With such a process background, the prospective educator will be better prepared to make use of the career education content material to be received in training.

17. The basic career development model assumes that the

career of a faculty member develops according to the same processes as the career of a student. Therefore, the university person can model the career development processes in the model for the preservice educator. This would involve both physically visible use of procedures indicated by the model in classroom management and personal life, and the sharing of subjective experience related to use of the model with students. One might also obtain the assistance of students with some steps in the personal process, in order to let the process be more visible to them. Specifically, the personal practices that might be modelled by the faculty for the benefit of students are:

a. model building,

b. decision making by the use of models,

c. goal setting, taking into account self and system,

d. assessment of personal situation in reference to goals set,

e. planning deliberate interaction with the system to achieve selected goals,

f. conscious acting on plan(s), by deliberate interaction with the bio-physical and/or socio-economic system to achieve selected goals,

g. reporting data to self and significant others concerning the results of action taken toward self-selected goals,

h. (re)assessment of personal situation in reference to goals, taking into account stability and/or change in self and the system since the last assessment, plan, or action taken.

A Basic Career Development Program Model

In recent years, curriculum developers have given much attention to career development in the public schools. A general concensus on the developmental nature of career in the person has emerged and has influenced curriculum models. The Illinois career education model, for example, is generally representative of the concensus. (See figure 3.3.) It acts as a guide to the overall conduct of career education in Illinois by summarizing program objectives for the different levels of the instructional systems in Illinois.

Reffering to the Illinois model, career education is recognized as a K-Adult process, and the university represents some of the options in the developmental levels beyond K-12. In contrast to K-12, comparatively little has been done, nation-wide, to formulate career education programming for the university, where we hope to accomplish preservice preparation of personnel in career education. This section, therefore, is a discussion of the implications of the proposed basic career development process model (figure 3.1) for thinking about career development at the university level.

The Process Model

The basic career development process model (figure 3.1) has been discussed earlier in this chapter. We discussed this

Figure 3.3

Career Education ILLINOIS MODEL

model at some length and discussed the interpersonal career facilitation that can occur by a joint faculty member-student use of the model in supervision (figure 3.2.)

What we wish to emphasize here is that the basic career development process model (figure 3.1) is a model for increasing powers of professional practice in career. The cyclical nature of the model suggests an ever-increasing power to act effectively in the area of one's professional practice and an ever-increasing capacity to give self-direction to one's own practice.

The general program goal at the university level then is the development of sustained, effective professional practice toward self-chosen and professionally valuable ends. The central career development role of university professors then is to facilitate effective (productive) action in their students. Their students should show an increasing power to make a difference when they act whether they act in research, administration, writing, counseling, teaching, curriculum development, or whatever their specialization(s). Individual career development in the university can be construed as movement toward professional commitment, expressed in productive professional activity. The university is a time period of increasing specialization in the career development process, a time of trading off many possibilities for progress in a few things, a time of increasing commitment to effective action along definite lines.

The Program Model

There is a basic career development program model implicit in the basic career development process model (figure 3.1.) The program implication is that since increasingly effective professional activity is synonomous with career development, then the career development program in which the person is involved must provide ever increasing opportunity for action along the lines of one's specialization. The program model implied by the basic career development process model is shown in figure 3.4.

The basic career development <u>process</u> model, with its attention to expanding practice by the individual, can only make sense in a career development <u>program</u> model which allows expanding opportunity for practice. Of course, increasing opportunities for practice means more projects, laboratories, workshops, action research, practice, internships, co-op placement, volunteer work, and the like. The exact mix of content and preprofessional practice in a given program is a matter of professional judgement, but a pattern of movement through ever-widening opportunities for preprofessional practice during the program is essential to career development at the university, as we understand it. This matter of professional practice at the university is perhaps the higher level analogue to the "hands on" injunction that obtains in the K-12 years.

It is important, we think, to comment that this program model is not a "career" model as some construe "career;" i. e.,

ENTRY	Career Development Program	EXIT	Employment
E N T R Y	Practice to Inform Practice Preprofessional Practice Content Mastery Study To Inform Practice	E X I T	Informed Professional Practice

Figure 3.4

A Basic Career Development Program Model

it is not concerned with vocational or technical programs only, as opposed to those in the social sciences or humanities. We see this as a generic model, pertaining to all fields of inquiry and activity. What we are advocating is effective practice in one's chosen line of endeavor. And, we are advocating the appropriate balance of content and practice to inform that practice. We are concerned with professional practice as much for the humanities as for the technical-scientific fields. We think it is correct to speak of "doing" philosophy and "doing" history. We think that the essence of being a playwright, poet(ess), or composer is professional practice, i. e., to write. We tend to be with those who observe the remarkable quantity of work produced by some of the effective producers of quality, and we value the quantity along with the quality. We call all of this "effective practice."

Conversely, we are concerned with content to inform practice as much for the technical-vocational fields as for the humanities-social sciences. We are not interested in sheer practice. We advocate informed practice. This line of thought does lack detail as far as describing specific fields of inquiry and practice is concerned, but the basic point is substantial, we think. We see no distinctions among fields in terms of professional practice being the desirable thing or in terms of the need for both content and preprofessional practice to inform the development of professional practice. We regret the problem with the word "career" which is created by the practice of many to denote

only vocational-technical programs as "career programs." We ask our readers to recognize our comprehensive definition of "career," pertaining to effective practice in any line of endeavor, in order to entertain our basic models for career development.

Parenthetically, this ambiguity problem illustrates that holding two or more meanings for the same word, such as "career," is a necessary part of effective professional practice for professors in preservice career education: i. e., (1) a "career program" is a vocational-technical skill preparation program, and (2) a "career program" is any program designed to enhance professional practice of any kind.

Our basic career development program model pertains to any degree or certificate-granting program. We hold that the granting of a degree or certificate to a person should be a warrant to that person and society that that person is in possession, at least, of the common understandings and professional competencies normally expected of someone with that degree or certificate. The precedent has been set in this country to sue institutions which grant degrees or certificates in the absence of these understandings and competencies. A new and overdue accountability has arrived in education. In addition to its intrinsic educational and social merits, we think that perceiving the goal of a career education program as that of capacitating effective professional practice by informing it with appropriate content and practice opportunities is also "politically" sound practice today.

The criteria for success in education should be in the form of effective practice, as evidenced by productivity in a chosen direction, with content mastery alone to be construed as only part of the preparation to act effectively, and not as effective practice by itself.

Levels of Instruction

If a career development program is such in terms of its power to inform professional practice with content and opportunity for appropriate practice, then any concept of levels of instruction must be developed in terms of levels of content and levels of opportunity for practice, for the development of specified levels of professional competence.

Using a sequence of three degrees in an imaginary field of study to illustrate, the consistent thing to do with our basic career development program model is to regard each level as a program in itself, since each is a terminal degree and functions "independently" in that respect. This can be portrayed by "stacking" the programs by levels, as in figure 3.5. The following commentary refers to program levels as portrayed in figure 3.5.

Realistic program levels are created more by reference to levels of employment in a field than by amounts of content and practice within a program. That is, in terms of placement, the concept of levels presupposes some differential staffing within

Entry	University Career Development Program Levels	Exit	Employment Levels

ENTRY	Practice to inform practice Study to inform practice	EXIT	Informed Professional Practice: Bachelor's Level

Figure 3.5

University Career Development Program Levels:
Three Sequential Terminal Degrees

a career field. If there are levels of professional practice in a given career field corresponding to the familiar B. S./B. A., Master's, and Doctor's degrees, then it is presumed that there are at least three corresponding levels of staffing in the employment pattern in that field. In this case, every effort should be made to use task analysis from actual employment settings as one of the sources for content and practice objectives which will inform the preparation of people for a given field and level of employment in that field.

Some fields do have differentiated staffing in their employment patterns, so that each level of training can and does constitute a terminal degree exiting to a specific level of professional employment practice, as in figure 3.5. Other fields are more restricted in their employment patterns. Figure 3.6 envisions an imaginary program of career preparation, also involving three degrees, but with only the doctoral level being an effective terminal degree.

We are all well acquainted with levels of instruction by content. Content is amenable, it seems, to "leveling." In fact, the common sense understanding of the bachelor's, master's, and doctoral levels is often that of levels of content, in quantity, or quality, or both. Some practice-oriented fields, such as medicine, have traditionally had leveling by practice also. Recent years have seen an effort to introduce practice levels, in addition to content levels, in all fields. This trend is con-

Figure 3.6

University Career Development Program Levels:
Three Sequential Degrees; One Effective Terminal Degree

sistent with both our career development "process" and our career development "program" models. We realize that it is sometimes more difficult to specify levels of practice to inform practice than it is to specify levels of content to inform practice, but we encourage the effort whenever it is undertaken. We think it can be done in any program to an extent that will more than justify the effort in benefits to all concerned.

Performance Objectives and Program Levels

Each level of university instruction should consist of self-selected content and practice, keyed to professional guidelines as to the level of professional practice and content mastery to be attained. There should be a blend of the student's "I will..." with the profession's "The student will...."

This suggests, of course, that there must be a statement of normative practice as well as content mastery at each level. However, to say that the preprofessional practice to be mastered at each level should be specified, as well as the content, is not to say that one should merely have a list of discrete performance objectives to add to discrete content objectives and should merely graduate a student when he or she checks off these two lists. This should be considered the minimal performance acceptable, and one would be hard pressed to justify delaying the degree in the presence of such performance, but it is not the ideal situation of itself. It is not professional

competence of itself. It only suggests the possibility of competence. We would also like to be able to determine that the individual has the power to draw upon his or her share of knowledge and repertoire of skills to inform on-going, creative professional activity. We would like to determine that the person has developed a certain sense of professional confidence in the process of informing his or her own professional practice by using the content and professional practice opportunities afforded. We would like to make some determination about productivity, in quality and quantity, resulting from informed practice. We would also like to determine that the person has achieved a state of sustained professional activity. In sum, we would like to know that our graduate has learned to practice the effective professional action processes of setting personal goals keyed to professional information, assessing situations relative to goals adopted, planning a course of action, acting on the plan, determining the results of actions taken, and reassessing the situation, all of which is portrayed in our basic career development mode. (Figure 3.1)

Chapter Summary

We suggested a working definition of the word "career," i. e., "the union of one's subjective and objective experiences in self-system interaction." We offered a basic career development process model, which represents a life design process in

which persons interact with their environment to develop themselves by assessment, planning, acting on plan, review of plan and action, and (re)assessment--and all of this in terms of personal career goals and objectives and the expectations of society. We discussed the process model both in terms of its application to an individual and in terms of its application to the interpersonal facilitation of one person's career by another person in the supervision setting.

We also presented a basic career development "program" model which we think is implied by the career development "process" model. The process model is centered in the attainment of effective professional practice. The program model, therefore, is centered in the capacitation, or informing of effective professional practice.

There is balance in the program model between preparing to act (content) and acting to prepare (preprofessional practice), such that there is substantial opportunity in the program for preprofessional practice as well as theory, to inform professional practice. This basic program model was discussed both in terms of single programs and levels of programs.

The line of thought developed in this chapter can be visually summarized by combining the basic career development process model with the basic career development program model, to show the self and the system facilitating effective professional practice on the part of the self in the system. The summarizing

diagram is presented in figure 3.7.

Once again, the central concern in figure 3.7 is "effective professional practice" on the part of the individual. The interior block of the model shows the educational program informing professional practice, while the satellite blocks in the diagram show the self informing its own professional practice. The effective professional practice finally achieved by the self in the system is the result of efforts by both the self and system to inform professional practice during the career development program of the individual.

in a Career Development Program

CHAPTER 4

SOME MANAGEMENT ELEMENTS OF A MODEL FOR THE PREPARATION OF EDUCATIONAL PERSONNEL IN CAREER EDUCATION

The Interdepartmental Operating Committee

An instructional system for the preparation of educational personnel in career education must operate across organizational lines on any campus. Therefore, we believe that an Interdepartmental Operating Committee is an essential factor in such an instructional system.

It is consistent with our basic career development process model to perceive the professional activities of an Interdepartmental Operating Committee as being part of the career development of the members of that committee. Therefore, it is possible to present and discuss the activities of an interdepartmental operating committee in terms of the management model shown in figure 4.1.

Using figure 4.1 as a guide to our recommendations in this section, there are a number of important conditions to be satisfied in the structure and function of an interdepartmental operating committee.

Figure 4.1: A Career Education Program Management Model

Structure

Administrative Authority

The university, like other situations, is a working combination of those who have knowledge authority and those who have administrative authority, sometimes, but not usually, invested in the same person at the same time.[1] Therefore, this committee should be constituted so as to blend knowledge authority and administrative authority in at least two ways.

First, the membership of the committee should include a sufficient number of persons who themselves hold resource-committing authority or who are directly sponsored by those who do. This is because frustration of knowledge workers runs high when they are indefinitely separated from enough administrative authority to implement knowledgeably authoritative conclusions. The administrative membership should concern itself with the committing of resources to the work of the knowledge workers as well as with being part of the knowledge work. Administrative workers should guide the knowledge work in terms of possible resources such as professional time for teaching and development, budgetary support for materials and supplies, space allocations, office assistance, outside funding, and the like. This requirement is particularly important if the interdepartmental operating committee is a temporary interest group and

---

[1]Peter F. Drucker, The Effective Executive (New York: Harper & Row, 1967), passim.

not a regularly constituted body on campus.

Secondly, the interdepartmental committee under discussion may emerge out of an on-campus interest group, but as soon as possible it should be formally constituted under the auspices of comprehensive campus administrative authority, thus uniting in another way the administrative authority and knowledge authority of persons interested in developing a preservice career education program. The committee should be charged by the university, at the outset, to propose a formal university program to be adopted at some level. It may be part of the work of the committee to recommend a number of such program possibilities for the university to consider.

We wish to emphasize that mere assent by administrative authority to the work of knowledge workers is necessary but not sufficient to the establishment of any new program. There must be active involvement of administrative authority with knowledge authority. We are not suggesting undue urging of career education upon either professors or administrators. In institutions valuing academic freedom, neither professors nor administrators should be under demand, even from each other, to create a preservice program of any kind. We are simply saying that if persons on a given campus do wish to create a preservice program in career education, we believe that this is one of the conditions that must be accurately assessed and satisfied. If it is not sufficiently satisfied over an indefinite period of time, it is

natural to expect frustration on the part of knowledge workers without sufficient administrative authority to act on reasonable conclusions.

Budget

This committee must have an operating budget sufficient to the scope of activity contemplated. This is self-evident. However, this is mentioned again in reference to the staffing of the committee. The committee must be able to draw, through its knowledge workers and administrators, enough committed money to carry on its functions. This money may come in the form of grants, special funds in the university, professors' time, and from the usual operating expense lines of the cooperating departments and colleges. The specific staffing suggestion is that the knowledge workers considered for committee membership are the more desirable when they have ability to draw support money to the university and from within the university to the work of the committee. The budgetary value of administrative workers on the committee has already been mentioned.

Functions

The following suggestions are made with regard to the functions of the interdepartmental operating committee. The committee should:

1. Establish goals and objectives for the university in preservice career education.

2. Assess the state of its university in reference to preservice career education goals and objectives.

3. Develop and propose plans for the promotion of preservice career education on the campus.

4. Operate the interdepartmental program in preservice career education, preferably under direct appointment by the university to do so.

5. Specify minimum content and practice competencies to be achieved by the student in the preservice career education program. Such competencies should be available for the information of students, faculty, and administration. The curriculum coordination and review functions of the committee should include the determination of where in the committee-sponsored career education offerings the particular competencies can be acquired. Some possible competencies are included in the Resources section in chapter 5 of this handbook.

6. Develop, coordinate, and review curriculum. The development of a core of courses designed to provide the nucleus of career education instructional activity, and the development of instructional packages for infusion and extension purposes should proceed under the direction of this committee. It is also a function of this committee to review these courses and modular content-offerings periodically, to insure that the expressed needs of participating on-campus and off-campus locations are being satisfied. These periodic reviews will also continuously

improve curriculum coordination among participating professors and departments

7. Coordinate materials acquisitions. As a constituted body, this committee should coordinate the accumulation of career education materials necessary for the effective conduct of a pre-service career education program. The committee should make determination of what materials are needed, locate sources of materials, locate sources of money when needed to acquire materials, select a place to house the materials, and arrange for utilization and circulation of materials as needed. Directories of materials to consider are included in the Resources section in chapter 5 of the handbook.

8. Make personnel recommendations. This committee should be in a position to identify university personnel with interest and expertise in matters related to career education. From such familiarity with university personnel, the committee can make recommendations to the administration for the staffing of courses, including appropriate team teaching and infusion arrangements. All instructional efforts actually undertaken should be coordinated by this committee.

As discussed earlier, the presence on the committee of some members holding direct or delegated administrative authority, and the appointment of the committee by comprehensive university administrative authority are essential foundations for this particular function of the committee.

The committee should also maintain a listing of campus

consultants available to off-campus interest centers, indicating their areas of expertise and consulting fees, if any. This listing may be handled directly by this committee or coordinated through a university extension and/or public service office.

9. Advise students and faculty. The Committee membership should be so constituted, and should so function, as to provide the necessary influence and guidance in the university's advisement process, to assure that courses developed, or revised, for career education purposes come to the attention of appropriate students and become part of the regular offerings of appropriate departments.

10. Select an interdepartmental operating center. The committee should select an on-campus site to serve as an operating center for the interdepartmental conduct of career education.

The Interdepartmental Operating Center for Career Education

The conduct of any activity of consequence requires a place to conduct it in and from. In the case of interdisciplinary efforts it must ideally be an interdisciplinary place. For the sake of comprehensive development of preservice training in career education, we recommend that an interdepartmental operating center be selected or developed on each campus to fill the function of a center for the conduct of preservice career education. This may be a center created expressly for that purpose or it may be a "subcenter" in an existing facility. We

presume that all campuses receiving this report will have a few options, at least, of possible locations for this purpose. We suggest that an Interdepartmental Operating Committee develop a list of possible locations and select a location from that list based on some of the criteria which are discussed in this section and some of the criteria which are developed locally. Possible locations may include libraries, media centers, learning centers, student development centers, and the like.

Criteria

The following characteristics of an operating center are considered essential, or highly desirable, for the conduct of an interdisciplinary preservice program in career education.

Administrative Space

It is highly recommended that space be allotted to the overall work of the committee and be boldly labelled as such so that the preservice career education program will have a tangible location as soon as possible. One could comment at length on the psychological and sociological significance of having specific space for a specific program. Space allocation is one measure of the status individuals and institutions give to a program. Space allocation is also one indication of the probable permanence of a given program. There is psychological and sociological value, also, in the Operating Committee being able to meet in a space designated for its functions when it desires.

Display

It is important that the committee have some place to show its wares, i. e., to show what it is doing.

Storage and Access

The Operating Committee will gradually accumulate materials and supplies from various sources, either on a permanent or loan basis. Therefore, it is advisable for the committee to have space designated to house materials, supplies, and records, and to give committee personnel a place to do administrative work in reference to these holdings.

Individualized Instruction Facilities

We recommend, if it is possible, that the operating center selected also be a "learning center." That is, that it be a place where alternative classroom space, seminar rooms, carrels, learning stations, and audio-visual workshop facilities are available for the purpose of individualizing instruction. We recommend this for at least the following reasons:

1. The diversity of enrollment in any class contemplated in an interdepartmental instructional system is so great that individualization to complement and enrich classroom instruction seems highly desirable. Professors desiring to increase exposure for students in specific fields can see that that is accomplished through the learning center, making possible a generic set of courses with individualization as needed. For example, Special

Education considerations beyond the concerns of the non-Special Education student could be handled in the Operating-Learning Center, while Special Education concerns of interest to all could be aired in the classrooms.

2. We in career education are concerned with motivation towards excellence in personal performance. We believe, with others, that variety in instructional approach can help produce and sustain this motivation. Therefore, we believe that we should be part of the effort in education to enhance instruction by individualization when possible.

3. The better learning centers also provide consultation, technical assistance, equipment, and supplies for the local development of audio-visual materials for use in instruction or projects. These services are often provided equally to faculty and students. It is worth mentioning, also, that some learning centers enjoy independent budgets with which they might assist the career education effort on campus.

For at least these reasons, we recommend that the operating center be a learning center, if possible.

Staffing

We recommend that at least one person be assigned by the interdepartmental operating committee to do the administrative-clerical work connected with the on-going activities in the career education operating center.

If the operating center selected is also a learning center, it may be that the center already has personnel to handle the work of the committee and its program. If not, the learning center may be able to obtain additional help through regular participating department budgets, along with whatever assistance is possible from the interdepartmental operating committee itself.

Activities

We recommend that the operating center functions include as many of the following activities as possible. The operating center staff and/or committee members will:

1. Encourage individualized instruction in conjunction with core class work.

2. Schedule individualized instruction conducted at the operating center.

3. Schedule professors for interdepartmental instruction in and out of the operating center.

4. Schedule the infusion of career education units of instruction into selected courses beyond the core of career education courses recommended in this handbook.

5. Advise the Interdepartmental Operating Committee and other participants of the availability of career education materials from federal, state, local, and commercial sources.

6. Obtain career education materials for preview and notify interested parties of the availability of such materials for preview.

7. Coordinate the purchasing power of diverse career related projects and of the departments involved in the interdisciplinary effort in order to build an extensive career education resource collection for the use of all participating parties.

8. Handle purchasing, cataloguing, storage, and circulation of career education materials developed and accumulated by the operating committee.

9. Maintain the materials, equipment, and supplies housed in the center.

10. Keep records of usage of modules, materials, equipment and supplies.

11. Maintain a file of university consultants in career education made available through the Interdepartmental Operating Committee and disseminate that information to the public.

12. Maintain and add to a file of resource persons available to professors and students in career education.

Curriculum Components

In figure 4.1 we pictured the interdepartmental operating committee conducting its professional career education activities through an interdepartmental operating center. The diagram summarized the curricular components as X core courses, Y extension, courses and Z infusion courses. This section of the handbook comments on these three curriculum components.

X Core Courses

Sequence

We recommend six courses to serve as the core of pre-service career education: an introductory course, a career development theory course, a counseling course, a teaching course, an administrative course, and a research course. The introductory and theory courses are background courses preparatory to the specialization of practice courses in the teaching, counseling, administration, and research of career education. All six courses are open to interdisciplinary enrollment. A complete sequence of courses would, therefore, thoroughly ground the educator in career education theory, give opportunity for specialized practice, and acquaint the student with the career education practice of those in related disciplines.

Different interdepartmental operating committees may choose to adopt a greater or smaller number of core courses. Figure 4.2 portrays our suggestions concerning a desirable sequence of six courses. An introductory class leads to an in-depth theory class, followed by professional practice courses.

Content

The Introductory Course

This course serves to introduce educational personnel to the K-Adult spectrum of career education practice today. Attention is given to personal problems encountered by individuals

Figure 4.2

Sequence of Recommended Courses for Preservice Preparation in Career Education

during transition between systems. Attention is also given to the system of linkages between major career institutions in society, particularly linkages between the various educational institutions and the institutions of the world of work. Students acquire knowledge of the classification systems pertaining to the world of work. Models of career education instructional systems adopted in Illinois and elsewhere are studied. Introductory material relative to the developmental nature of careers within persons is presented. Students become familiar with modern social, political, and economic movements toward comprehensive concern with careers in this country. Some projections of likely trends in career education are entertained. Possible careers for persons interested in career development itself are highlighted. The "cardinal tenets" of career education, both procedural and philosophical, are identified. Social statistics and projections for our social system having a bearing on thought about careers are reviewed and discussed. Primary authors and instigating figures in career education are discussed.

Direct contact, either by visit or visitor, with as many on-going programs related to career development as possible is highly recommended for this course. This could include work-study people, placement centers, student panels, employment agencies, pertinent research underway, recruiters, authors, public school career education personnel, union leaders, and so on.

Career Development Theory

The course in career development theory should foster an in-depth consideration of the best thinking on career development to date. This course should include theory concerning the interlocking sociological, psychological, political, and economic ramifications of career as well as career development theory. The developmental nature of career in the person, structural matters of importance to career in the social system, and the theory of fortuitous marriage of the self and the social system in career are recommended as the prime considerations here. One should leave this course with an informed appreciation of the personal and social task that is career development today.

This course should also provide a laboratory type experience in which all persons enrolled, regardless of professional discipline, experience a number of the basic practices of theorists in career development. The recommended activities include the identification of basic factors in career development, the study of these factors, the adoption of an organizing point of view concerning those factors, and a synthesis of those factors into an organized theoretical statement in terms of the point of view adopted.

Teaching for Career Development

This course presupposes an orientation to current K-Adult career development practices, and it presupposes an informed

appreciation of the theoretical problems connected with the integration of self and society, as dealt with in the introductory and theory courses.

This course is a laboratory type experience in which all educational personnel enrolled, regardless of professional discipline, experience a number of the basic practices of teachers in career education. The recommended course activities include fusing career development objectives with subject matter objectives, organizing field trips, locating and using resource persons, using the full school and community for teaching, conducting career-oriented teacher-parent conferences, assessing career development in the classroom, utilizing counselors, evaluating career development materials, and individualizing instruction by career interests.

Counseling for Career Development

This course presupposes an orientation to current career development practice in our society, and an orientation to the theoretical problems connected with the integration of self and system in career.

This course is a laboratory type experience in which all persons enrolled, regardless of professional discipline, experience the activities of a counselor in career development. The recommended course activities include assessing individual career interests and abilities, providing accurate career information tailored to the present needs of students, clarifying

student self-perceptions, placement and follow-up work, consulting with teachers on career guidance activities, and counseling with students on personal matters affecting their career development.

Administration for Career Development

This course presupposes an orientation to current career development practice in a society, and an orientation to the theoretical problems connected with the integration of self and system in career.

This course is a laboratory type experience in which all persons enrolled, regardless of professional discipline, experience the activities of an administrator in career development. The recommended course activities include comprehensive program planning and development, requesting grants, practicing the budgetary mechanics connected with state-appropriated monies, developing appropriate evaluations for projects undertaken, developing program cooperation among various professional services, staffing career education programs, attending school board meetings, and working with citizen advisory groups.

Research for Career Development

This course presumes an orientation to current career development practice in our society, and an orientation to the theoretical problems connected with the integration of self and system in career.

This course is a laboratory experience in which all

persons enrolled, regardless of professional discipline, experience a number of the basic practices of researchers in career development. The recommended course activities include designing local career education needs assessments, designing student career maturity assessment programs, designing on-site evaluations of career education programs, selecting commercial research instruments, evaluating career education materials, evaluating outside evaluators, and preparing research reports for local consumption.

Discussion of Core Courses

Emphasis on Professional Activity

The emphasis throughout the courses is on appropriate professional activity in each course. This is consistent with our basic career development model (figure 3.1) which presupposes that career development at the university level, especially, means an ever increasing effectiveness in professional activity.

Emphasis on Interprofessional Activity

The conduct of career education in the public school districts is clearly an interprofessional activity. It requires teachers, counselors, administrators, curriculum workers, and researchers to work together as never before. Working across professional lines during preservice preparation, to establish some concensus on the place of career in education and to become aware

of the work styles of other professionals in career development, will prepare the way for interprofessional career development activity in the districts. To the degree that the career development of students becomes a common concern among the various professions involved in the preservice preparation of educational personnel, a specific organizing point of view can be developed for more interprofessional cooperation in the school districts.

Developing Career Education Leadership

We know from experience that any educator may be drafted, in the exigency of the hour, to head up career development activity in a school building or district. The leadership role may be assumed by a teacher, a counselor, or administrator, or combinations thereof. Therefore, it is wise to prepare all educators to give career education leadership. For this reason, we wish each preservice person entering the districts to know the professional work generally, and the career development work specifically, of other professionals with whom they will interact in career education in the districts.

Perspective on Research

We wish to comment on the position of the research course in figure 4.2. It is common to position a research course as in figure 4.3, rather than as in figure 4.2. The position of research in figure 4.2 is supported by our basic career development model (figure 3.1.) The position in figure 4.3

Figure 4.3

Location of Research Course in Traditional Course Sequence

is not supported by our basic career development model.

Figure 4.3 suggests that research skills are of a higher order than teaching, counseling, and administrative skills. We think that basic research skill is part of effective professional practice for <u>any</u> certified educator, but we do <u>not</u> perceive research as a higher order skill than teaching, counseling, or administration. It deserves no place of ascendancy. It deserves no special identification with the Ph.D. degree. We place a class on the practice of research on a simple par with classes in the practice of teaching, counseling, and administration.

We do not want to require that every one of our Ph.D's be capable of effective professional practice in research at the doctoral level of competency in research. Research is only one of a number of types of effective practice that a professional educator might engage in. Some candidates elect research as their line of professional practice, but the observable facts are that the great majority do not, and that their research is often a "one-shot deal" to gain the degree for other professional purposes. Therefore, the doctoral degree should be awarded for effective professional practice at the doctoral level in whatever the person's profession--teaching, counseling, administration, curriculum, research, or whatever. That is, let the Ph.D. represent an attained level of professional practice and not a research degree, per se.

Also, we think that giving research an ascendant position

as in figure 4.3, promotes the belief that the best education is almost wholly a matter of having to know before you can act, whereas our career development models contain the view that professionals not only have to know before they can act, but they also have to act before they can really know.

In conclusion, our career development models call for putting research on a simple par with other professional skills, as in figure 4.2, and letting the Ph.D. represent, not a research degree, but an attained level of professional activity in the person's chosen profession.

Concerning "Infusion"

We have taken a particular stance with regard to "infusion" strategies. Those new to career education soon find that many career education practitioners strongly advocate "infusion," i. e., the injecting of some career education into all areas of the curriculum. As an ideal, this conceives of all professors/teachers in all disciplines including some career-related content and practice in their own work.

Career education, in this strategy, is not to be considered a subject to be taught, but a "point of view" which can be infused into all areas of the curriculum. We have no argument with using infusion as a strategy. We do however consider it practical to couple core courses with infusion. We offer the following reasons for this position.

1. Career education may not be a subject, but career development certainly is, as are economics, manpower, sociology, and other disciplines with insights important to career development. There are definite bodies of knowledge to be dealt with, suggesting the appropriateness of courses.

2. Infusion is an inductive process. Its progress toward a curriculum is a matter of accumulating uncoordinated elements for quite a long time. A history professor may adopt a unit here, a math professor there. Then, an English unit on broadcasting, and so on. This pattern is contrary to the usual expectations put upon administrators of programs, who are expected to work more deductively, i. e., to develop a plan and implement it. Also, it is a major administrative task to indentify career development activities room by room or professor by professor, to specify their outcomes, and to coordinate them into something to be called a program, taking into account course section differences, turnover in personnel, competing priorities, and many other factors.

3. The career development of educators, we have claimed, is a matter of the development of the power to act effectively in professional activity. We think that the consistent development of practice may often suggest the desirability of courses.

4. Under a pure infusion system, the student has less, not more, control of his or her own learning. Infusion leads to diffusion, which can lead to confusion. The student, in order to

educate him or herself in career development theory and practice, would have to know where all the diffuse (infused) elements of such a curriculum were, and apply wizardry to his or her schedule to register for them all in proper scope and sequence. The student has more power over his or her own learning in an identifiable course situation than in a diffusion situation.

We do not reject infusion. We simply advocate coupling it with core courses. Let the core courses provide a "screen" through which all preservice personnel may pass to be assured of certain basic and common learnings, and then let's also have all the infusion we can possibly manage besides. Similar comments could be made concerning strategy in the public schools. Therefore, we wish our graduates to experience the "core plus infusion" strategy, and to carry it to the districts, rather than the "pure infusion" strategy.

Y Extension Courses

The argument in favor of having a core of courses on campus is strengthened in view of the expanding role of university extension offerings in the modern era. The growth of adult education, the development of career education resource centers, the increasing number of working professionals seeking available classes in career education, and the simple demand of university publics for more convenience in offerings in general, all combine to make it highly advisable to develop all core courses with an

eye toward using these courses, or portions thereof, on extension.

Z Infusion Courses

One of the suggestions we have here is to develop the core courses with an eye toward taking units, modules, or whatever out to other courses on and off campus. The operating committees on various campuses will readily identify appropriate places for infusion into other courses beyond the core.

Infusion may be accomplished on the campus by taking modules to other courses, or by arranging individualized learning activities in a learning center for use by students enrolled in courses outside of the core. The operating committee may also prepare materials and activities to be used by professors wishing to conduct "Directed Individual Study" in career education.

The planning and implementation of such infusion efforts, plainly, is an administrative responsibility of sizeable proportion. It makes the desirability of an operating center and assigned help all the more apparent.

Infusion also suggests that the committee must commit itself heavily to the development of many modules and learning packages beyond those developed in the core courses. And, the committee must be prepared to work with professors who desire to become involved with career education on an infusion basis.

Because of the greater administrative commitment required in infusion, we recommend the following sequence in the develop-

ment of the overall preservice program in career education. First, the core courses, then the extension offerings. Then, building on what you have, extending out into the university via infusion, and via cooperation with other existing courses already having career education content and practice in them. That is, part of the infusion strategy is to assess what career education is already going on on campus. In our estimation, there is plenty on every campus, though the name "career education" may not always be used in reference to it. It is one of the functions of the operating committee, using the infusion strategy, to locate all these career education elements and to coordinate them, as well as to develop elements to send out to classes.

Chapter Summary

In chapter 4 we introduced a preservice career education program management model, figure 4.1.

We recommended the formation of an interdepartmental operating committee to conduct an interdisciplinary program in preservice career education. We recommended that this interdepartmental committee locate an operating-learning center for the conduct of its career education program.

We suggested that six courses be developed to form the instructional core for a preservice career education program. We offered suggestions concerning the content of these courses. We discussed five topics related to the core courses; i. e., emphasis

on professional activity, emphasis on interprofessional activity, developing career education leadership, a perspective on research, and a discussion concerning "infusion."

We commented briefly on extension offerings and concluded with remarks concerning on-campus infusion efforts.

CHAPTER 5

RESOURCES FOR AN INSTRUCTIONAL SYSTEM

Introduction

In chapter two we discussed career education as the effort of one sector of our society to bring about self-system integration, to the satisfaction of both self and system. In chapter three we presented a career development process model from which we also derived a career development program model and an interpersonal career facilitation model. In chapter four we offered suggestions for the management of university level career education programs.

This chapter contains an organized selection of appropriate preservice career education goals and objectives and some references to guides to assessed career education material.

Goals and Objectives

This section contains instructional goals and objectives than can be used by an interdepartmental operating committee or by individual university professors for planning courses and modules in preservice career education. The goals are arranged in nine categories:

1. Process
2. Theory and Knowledge
3. Assessment
4. Awareness
5. Decision Making
6. Placement
7. Resources
8. Organization
9. Evaluation

Each goal is accompanied by a set of pertinent objectives. The objectives were arranged according to three suggested levels of instructional progression to aid those who may wish to program in levels. The section concludes with some references to other sources containing career education instructional goals and objectives. We have consulted these other works and the work of our colleagues at Northern Illinois University in developing this section of goals and objectives.

Process

Goal: An understanding of the interpersonal career facilitation model which is presented in chapter three of A Handbook for the Preparation of Educational Personnel in Career Education.

Objectives:

(I) 1. Read and study the interpersonal career facilitation model described in chapter three of this manual.

(I) 2. Describe at least three ways in which you can make use of the interpersonal career facilitation model.

(I) 3. Explain the interpersonal career facilitation model to a member of your class.

(II) 4. Explain the interpersonal career facilitation model to several teachers, counselors and/or administrators in your school district and write a brief summary of their comments and reactions.

Process

Goal: An understanding of the goal setting phase of the interpersonal career facilitation process which is presented in chapter three of A Handbook for the Preparation of Educational Personnel in Career Education.

Objectives:

(I) 1. Define "goal" and describe some reasons for the use of goals in the interpersonal career facilitation process.

(I) 2. Outline the process one goes through in setting a goal.

(I) 3. Write a paper discussing the factors influencing personal selection of goals.

(I) 4. Describe some of the characteristics of a well-written goal.

(I) 5. Write a series of sample personal career development goals.

(I) 6. Describe ways in which you can assist others in setting career goals.

Process

Goal: An understanding of the assessment phase of the interpersonal career facilitation process which is presented in chapter three of A Handbook for the Preparation of Educational Personnel in Career Education.

Objectives:

(I) 1. Tell orally what is meant by the assessment phase of the interpersonal career facilitation process.

(I) 2. Participate in a group discussion focusing on the kind of information that would be valuable in this type of assessment.

(I) 3. List ways in which this kind of assessment information can be attained.

(I) 4. Explain in writing why the facilitator's and student's cycles have been particularly joined at the assessment phase of the interpersonal career facilitation process.

Process

Goal: An understanding of the planning phase of the interpersonal career facilitation process.

Objectives:

(I) 1. Tell orally what is meant by the planning phase of the interpersonal career facilitation process.

(I) 2. Describe the process you personally go through in planning for action.

(I) 3. List some of the characteristics of a well-designed plan.

(I) 4. Design a plan for action related to one (or more) of your personal career goals. Carry out the plan and write a paper discussing the strengths and weaknesses of the plan you designed.

Process

Goal: Skills for facilitating the career development of others according to the interpersonal career facilitation model which is presented in chapter three of A Handbook for the Preparation of Educational Personnel in Career Education.

Objectives:

(I) 1. Participate in a group discussion concerning the ways in which a student and a facilitator can be involved with each other during the interpersonal career facilitation process.

(I) 2. Tell your small group the purposes of the direct assistance meetings that take place between the student and facilitator (teacher, counselor or administrator) during the interpersonal career facilitation process.

(I) 3. List some of the activities that might take place during a direct assistance meeting between a student and facilitator.

(II) 4. Choose a partner in class and assume the roles of facilitator and student. Assist each other in one aspect of career development through the interpersonal career facilitation process described in the model. At the end of the process evaluate each other with

regard to the roles of facilitator and facilitated.

(III) 5. Find a person who will volunteer some time each week for a semester and assist the individual in his or her own career development through the interpersonal career facilitation process described in the model.

Process

Goal: Skills in record keeping to be used in facilitating the career development of others.

Objectives:

(I) 1. List some types of information that would be beneficial to maintain in a continuous record when facilitating the career development of others.

(I) 2. Review several different methods of record keeping.

(II) 3. Design your own method of record keeping. Describe its advantages and disadvantages.

(III) 4. Using the method of record keeping that you designed, maintain a continuous record of another person's career development for a period of at least two months.

Theory and Knowledge

Goal: An understanding of career development.

Objectives:

(I) 1. Read and discuss in small groups some major career development theories (Ginzberg, Holland, Roe, Super, Tiedeman and O'Hara).

(I) 2. Identify, outline and compare the important elements of the career development theories studied. Write a short summary for each theory in your own words.

(I) 3. List elements that you believe are important in career development.

(I) 4. Briefly describe your own theory of career development.

(II) 5. Briefly report on what the theorists studied (or others) have done to verify their proposed career development theories.

(II) 6. Compare and contrast in writing at least five major career development theories. Conclude by indicating what theory(ies) you believe to be most valid and discuss the reasons for your choice.

(II) 7. Write a detailed history of your own career development.

(II) 8. Write a thorough exposition of your own theory of career development.

(III) 9. Read and summarize some of the major longitudinal studies in the field of career development (Super's Career Pattern Study, Gribbons and Lohne's Study of

Readiness for Vocational Planning, Crites' Vocational Development Project, Project TALENT, Cooley's research, etc.).

(III) 10. Trace the career development of a small group of students and write a paper which discusses specific ways in which their development was, and could have been, facilitated.

Theory and Knowledge

Goal: An understanding of the vocabulary of career education

Objectives:

(I) 1. Construct a list of terms frequently used in the literature pertaining to career education.

(I) 2. Review definitions that have been proposed for important terms in career education literature. From this review, select those definitions which seem most appropriate to you and keep a record of them.

(I) 3. Write your own definitions for career education terms.

(II) 4. Write a paper discussing the relationship between career development and career education in which you make use of the basic terms used in career education.

Theory and Knowledge

Goal: An understanding of how career development and child development are related and how the concepts of both are applied in career education.

Objectives:

(I) 1. Review several child development theories and identify the major concepts.

(I) 2. Review several career development theories and identify the major concepts.

(I) 3. List ways in which basic concepts of child development are correlated to those of career development.

(II) 4. Write career education objectives based on concepts of child and career developme.

(II) 5. Plan an activity or a unit of instruction that includes materials and objectives based on concepts of child and career development.

(III) 6. Construct a detailed timeline which reflects the interrelatedness of child and career development. Using the timeline as a reference base, write a paper proposing what the basic aims of career education should be at every level and include suggestions as to how these aims could be carried out.

Theory and Knowledge

Goal: An understanding of current issues in the field of career education.

Objectives:

(I) 1. Identify at least five issues in the field of career education and describe their current status.

(I) 2. Participate in a debate or panel discussion related to one of the current issues in career education.

(II) 3. Interview at least three people who are involved in career education and ascertain their stance on one of the current issues.

(II) 4. Write a paper in which you summarize current information and authoritative opinion on one issue. Choose a position and support your belief.

Theory and Knowledge

Goal: An understanding of career education programs.

Objectives:

(I) 1. Read and discuss in groups various descriptions of career education programs that have appeared in books or articles in recent years.

(I) 2. Compile a list of factors that describe what a career education program is.

(I) 3. Write your own definition of a career education program.

(II) 4. Identify typical goals for a comprehensive career education program.

(II) 5. Write a paper discussing the difference between a career education program and a vocational education program.

(II) 6. Study the design of at least two career education programs. Write a brief summary of each.

(II) 7. Outline an ideal career education program for a school district of your choice.

(III) 8. Develop a detailed proposal of a one and five year plan for a career education program at any level.

Theory and Knowledge

Goal: An understanding of the career education movement in the United States.

Objectives:

(I) 1. Compile a list of statistics (economic, education, work force, etc.) that reflect a need for career education.

(I) 2. Make an outline depicting the various philosophical, social and economic factors leading up to the recent career education movement.

(I) 3. List ways in which federal, state and local governments have influenced the career education movement.

(I) 4. Write a collection of brief sketches about the key figures in the career education movement.

(II) 5. Research and write a paper that traces the development of the career education movement.

(III) 6. Write a paper which predicts in detail the short and long range future development of the career education movement. Support the predictions being made, as much as it is possible to do so.

Theory and Knowledge

Goal: An understanding of the implications of career education for special groups.

Objectives:

(I) 1. Describe stereotypes associated with race, age, sex and religion as they relate to career development.

(I) 2. Read and summarize several sources discussing the implications of career education for different special groups such as gifted, talented, handicapped or disadvantaged students.

(II) 3. Participate in a panel discussion regarding the career education of a special group.

(II) 4. Write a career education lesson plan for working with a special group. Design activities and choose materials for it.

(III) 5. Create a career education program specifically designed for students of a special group.

Theory and Knowledge

Goal: A knowledge of prominent criticisms of career education.

Objectives:

(I) 1. Read and discuss in class at least three articles containing criticisms of career education.

(II) 2. State at least three criticisms of career education. Write a rebuttal to each. Support your position by including references.

(II) 3. Participate in an in-class debate concerning one criticism of career education.

Theory and Knowledge

Goal: Knowledge of occupational clustering schemas.

Objectives:

(I) 1. Orally describe the various occupations you have had and list the skills required for each one.

(I) 2. Briefly describe each of the fifteen United States Office of Education occupational clusters.

(I) 3. Briefly describe the Illinois Office of Education occupational clusters.

(I) 4. Briefly describe the clustering of occupations used in the Dictionary of Occupational Titles (DOT).

(I) 5. Briefly describe the occupational clustering schema developed by Anne Roe.

(II) 6. Select at least two occupations from each of three clusters and describe entry requirements, work activities, expected salary, benefits and the employment outlook for each. Cite the sources used to obtain this information.

(II) 7. Choose a cluster and design a sample lesson unit to familiarize students of a particular age level with occupations from that cluster.

(II) 8. Discuss the relationship between occupations and personal lifestyles.

(III) 9. Conduct occupational role-playing activities or other simulation activities with students.

Assessment

Goal: To select, administer, score and interpret instruments used for needs assessment in career education program planning.

Objectives:

(I) 1. Compile a list of sources of information on needs assessment instruments that could be used in career education program planning.

(II) 2. Investigate several career education needs assessment instruments and briefly report on the use of each one.

(II) 3. Select one career education needs assessment instrument and write an in-depth report on it.

(III) 4. Administer, score and interpret one needs assessment instrument with a group of students, and prepare a written report describing how the results could effect career education program planning for these students.

Assessment

Goal: Skills to collect and analyze needs assessment data to be used in career education program planning.

Objectives:

(I) 1. List the types of data that would be useful for assessing needs for career education.

(I) 2. Give two examples of needs assessment studies that have been done in the field of career education.

(I) 3. Identify methods of collecting and analyzing data for assessing needs in relation to career education.

(II) 4. Propose a plan for needs assessment in a setting of your choice.

(III) 5. Implement a needs assessment study in a setting of your choice and report on the results.

Awareness

Goal: Self-awareness as it pertains to career development.

Objectives:

(I) 1. Keep a journal of personal thoughts and feelings about yourself for a short period of time and then indicate how these are related to your career development.

(II) 2. Participate in several individual and group self-awareness activities in class. Following these, orally discuss the value of these types of activities for career development.

(II) 3. Discuss the relationship between self-awareness and career awareness.

(II) 4. Design an instructional unit, for use at a particular level, aimed at increasing the student's understanding of self (in terms of interests, abilities, attitudes, values, needs, etc.) in relation to personal career development.

Awareness

Goal: Educational awareness as it pertains to career development.

Objectives:

(I) 1. Describe in writing at least five ways in which formal education has prepared you for activities outside of the school setting.

(I) 2. Compile a list of possible school-sponsored activities designed to take place out of the classroom which would promote the career development of students.

(II) 3. Interview leaders of local businesses and community organizations concerning how the school could work with these groups to promote the career development of students. Orally report the interviews to the class.

(II) 4. Choose one of the United States Office of Education occupational clusters. Make a detailed outline of ways in which all levels of school could institute career planning activities for that cluster of occupations.

(II) 5. Write a paper discussing the connections between educational awareness and career development.

Awareness

Goal: Social awareness as it pertains to career development.

Objectives:

(I) 1. List at least five ways in which family members or friends have influenced your career development.

(I) 2. Participate in group activities aimed at developing social awareness. Following these, orally discuss the value of these types of activities for career development.

(II) 3. Discuss how the major career development theorists you studied treated the social aspects of career development.

(II) 4. Identify the relationship between social awareness and career development.

(III) 5. Write a paper on the sociological relationship of the self and the social system in career development. Discuss roles, positions, norms, ideals, sanctions, power, status, communication, and/or other sociological factors.

Awareness

Goal: Career awareness as it pertains to career development.

Objectives:

(I) 1. Formulate your own definition of career awareness.

(I) 2. Read and discuss various definitions of career awareness.

(II) 3. Compile a list of some of the major elements of career awareness.

(II) 4. List some of the factors contributing to the development of career awareness.

(II) 5. Describe the roles of teacher, counselor and administrator as facilitators in the development of career awareness in students.

(II) 6. Describe the relationship of career awareness and career development.

Awareness

Goal: Economic awareness as it pertains to career development.

Objectives:

(I) 1. Define economics, labor, the market system and other commonly used economic terms.

(I) 2. List at least five ways in which economic factors have affected your career development.

(I) 3. Compile a list of sources containing economic information that would be useful in career education.

(II) 4. Identify at least five economic factors in career decision making.

(II) 5. Describe the present, and probable future, labor market for the different occupational clusters.

(II) 6. Design and implement an activity aimed at developing students' economic awareness.

(II) 7. Participate in a panel discussion concerning manpower needs and employment trends at the local, state and national levels.

(III) 8. Develop lesson plans which focus on the roles which the market system, economic instability, economic growth and change play in determining career choice.

Decision-Making

Goal: An understanding of how past experiences influence career decision-making.

Objectives:

(I) 1. Discuss in class some types of life experiences that significantly affect career decision-making.

(I) 2. Construct a timeline from birth until now and locate on it five significant experiences in your life. Describe how these experiences affected your career decisions.

(II) 3. Design an activity for an age group of your choice that demonstrates how past experiences influence career decision-making.

(III) 4. Write a career autobiography that consists of a collection of personal life events, i. e., leisure and work experiences, important people in your life, personal rewards and frustrations in your life, etc., that are both good and bad. Describe these events in terms of your feelings about them and what you have learned from them. Hypothesize about how these events have, and might, influence your career decision-making.

Decision-Making

Goal: An operational knowledge of differentiation, integration and hierarchical restructuring.

Objectives:

(I) 1. Define differentiation, integration and hierarchical restructuring.

(II) 2. Participate in a group discussion focusing on what part differentiation, integration and hierarchical resturcturing play in career decision-making.

(II) 3. Describe several personal examples of how you have used differentiation, integration and hierarchical restructuring.

Decision-Making

Goal: An understanding of choice.

Objectives:

(I) 1. List factors that affect choice.

(I) 2. Discuss in class the importance of choice in personal career development.

(II) 3. Describe the developmental nature of choice capability.

(II) 4. Write a paper explaining how choice is treated in each of the major career development theories studied.

(II) 5. Describe how choice is treated in your own career development theory.

Decision-Making

Goal: An understanding of the decision-making process.

Objectives:

(I) 1. Read and discuss several decision-making models (Tiedeman, Miller-Tiedeman, Gelatt, and others).

(I) 2. Analyze a recent personal decision. Compare the steps you went through in making the decision to the processes described in the decision-making models you studied.

(II) 3. Outline the process that best describes your most frequently used personal decision-making strategy. Create a model of it. Suggest ways in which this strategy might be improved.

(II) 4. Select four people of various ages and review with them two decisions they have made recently. Describe the decision-making strategies that each used. Compare and contrast these different strategies and suggest ways in which they could be improved.

(II) 5. Participate in a small group activity in which you experience the making of a group decision.

(II) 6. Write a paper discussing the similarities and differences between individual and group decision-making.

(III) 7. Develop a personal theory of decision-making, drawing freely on the theories you have read if you wish. Design a model to accompany your theory.

Decision-Making

Goal: Knowledge of some ways to facilitate the development of decision-making skills in others.

Objectives:

(I) 1. Describe the roles of teacher, counselor, and administrator as facilitators for the student's development of decision-making skills.

(I) 2. Compile a list of games, audio-visual materials, activities and techniques that can be used to teach decision-making skills. Demonstrate the use of at least one of them in class.

(II) 3. Plan and implement small group activities in which students experience making group decisions regarding some career-related problem situations.

(II) 4. Design a series of lessons and activities for a particular age group to familiarize students with the steps involved in a decision-making process.

(III) 5. Plan and implement three individualized activities in which students experience and focus on movement through the steps involved in a decision-making process

Decision-Making

Goal: Knowledge of the use of computer systems to facilitate the development of decision-making skills in persons.

Objectives:

(I) 1. Read and discuss how computer systems are being used to teach people decision-making skills. Prepare a detailed explanation of how the skills are taught by at least two different computer methods.

(II) 2. Experience, or if not possible, simulate use of a computer system designed to teach decision-making skills.

(II) 3. Participate in a panel discussion focusing on the advantages and disadvantages of using computer systems to teach decision-making skills.

(II) 4. Write a newspaper feature article in which you predict the future use and importance of computer systems in the teaching of decision-making skills.

(III) 5. Design a research project to study the effects of using computer systems in the teaching of decision-making skills.

Decision-Making

Goal: Knowledge of how guidance programs can facilitate the development of decision-making skills in persons.

Objectives:

(I) 1. Describe the role of guidance programs in the development of decision-making skills.

(II) 2. Participate in a group guidance activity aimed at developing decision-making skills. Report on your experience.

(II) 3. Visit a school that has guidance programs aimed at developing decision-making skills. Interview some of the leaders and observe the program in progress.

(III) 4. Write a program proposal describing how individual and group guidance can be used to help people develop decision-making skills.

(III) 5. Design and implement a short term group guidance program focusing on the development of decision-making skills.

Placement

Goal: An understanding of placement services.

Objectives:

(I) 1. Describe various types of placement services.

(I) 2. Describe the roles of teachers, counselors, and administrators in placement work.

(II) 3. Interview several staff members at a placement center. Construct an outline of their services and how they provide them.

(II) 4. Survey a group of employed adults to find out what type of placement services they have used and found to be of value to them in the past, both in and out of the school setting.

(III) 5. Design an operational model for placement services in a setting of your choice.

Placement

Goal: A knowledge of financial aids available for students.

Objectives:

(I) 1. List different types of financial aids that are available for all forms of continuing education.

(I) 2. List sources that can be used to obtain information regarding financial assistance.

(II) 3. Fill out several different financial aid applications. Write a brief report discussing the forms and the procedures for filling them out.

(II) 4. Write to federal, state and local government offices to obtain information regarding financial assistance.

(II) 5. Visit the high school in your district to view financial aids information and to discuss with the counselors the procedures involved in obtaining financial assistance.

(II) 6. Interview a financial aids director at a local trade school, junior college, college or continuing education setting of your choice.

Placement

Goal: Knowledge of how to collect and disseminate placement information.

Objectives:

(I) 1. Tell what types of information would be valuable in a placement service.

(I) 2. List ways in which placement information can be collected and disseminated.

(II) 3. Design sample placement newsletters and bulletins for various school settings.

(II) 4. Visit schools which have computerized placement information systems. Use the system and write an evaluation of it.

(II) 5. Describe ways in which students can be involved in the collection and dissemination of placement information.

(III) 6. Visit a placement center and interview some staff members there. Outline their procedures for collecting and disseminating placement information.

Placement

Goal: Skills in preparing a resume.

Objectives:

(I) 1. Read and discuss several sample resumes.

(I) 2. List the elements of an effective resume.

(I) 3. Write a personal resume and present it in a group for evaluation. Rewrite the resume incorporating some of the suggestions made by the group.

(II) 4. Write a letter to a friend explaining why he or she should have a resume. Include some helpful suggestions on how to write one and how to use one.

Placement

Goal: Job interview skills.

Objectives:

(I) 1. Write the transcript of a hypothetical job interview.

(I) 2. Compile a list of skills that are important to an applicant during a job interview.

(II) 3. Interview or survey local employers to determine what qualities they look for in a job applicant during an interview.

(II) 4. Search resource materials and compile a list of aids that are helpful in preparing for job interviews.

(II) 5. Role play job interviews, assuming the role of employer as well as job applicant, and evaluate the results. (Use the hypothetical transcripts developed in objective one, above.)

(III) 6. Write a detailed manual designed to prepare students for job interviews.

Placement

Goal: Knowledge of productive work habits.

Objectives:

(I) 1. Compile a list of personal work habits that are important in securing and maintaining a job.

(I) 2. Identify ways in which students can be assisted in developing productive work habits while in school.

(II) 3. Survey local employers to determine what work habits they consider to be most important for their employees.

(II) 4. Design a series of individual and group activities aimed at developing work habits in students.

(III) 5. Design a research project to study some factor(s) influencing the development of productive work habits.

Placement

Goal: An understanding of factors that contribute to job satisfaction.

Objectives:

(I) 1. Define in your own terms what is meant by job satisfaction.

(I) 2. Describe a variety of factors that influence job satisfaction.

(II) 3. Read and discuss some of the studies that have been done regarding job satisfaction.

(II) 4. List all the conditions that would contribute to making a job personally satisfying for you. Construct a hierarchy of these conditions.

(III) 5. Participate in an in-class auction of working conditions. After the auction, discuss in groups what you have learned about yourself and others in relation to job satisfaction.

(III) 6. Design and implement a research project to study some aspect of job satisfaction.

Resources

Goal: Proficiency in selecting, using and evaluating materials for use in career education programs.

Objectives:

(I) 1. List types of resource materials that could be of value in a career education program.

(I) 2. Compile a list of sources that can be used to determine what career education resource materials are available. Rate the usefulness of each source.

(II) 3. Propose procedures that should be followed for the selection and evaluation of career education resource materials.

(II) 4. Survey school personnel to determine what types of career education resource materials they think are needed.

(II) 5. Devise a system for school personnel to report their evaluations of resource materials related to career education.

(III) 6. Select at least three different career education resource materials and use them appropriately in a school setting. Evaluate the effectiveness of the materials. Suggest any improvements that could be made in the materials or in the use of them.

Resources

Goal: Knowledge of school-based resources and of ways to use them in planning and implementing career education programs.

Objectives:

(I) 1. Compile a list of the types of individuals (teacher, counselor, librarian, etc.) in a school system. Describe the role of each in planning and implementing career education programs.

(II) 2. Compile an indexed list of materials available in the school district that might be used in a career education program.

(II) 3. List all the extracurricular activities and clubs at a school and tell what functions they have in career education. Suggest several activities or clubs that might be of further value to a career education program.

(II) 4. Survey school personnel to discover what skills or knowledge they have that could contribute to the planning and/or implementing of a career education program.

(III) 5. Propose a plan for a career education committee composed of school personnel. Include a description of its purpose, authority, members, activities, etc.

(III) 6. Design a career resource center for a school setting of your choice.

Resources

Goal: Knowledge of community based resources and of ways to utilize them in the planning and implementation of career education programs.

Objectives:

(I) 1. Compare the roles of the school and the community in career education.

(I) 2. Compile a list of types of individuals in the community (parents, employers, government officials, etc.) and describe the role of each in the planning and implementation of career education programs.

(I) 3. Identify components of a parental involvement program.

(II) 4. Compile a list of agencies in the community and describe the role of each agency in the planning and implementation of career education programs.

(II) 5. Interview members of several different volunteer organizations in a community and report on ways in which they can function as a career education resource.

(II) 6. Survey a community and construct a list of possible sites for local career education field trips.

(II) 7. List the various local or national youth organizations that relate to career education. Describe the career education activities of these organizations.

(III) 8. Graphically develop an adequate system of advisory councils for a district career education program and

describe the activities each council might become involved with in planning and implementing a career education program.

(III) 9. Select a community and create a comprehensive community resource manual to be used as a tool in the planning and implementation of career education programs for that community.

(III) 10. Diagram a channel of communications through which school personnel and community members can contribute information pertinent to a career education program.

Organization

Goal: An understanding of how federal legislation and state guidelines affect local career education program planning.

Objectives:

(I) 1. Describe at least five ways in which federal or state government can affect career education program planning.

(I) 2. Briefly compare the Comprehensive Career Education Model developed at Ohio State University and the career education model developed by the State of Illinois.

(II) 3. Present a brief synopsis of the manner in which federal legislation in 1963, 1968, 1971, 1975, and 1976 has affected program planning at the local level.

(II) 4. Present a brief synopsis of the Illinois state guidelines regarding career education programs.

(III) 5. Describe the activities (including personnel and important materials) that occur in each phase of the Illinois Three-Phase System of Evaluation.

(III) 6. Describe the new dimensions to program planning that have resulted from the Three-Phase System and their implications for local districts and the Illinois Office of Education.

Organization

Goal: Proficiency in planning career education programs for a variety of settings.

Objectives:

(I) 1. List and describe the components of a career education program plan.

(I) 2. Write a paper in which you discuss the meanings of career awareness, career orientation and career preparation. Discuss the significance of each of the terms as it relates to career education program planning.

(II) 3. Describe an adequate career awareness program for elementary grades. Include overall program goals, content, student learning activities, personnel involved, equipment used, and students served.

(II) 4. Describe an adequate career orientation program for middle schools. Include all of the aspects of the program listed in objective three.

(II) 5. Describe an adequate secondary level vocational education program, in-school and community based. Include all of the aspects of the program listed in objective three.

(II) 6. Describe an adequate comprehensive post-secondary career education program, in-school and community based. Include all of the aspects of the program

listed in objective three.

(III) 7. Design a local district one and five year plan for career education according to state guidelines.

Organization

Goal: Competency at writing program objectives to be used in the planning of career education programs.

Objectives:

(I) 1. Describe each of the three components of a program management objective.

(I) 2. Write five program management objectives that contain the three necessary components.

(II) 3. List ten or more sources of input for developing program management objectives for career programs.

(II) 4. Detail procedures, activities and forms for using program management objectives in total program planning and in program and staff evaluation.

(II) 5. Recommend procedures, activities and forms for a team approach to developing program management objectives for a local one and five year plan.

(III) 6. Write a one and five year plan for one component of a nearby school district. Consult with that district in doing so.

Organization

Goal: An understanding of the roles of various people involved in the implementation of career education programs.

Objectives:

(I) 1. Describe in detail the roles as you understand them of the following types of individuals in career education.

student	career education director
parent	principal
teacher	superintendent
department chairmen	board of education
guidance personnel	advisory councils
school staff	local employers

(I) 2. Identify specific tasks associated with each of the roles described above.

(II) 3. Describe mechanisms for involving each of these types of individuals in planning a career education program and specify the types of input they can be expected to provide.

(III) 4. Interview five persons with roles listed in objective one. Let them describe their roles in career education as they understand them.

Organization

Goal: Skills needed to plan effective inservice training programs for career education.

Objectives:

(I) 1. Describe activities that could be offered in an inservice training program for career education.

(I) 2. Compile a list of community and state persons that can be drawn upon as resource people in inservice programs.

(II) 3. Contact state and national professional organizations regarding suggestions for inservice career education programs.

(II) 4. Design or locate instruments that can be used to assess:

1) Knowledge of the staff regarding career education.

2) Interests of the staff regarding career education.

3) The effectiveness of career education inservice programs.

(III) 5. Visit and participate in career education inservice programs in several school districts. Write an evaluative report on these programs.

(III) 6. Design in detail a career education inservice program for the staff of a specific school.

Organization

Goal: Knowledge of the financial requirements of career education.

Objectives:

(I) 1. Identify at least five components of career education and describe the expenditures needed to support them.

(II) 2. List ways in which reimbursement can be sought for various career education expenditures.

(II) 3. Review a local district budget and identify items related to career education.

(II) 4. Interview a financial director and a career education director in a local school district to gain some knowledge of the financial requirements of a career education program.

(III) 5. Develop a one year itemized budget for the implementation of a career education program at a specific school.

Organization

Goal: An understanding of Illinois state guidelines for program reimbursement.

Objectives:

(I) 1. Describe the types of elementary, secondary and adult career education programs that are eligible for reimbursement from the Illinois Office of Education.

(II) 2. Define each factor included in the Illinois Office of Education formula for reimbursing career programs.

(II) 3. Compute the amount of reimbursement that would be provided to a local district for a particular career program.

(II) 4. Describe at least four types of special contractual arrangements with the Illinois Office of Education that provide for reimbursement to the local education agency for career education program expenditures.

Organization

Goal: A functional knowledge of career education research.

Objectives:

(II) 1. Describe ways in which research can be used in career education.

(II) 2. Read and discuss in class some of the major career development research studies and the implications these studies may have for you and your school.

(III) 3. Describe some major research tools and measures used in career development research.

(III) 4. Use a career development research tool or measure in a small-scale career education research study and write a report on the results.

(III) 5. Design a detailed career education research study and write a grant proposal for it.

Evaluation

Goal: Skills needed to assess the career development of individuals and groups.

Objectives:

(I) 1. Read and discuss several career development theories.

(I) 2. Identify elements of personal career development.

(I) 3. Compile a list of instruments, aids and techniques that can be used to assess the career development of individuals.

(II) 4. Select a method of assessment and use it to assess the career development of one student.

(III) 5. Design a program to assess the career development of a group of students at a particular level and estimate the costs, time, personnel and space needed for its implementation.

(III) 6. Implement a program to assess the career development of a group of students at a particular level and report the findings.

Evaluation

Goal: Skills needed to evaluate the effectiveness of a career education program.

Objectives:

(I) 1. Identify the components of a career education program.

(I) 2. Propose criteria for what constitutes an effective career education program.

(I) 3. Compile a list of techniques and instruments that can be used to evaluate the effectiveness of a career education program.

(II) 4. Evaluate the effectiveness of one component of a particular career education program.

(III) 5. Develop a one and five year plan for evaluating the effectiveness of a career education program in a nearby school or district.

Evaluation

Goal: Skills for collecting and analyzing subjective information to aid in evaluating and planning career education programs.

Objectives:

(I) 1. List some types of subjective information that would be useful in evaluating career education programs.

(I) 2. Describe methods for collecting such information and give examples of how it can be used for future planning.

(II) 3. Collect and analyze subjective information regarding several students and assess their career development according to this information.

(III) 4. Collect and analyze subjective information for a sampling of students in a school and write an evaluation of the career education program based on these findings.

Evaluation

Goal: To select, administer, score and interpret instruments used for evaluating career education programs.

Objectives:

(I) 1. Compile a list of sources that would provide information on evaluation instruments for career education programs.

(I) 2. Investigate at least five instruments and briefly report on the use of each one.

(II) 3. Select one instrument and write an indepth evaluation of it.

(III) 4. Administer, score and interpret an instrument (or battery of instruments) within an ongoing career education program and prepare a written report of your results for the school district involved.

Evaluation

Goal: Skills in the use of follow-up studies for the purpose of evaluating and improving all education programs.

Objectives:

(I) 1. List the types of data that would be of value in a follow-up study.

(I) 2. Identify ways in which follow-up data can be used to evaluate education programs.

(I) 3. Identify a procedure to use in gathering follow-up information including any data collection instruments that are appropriate.

(I) 4. Gather follow-up data on several students who have left school.

(II) 5. Plan a follow-up study in a particular setting.

(III) 6. Complete a follow-up study in a particular setting.

(III) 7. Evaluate the results of a follow-up study in terms of the implications it has for all aspects of the existing educational programs in that setting.

Guides to Instructional Resources

It is beyond the purview of this particular project to conduct a comprehensive survey of materials available in career education. However, a very extensive survey of career education materials was conducted concurrently with this project by the ERIC Clearinghouse in Career Education at Northern Illinois University. The report for this companion project, entitled Key Resources in Career Education: An Annotated Guide, will be available in September, 1976.

Also, a second high quality survey, the EPIE Career Education S*E*T, came to our attention during this past year.

We recommend that these two reference works be obtained for use on any campus where preservice preparation in career education is being developed. Taken together, they constitute the most complete survey of career education materials that we have knowledge of. The two resources are annotated below.

ERIC Clearinghouse in Career Education. Key Resources in Career Education: An Annotated Guide. DeKalb, Illinois: Northern Illinois University, 1976.

This annotated directory is a guide for individual thinking and decision making in planning career education programs. It contains references for vocational psychology, career development theory, career education definitions, career education models, programs, and curriculum at all levels, and many related topics, as well as references to assessed career education materials.

Many thorough canvasses of career education and career guidance materials were made. Only the more comprehensive and synthesizing of the many available compilations were selected as key resources for this directory.

EPIE Institute. EPIE Career Education S*E*T. 2 vols. New York: EPIE Institute, 1975. Vol. 1: How to Select and Evaluate Instructional Materials. Vol. 2: Analysis of Seven Hundred Prescreened Materials.

Volume one provides information on how to evaluate and select instructional materials designed to meet career education goals in career awareness, education awareness, economic awareness, decision making, career preparation and training, and other career-related competencies.

Volume two presents abstracts of both commercial and non-commercial career education materials for all age levels. Materials copyrighted prior to 1971 were not considered for inclusion.

Chapter Summary

This chapter provided curriculum elements which can be used as components for the organization of preservice career education courses and modules on university campuses. A set of curriculum goals and objectives and some references to comprehensive guides to assessed career education instructional materials were provided.

CHAPTER 6

FORMATIVE COURSE EVALUATIONS
NORTHERN ILLINOIS UNIVERSITY

Introduction

Northern Illinois University developed five and implemented six courses in preservice career education during the 1975-76 academic year. The courses were:

1. Foundations of Career Education
2. Career Development Theory
3. Seminar on Research in Careers
4. Teaching for Career Development in the Elementary School
5. Career Education Techniques
6. Organization and Administration of Career Education

All six courses were open to interdisciplinary enrollment. There were no prerequisites.

In this chapter a brief description of each course is followed by an outline of the subject matter, competencies, activities, evaluation, and references used in the course. Following the outline of each course is a sample lesson plan.

This section was developed by consulting course materials submitted by the instructors to the authors and by interviews with the instructors involved. All but one of the courses was offered for the first time this year.

Foundations of Career Education

developed by

Dr. Ruth Woolschlager
Department of Business Education

and

Dr. Edward J. McCormack
Division of Counselor Education

Northern Illinois University

Course Outline

1. Description: This course is intended to familiarize the undergraduate and graduate student with basic concepts and methods in career education, and to develop the necessary foundation for those considering further study in career education.
2. Subject Matter
   a. Overview of career development theory and practice
      (1) Donald Super
      (2) Eli Ginzberg
      (3) David V. Tiedeman
      (4) Ann Roe
      (5) John Holland
      (6) Sidney Marland
   b. Perception of self as related to careers (Value Scale of Occupations)
   c. The world of work
   d. The career education process: bringing new life to school courses

e. Career education as part of the various disciplines in secondary schools

f. Interest inventories and aptitude tests

g. Relationship of vocational education to career education

h. Cooperative education and internship as an integral part of career education

i. Roles of community college and four year colleges in career planning

j. Adult education as an aid to changing careers or developing new careers

k. Techniques and materials useful in aiding and developing career awareness, exploration and preparation, emphasizing the use of ERIC and the Learning Center

l. The relationship of role perception, career choice, and unemployment

m. Attitudes of the unemployed

n. Projecting career opportunities

o. Methods for career planning and advising

p. Applying for a position and getting it, resumes, interviews, etc.

q. The concept of promotability with special attention to the promotability of women

r. Current research in career education and opportunities for further research

s. The work of state agencies and federal funding

t. Removing age, sex, race and physical handicaps as barriers to career development

3. Competencies

a. Explain in writing at least three central issues in career development theory.

b. Discover and analyze at least four reasons for the importance of career education in the United States today.

c. Develop a lesson plan which fuses career education objectives with those of a given subject or discipline.

d. Conceive, develop and present a career education project (including supporting readings) which will be useful in a school situation.

e. Write a paper exploring self-concepts and role perceptions in relation to career choice.

4. Activities

a. View slides, sound-slide programs, videotapes, filmstrips and films.

b. Interest inventories and aptitude tests

c. Field visits

d. Panel, group, and in-class discussions

e. Role playing

f. Reading assigned materials and other references

g. Writing career education objectives

h. Reporting on career projects

i. Attending a career education conference

Evaluation

Because of its foundational nature, a great variety of students took this course. This variety in enrollment provided interesting interprofessional exchange among students and between students and instructors. However, it also made it more difficult to meet the variety of career education needs of the students. Team teaching proved to be very beneficial in this regard because of the vastly different professional backgrounds and experiences that could be drawn upon.

A variety of materials and activities and sufficient time for extensive interchange in class are vital to the success of this course. It is suggested that the required readings be expanded, that the number of on-site visitations be increased, and that greater use be made of individualized experiences to meet the needs of diversified student enrollment.

Persons teaching this course should have a thorough knowledge of at least the following:

1. career development theories,
2. the career education practices of teachers, counselors, and administrators,
3. a variety of career education materials and activities,
4. a variety of current career education programs.

Sample Lesson Unit
Foundations of Career Education

Resumes and Job Interviews

by

Dr. Ruth B. Woolschlager

I. Main Ideas

A. The importance of a well written resume in obtaining a job

B. Elements of a well written resume

C. The importance of effective job interview skills in obtaining a job

D. Characteristics of effective job interview behavior

II. Objectives

A. Establish criteria for a well written job resume

B. Develop skills at preparing a resume that conforms to the criteria established in II A.

C. Describe effective job interview behavior

D. Develop skills at recognizing effective job interview behavior

E. Develop effective job interview behavior through role playing

III. Pre-assessment

A. Students will be asked to identify the elements of a well written resume and of effective job interview. They will compare their lists with elements identified by other class members.

B. A Preliminary resume is submitted by each student.

IV. Main Activities

A. Students survey newspaper ads of job listings from a Sunday edition of a metropolitan paper and select several jobs that appear interesting.

B. Students prepare a resume that would be appropriate for the jobs selected in IV A.

C. Entire class discusses elements of a well written resume.

D. Students break into small groups where they will remain for the balance of the lesson.

E. Students distribute their resumes to small group members. Each resume reviewed in turn by the group.

F. Group members discuss characteristics of both effective and ineffective job interview behavior.

G. Group members role play with each other both effective and ineffective job interview behavior related to the jobs for which the resumes were prepared.

H. Group members discuss the job interview behavior that each group member displayed.

V. Post-assessment

A. Students submit revised resumes.

B. Students produce scripts in the form of written dialogue or on tape that display effective interview behavior.

VI. Materials and Supplies

A. Sunday editions of metropolitan newspapers.

B. Dittoed copies of sample resumes.

C. Tape recorder, and tapes or videotapes (if desired).

VII. Time estimate: approximately five hours of class time.

VIII. Cost estimate

A. Price of a Sunday edition of a metropolitan paper.

B. Price of a recording tape (if desired).

Resources (if Desired)

Career Development Theory

developed by

Dr. Michael A. MacDowell
Department of Student Teaching and
Director, Illinois Council on Economic Education

and

Dr. Edward J. McCormick
Division of Counselor Education

Northern Illinois University

Course Outline

1. Description: This course will provide the student with a thorough background in current career development theories. Open to graduating seniors and graduate students.
2. Subject Matter
   a. In depth study of career development theories
      (1) Ginzberg et al
      (2) Holland
      (3) Roe
      (4) Super
      (5) Miller-Tiedeman
      (6) Tiedeman
   b. Career education terms
   c. Models and systems thinking
   d. Decision making
   e. Development of a personal career development theory
   f. Self-concepts and systems-concepts as they relate to career development

g. Economic factors affecting career choice, including:

(1) economic growth

(2) economic instability

(3) market system

(4) manpower needs, etc.

h. Career counseling strategies

3. Competencies

a. Define differentiation and integration. Give at least two examples in your own experience.

b. Define career, career education, and career development.

c. Make a written, personal, explanatory statement about career development. Show use of differentiation, integration and an organizing point of view.

d. Identify in writing the elements of five career development theories (Roe, Super, Holland, Tiedeman and O'Hara, Ginzberg et al). Tell the meaning and significance of each element.

e. Discuss with class members in a small group setting the concept of interrelatedness in systems thinking, particularly as it relates to career development and career decision making.

f. Discuss with class members in a small group setting the concepts of models in systems thinking, particularly as it relates to career development and career decision making.

g. Describe in writing your personal style of decision making.

h. Identify in writing at least five basic economic components of career decision making.

i. Describe verbally the present and probable future labor market trends for different occupational clusters.

j. Show use of career information materials in career decision making.

k. Develop useable classroom materials for manpower and career education instruction.

l. Describe in writing the roles which the market system, economic instability, and economic growth and change play in determining career choice.

m. After reviewing a film and individually composing a list of factors influencing self-concept, discuss with class members in a small group setting the factors contributing to the development of a desirable self-concept.

n. Explain to class members at least one career counseling approach that could be taken in each of two different career counseling case studies.

o. Use economic-career education lesson plans in an actual class or micro-teaching situation.

4. Activities

a. View slide/cassette presentations, films and filmstrips.

b. Maintain a personal journal.

c. Small and large group interchange

d. Short oral presentations

e. Written exams both in and out of class

f. Assigned readings

g. Micro teaching

Evaluation

The major strength of this course was the integration of career development theories, awareness of self as a theoretical resource, and knowledge of the roles of the self and the system in career development within a continuously evolving personal theory of career development. Initially, some difficulties arose because of divergent expectations of the students and the instructor, i. e., students expected more structuring of their career development theory task by the professor, while the professor expected more structuring by the students. From this, it was learned that it is necessary to convey the idea from the very beginning that the student is already a career development "theorist" who has already accumulated much of the knowledge and experience that is essential to personal theorizing about careers. Also, some improvements could be made by eliciting attempts at a personal career development theory in the very beginning of the course and by allowing more in-class time for students to share ideas about their personal theories with each other. The use of the learning center facilities to handle the career and economic infor-

mation dispensing aspects of this course is encouraged to leave more classroom time for creative activity.

Team teaching can be particularly helpful for approaching different aspects of self-system integration in career development. Those who teach the course as outlined here should have knowledge of:

1. career development theories
2. decision-making strategies
3. economic factors in career development
4. factors affecting self-system integration
5. how models are used to guide effective action
6. systems thinking

Sample Lesson Plan

Career Development Theory

Basic Economic Concepts Relating
to Career Decision Making

by

Dr. Michael A. MacDowell

I. Main Ideas

A. Main Theme

1. Students cannot make appropriate or rational decisions about careers without knowledge of the economic system in which these decisions are to be made.

2. The object of this theory unit is to provide preservice and inservice personnel with basic understandings of the American economic system and its relation to manpower distribution and career opportunities.

B. Supporting Themes

1. All work is important in our economic system.

2. The performance of work is rewarded by psychic satisfactions as well as by income.

II. Objectives

A. Main objectives

1. To have students gain an appreciation of the role of work in our economic system.

2. To have students become familiar with the basic

economic factors relating to manpower distribution.

3. To have students understand the meaning of economic concepts as they relate to manpower distribution.

4. To have students utilize such resources as Man-Power in Illinois and The Occupational Outlook Handbook.

B. Supporting objectives

1. The students will understand the effects of economics on career decision making.

2. The students will increase their economic understanding score by three points on the post-test, relative to pre-test scores.

3. Inservice teachers will utilize the course activities in their classrooms.

4. Preservice teachers will utilize the course activities in a teaching unit lab.

5. All enrollees will utilize the learning lab to view career education materials such as Bread and Butterflies.

III. Pre-assessment

A. Form A of the "Test for Understanding of College Economics" will be given to each student. This is a nationally normed instrument.

B. Vital statistics regarding the pre-test and post-test analysis will be shared with the students.

IV. Main Activities

A. Instructor Activities: The instructors will proceed through four booklets related to economics, manpower and career education. These booklets, entitled I(t) Work(s) include a brief overview of economics related to career education and topics on socio-economic change, technology, and marketability.

B. Student Activities: Students, after reviewing lesson plans from the World of Work Economic Education package, will be expected to create one lesson plan or learning activity package for each of at least three of the World of Work Economic Education concepts.

V. Post-Assessment

A. Form B of the "Test for Understanding of College Economics" will be given each student.

B. Results will be shared with the students.

C. A survey concerning attitudes towards this section of the course as well as its possible adaptation to the public school classroom will also be administered and discussed.

VI. Materials and Supplies

A. I(t) Work(s) package

B. Student teaching aids

C. The World of Work Economic Education handbook.

VII. Resources

A. The learning lab, educational T. V., and selected career education materials will be utilized by all students.

B. The micro teaching lab and video tape equipment will be utilized.

VIII. Time Estimate: This unit can be completed in four 2½ hour sessions.

IX. Cost Estimate

A. Estimates on the I(t) Work(s) package, minus audio-visual equipment, are approximately $5.00 per booklet set.

B. The World of Work Economic Education materials cost approximately $3.50.

C. The University may wish to buy the entire (I)t Work(s) audio-visual package for $850.00 from the World of Work Economic Education Center at North Texas State University.

Seminar on Research in Careers

developed by

Dr. David V. Tiedeman
Division of Counselor Education and
Director, ERIC Clearinghouse in
Career Education

Northern Illinois University

Course Outline

1. Description: This course is designed as an advanced level seminar in self theory, decision theory, career satisfaction, research in careers, and the social issues in career development.
2. Subject matter
   a. Vocational choice
   b. Vocational adjustment
   c. Vocational motivation
   d. Vocational satisfaction
   e. Decision theory
   f. Self theory
   g. Research and research techniques
   h. Theory construction problems
   i. Social issues (women, minorities, trends, computer-based programs, etc.)
3. Competencies
   a. A comparative understanding of the elements of vocational development theories
      (1) Roe

(2) Holland

(3) Ginzberg et al

(4) Super

(5) Tiedeman and O'Hara

b. An understanding of career development and of the informing process in it.

c. An understanding of the developmental nature of vocational choice.

d. An understanding of the research-derived correlates of career choice (stimulus, organismic and response variables as defined by Crites and their related concepts).

e. Familiarity with the major longitudinal studies in the field of career development

(1) Super's Career Pattern Study

(2) Gribbons and Lohne's Study of Readiness for Vocatioal Planning

(3) Crites' Vocational Development Project

(4) Project TALENT

(5) Cooley's research

f. Understanding of current issues in the field (women, minorities, measurement, etc.)

g. Familiarity with the major research tools and measures used in career assessment research.

h. An appreciation of theory construction problems.

i. An integrated personal theory of career development in which you have sufficient confidence to practice.

4. Activities

   a. This course is designed as an advanced level seminar with the major part of the course based upon the seminar format.

   b. Library research, student presentations, and instructor-based discussion and lecture will be utilized.

   c. Students will be encouraged to plan a research project of their own.

Evaluation

Pre and post assessment revealed a considerable gain in the students' knowledge of career development theory and in their ability to describe their own careers. Also, with one exception, the students' proposals for research designed to test differences of opinion which they had with an established theorist were rated as displaying above minimum competency.

A major difficulty encountered was the fact that none of the students had studied career development theory prior to entry into the course. This meant that six of the sixteen class periods were devoted to career development theory, which precluded the attainment of the full range of course competencies. Much less time remained to devote to the research on vocational behavior, to research instrumentation, and to longitudinal studies of careers. Because of these difficulties, it is strongly recommended that the course on career development theory be made a prerequisite for entry into this research seminar.

A knowledge of career development theory, of the major lines of career development research activity, and of the philosophy of science are essential for persons teaching this course.

Since students are not uniformly excited about doing research, it is recommended that this course be taught as a research laboratory to help increase motivation and to encourage initiative in research. It would be ideal to create a center for research in career development at the university and to involve students in actual research work being carried on there.

Teaching for Career Development in the Elementary School

developed by

Dr. Walter Wernick
Department of Elementary Education and
Director, ABLE Model Programing

Northern Illinois University

Course Outline

1. Description
   a. Planning, implementing and evaluating career development programs in the elementary school
   b. Refocusing curriculum areas to meet career development objectives
2. Subject Matter
   a. Action goals of the State of Illinois
   b. Career development programs funded by state and national agencies
   c. Career development programs as implemented by selected school districts (Peoria, Glen Ellyn, Maywood, DeKalb)
   d. The career development process
   e. Planning through the "organizing center" approach
   f. Parental involvement in school programs
   g. The utilization of community resources
   h. The relevance of traditional subject areas to the activities of active adults

i. The changing world of work

j. The utilization of instructional support systems within a school district

k. Planning, implementation and evaluation of instructional programs refocused to meet career development objectives

l. The teacher as a career development model

3. Competencies

a. Identify components of a parental involvement program.

b. Identify components of a community resource utilization system.

c. Identify elements of the career development process such as, inquiry, values clarification and decision making.

d. Utilize instructional planning techniques to aid career development.

e. Develop methods by which resource people can be utilized in instructional environments within school and outside of school.

f. Analyze techniques to utilize the instructional support systems of the school more effectively.

g. Discuss significant trends in the world of work.

h. Utilize techniques to individualize instruction to meet local career development objectives.

i. Identify ways by which career development planning and instruction can be evaluated.

j. Identify ways the visibility of the work of the teacher

can be enhanced.

4. Activities

   a. Studying career education plans and requirements developed by the Division of Vocational and Technical Educaion, State of Illinois and the Office of the Superintendent, State of Illinois

   b. Studying reports of state and national funded projects

   c. Other reading references

   d. Viewing films, filmstrips, and sound-slide programs

   e. Discussing topics with selected resource people

   f. Interviewing resource people in the field

   g. Reporting of interviews to the class

   h. Writing plans to meet career development objectives

   i. Analyzing ideas, strategies, and materials produced to meet career development objectives

   j. Evaluating the work performed to meet course objectives and the work of the instructor of the course

Evaluation

The offering of this course on extension is one of its greatest strengths. This provides more opportunities for direct application in the classroom and for close-up focusing on pertinent aspects of local career education programs. The variety of activities and frequent opportunities for practical sharing were also cited by students as strong points.

While this course was specifically designed for practicing elementary teachers, its application can be broadened by either developing components for other levels of instruction or by altering the entire course to include all teachers. Applicability to various instructional levels can also be achieved through more extensive use of individualization, through micro-laboratory experiences and through stratified classroom applications.

It is suggested that persons teaching this course have the following background:

1. experience in teaching at the level(s) of school involved,

2. a thorough understanding of career education theory and its relation to practice in the classroom,

3. familiarity with schools in the area, i. e., knowledge of their current general programs and career education practices.

Sample Lesson Plan
Teaching for Career Development in the Elementary School

People are Primary Sources for Career Development Ideas

by

Dr. Walter Wernick

I. Main Ideas

A. Career development focuses upon the lives of people.

B. Students need to be put into direct contact with active adults.

C. Students need to learn skills to communicate with adults.

D. Students need to learn to process career development data obtained from adults.

E. Students need to learn to share information obtained from primary sources.

II. Objectives

A. Teachers will include authentic people in their list of resources for planning and implementing their instructional programs.

B. Each teacher will select resource people to meet the needs of his learning environments.

C. Teachers will provide opportunities for students to learn the communication and inquiry skills needed for career development interview sessions.

D. Teachers will follow through with the development of research skills, value clarification skills, and sharing skills after interview sessions.

E. Teachers will evaluate their utilization of resource people to improve their effectiveness in delivering "academic" programs as well as programs specifically oriented toward career development themes.

III. Post-Assessment

A. Teachers will be asked to identify the elements of career education as they perceive it. They will compare their listing with elements identified by others (including the college instructor).

B. Sources of information about career development will be presented with the suggestion that people are primary sources and should be utilized.

IV. Main Activities

A. Teachers will be given a packet of occupation cards. Each card will have the title of one occupation, e. g., newspaper reporter. Teachers will be asked to choose resource people appropriate to their age/grade level from among the occupations on the cards.

B. After a period of three to five minutes, teachers will be told that they can only choose one resource person. "Which one is best for you?" All other occupation cards are to be put back into the packet.

C. Teachers are asked to tell which one resource person they chose and why they made the choice.

D. Discussion of choices should focus upon each teacher's imaginative view of how the resource person could be utilized and why the choice was made. (A parent has the occupation; student interest; the person in mind is a colorful character; a teacher does the activity part-time and is easily accessible; the students are unaware of the work the person does and need to be informed; etc.)

E. Teachers are congratulated for thinking through their needs and for their wise use of community resources.

F. Teachers are asked to imagine that the person they chose will be in their learning environment. How will they prepare the class? How will they prepare the resource person?

G. Teachers are helped to see interviewing as part of a larger process of inquiry, value clarification, and sharing information. Guidelines are developed to help students shape and ask questions. Activities are discussed which further develop the personal meanings obtained from direct experience with a resource person.

V. Post-Assessment

A. Each teacher develops an "organizing center" form

for his or her own situation. This form identifies the resource people (and other things and places) to be utilized, the content to be correlated and infused, and the endproducts to be developed by the class members.

B. The "organizing center" plan for thinking through specific objectives, resources, and activities is shared with other teachers and the instructor of the course. Suggestions to narrow or broaden activities discussed with the main thought being the teacher is the manager of the learning environment and is the final decision maker regarding what is planned and implemented in his or her classroom.

C. Emphasis is upon developing the interactive processes of inquiry and value clarification, not upon specific clusters of occupations or quantities of resource people. Evaluation is in terms of the ways each teacher has provided for the development of interviewing skills and their utilization within the regular curriculum of his or her school.

VI. Materials and Supplies

A. Worksheets

1. What is career education?

a. What does it include?

b. What should I do?

c. What should my school do?

2. Guidelines for interviewing

   a. Preparing the student

   b. Preparing the resource person

   c. Sample questions

   d. Follow-up activities

3. Organizing center planning forms

4. A focusing instructional unit

B. A packet of index cards for each participant. There are approximately thirty to fifty different occupations in each packet.

VII. Time Estimate

A. The unit can be taught in segments or all at once, depending upon the numbers of participants and their backgrounds. Practicing teachers know their "curiculum" without looking at scope and sequence charts. Neophytes may need to work with curriculum guides or work collaboratively with experienced teachers.

B. Sample lessons and units should be shown intermittently, not studied in depth as models. Each teacher's imaginative use of resource people must be the bull's eye, not a one-time written plan done up in proper form. Skills of the instructor in bringing appropriate examples to mind, in extending the tentative thoughts of participants, and in encouraging a refocusing of instructional elements are the key

determinants for the time factor. The instructor must be thoroughly familiar with the work of many effective teachers.

C. The texts for the course show how activities could be originated, correlated, and evaluated. How fast or how far the instructor proceeds depends upon his or her own expectations for the group. This unit could be accomplished in one to eight hours.

VIII. Cost Estimate

A. Packets can be developed at moderate cost. The Jones text costs $9.95. The ARGUS materials can be purchased for $9.45. Many of the worksheets are in the public domain.

B. The most expensive item in this unit is the person delivering the instruction. There can be no substitute for the person-to-person development of ideas, for the involvement of participants toward the unit's objectives, and for the instructor's expertise in sharing credible, imaginative approaches to the work teachers must perform.

Career Education Techniques

developed by

Dr. Anna Miller-Tiedeman
Career Guidance Coordinator, DeKalb High School
DeKalb, Illinois

and

Dr. Robert J. Nejedlo, Director
Counseling and Student Development Center
Northern Illinois University

Course Outline

1. Description: An interdisciplinary course on career education techniques for those intending to be counselors, teachers, or administrators at the elementary, secondary, community college, higher education, or adult and continuing education levels. This course is required for those seeking secondary counselor certification.
2. Subject Matter
   a. Overview of career development theory
      (1) Roe
      (2) Holland
      (3) Super
      (4) Ginzberg, et al.
      (5) Miller-Tiedeman
      (6) Tiedeman
   b. Career content and process
   c. The concept of "design a self," using Loevinger's theory

of ego development.

d. Career guidance and sequential career guidance programs

e. Implications and applications of process teaching for career education

f. Career counseling

g. Implications and applications of peer counseling for career education

h. Comprehending process in teaching and counseling

i. Processes in attaining organizational goals

j. Implications and applications of organizational processes.

k. Computer-based information systems

l. Printed and non-printed resource materials for career education

m. The placement service at different levels with sample forms and related discussion

n. Evaluating career education programs

3. Competencies

a. Explain the concept and function of the ERIC Clearinghouse in Career Education to a fellow class member and to a professional in a work setting of your choice.

b. Briefly describe in writing the career development theories of Roe, Holland, Ginzberg et al., Super, Miller-Tiedeman, and Tiedeman.

c. Define "career content" and "career process."

d. Recognize and discuss the difference between career

process and content.

e. Clarify the process of career education through a mini-teaching experience.

f. Clarify the process of career education through a mini-counseling experience.

g. Present a project detailing the components of a sequential career education program related to your choice of work setting from either a teaching, counseling, or administrative perspective. Include evidence of your knowledge of career education techniques.

h. Present an appendix to the project referred to in objective seven containing appropriate resources in career education.

i. Present a plan for evaluating the project referred to in objective seven.

4. Activities

a. Films, slide/cassette presentations, and slide presentations

b. Demonstration and use of ERIC

c. Career interviewing

d. Group and class discussion

e. Mini-teaching and mini-counseling experiences related to the process of career education

f. "Hands on" experiences with occupational view decks, career games, etc

g. Field trips and visits

h. Design and presentation of career education projects

i. Numerous handouts and sample forms

j. Written examinations

Evaluation

Team teaching proved to be an excellent arrangement for this course. A variety of appraoches could be drawn upon from the different backgrounds of the two instructors. The strengths of the course were the emphasis placed on understanding the career development roles of the various professions represented in the student enrollment, and the emphasis placed on the importance of theory to inform practice at all levels. Perhaps the most significant outcome was the students' increased awareness of themselves as career education resources, and their increased ability to use themselves as such.

The class size of thrity-eight made it somewhat difficult to respond to individual needs. A class size of twenty or less would, of course, be most desirable. Greater use of microteaching and learning center experiences for more individualization of instruction would also be helpful in this regard.

It is recommended that persons planning to teach this course have the following preparation:

1. an understanding of career development theory and its relation to career education practice,

2. experience in the conduct of career education programs,

3. access to exemplary career education programs for on-site visitations.

Sample Lesson Plan
Career Education Techniques

Defining "Career Content" and "Career Process"

I. Main Ideas

A. Career Content

1. Parent attitude
2. Teacher attitude
3. Friends
4. Cultural influences
5. Academic success and failure
6. Economics
7. Interests
8. Aptitudes
9. Self-concept
10. Early goals
11. Technology
12. Changing concept of work
13. Extra curricular activities
14. Abilities

B. Career Process

1. Chance
2. Opportunity
3. Time in history
4. Follow through

5. Failure to follow through
6. Decision making
   a. Getting information
   b. Taking risks
   c. Recognize the career problem
   d. Availability of information
   e. Possible alternatives
   f. Clarifying alternatives
   g. Considering determiners and influencers of career decisions.

II. Objectives

A. To understand the complexity of career development over a life span by learning to distinguish the content of a career from the process of a career while analyzing another person's career developement history.

B. To judge how much of a particular person's career development has been by chance and how much by choice.

III. Pre-assessment: the student will write a description of what he or she thinks is meant by "content of career" and "process of career."

IV. Main Activities

A. Students are paired off and instructed to interview each other for fifteen minutes each.

B. Each pair is given an additional fifteen minutes to write up the interviews.

C. Instructor and students participate in a discussion concerning "the content of career" and "the process of career."

D. The instructor asks students for examples of career content from their interviews and lists these on the board for students to observe and record.

E. The instructor asks students for examples of career process from their interviews and lists these on the board for students to observe and record.

V. Post-assessment: Students write a detailed explanation of what they now think "content of career" and "process of career" mean, giving specific examples from the interviews and/or from their own lives.

VI. Materials and supplies: none

VII. Time Estimate: 1½ hours

VIII. Cost estimate: none

IX. Resources: assigned readings

Organization and Administration of Career Education

developed by

Dr. Richard Erickson
University Coordinator for Vocational
and Technical Education and
Associate Director of ERIC Clearinghouse
for Career Education

and

Dr. David V. Tiedeman
Division of Counselor Education
and Director, ERIC Clearinghouse in
Career Education

Northern Illinois University

Course Outline

1. Description: The study of the organization and management of school and community resources for the career development of students. Activities will include field visits and the evaluation of career education programs.
2. Subject Matter
   a. Career education program planning and evaluation with special reference to the State of Illinois.
   b. Development and use of total program objectives.
   c. Career education programs and students served.
   d. Using school and community resources in career education program development.
   e. Guidance and auxiliary services for career education.
   f. Locally directed program evaluation.

g. Illinois state guidelines for program reimbursement.

3. Competencies

a. Present a brief synopsis of career development stages and describe the relationship of these stages to career education programming.

b. Describe the Illinois 3-Phase System of Evaluation, its influence on career education program planning, and its implications for public school districts and universities.

c. Write program management objectives

d. Detail the procedures, activities and forms for:

(1) a team approach to developing program management objectives for a local district one and five year plan for career education.

(2) using program management objectives for total program planning and avaluation.

e. Describe adequate programs for career awareness, career orientation, career preparation, vocational education, and post-secondary career education programs. Include program goals, content, activities, personnel involved, equipment used and students served.

f. Describe methods for developing an adequate system of advisory councils, and for invloving various other resource people in career education program planning.

g. Define terms used in career education program planning.

h. Describe specific career guidance services giving special

attention to placement and follow-up.

i. Describe the roles of various individuals in career education program planning and evaluation.

j. Describe the various types of reimbursement that can be sought for career education programs.

4. Activities

a. On-site visitations

b. Lecture and discussion

c. View films

d. Prepare abstracts of materials read outside of class

e. Library research

f. Written examination

g. Compute amounts of reimbursement porvided for particular career programs

h. Develop a local district one-and-five year plan for career education

Evaluation

Pre and post assessment revealed a substantial increase in the students' confidence in their ability to perform on all of the course competencies. In general, the students considered themselves well prepared in this area of career education at the conclusion of the course.

The greatest strength of this course was its well-planned organization of distinct programmed and transportable modules.

However this aspect also proved to be problematical at times because the course was occasionally too highly organized to allow as much freedom in the classroom as was desired by the students and/or instructors. Modifications of the original modules and of the modes of presentation are planned to eliminate this difficulty.

It was found that this course was ideal for team teaching because of the balance that could be struck between the occupational emphasis of one instructor and the umbrella career emphasis of the other instructor. Other suggested changes in the course are to increase the use of micro-laboratory experiences, and to increase the amount of field work. The possibility of students participating as special members of Department of Adult, Vocational, and Technical Education program evaluation teams is under consideration.

A comprehensive understanding of both occupational education and career education is essential to teach this course as outlined here. Access to current information in these two areas, as well as local availability of exemplary programs, are crucial to the success of this course.

4. Joint agreements
5. Learning resource center
6. Assessment (review of objectives and informal assessment of students' level of development).

C. Mechanisms for involving school and community personnel in program planning.

1. Students
   a. Need for various programs
   b. Evaluative data for program improvement
2. Parents
   a. Need for various programs
   b. Evaluative data for program improvement
3. Occupational teachers
   a. Individual and total program objectives
   b. Evaluative data for program improvement
   c. New program ideas
4. Guidance personnel
   a. Evaluative data for program improvement
      (1) Follow-up data
      (2) Job placement data
      (3) Assessment of students' needs for occupational preparation
   b. Criteria and procedures for identifying the disadvantaged and handicapped

c. Procedures for student selection and classification

5. Personnel from feeder schools

a. Program objectives

b. Program description

(1) Content

(2) Methods

(3) Facilities

(4) Students served

6. Assessment (review of objective and informal assessment of students' level of development)

II. Objectives

A. Graphically develop an adequate system of advisory councils for a district's career education program and describe the activities of each council.

B. Define the following and describe situations in which each might contribute to the development of a strong occupational program.

1. Contractual agreement

2. Area/vocational center

3. Cooperative vocational program

4. Joint agreement

5. Learning resource center

C. Describe mechanisms for involving each of the following types of individuals in planning a career program and tell the specified types of input they

can be expected to provide.

1. Students
2. Parents
3. Teachers
4. Guidance personnel
5. Personnel from feeder schools

III. Pre-assessment: Students indicate their level of development with regard to each unit objective by using the following scale: 0-no knowledge; 1-some, but not complete knowledge; 2-complete knowledge

IV. Main Activities

A. Students read Department of Adult Vocational and Technical Education Guide for Planning, Organizing and Utilizing Advisory Councils and other selected materials concerned with using school and community resources.

B. Students summarize all readings. Abstracts are submitted to the instructor in 3 x 5 card format and evaluated and returned to students for their files.

C. Lecture and Discussion

V. Post-assessment: Students prepare a written response to each of the unit objectives and submit them to the instructor for review and constructive criticism. Responses and instructor's comments are returned during the following class meeting.

VI. Materials and Supplies: 3 x 5 index cards

VII. Resources: Assigned readings

VIII. Time Estimate

A. The unit can be taught in three separate one hour segments.

B. The remaining activities take place outside of class and the amount of time will vary with each student.

IX. Cost estimate: The only cost involved for this unit is the purchase of 3 x 5 index cards.

Chapter Summary

This chapter presented a formative evaluation of six career education courses taught at Northern Illinois University. A course outline and sample lesson unit were provided for each of the six courses.

ABSTRACT: VOLUME I CONTAINS CAREER EDUCATION ACTIVITIES FOR GRADES K-5. THE UNITS ARE DEVELOPED AROUND SPECIFIC TOPICS AND INCORPORATE THE FOLLOWING ELEMENTS: SUBJECT-CONTENT RELATIONSHIPS, OCCUPATIONAL INFORMATION, RESOURCE SPEAKERS, INTERVIEWS AND REPORTS, PARENT AND FAMILY INVOLVEMENT, HANDS-ON AND OTHER SENSORY EXPERIENCES, ROLE PLAYING AND SIMULATION ACTIVITIES, AND CAREER-RELATED FIELD TRIPS. EACH UNIT REQUIRES FOUR TO SIX WEEKS, AND TEACHERS MAY SELECT FROM THE ACTIVITIES LISTED THOSE MOST APPROPRIATE FOR THEIR PARTICULAR STUDENTS. THE UNITS GENERALLY CONTAIN OBJECTIVES, CONTENT QUESTIONS, TECHNIQUES AND ACTIVITIES, RESOURCES AND MATERIALS REQUIRED FOR EACH ACTIVITY, AND A BIBLIOGRAPHY. SAMPLE UNIT TOPICS ARE CLOTHING, INSECTS, THE RADIO STATION, AND AGRICULTURE. (AUTHOR/RG)

RADFORD CITY SCHOOL'S CAREER EDUCATION PROJECT
RADFORD, VIRGINIA 24141

INTRODUCTION TO ELEMENTARY CAREER EDUCATION UNITS

The Career Education Program of the Radford City Schools is a pilot project of research and development for career education techniques and materials. It is funded through a grant from the Office of Education which extends until December 14, 1974.

The unit approach was utilized to implement career education concepts on the elementary level. A total of 99 career education instructional units have been developed by the Radford teachers. These units were designed for use in grades K-7 and special education.

The units were developed around specific topics (clothing, weather, etc.) and incorporated the following elements:

1. Subject content relationships
2. Occupational information
3. Resource speakers
4. Interviews and reports
5. Parent and family involvement
6. Hands-on and other sensory experiences
7. Role playing and simulation activities
8. Career related field trips

The majority of the units contain more activities than would normally be included in a unit, therefore the teacher can select the most appropriate activities for her particular students. The length of time that should be spent on each unit is approximately four to six weeks.

BROAD OBJECTIVES:

Self Awareness

The child will become more aware of the relationship of jobs and skills to the clothing he wears. He will become more aware of the tasks needed to produce various clothing items, and relate these to the skills he is learning.

Educational and Career Awareness

The student will become aware of the varied occupations in the clothing industry through educational experiences in the classroom and community.

Economic Awareness

The student will develop economic and social concepts through role play and observation of the manufacture, buying and selling of clothing.

Employability Skills

The student will form concepts, attitudes and skills related to the clothing industry. Hopefully, he will be able to successfully perform tasks and recognize the importance of following directions and doing a job well.

Attitudes and Appreciations

In observing particular skills needed in the manufacture and selling of clothing, the child will become aware of the importance of all jobs and high performance skills. He will see the importance of inter-dependence in accomplishing goals.

Decision Making

To help the child become aware that he has a choice in many situations.

The child will become aware of the relationship between responsible action and decision making.

Through role playing the student will learn to select clothing appropriate to the

CONTINUED

weather and/or activity, to care for his clothing and develop an interest in specific tasks related to this field.

Beginning Competency

The student develops small muscle skills, number skills, vocabulary enrichment, listening skills and manipulating small tools.

Introduction to: Nothing to Wear but Clothes

This unit will try to give kindergarten children more of an understanding of what people and processes are involved in producing an item of clothing from fiber or animal to finished product.

Through field trips, resource people, hands-on experiences, movies, film-strips and stories, the children should gain in their knowledge of skills needed to produce a variety of clothing.

Because kindergarten children learn best by doing, it is important to make available many hands-on experiences such as weaving, sewing, spinning, designing, cutting, etc.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIALS
As an introduction to the unit, children will be selected to open four boxes of assorted clothing pertaining to the seasons. Have available four suitcases for the children to pack for a summer, winter, spring or fall vacation.	Filmstrip: Clothes and Where We Wear Them. How We Get Our Clothing. Pella's New Suit. Where Clothes Come From.
Let's pretend we're going on a trip. It's summer and very hot. What will we need to pack? Continue this discussion and dramatize and charade.	Song: What are you Wearing? Hap Palmer - Basic Skills

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Why do we need different types of clothing?	Art Activity: Children draw and cut out people dressed appropriately for a particular season. Children role play these activities.	Art Book-Arts and Crafts for Elementary Teachers. Childcraft Vol. 10 p. 220 "Making the Clothes You Wear" Transparencies "Learning About Clothing" (SVE)
What type of clothing do we wear for different activities? Why? Sligh riding Church Shopping Swimming Sleeping Birthday Party Camping Travelling Bike Riding Playground Activities Hiking Riding Horses Riding a Motorcycle Deer Hunting Fishing	Children look through catalogs and cut out and classify clothing according to activity or season. Make a collage of torn paper pictures of as many different kinds of clothing as each can find. Songs: Hanging Out the Linen Clothes Here We Go Round the Mulberry Bush The Shoemaker (from Music in Our Town) Children bring dolls and dress according to activity.	Story: "A New Hat and a New Dress" Bulletin board made by the children with the four seasons backgrounds with appropriate dress on the people. Books: The Red Jacket Katie No Pockets The Pockets of Paul Songs: Easter Parade Hat Parade I Have a Little Overcoat The Laundry Man

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
		Stories: New Clothes for Henry The Story of Your Coat Study Prints: Clothing Stories: The Jumping Hats from a World of Suprises p.130 Titos Hats The Elves and the Shoemaker A Visit to the Shirt Factory from Going Places Seeing People
Where do clothes come from?	Children will have an opportunity to dress in various types of clothing leading up to an art activity of painting large cardboard boxes to be used as clothing, hat and shoe stores.	Filmstrip: Where Clothes Come From Large freezer boxes to be used for classroom shopping center. Play money, cash register, various types of clothing available for role playing. Filmstrip: My Dad Works in a Shoe Store.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Would you like to visit some real stores and get some ideas for your stores? Try to remember the kinds of objects you will need in your stores.	Field trip to town where children will visit a department store, shoe store, hat shop, etc. As a follow-up, we will discuss the various jobs seen in these stores and encourage role-playing of these observations.	
What materials do we use in our clothing?	Discuss concepts of heavy, light, etc. and seasonal clothing. Art Activity. Various types of cloth available to feel, squeeze, smell, pull, etc. Make a fabric collage.	Filmstrips: The Story of Cotton The Story of Leather The Story of Wool Textiles for Everyone Wool Into Clothing Textiles Teaching Kit On science table have magnifying glasses and microscopes for the children to experiment with and observe the various fabrics. Field Trip Visit a fabric shop.
	Discuss measurement with regard to how we buy and measure fabric, people, etc.	Have yard stick, measuring tape, etc. on science table, cotton boll.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
How do fabrics become colored?	Crayon color on fabric then iron with a hot iron to set the wax. Tye-dye old T-shirts on blouses which each child has brought from home. Encourage children to bring in berries, flower petals, leaves, etc. that can be used to experiment with coloring fabrics. Art Activity: Cotton balls dipped in tempera.	Field trip to Dalton's Farm to see sheep shearing. Books: The True Book of Cloth by Highbert Let's Find Out About Clothes The Story of Your Coat by Clara Hollos
How are fibers woven?	Have the small looms out and introduce weaving with the loops. Keep these out and available for those who wish to work at this project. Show the children how to weave pot holders and weave off the loom.	Have a resource person come from RMC to show movie and samples of man-made fibers. Visit someone who has a loom - a home or Radford College Art Department. Have them demonstrate different type of weaving.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
How are clothes made from fabric?	Have sewing machine in the room. Teach those interested how to use it.	Visit the shirt factory. Observe especially the production-line techniques.
Who makes them?	Introduce term "pattern .	Have resource people come into the room to show and possibly teach children various crafts such as knitting, crocheting and fancy weaving.
Are all clothes made the same way and design?	Have some doll clothes cut out for children to sew up if they choose.	Visit sewing classes at Radford College to see and use the machines and to watch clothes being made by individuals.
	Borrow a child mannekin from a department store. Bring old patterns and pieces of material to be manipulated and experimented with.	
How do we care for our clothes? Who helps us keep our clothes clean besides mother?	Song: This is the Way We Wash Our Clothes"	Filmstrip: Proper Clothes and Their Care Our Neighborhood Laundry
	Help children learn to care for doll clothes in the classroom. Have them wash, rinse, pretend iron, and fold.	Visit the local cleaning establishment. Point out and observe the different techniques of keeping clothing clean, such as washing, dry-cleaning, spotting. Have someone demonstrate how shirts are ironed at a professional cleaners.

13

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	As a culminating activity, children will wear their own creation for a fashion show. Encourage each one to describe the type of material, where it came from, and where the article was purchased.

INTRODUCTION TO: Clothing
"This Is The Way We ? Our Clothes"

The purpose of this unit is to develop, in young children, an interest in and understanding of the clothing they wear.

Through sensory contact, they will learn of the many textures, colors, and weights of fabric and of the kinds of apparal for which each fabric is suited.

Through contact with workers responsible for producing and caring for clothing, the children will develop an understanding of the world of work.

BROAD OBJECTIVE: To develop an awareness in young children of the many kinds of clothing and why we wear and need them. To also develop an awareness of workers who make clothing available to them.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are you wearing today? Where did your clothes come from?	Play "show 'n tell" identifying what each child has on.	Read: Emperor's New Clothes (Hans Christian Anderson)
	Bulletin board - Tune of "Mulberry Bush" "This is the Way we Make our Clothes" Discuss-identify items on board.	Picture of sewing machine, patterns, pieced-together outfit, bobbins, zippers, pinking sheers, etc. Also, knitting, weaving.
2. How are clothes made?	View filmstrip and discuss.	Filmstrip: How Clothing Is Made Radford College
	Take trip	Field trip to Home Ec. Dept. to see a sewing class.
	Creative play with paper dolls.	
	Make girl and boy figures-- dress in materials brought in by children.	Pieces of material
3. What kinds of material do you know about? What materials are soft? Shiny? Rough?	Play guessing game with materials; for example: flannel; what kind of clothing would you wear made from this material(pajamas). Also, use denim, velvet, corduroy, etc. Blind fold child and guess what kind of material it is from, how it feels.	Have a speaker come in from nearby clothing, fabric or fiber plant.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Do pot holder weaving and visit a clothing plant and loom operation. Continue "Mullberry Bush" song and creative play. This is the way we cut out our clothes, sew our clothes.	
4. Where does wool come from?	View filmstrip Start a clothing booklet. Allow each child to select a piece of wool for page. Draw a sheep. Also, add wool yarn.	Filmstrip: Materials for Clothing (Radford College)
5. What is knitting? Crocheting?	Have a knitting demonstration. Allow children to try. Have crocheting demonstration. Allow children to crochet chain bracelets.	Knitting needles and yarn. Crocheting needle and thread.
6. What different kinds of clothing do we wear? What is a vest?	Show film. Art: Collages of textures of materials. Add to booklet. Allow each child to sew a button on a piece of material and to attempt cutting with pinking sheers. Add results to booklet.	Filmstrip: Clothes and Why We Wear Them (Radford College) Clothing charts and labels.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
7. How do we clean our clothes? What workers do this job?	Visit a cleaning center. Observe wet and dry methods.	Filmstrip: A Trip to the Laundramat (Radford College)
	Allow each child to choose a sewing project: hair band, bean-bag, draw-string bag. Make from scraps brought in by class. Put in paper pocket at back of booklet.	Sewing machine - Beans, rice, pine needles, elastic, and yarn.
8. Do you think you know how we get our clothes now?	Filmstrip.	Filmstrip: Where Clothes Come From (Radford College)
	Have fashion show. Children will bring in or wear certain items which they will model and tell about.	
	Mullberry Bush song - cut, sew, knit, wash, iron, wear and act out as sing. Have children finish the booklet and take home with doll they clothed.

RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: Community Helpers
"The Hat Tree"

This unit seeks to introduce the kindergarten child to his community and to acquaint him with the world of work.

The child will be given information concerning various occupations and will be involved in role playing situations that hopefully will start developing individual interests and abilities.

This unit will be geared to what interests the children most like. Occupations not mentioned might be included if children express a desire and show an interest in them.

MOTIVATING ACTIVITY	RESOURCES AND MATERIAL
The first day of the unit, have displayed in the room a "Hat Tree" with various hats worn by community helpers. Children will be allowed to select hats to role play.	Read: "The Hat Book" by Leonard Shortall. "About Our Friendly Helpers" by Elaine Hoffman and Jane Hefflefinger. Display on unit table-books, puzzles, Kinder-City(miniature city), community helper puppets, study prints(Workers in Our Neighborhood). Flannel board(Instructo) of community helpers.

23

BROAD OBJECTIVE: (1) To help the kindergarten child learn to work and play cooperatively with others and to develop an awareness and appreciation for the various occupations in his community.

(2) To broaden his interests and introduce new experiences that will increase his knowledge of community helpers and help him develop new interests and abilities to become a responsible and effective member of the community.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Who can name the daddies who might wear these hats? Does your daddy have any of these hats at home?	Children can help identify hats on tree. Let "helper" select one hat to lead into specific discussion of community helper.	
2. Who is this helper?	Policeman: Show study print and dress child in police suit.	Filmstrip: "The Policeman" (McGraw-Hill)
	Discuss safety rules at home and school. Traffic signs are on display in classroom.	Books: Your Police-George J. Zafflo. Policeman Small-Lois Lenski The Book of Policemen-Irene Miner.
	Prepare simple map to be filled in with location of sites visited or used.	Traffic signs
	Invite policeman to visit classroom for children to interview and hear rules of safety.	Books: Our Friend the Policeman-David Cunniff. Let's Find Out About Policemen-Martha and Charles Shopp.
	Make police hats. Ride in police patrol car. Visit police station Role-play a day in the life of a policeman and his family.	Construction paper(hats & badges) Field trip-police station Wear colored badges to match an adult on trip.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	For role play, provide boxes for children to make police cars(individual cars can be made with bottom of box opened and handles cut out on sides. P.E. "Red Light, Green Light" "Little Lost Child"	Study Prints-Police Dept.Helpers "Workers in Our Neighborhood" (McGraw-Hill) Study Prints-Ginn Language Arts Kit.
3. Do any of your fathers work at the Police Department? Do any of your big brothers and sisters serve on Student Patrol? How many of these helpers have you seen on TV?	Encourage fathers, mothers, siblings to visit classroom and share their job duties with the class. Make tagboard patrol belts for each child to wear during school patrol interview.	Study prints of Policeman-(David C. Cook) Resource persons-fathers, mothers, siblings. Tagboard.
4. This hat is red. Who is the helper who wears it? How does he keep our school and home safe? Where does he work? What does he wear? What kind of car or truck does he use? Why does he waar a red hat? Why do policemen and firemen have to work at night?	Riddle: Who am I? Clangiclang! Stay out of my way... I'm rushing to put out a fire today. Encourage children to tell what they know(and bring toys, books about it). Invite Fire Chief to visit with fire truck. Children later will ride on truck and visit the fire station. Wear fire hats made from red construction.	Books: Fire Snorkel No.7(Jene Barr) The Big Book of Real Fire Engines(Elizabeth Cameron) Filmstrips: SVE-Rand-McNally "Johnny The Fireman" Resource person-Fire Chief Records: "Fire Truck" "Fire, Fire, Fire" "Smokey The Bear" "Let's Be Firemen"

15

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Why do we have fire drills?	Demonstrate and role play fire drill.	Fingerplay: Fire Little Firemen (Scott Thompson) Material: Red construction paper.
5. How can we practice safety at home and school? What can we do to make our homes safer? In what ways can we protect our homes and school?	Distribute police and fire booklets made for primary children. Make a tour of school to locate fire extinguishers and school fire alarm. Locate fire hydrants. Indicate these on map of community.	Fire Dept. Helpers(SVE) Books: The Little Fire Engine (Lois Lenski) The Great Big Fire Engine (Tibor Gergely) Let's Find Out About Firemen (Martha & Charles Shapp) Let's Go To A Firehouse (Naomi Buchheimer) The First Book of Firemen (Benjamin Brewster)
6. Who wears this hat? How does he help us? Do any of your fathers do this work? Would you like to have a grocery in the classroom?	Child selects butcher, grocer or restaurant hat from The Hat Tree. Discuss study prints, types of foods we eat, favorite food, etc. Take a walk to neighborhood grocery. Talk with manager, discuss food and supplies in his store. Decide what is needed to put one in classroom. Provide large box to paint and construct grocery store. Encourage children to bring empty cans, boxes and bottles for role play. Play cash register.	Books: Two For A Walk(Nathan Kravetz) I Had A Penny(Audrey Chalmers) Annie's Spending Spree (Nancy Watson) I Want To Be A Store Keeper Field trip-neighborhood grocery store. Refrigerator box-paint

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
		Study Prints: 4 Basic Foods "Talkstarters"-At the Store Workers in Our Neighborhood (McGraw-Hill)
	Children in housekeeping corner can prepare "food" by making play dough play food. Play money can be used. If interest holds, food preparation could be part of unit with place mats, aprons, flower arrangement, actual cooking, etc.	Materials: Cans, bottles, boxes, play cash register, flannel board(Instructo) puzzles, play dough, play money. Filmstrips: The Grocer(Jam Handy) Shopping For Groceries (Jam Handy) Life in a Small Town Life in a Large Town (McGraw-Hill) The Town Mouse and The Country Mouse SVE-Rand-McNally
	Invite local grocer or interested parents in to see and participate in project.	Resource person-local grocer or interested parent.
7. Who is the helper who brings the milk?	Invite a milkman to visit with his truck and deliver whipping cream. The class will shake this in the jar to make butter.	Study prints on the milkman. Whipping cream jars

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Game: There are many people who help us everyday. The milkman brings us the milk. He is a friend of mine. The children form a circle and one is the milkman, and places the milk carton behind one child who then chases the milkman around the circle and then becomes the milkman.	Milk carton
8. Who makes food other than mother?	Make play dough to play with. Make baker, chef and waitress hats for pancake party. Let children dramatize. Filmstrip(view) Let the children make pancakes(pour and turn their own). Use the butter made by the children. Play game: Baker baker deliver the bread. Repeat the game listed under content question related to the milkman. Use bread wrapper instead of milk carton. Also play hot bread instead of hot potato.	Study prints listed in bibliography. Tissue or crepe paper and construction paper for hats. Filmstrip: The Little Red Hen Pancake mix, bowl, milk, eggs and other utensils and ingredients for pancakes.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Tell the story of pancake with flannel board like the gingerbread man. Use this rhyme: Mix a pancake Stir a pancake Pop it in a pan Fry a pancake Toss a pancake Catch it if you can.	
9. Who might wear this? How does the doctor or nurse help us? Where do they work? Would you like to meet a real doctor or nurse?	Select a child to pick nurse cap or doctor's equipment from "The Hat Tree." For role play, have one interest center equipped with cot, play doctor and nurse kits, first aid equipment. Have box to make an ambulance. Visit hospital or doctor's office. Have ambulance come to school.	Books: How Hospitals Help Us (Alice M. Meeker) Doctors and Nurses, What Do They Do? (Carla Greene) Who's That? (Blair Walliser) The Indoor Noisy Book (Margaret Wise Brown) Busy Bodies (Clare Bowman)
10. Would you like to meet a doctor or nurse? How can we help the doctor and nurse? How do these different people prepare for their jobs?	Invite school nurse to visit classroom and demonstrate such things as simple first aid, etc. This question can lead into study of importance of eating good food, getting proper rest and exercise. Role play what you would do if: a. you were a nurse and you had to help child who cut his arm.	Resource person-school nurse or parent.

29

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	b. you were a doctor and child came to you who has to have tonsils out. c. you are dentist and a grown up has a toothache. d. you are mother or father and you discover your body has high temperature.	
11. How do we get our homes?	Discuss house helpers, fix-it men and carpenters.	
	Set up work bench with tools.	Table and tools
	Sing the song "Here They Come" to the tune of Three Blind Mice.	
	For physical activity have children act out "This is the Way We Paint the House" to the tune of "Here We Go Round the Mulberry Bush." Act out with real brushes and clean up tools.	Brushes, brooms, buckets, cloths.
12. Who delivers the mail?	Make mail satchel. Use a rural post box and have a letter for each child inside. Have mail call. Write a thank you letter to a helper who has visited the class. The class will walk to a corner box and mail it. Riddle: I walk for blocks and blocks to put letters in your mailbox' Who am I?	Mail box Envelopes Thank you notes and stamps

30

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
13. Who picks up the garbage?	Let children pick up trash on the playground, and clean up the room. Read story	 Dear Garbage Man

CULMINATING ACTIVITY:

CULMINATING ACTIVITIES	RESOURCES AND MATERIAL
As a culmination we will compose a letter to our parents telling them about "The Hat Tree." An invitation will be extended to the parents urging them to join us in our project about the study of community helpers. They will be encouraged to add their different hats to our "Hat Tree", visit our classroom and tell us about their jobs. This could extend our unit into other fields as we learn and explore the world of work.

INTRODUCTION TO: Health
"An Apple A Day"

This health unit is introduced to the child to develop an awareness and an appreciation of the importance of personal hygiene and cleanliness, and help him learn to care for his personal needs. With the help of various resource people in this field and field trips, the child will be able to perform these functions in the classroom and use them in his personal good grooming and health habits. Hopefully, he will develop an understanding and appreciation of occupations in this field and his dependence on them.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is the doctor's job?	Bulletin board on doctor, nurse, "Emergency Room"	Fingerplay - "Let's Be Doctors" Filmstrip: "What the Doctor Sees When He Looks at You"
2. What is the nurse's job?		Invite a nurse to visit the class dressed in uniform and discuss her job and dress.
3. How do they help us?	Discuss first aid. Show equipment. Children will role play jobs of hospital workers.	
	Discuss study prints on doctor and nurse.	Write thank you note to nurse.
	View filmstrip.	Filmstrip: "My Mother Has A Job"
	Art: Make nurse caps and doctor's mirror.	
	Read and discuss story.	Story: "My Friend the Doctor" "Doctors and Nurses"
	Make an ambulance from large box. Have ambulance driver bring ambulance-let children observe equipment. He might demonstrate use of splints, oxygen, slings, etc. also, stretchers.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	View filmstrips.	Filmstrips: "The Neighborhood Doctor" "My Mother Works in a Drug Store"
	Start doctor and nurse booklet so that it looks like a doctor kit on cover. Color worksheets on doctor and nurse.	
4. What are some of the "tools" doctors and nurses use to help us?	In doctor and nurse kits, make a display of cotton swabs, depressers, band aids, splints, etc. Acquaint children with terms: stethoscope, blood pressure, etc.	Visit a hospital or informary to see doctors and nurses in action.
5. Are there doctors who don't help people?		
6. Who do these doctors help?	Child might bring in his puppy and talk about how it needs to be kept healthy.	Visit local veterinarian (Note films-rip in bibliography "My Dad-The Veterinarian")
7. Where do we get the medicines the doctor tells us we need?	Invite a pharmacist to visit the class and discuss drug safety.	Pharmacist
8. Should we take medicines by ourselves?	Children set up pharmacy with empty bottles, etc. Contact Pittsburgh, Pa. Poison Control for Mr. Yuk Buttons, 125 DeSoto St., Pittsburgh, Pa. 15213	Empty bottles

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Art: Hospital collage; band aids, q-tips, candy pills, etc.	Band aids, q-tips, candy pills, construction paper.
9. Why do we need to look nice to be healthy? How helps us.	Barber shop and beauty shop	
	View filmstrip.	Filmstrip: "Neighborhood Beautician"
	Set up with all equipment - wigs, play razors, mirrors, capes, etc. Might visit a barber shop and/or beauty shop.	
	Bulletin board with beauty operator, study prints, etc.	Study prints: "Keeping Clean and Healthy"
	Art: Children can make large barber poles for their barber shop. Art - pink construction circle- "What makes me Pretty"? Draw own face and add ribbon, features.	
	Invite a cosmetologist to visit class and show a beauty kit and put make up on teachers.	Filmstrip: "The Neighborhood Barber"
	For booklet: Girl's worksheet with mirror, comb, etc. Boys draw their faces; hang them in barber shop.	Study print: "Community Helpers"

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
10. Who helps us have healthy teeth?	Discuss study prints of dentist.	
	Have students color worksheet with toothbrush and toothpaste on it.	Book: A Visit to the Dentist by Bernard Garn.
	Present red capsule for tooth test. Instruct children how to use the capsule to check on brushing habits.	Filmstrips: "Let's Visit the Dentist" "The Mouth I Live In"
	Visit a dentist's office or have a technician come into the classroom.	Possible materials from these people: large models of teeth/etc. toothbrushes for each child. capsules

INTRODUCTION TO: MUSIC - "WHISTLE WHILE YOU WORK"

This unit on music is written for the kindergarten child. It is hoped the child will gain an understanding of the variety of musical instruments and types of music.

Through field trips, resource people, and listening and rhythmic experiences, the child will gain a general understanding of music and the careers related to it. He should also find it a form of entertainment and relaxation.

BROAD OBJECTIVES:

Self Awareness: The student will become aware of the four families of musical instruments and their sounds.

Educational Awareness: The student will attempt to develop skills in listening to music, to distinguish among the different instruments and learn how to identify them by their shapes and sounds. The student is introduced to each family of instruments and learns them by name.

Career Awareness: The student becomes aware that there are many different musical instruments and that each may lead to different careers in the field of music. The student is made aware of the value of music.

Economic Awareness: The student becomes aware of why people play music. He recognizes some of the uses of music. He learns that music has a value in our economy.

Decision Making: The student becomes aware that he has a choice of the many instruments.

Beginning Competency: The student will attempt to play music on basic instruments. He becomes aware of the relationship instruments have with each other.

Employability Skills: The student will attempt to perform individually and with a group. He will become aware of how important it is to follow directions, timing, cues from the director. He will become aware that there can be no music without working together.

Attitudes and Appreciation: The student will become aware of what his contribution is to music and how the sound of his instrument differs from the others in the group.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Ehen you work do you whistle? How do you whistle?	Filmstrip: "Snow White and the 7 Dwarfs". Discuss filmstrip. Show how to whistle.	Bulletin board display of the 7 Dwarfs whistling while working. Music notes, treble and bass clefs, etc.
Can you whistle a merry tune?	Song: "Whistle While You Work".	Cassette and Book: 780G "I Want To Be A Musician".
Did you know that you can whistle into a musical instrument?	Show a real flute or a picture of one. Pass flute around (if possible) and let children examine. Discuss the flute.	A resource talent from the High School will show how a flute is used.
What kind of sound does a flute product? (low, high, soft)		
Name another instrument that you can whistle into. What kind of sound does a piccolo product? (happy, shrill, laughing)	Show piccolo.	Resource talent can show piccolo and how used.
How many holes in a flute and piccolo?	Math concept.	
Name some other instruments in the woodwind family. Clarinet, bassoon, obae.	Record: The Licorice Stick. Show real or pictures of these instruments. Introduce Tonette. Let children play them.	Young People's Records. The Licorice Stick Story of the Clarinet

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Can you tell me what kind of musical instrument this is? (Hold up a real trumpet, if possible.)	Show real trumpet or pictures of one.	Resource talent from community or high school to show how trumpet is played.
Where do you see a trumpet? (Marching Band)		Go to high school to see a marching band in action. Interview band director.
What kind of sound does it produce? (high, low, sharp)	Record: Sousa "Stars & Stripes" "Washington Post March" Record: "Little Brass Band"	Visit the Radford College Highlander Band. See bagpipes. Interview a music major who plays bagpipes.
How many valves does a trumpet have?	Math concept.	
Who is John Phillip Sousa? (March King)	Make a Kazoo. March with Kazoos, play one of Sousa's marches. Show pictures of Sousa.	
Name some other instruments in the brass family. Saxophone, Tuba, French Horn, Trombone, Coronet.	Discuss these instruments. Let children touch and examine. Record: Tubie Tuba in Orchestraville	Record: Tubie Tuba in Orchestraville.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
What is a corductors job?		
What kind of an instrument sounds like heavenly music, wind blowing through the trees, a bee, a storm?	Show a violin. Record: Flight of the Bumblebee, by Rimsky - Konsakoff.	Visit Radford College Orchestra. Interview the conductor.
How many strings on a violin? (4)	Math concept.	
Name some other members of the string family. Viola, Double Bass or "Bull Fiddle", Cello, Bow(used for producing sound across the strings), Harp.	Show the real instrument or a picture. Song: "Gay Musician" After children have learned song, they can pantomine the instrument. As they sing produce the sound of the particular instrument. Introduce autoharp. Show how it is used. Let children try to play it.	
Can musical instruments sound like a particular animal or bird? (yes)	Teacher accompany the children's singing on the autoharp. Record: "Peter and The Wolf"	Record: "Peter and The Wolf"

84

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
How do you play a guitar? (strumming, picking with a pick)	Show a guitar. Show different kinds of guitars. (electric, etc.)	Resource talent from community. Corwin Matthews - Guitar Maria Casas - Spanish Guitar.
When and where do you see a guitar? (Folk & Country Music Band)	Make shoe box guitar.	
	Talk about Folk & Country Music since they use guitars,etc.	
	Introduce Flat Foot Dance.	Resource talent from community.on Flat Foot. Wilma Kincer
How many strings on a guitar? (6, 8, 12)	Math concept.	
	Introduce the percussion family by taking front part of the piano showing strings and hammers. Let children examine and touch.	Resource talent from Radford College. Interview Dr. Zunbrigg.
What kind of instruments do you find in the percussion family?	Put on display snare drums, bass drum, glockinshpel, cylophone, kettle drums or gong. Let children examine and play.	
How do you play a percussion instrument? (by striking)	Make tambourines.	
	Experiment on water glass xylophone for different pitches of sound.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Use rhythm band with rhythm record. Children should learn to: 1. Be good members in a band. 2. Sit correctly when holding or playing an instrument. 3. Watch cues from the leader of the band. 4. Listen for various theme changes.	
Where do you see an organ? (Church. Home) What is a pipe organ?	Show pictures of various organs and pipe organs.	Visit Preston Hall at Radford College. See pipe organ. Interview Miss Hiembich
How many keyboards does an organ have?	Math concept.	
	Shoe filmstrip: Snow White and Seven Dwarfs.	
	Discuss the different musical instruments used in the story.	Filmstrip: Snow White and the Seven Dwarfs.

5a

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	CULMINATING ACTIVITY A music recital using rhythm band instruments and instruments made by the children. Let one child lead the band. Role play the story of Snow White and the Seven Dwarfs.

INTRODUCTION TO: The School
"Pat-A-Cake, Pat-A-Cake"

This unit is an introduction of the kindergarten child to his new environment in the school community. It is presented in a way that will help develop an appreciation and understanding of the various job roles in the school. Hopefully, it will help the child develop an awareness of his role in being a helpful, cooperative and responsible student.

BROAD OBJECTIVE: (1) To present appropriate occupational information about the occupations of the school staff and promote an appreciation and understanding of each school helper's role.
(2) To help the child become aware of his importance as a responsible, helpful, cooperative citizen in the school community.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Why do we need helpers in the classroom? Why is it important for us to share our jobs? Is it easier for one person to help? Would you like to be a helper?	As an introduction to this school unit, a helper chart drawn as a gingerbread man will be in classroom with each child's name on separate cards to be chosen for classroom duties each day. Read and discuss book or filmstrip.	Read: "The Gingerbread Man"(Nancy Nolte) or show filmstrip of same SVE Rand-McNally.
2. Would you like to make your own gingerbread man like the one on the helper chart?	Children will help make a real gingerbread man and decorate with raisin eyes, etc. Class will take him to cafeteria to put him in oven. (After baking, teacher will put in freezer for future use.)	"Little Bear Learns to Read the Cookbook." Recipe for gingerbread man: 2/3 cup shortening (cream) 1 1/4 cups sugar 2 tbsp. molasses (add to 1st) 2 eggs 2 tbsp. sour milk (add) 1 tsp. soda 3 cups flour 1 tsp. salt 1 tsp. b. powder 1 tsp. cinnamon (add) 1/2 tsp. ginger 1/2 tsp. nutmeg Pour into gingerbread man pan and bake 375°

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. Who are the helpers that work in our school kitchen? How do they help us? What jobs do you see them doing?	Introduce all cafeteria workers. Let children observe them working with equipment. Children will role play these workers in interest centers.	Flannel board(Instructo) "School Helpers" Teaching Pictures(David Cook) Cooking utensils put in kindergarten housekeeping center.
4. Do you think it would be fun to go back to cafeteria to see if the gingerbread man is done in the oven?	Eat snack in cafeteria. Children will find note on cafeteria table from the gingerbread man saying: "Look, look, as hard as you can, you can't find me"... "The Gingerbread Man" Children will walk through school until they find the "clue"- brown construction paper shaped like gingerbread man will be taped on the principal's office door.	Mike Hage, Jr. "How School Helps Us" As each school helper is visited add the tool he uses to interest centers.
	Visit a guidance counselor and ask her to visit class. Ask her to discuss her job.	Filmstrips and cassettes: Knowing Our School (Encyclopedia Britannica) 1. Going to School 2. Our Room in School 3. A New Friend at School 4. Helpers at School 5. School Rules 6. Our School in the Community. Filmstrips(Eye Gate) 1. Going to School is Fun 2. School Helpers Book: Cathy's First School

52

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
5. Who do you think might work here? Would you like to meet our principal and his helper? (Secretary) What kind of jobs does the principal do? What does his secretary do to help him? How do they help us? How can we help them?	Children will continue their search each day, exploring the school. They will see the various school helpers working in their jobs. Each day, a similar note from the gingerbread man will be found which will lead them to each area of work. Those visited will include: Cafeteria Principal Secretary Custodian School patrol a. safety b. flag Special teachers music guidance speech Classrooms and teachers	Books: Let's Find Out About School(Martha and Charles Shapp) Schoolroom Bunny(Janet Knokle) Andy and the School Bus (Jerrold Beim) Study Prints on School Patrol by Ginn. Jerry at School(Kathyrn and Byron Jackson) How School Helps Us(Mike Hage, Robert Ryan) Will I Have A Friend (Miriam Cohem) Let's Go To School (Naomi Buchheimer) Good Morning, Teacher (Jene Barr) Crow Boy(Taro Yashima) School for Sillies (Jay Williams) All Ready for School (Leone Adelson) Record: Sounds in Our School (Scott-Foresman)

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
6. Where is the gingerbread man?	After meeting all of school helpers except librarian, children will find final note giving clue to look in library. There, they find the gingerbread cake they baked hiding behind the book of same which librarian will read. In this way they will learn of their weekly visit to the library to hear a story. Over a snack of gingerbread shared with librarian, children can learn rules, etc. of library.	
7. Who is the librarian and what does she do? How can we help her and our school?		
8. What will first grade be like next year?	Visit one of the first grade classes.	
9. What would we see in a science class (for example)?	Visit an upper grade-observe what they are studying.	

CULMINATING ACTIVITY:

CULMINATING ACTIVITIES	RESOURCES AND MATERIAL
Would you like to have another gingerbread party and invite our school friends? Follow-up activities could include: 1. Children decorate ginger snaps with raisins and icing-invite one school helper each day to have snack with them and interview helper. 2. Guessing game-pantomine what each helper does. 3. Draw pictures of each worker, have roller movie. 4. Tape record school sounds. 5. Puppet show of each helper. 6. Children can make greeting cards to send to helpers on birthdays, holidays, etc.	For role play children can have tools of each school helper. Cafeteria - play food - set up in classroom. pots and pans aprons dishes, etc. Principal and Secretary - set up in classroom - Desk Telephone Pencil and paper Custodian - Carpenter tools Broom Mop Set up carpenter's bench in classroom.

INTRODUCTION TO: Self

Who Am I?

The "Who Am I" unit is the beginning point for the Kindergarten program. The child's knowledge of self and his own world is the central point from which we expand his awareness to others and the world around him.

The program is initiated with this unit on Self, proceeds to the family, school and community.

Kindergarten activities, goals and skills will be developed throughout the unit. The child will then possess an understanding and appreciation of his own environment and the world around him.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIALS
	Filmstrip: Science Research Associates Series Focus on Self-Development Stage 1

63

BROAD OBJECTIVE: 1. To develop the concept of "Who Am I" and to identify ways in which he is a different and unique individual.
2. To extend the student's awareness of things that are important to him in his own world.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Who am I?	Start group discussion by asking, "Who am I?" Teacher introduces herself.	
2. Who are you? 3. How old are you?	Show studyprint to lead into discussion of child introducing himself, stating full name and giving his age. Teacher writes name of child on board and lets child place on table for display. Let child put number of candles into "play cake.	Photoboard 7 (SRA) picture of happy child. "Who Am I" individual cards with space for child's name, birthdate, address, age and space for drawing himself. Play styrofoam cake with candles.
4. How do you look?	Read: Who's That in the Mirror? Show filmstrip: "Cindy and the Elf." (SRA) Discussion of how he looks. Draw himself on Who Am I" cards. Put on display table.	Full length mirror (observation) Book: Who's That in the Mirror (Polly Berends) "Who Am I" cards Film: SRA-"Cindy and the Elf"
5. Where do you live?	Using hand puppets and model doll house, talk about home and importance of knowing address. Make milk carton houses when they learn address, put on house. Street plan-place houses on plan-develop awareness of where child lives in relation to school/friends.	Milk cartons Construction paper Houses put into community (Use display table.) Filmstrip: "Sometimes I Wonder" (SRA) Story: The Growing Story (Ruth Krauss)

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Paper doll: Child makes "me", adds yard hair, features, etc.	Story: In A People House (Theodore Lesieg)
6. What is your telephone number?	Show study prints of Our Friend the Policeman.	(McGraw-Hill) Study Print of Policeman
	Have model telephone to practice dialing. Emergency, etc.	Telephone
	Role-playing in using the telephone.	Awareness Study Prints(SRA)
	Color telephone for "Wo Am I" booklet. Child puts number when he learns.	
7. What can you do by yourself?	Color show cut out of construction. When he learns to tie, lace with yarn and add to "Who Am I" book.	"I Can Do It Myself" table of manipulative materials with zippers, shoes and laces, buttons.
	P.E. game "Little Lost Child"	The Telephone Book (Virginia Hubbel and Ken Sobal)

BROAD OBJECTIVE: 3. To develop positive attitudes and behavior that will enable the child to work and play cooperatively.

4. To make the child aware of the rights and feelings of others and extend his awareness of the necessity of being a cooperative group member.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Are we all alike? 2. What do girls like to do? 3. What do boys like to do? 4. What do we like to do together?	Look at "Here I Am" pictures and compare. All blue eyes stand up, etc. Compare size by standing back to back. Children measure and weigh each other. Draw picture of a friend. Hand prints of children (fingerpaint) Compare different sizes. Girls role play. Boys role play. Play game: "Farmer in the Dell" Cut out handprints for Helper Chart. Talk about importance of interdependence and sharing.	Scales, mirrors, tape measurers. Story: Fingerpaint "Helping Hands" for Helper Chart. Books: Do You Know What I"ll Do? (Charlotte Zolotow) Let's Be Enemies (Janice Udry) Who Will Be My Friends (Syd Hoff) Kind Little Joe (Vera Cerutti) Story: Do You Remember (Mircea Vasiliu)

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
5. What makes you happy?	Show "Circle of Feelings" filmstrip.	Paper bags and puppet theatre.
6. What makes you sad?	Make facial expressions, and child describes emotion.	Filmstrip: "Circle of Feelings" (SRA)
7. What scares you? a. is it alright to be scared? b. what do you do when you are scared? c. what makes you feel safe?	Make paper bag puppets of themselves. Use them in guessing game for emotion descriptions. Make up stories about these communications.	
8. What makes you mad?	From a group of pictures clipped from magazines put in group according to "happy", "sad"(catagorizing math). Art: Construction paper Have children draw sad or happy faces. P.E.: Interpretive movement- (happy, sad, excited, etc.)	Story: "Someone I Know" (C. M. Adorjan)
9. Good manners		Filmstrip: Learning About Manners (SVE)

C7

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
As a culminating activity to this unit, "Who Am I?", children will complete and take home booklet which will include pages of drawings and artwork such as: 1. Picture of himself 2. Sample of writing his name 3. Birthday cake with number of candles colored 4. Record of weight and height 5. Color telephone with child's number 6. Shoe with yarn laces 7. What makes me happy 8. What makes me sad 9. What I like to do at school and home 10. Picture of home with address and family members

RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTORDUCTION TO: The Family
Family Affair

The family unit follows the self unit and now directs the child's thinking from self to his family. He becomes aware of the jobs of each family member and of his role as a cooperative group member.

The child begins to realize there are a variety of jobs within his own home and particularly the occupations of his parents-both in the home and in the community.

Kindergarten objectives or goals, activities and skills will correlate well throughout this unit.

BROAD OBJECTIVE: (1) To develop the child's awareness of home and his job role as a cooperative family member.

(2) To help the child understand and appreciate his parents' jobs in their occupations and at home.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What do you do at home?	Read story, Family Helpers and discuss each family member's job.	Book: About Family Helpers
2. What does mother do at home and at work? Do you help her?	Children draw six of the jobs from the above story.	
3. What does daddy do at home and work?	Listen to the Sesame Street record about the family.	Sesame Street Record: Five People in Our Family
Introduction to Family and Home.	Story or filmstrip Motivation- Bulletin board about the family.	Filmstrip and stories: Family Helpers by Elaine Hoffman and Jane Hefflefinger
	Read stories about the family. Make a large box into house. Children will paint and use for role play and puppet theater.	Happy Little Family by Rebecca Caudill. Debbie and Her Family by Lois Lensky. A Day with Your Family
1. What is a family?	The family is mother, father, children and relatives who live with them. Have a discussion. Family mobile: Cut out paper dolls of family members and hang on coat hanger.	Family fingerplays Book: Rhymes For Fingers and Flannelboards by Louise Binder Scott.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
2. How many are in your family?	Have class discussion on child's family. Role play, use family figures to describe child's family.	Record:(Sesame Street) Five People in My Family Filmstrip: Robert and Family Visit the Zoo
3. How many sisters and brothers do you have?	Listen to records. Display pictures of a family. Have children color and cut out pictures of their family. (Ditto sheet) Glue to popsicle sticks.	Record: Hush, Little Baby. Rock-A-Bye Baby. Do You Know What I'll Do? by Charlotte Zolotow
4. Are they bigger or smaller than you?	Read book, Big Brother.	Book: Big Brother by Charlotte Zolotow.
	Listen to records about pets.	Record: Doggie in Window Three Little Puppies
	Draw favorite pet.	
5. Do you have a pet? Is it part of your family?	Read stories about pets.	Stories: Have you Seen My Puppy? by Adelaide Hull. A Dog For Susie by Ruth Nordlie. Katie the Kitten by Kathryn Jackson.
	Show and talk about study prints.	Study prints
	Make pets from clay, paris craft, paper mache.	Materials needed: Clay Paper mache Paris craft Newspaper

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Let children tell about his pet, or a pet they would like to have.	
	Listen to records about pets.	Record: Sing'n Do Songs "My Little Puppy" Maybe I'll Find a Kitty Under the Christmas Tree
	Make puppets from light bulbs (mother, father, pets) Children will give puppet show about jobs.	
	Read and discuss a book about kindness.	Book: Kindness is a Lot of Things
	Read and discuss book.	Book: Go, Dog, Go by P. D. Eastman
6. What do you do together as a family?	Show and discuss study prints-	Study Prints: "A Family at Work and Play
	View filmstrip	Filmstrip: "Robert Goes Shopping"
	Talk about sharing. Read story.	Book: Kindness is a Lot of Things by C. R. Gibson.
	Talk about things they like to do with their family. Ex: Playing games, picnics, camping, shopping, vacation and a drive in the country. Read story and discuss. Show filmstrips.	Story: Big Brother-Charlotte Z. Filmstrips: "Family Fun" "Robert's Family at Home" "Robert's Family & Their Neighbors" "A Day with Your Family"

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
7. What do you live in? What different kinds of houses do you know about?	Show pictures of different kinds of homes;(apartments, trailers, etc.) let the child describe the home he lives in. Ask if it is big or small. Role play.	
	Read stories and discuss.	Stories: The Big Girl and the Little House by Ruth Krauss. A Very Special House by Ruth Krauss. Best Little House by Aileen Fisher.
	Make houses out of milk cartons.	Material needed: Milk cartons Paint
	Listen to record.	Record: Sounds I Can Hear
	Filmstrip-view and discuss.	Filmstrip: Home - Scott Foresman
	Read the story about the three little pigs. Let the children dramatize the story.	Story: The Three Little Pigs
	Read and discuss-book	Book: A Very Special House
	Take a field trip.	Field trip: Look at different kinds of houses(a typical house, apartment, trailer, and a house under construction).
	Discuss the field trip.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
8. What is your job at home? Do you take care of your pet?	Filmstrip - view and discuss.	Filmstrip: Family at Work
	Talk about the jobs a child could do, how to feed and take care of his pet, and have him tell things his pet does.	
	Stories-read and discuss.	Stories: A Home for My Kittens by Albertine Deletaille. A Dog for Susie by Ruth Norulie.
9. What does mother do at home? Do you help mother? How?	Show study prints(Mother). Discuss what mother id doing and her jobs in the home.	Study prints - Mother
	Stories-read and discuss.	Stories: Are You My Mother? by P. D. Eastman. Mommies Are for Loving by Ruth Penn. Ask Mr. Bear by Majorie Flack. Where Are the Mothers? by Dorothy Marin.
	Display unit table with tools and materials of various jobs brought in by children.	
	Role play, "Did you ever see a mommy"?(Turn to, "Did you ever see a lassie?"	
	Teams will role play various jobs. Children will guess.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Have one child in center, have him act out something that mother does. See if children can guess. The first one to guess gets a turn until all have had a turn.	
	Listen to records.	Records: I Love You Mommy. Here We Go Around the Mulberry Bush.
	Have a mother come to school and tell children about her role in home.	Resource person - a mother
	Read and discuss stories.	Stories: Mr. Rabbit and the Lovely Present by Charlotte Zolotow. The Hating Book by Charlotte Zolotow.
10. What things does mother use in her work at home?	Have a display of tools mother works with. See if child knows what each tool is and how it helps mother. Role play. (Mommy bags)	Display - Dishes Pans Broom Silver ware
	Have a child take home a paper bag; let mother put something in it. Have child give a clue, and see who can guess what it is. Let each child have a turn.	Paper bags

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
11. Does mother have a job outside of the home? What does she do?	Discuss where mother works. How she gets to work. Let children make hats for mothers.	Materials: Paper bags Plates Construction paper Crayons
	Read-Jennie's Hat.	Book: Jennie's Hat by Ezra Keats.
	Have several mothers visit class and tell class about their jobs.	Resource persons: Mother visits class Nurse Cook Florist
12. What does daddy do at home? Do you help daddy? How?	Show study prints.	Study prints: A Family at Work and Play
13. What tools does daddy use to work with?	Talk about jobs daddy does at home(washing car, cutting grass, painting, fixing all of the things that break-our toys, etc.)	
	Books-read and discuss.	Books: Daddies by Lonnie Carton. The Sorely Trying by Russell Hoban. No Fighting, No Biting by Else H. Minauh. Thank-You-You're Welcome by Louis Slobodkin.

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Have a daddy visit the class and tell about his jobs at home. Role play things you like to help daddy do.	Resource person - a daddy.
	Make daddy bag(note mommy bags)	Paper bags
14. Where does daddy work?	Have daddies visit class and tell what they do. Try to get a variety of occupations(laborers, skilled trade, business).	Resource persons-daddies from various occupations to talk about their jobs.
	Listen to record about daddy.	Record: My Daddy
	Read and discuss book.	Book: Daddies, What They Do All Day by Helen Walker.
15. How are families different?	Filmstrip-view and discuss.	Filmstrip: How A Navajo Indian Family Lives.
	Discussion on different family life(Ex.: American, Eskimoes, Indians, etc.)	
	Build homes showing how each is different.	
	Build a block or brick house. Make a tepee and igloo.	Wooden blocks Card board bricks Paris craft Cloth

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
16. How do we all help each other in the family?	Everyone doing his job, working together. Let children role play "A Family".

INTRODUCTION TO: INSECTS - "MY WORLD IN A JAR"

This unit is written for the kindergarten child and focuses on but not entirely limited to the study of insects.

The unit aim is to acquaint the child with the world around him, to help the child understand the interdependence of all living things, and to become aware of the various occupations in the field of science.

OBJECTIVES:

1. Self Awareness
   The student will become aware of his interest in nature. He will learn about himself in his social and physical development in relation to nature's wondrous growth plan.

2. Educational Awareness
   The student will recognize the variety of careers available in the field of science and the importance of learning, reasoning and experimenting.

3. Career Awareness
   The student will become aware of the many tasks performed by people in the field of Biology, emphasizing the importance of learning facts, performing skills and experimenting.

4. Economic Awareness
   The student will become aware of the economic opportunities available through field trips, interviews and observation of people in professional, business and service careers in the field of science.

5. Decision Making
   In learning to care for insects and other living things the student will make decisions by experimentation, observation and evaluations of his performed tasks.

OBJECTIVES (cont.)

6. Beginning Competency
The student will become aware of the importance of being knowledgeable, in using material, developing skills, analytical thinking, experimentation and evaluation.

7. Employability Skills
The student will become aware of his interests and skills and relate these to various careers available in the field of science.

8. Attitudes and Appreciations
The student will experience satisfaction in observing nature's plan for all living things and relate this to the importance of planning his own life. He will recognize his needs for interdependence through experimentation and observation. He will develop interests, gain satisfaction, and learn to care for others.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
What are we eating?	As an introduction to the unit and an activity to motivate the children, they will be served honey at snack time leading into a discussion of the honeybee and insects in general.	Study Prints: Moths and Butterflies SVE Insects of Home and Neighborhood SVE Insects of Garden and Cropland SVE Common Insects SVE
Are insects important?	Have available to the children a variety of books relating to insects. Put bee transparencies on science shelf for the children to use with the overhead projector.	Display table will be set up with specimens of insect collections, beehive, magnifying glasses, microscopes, beeswax, honeycomb in the honey etc.
How do we care for bees?	Resource person: Bee keeper dressed in protective clothing. Tells and shows the children about his job. Children will later visit the hives.	Cassette: The Busy Bees Eye Gate Transparencies: Life Cycle of the Beehive
Did you know each bee has a special job in the hive?	These jobs will be brought out in the Busy Bee filmstrip. Discuss how our school is organized like a hive.	Book: Bees, Bugs and Beetles Scholastic Books

CONTENTS AND QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Are bees helpful?	Discussion of protection and health relating to insects.	Have health nurse visit to discuss care of insects bites, safety and general first aid. Lead children to ask about various aspects of her job.
What other insects are helpful? (dragonfly, praying mantis, lady bugs, wasps, butterflies, etc.)	Encourage children to bring in insect collections.	
Why do scientists study and collect insects?		Poem: Ladybug, Ladybug
What differences do you see when you look at our insects through the magnifying glass? Are their legs all the same? Are their eyes the same? What kinds of mouths do you see? Etc.....	Help the children classify the insects as to helpful and harmful. Help them set up experiments in jars with different insects and plants together and observe what the insect does to the plants such as eat the flowers. Observe insects eat other insects. (The praying mantis will eat small grasshoppers, crickets, flies, etc.)	Visit Radford College Biology Dept. to see insect collections, interview professors who study insects and workers who help them about their jobs. Books: Insects that Help Plants Gibson, Melmont Insects and Their Ways Lets Look at Insects - Huntington Pb. Doubleday. Insects Do the Strangest Things Easy to Read Book

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
		Insects - A Beginning Science Book - Brouillette - Follett Insects - Roberts Pb. Melmont The Tall Grass Zoo - Lubell Pb. Rand Insects - Collection and Preservation Stevens Pb. Scott
Why do insects need different kinds of legs, mouths, eyes, etc.?	Reinforce moth concepts by making insects from play dough, pipe cleaners, and beans. (Six legs, two antennae, so many dots, wings, etc. Make insect mobiles with stuffed mesh bags, with butcher paper for wings, pipe cleaners for antennae, legs, tongues, etc. Teacher make a chart showing different types of legs, mouths, eyes, tongues. Discuss how they are used and why they are different.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Do you know any harmful insects? (Moths, Japanese Beetles, grasshoppers, houseflies, cockroaches, locusts, ants, termites, boll weavils, silverfish, ticks, mosquitoes, lice, fleas, etc.)	Have available butterfly nets to catch samples of insects. Stress must be put on catching a very limited supply of each insect. Bring in conservation and balance of nature concepts.	Resource person: Pest control serviceman. Focus on harmful insects. Have the insect control man bring in his equipment and spray the room. Look for what insects live in the room and were killed. Visit Entomology Department at VPI.
What do we do to get rid of them? Have you seen any insects earing the flowers in your year?	Have plants in a jar. Put in some insects. Watch to see which ones are helpful and which ones eat flowers, weeds, leaves, etc.	Books: Insects - Indoors and Out. Roberts, Pb. Melmont. Lady Bird Quickly Kepes Pb. Little I Want to be a Scientist. Greene Childrens Press.
Have you seen trees with big cocoons and lots of caterpillars inside them? Do you think these insects are helping the trees? Are they hurting it? What do you see that tells you this?	Mount insects brought into class. Watch the trees with the tent caterpillars on them and see what happens to the leaves and branches.	Filmstrip How Insects Live and Grow. SVE How Insects Change. SVE Flowers Fruits and Seeds. SVE I Want to be a Forester.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCE AND MATERIAL

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Did you know ants build towns under the Ground?	Set up ant farm on science table. Take a field trip for insect collection using insect cages made by the children.	Film loop Ants at Work. Ant Farm. Transparency Life Cycle of an Ant Colony. Book Questions and Answers About Ants. Scholastic Books.
What kinds of homes do insects live in? Do they all build their own homes? Do some live in insect cities? Do you know any insects who live alone?	Watch changes in the ant colony set up on science table.	
	Bring wasp nest. Cut off part of it so the inner structure can be studied.	Books: Insects and the Homes They Build. Sterling, Pb. Doubleday.
Can you find an insect house to bring for the science table or to tell us about?	On walks in school neighborhood, hunt for signs of insect homes.	Insects Do The Strangest Things.
	Let's find some insects.	
Did you know that there is an insect that makes thread for people?	Have displayed on science table the kid "Japanese Silk - Cocoon Package" from Around the World by Mail.	Book: About Silk Worms and Silk Wormser Song: Mulberry Bush

92

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Have the children hunt for cocoons and experiment with them in the room to see if the thread can be unravelled like the silk worm.	
What differences do you see in the moth and butterfly? (Lead them to see antennae differences, wing positions when resting, etc.)	Have a monarch caterpillar on a milkweed leaf. Watch it eat the leaves, grow, change to a chrysalis and emerge as a butterfly (usually 2 to 3 weeks). Have children responsible for keeping a supply of milkweed leaves for the caterpillars to eat.	Book: Monarch X (Weekly Reader Book Club) Film: "Insect Zoo" Transparencies: Life Cycle of Butterflies Book: Where do Butterflies Go When It Rains?
Do you think we can go for a walk and find a Monarch caterpillar? Can you identify a milkweed?	For art activity, make a sequence of development of caterpillar using a culminating activity.	Film Loop: Monarch Butterfly-Chrysalis to Butterflies SVE

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Costumed Charade. Divide children into groups and have each choose and costume one child to represent a specific insect. Provide newspaper and other art materials. Have one child the speaker for each group to describe the insect. The person who is the insect act out movement of the insect. The audience tries to guess which insect the group has tried to depict.	Chart by Moncure Monarch - Egg to Butterfly.
	Set up a display of insects the children have collected. Have the first grade come in to see the collection. Have different children act as guides telling about each group of insects in the display.	Filmstrip: How to Identify Moths and Butterflies. SVE

UNIT TITLE: FOOD AND NUTRITION

"YUMMY IN THE TUMMY"

APPROXIMATE GRADE LEVEL: KINDERGARTEN

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: Food and Nutrition
"Yummy in the Tummy"

This unit is developed to acquaint young children with good eating habits and, hopefully, to encourage eagerness toward trying many kinds of foods.

As the child learns about foods, he will hopefully gain an understanding of some of the occupations related to food processing, selling, and serving.

This unit of study will lead into a unit on health services and good grooming practices.

BROAD OBJECTIVE: To develop an awareness in young children of good eating habits and to acquaint them with workers who help provide these foods.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Why do we need to eat good goods?	Bulletin board surrounded by food cut-outs. Plate and utencils.	Food cut-outs "Better Breakfast Activities" Cereal Institute, Inc. 135 LaSalle St. Chicago, Ill. 60603
2. What are good foods?	Creative play-child manipulates cut-outs on plate to show his breakfast(etc.) that day.	
3. What is a good breakfast?	Study prints discussion. Have children bring in containers from milk products. Make butter.	Study print: "Food and Nutrition" Milkman could come, show truck, etc. Could deliver cream used for butter.
4. Do you feel better after eating a good breakfast?	Play "Breakfast Game" during unit. Award ribbons to all for participation. Creative play - using food containers/housekeeping corner, act out serving breakfast, eating, manners, etc. Read: "Pancakes, Pancakes" Make cereal collages using different shapes and colors of cereal.	Kellogg's Co. Battle Creek, Michigan

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Have "Breakfast Party" Make placemats, cook and serve oatmeal(or pancakes and use your butter) and serve with juice and milk.	
	Make aprons/chef hats, waitress caps.	Construction & crepe paper.
	Make collage of breakfast foods, cut from magazines.	Magazines
5. What other foods do you eat?	Study print discussion of "Lunch" and "Dinner".	Study print: "Food and Nutrition"
6. Are lunch and dinner important, too?	View filmstrip and follow with discussion.	Filmstrip: The Fruit and Vegetable Store
	Visit school cafeteria and/ or restaurant to see foods prepared for lunch or dinner.	School cafeteria
7. What are fruits and vegetables? Where do they come from? Which ones do you know?	Make play-dough fruits and vegetables for housekeeping center. Have a taste party. Make a fruit compote. Serve during snack.	Read: "Green Eggs and Ham" to encourage children to try something new.
8. How many different kinds of breads have you tasted?	Have bread-tasting party.	
	View filmstrip and discuss. Have a lunch party. Each child could bring in a vegetable.	Filmstrip: "Let's Have a Party"

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIALS
	Wash, chop, mix salad. Make grilled cheese sand. and dry soup mix. All have jobs to do.	
	Guessing game: I am a fruit; I'm red. I grow on a tree. People pick me and rub me until I'm very shiny. What am I? (apple)	
	I'm a vegetable. I'm green. Lots of me grow in one pod. I'm round. (peas)	
9. How does mother get these good foods?	View filmstrip and discuss.	Filmstrip: "The Grocer"
	Set up supermarket with food containers brought in by children.	
	Role-playing - grocer, meat cutter, customer, etc.	Visit a grocer store or invite a grocer to the room.
10. Where does the grocer get foods?	Plant seeds and watch them grow. Radishes grow quickly.	Visit dairy or fruit farm. Perhaps an egg farm.
11. Do you think you know which foods are good foods now?	Make a food mobile from food groups: milk group, fruits/veg., meat/fish/eggs, cereals/breads.

INTRODUCTION TO: "WHEN JOHNNY COMES MARCHING HOME" - ARMED FORCES

The primary purpose of this unit is to help the children become aware of the various branches of the armed services.

It will stimulate an appreciation for the services and a knowledge of the numerous jobs available and the duties of each.

BROAD OBJECTIVES:

1. To become aware of the branches of the armed services.
2. To develop an understanding of the need for the armed forces.
3. To give the child an opportunity to begin his decision of the branch he prefers.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Motivation to: "When Johnny Comes Marching Home"		
Teacher asks: Which branch will you take?	Bulletin board of a tree with uniforms and equipment on separate branches depicting the different branches of armed services. Class discussion.	Pictures. Tree (it could be made 3 dim. by using real tree links).
1. Why do we have armed services?	Class discussion pointing out that every nation such as the United States must be able to defend its interests on land and sea, and protect the lives and property of its citizens in other regions. During war and other emergencies, the United States must be ready to send well-trained, disciplined forces to accomplish these goals.	Books.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
2. What armed services do we have?	Children will discuss their experiences and knowledge of the different armed services.	
	Teacher will guide the class to include: Army, Navy, Marines, Air Force, and National Guard.	
	Make a chart listing these branches.	Poster board.
	Children may decide which they like best and draw a picture.	Construction paper, crayons
	Display pictures in appropriate place on branches of tree.	
3. What is a soldier's job?	Discussion.	
	Read a story.	Book.
	Bring tools and display.	
	Song.	"When Johnny Comes Marching Home"
	Emphasize that the army's job is to protect the land.	
	Show filmstrip or film.	Filmstrip, film.

INTRODUCTION TO: The Farm
"In The Barnyard"

Children in the city need to become aware of farm life and farm animals. They need to gain an understanding of the interdependence of people who live and work on the farm to those who live and work in the city.

First grade skills and subject areas can be readily developed in this unit.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIAL
Display and discuss model farm from the National Dairy Council. Include child's vacation experiences on a farm.	Model farm.
Play record and sing: Old MacDonad's Farm In The Barnyard Read story.	Record: Old MacDonald's Farm Song: In The Barnyard Record-Sounds on the Farm and study prints. Book: Good Morning Farm by Betty Wright.
Art prints such as those of Andrew Wyeth depicting farm life may be introduced to motivate discussion.	Art prints

112

BROAD OBJECTIVE: To help the children become familiar with farm life and farm animals, and help them to gain an appreciation of life on a farm.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What do you think living on a farm would be like? What does the farmer's family do all day?	Class will discuss and draw a picture of what they think life on a farm is like. Read stories. Show pictures and study prints of farm life. Filmstrip. Begin farm booklet. Make folder.	Books: What I Will Be From A to Z (National Dairy Council) The Little Farm (Lois Lenski) The Cow In The Silo (Patricia Goodell) My Friend The Cow (National Dairy Council) Study prints. Construction paper Farm ditto
1a. How is the farmer's family like(likeness and difference) your city family?		Film: Farm Animals-10 min. P. Radford College Farm Babies and Their Mothers-11 min. P. Radford College Farmyard Babies-11 min. Radford College Feeding Farm Babies-16 min. State Poultry on the Farm-10 min. State
2. What animals do you know that live on a farm? Why does a farm have animals?	Continue booklet with pictures of farm animals. Children can cut out and bring, also color worksheets on animals. Read story.	Worksheets on baby animals. Books: Farm Life-Kathrine Keeler Farm Life-Miriam Mason

113

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. Where does the farmer keep his animals?	Discuss how the farmer takes care of his animals and barns, etc. Include farmers' personal cleanliness, government inspection, etc. Visit a dairy farm. Role play a day on the farm or in the barnyard. View filmstrips and read books. Play guessing game on mother and baby animals. Put two eggs in a "chick-u-bator" and count time for hatching.	Filmstrips and record: Sounds on the Farm(Eye Gate) Dinky, The Calf Fluffy, The Chick Frisky, The Colt Fleecy, The Lamb Porky, The Pig Our Poultry Farm Books: Animal Families(Ann Weil) The Horse Who Lived Upstairs (Phyllis McGinley) Katie's Chickens (Nancy Watson) Farm Stories(Kathryn Jackson) Seven Diving Ducks (Margaret Frisky) Gertie, The Duck (Nicholas Georgiady) Kristie and The Colt (Emma Brock) Johnny Cow's New Garden (Leonard Brooke) The Lonely Little Pig and Other Animal Tales (Wilhelmina Harper) Flip, The True Story of a Dairy Farm Goat (Jane B. Moncure) All Kinds of Cows (Madeline Dadd) Rubber Farm Animals (Kindergarten)

114

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Have children work individually on puzzles.	Puzzles: The Farmer Pigs; Ducks; Cats; Donkeys; Lambs; Cows; Chickens; Birds; Goats; Horses.
	Children can make farm and animals out of clay.	Clay and boxes.
4. What kind of tools or machinery does the farmer use?	Show filmstrip.	Film: Old MacDonald-16 min.-State The Cardboard Cow-14 min.-State
	Use pictures of farm machinery and discuss use, etc. Make models of farm machinery from boxes or clay.	Pictures. Roll of manilla paper Bulletin board Clay Boxes
	Show film.	Film: Farming in South China- The S. River Valley 20 min. - Radford
	Have children make mural of farm life, include animals, machinery, etc. Label all parts studied.	World Book Encyclopedia Model of dairy farm Sentence strips
	Introduce and sing songs about the farm.	Songs: Music in Our Town 2 Farmer's Market Barnyard Family Sheep Are Coming Down the Road Growing Crops

115

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
		Market Day The Farmer
	Read stories.	Books: Farm Boy(Philip Stong) The Farmer and the Witch (Ida Delage) Over in the Meadow (John Langstaff)
	Show filmstrip on the farm.	Filmstrip: Animals on the Farm Life on a Dairy Farm
	Books-read and discuss.	Books: All Kinds of Cows (Madeline Dadd) Let's Go To A Dairy (J. M. Goodspeed)

BROAD OBJECTIVE: To help the child become aware of the interdependence of the farmer to us - how we depend on the farmer for food and how he depends on us for his livelihood.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What crops do the farmers raise? Who can name some special kinds of farms?	Filmstrip-view and discuss.	Filmstrip: Set of 6 Learning About Plants Life on a Dairy Farm
	Show pictures of various foods-have children discuss and make a chart of foods raised on the farm. Bring cut-outs of these to class and make a collage.	Pictures of foods.
2. How are farm animals important to us?	Discuss and make a picture chart of the different products derived from sheep, cattle, hogs, etc. Label all. Songs and stories. Imitate animal sounds and guess the animal. Take the class on a field trip to visit a small farm.	Flannel board kit: Farm Animals No. 88 Animals and Their Young Study prints-A Trip to the Farm Sounds I Can Hear-(Record) Sentence strips Poster board Field trip: Small farm
3. Where does the farmer sell his products?	Poems-about farmer, his products and market. Work farm picture puzzles. Film	Puzzles Film: Agricultural Lifelines-14 min. Elem.-State. Food for the City: Produce-12 min.-State
4. Who buys the foods at the market? How does this help the farmer?	Role playing - farmer buying and selling.	

BROAD OBJECTIVE: To extend the child's knowledge of the duties of a farmer in daily life.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What does a farmer do all day? Who helps him with his work?	Show and discuss large farm picture(Childcraft) of what a farmer is and will do on the farm.	Bulletin board Childcraft farm picture
	Construct a farm and label the buildings, animals, machinery.	Boxes
	Role play-farmer at work.	
2. What does the farmer do in different seasons?	Show pictures and discuss-have children bring some pictures. Make a bulletin board of the farmer's jobs in each season. Measure and divide into fourths. Songs Poems	Film: The Farmer- 14 min. Elem.-Radford College Pictures of farmer's seasonal jobs.
	Let the children create or tell a story about farm life.	

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Pop popcorn in the classroom.	Popcorn Popper
Role play - The farmer and his helpers A day on the farm	
Complete booklets and take home.	
Begin a list of careers we have talked about in this unit-add list as we study more occupations.	Resource persons: 1. Farmer 2. Salesman 3. Grocer 4. Machine operator 5. Dairyman 6. Feed dealer 7. Manufacturers of farm tools 8. Veterinarian

UNIT TITLE: "THE TOY SHOP"

APPROXIMATE GRADE LEVEL: GRADE 1

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: "THE TOY SHOP"

In this unit the child gains an insight into numerous occupations especially those related to the toy shop, such as construction of store,toys, and the buying and selling of these.

During this unit the teacher will concentrate on the value of coins. First grade skills and subject areas will coorelate well throughout this unit.

BROAD OBJECTIVES:

1. To help children understand the value of coins.
2. To help children develop an understanding and appreciation of the workers involved in making toys and toy shop.
3. To develop an understanding of the value of money.
4. To help children become aware of job opportunities that stem from operating a toy store.

BROAD OBJECTIVE: To help children become aware of job opportunities that stem from operating a toy store.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Motivation	Bulletin board depicting shelves of toys.	Pictures of various toys.
	Which would you buy?	
	Play record, Parade of Toys.	Record, Parade of Toys.
1. Where did the store get your toy?	Teacher guided class discussion.	
	Resource person who makes toys.	Resource person: Mr. Sylvester Stanley
2. Would you like a toy store?	Discussion on procedure of establishing a toy store. Children will be divided into 2 groups: one to make the toy shop and another to make the toys.	Suggested materials for toys: Sock dolls or animals Popcycle stick toys Puppets Paper construction Clay construction Box construction Assembly line could be used in the making of toys.
	Begin construction of toys and shop.	

125

BROAD OBJECTIVES: To help children understand the value of coins.
To help children develop an understanding and appreciation of the workers involved in making toys and toy shops.
To develop an understanding of the value of money.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. Who makes the toys? Who builds the store?	Read a story or show a film-strip to build an awareness of the jobs involved.	Books and filmstrips.
4. How much will your toy cost?	Children will decide the price of their toy and place toy in the store. Begin math lessons on the value of coin money.	Book. Refer to pages 86, 87, 175, 176 in math book. Flannel board set on money. Play money and real money.

71

BROAD OBJECTIVES: To help children understand the value of coins.
To help children become aware of job opportunities that stem from operating a toy store.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Children will make their own price tags after discussion of coin value. Children will place their toy in the store.	String, construction paper, crayons
5. How will you get the toy out of the shop?	Children will make coins and role play buying and selling in the toy shop.	Store, toys, play money
Culminating Activity	Field trip to see toy display.

INTRODUCTION TO: The Family
"All In A Family"

This unit follows the self unit and broadens the child's horizons of his world. His thinking is now directed from self to include his family members and the jobs of each family member, as well as his role as a cooperative member.

The child, in this unit, becomes aware of a variety of jobs within his own home, and more specifically the occupations of his parents both in the home and in the community.

First grade subject matter and skills will flow throughout this unit easily.

This family unit preceeds the unit on school.

130

BROAD OBJECTIVE: (1) To help the child become aware of his concept of home and his job role as a cooperative family member.

(2) To help the child understand and appreciate his parents' jobs in their occupations and at home.

	Show pictures of various houses-discuss. Have children bring in pictures of houses and make a collage. Make houses out of milk cartons or use paper mache.	Pictures of different houses. Poem-Houses by Elsa Jane Werner Pictures from magazines. Milk cartons. Newspapers and paste.
	Make a big house out of refrigerator box or other big box. Children will do all the measuring, dividing it into rooms, decorating it.	Refrigerator box or others. Building blocks.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Take a field trip. Build house with blocks or box then. Discuss trip-emphasize the occupations seen on the trip and at the house under construction.	Field trip-to view the different types of houses, such as regular home, apartment, trailer. Also, visit a house under construction.
5. What is your job at home?	Show filmstrip. Discuss child's role, include taking care of self. Read and discuss book.	Filmstrip: Family At Work Book: Tom, Sue, and The Clock by Conrad Aiden.
6. Do you take care of your own pet?	Discuss how child takes care of pet-feed, wash, fix pet's house, etc. Read story. Children could do a bulletin board on caring for pets.	Book: A Home For My Kittens by Albertine Beletaille. Bulletin board.
	Children can act out how they care for pet. Sing and do actions to the Mulberry Bush-emphasizing things they do for their pet.	Record: The Mulberry Bush
7. What is mother's work at home? Do you help mother? How?	Show study prints on mother at work. Discuss mother's various jobs; washing, ironing, dishes, cooking, cleaning, etc. Show and tell how you help-talk about getting along and obeying, etc. Read books.	Study prints: A Family At Work and Play. Mommies Are For Loving by Ruth Penn. Resource person-a mother to talk about her jobs at home. The Hating Book by Charlotte Zolotow Are You My Mother? by P. D. Eastman

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Role playing.	The Sky Is Blue by Charlotte Zolotow. Ask Mr. Bear by Majorie Flack Record: I Love You Mommy
	Game, Did You Ever See A Mommy? (Act out the game.) Song, Mulberry Bush.	Game-Song-Did You Ever See A Mommy?(Tune-Did You Every See A Lassie?) Record: The Mulberry Bush
8. What tools does mother use in her work at home?	"Mommy bag" Discuss mother's different tools /things that help her. List on chart. Have child take bag home and bring back one of mother's tools and tell/show class how mother uses it-all about the tool.	Paper bags. Display of various tools mother could use on a table. Where Are The Mothers? by Dorothy Marin. My Rabbit and The Lovely Present by Charlotte Zolotow
9. Does mother go to work outside the home? What is mother's job? Where does she work?	Discuss where mother works and how she goes to work. Have children find out and then come back and role play it for class and let class guess what she does.	
	Read story. Make hats with mother's job name on it. Make a chart. Mommy bags-too or note telling about her job.	Jennie's Hat by Ezra Keats Use paper plates, bags, milk cartons to make hats.
10. What does daddy do at home? Can you help him? How?	Read story. Role play favorite thing you like to help daddy do.	Book: Daddies by Larrie C. Carton Record: My Daddy The Sorely Trying by Russell Hoban

134

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Show study prints and discuss dad's jobs around the house and what you do to help. Make a chart with dad's jobs listed as cutting grass, fix it, garden, paint, etc.	Study prints. No Fighting, No Biting by Else Minauh. The Early Bird by Richard Scarry. Thank You-You're Welcome by Louis Slobodkin. Study prints-A Family At Work and Play.
11. What tools does daddy use at home?	Display table. Discuss. Daddy bag(Note mommy bags) Have a father talk to the class about his jobs at home.	Table of possible daddy tools. Bags. Papa Small by Lois Lenski Resource person-father to talk about his jobs.
12. What is daddy's work outside the home? What does he use in his work?	Discuss where he works-role play. Children should become familiar with a variety of occupations here. Talk about tools, find pictures, make a collage. Make hats of his job. Song/game-Did You Ever See A Daddy? The Mulberry Bush showing things daddy does. Draw pictures of daddy at his job.	Poster board. Glue. Daddies and What They Do All Day by Helen Puner Hats-paper plates, boxes, bags, milk cartons. Record: Mulberry Bush Construction paper.
13. How do we all help each other in our family?	Discuss everyone doing his own job, working together, manners, etc. Story or film. Role play.

INTRODUCTION TO: Self
"Who's That In The Mirror?"

This unit is an introduction or base to many units, it is to focus the child's attention first on the things he knows about or is aware of in his own world, and then to branch out to the world around him.

The objective or purpose is to help this child of "tender" years to become aware of self and of self in relation to others; proceed to the family(the next closest unit to him); then continue with school; and finally, to discuss the community.

Hopefully, the child will then possess an adequate understanding and appreciation of his own world and the world around him.

First grade skills and subject areas will correlate well throughout this unit.

141

BROAD OBJECTIVE: (1) To help children understand the concept of "Who Am I?" and to identify ways in which the child is a different or unique individual.

(2) To help the child become aware of things that are important to him in his own world.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Who am I?	Teacher asks the class the question. Guides discussion. Teacher introduces self and tells a little about self. Show filmstrip-discuss.	Bulletin board. Filmstrip: "Sometimes I Wonder." Book: Debbie and Herself by Lois Lensky. Do You Remember by Marcea Vasiliu
2. Who are you? How do you look to others? To yourself? Are we all alike?	Class discussion. Children tell whether they are a boy or a girl, introduce themselves. They may tell something about self if they wish. Read story. Surprise box-w/full length mirror...here I am written over mirror. Observation and measurement. Talk about likenesses and differences-have children look in mirror and tell all they see. Compare with others back to back. Use scales and tape measure. Children can draw own picture(can be life size and fill in face and clothes).	Game: "Twenty Questions" (Teacher starts, children join in-guessing who) Books: Many Names For Eleen by Peggy Sullivan. Who's That In The Mirror by Polly Berends. Filmstrips: Getting To Know Me 1. People Are Like Rainbows 2. A Boat Named George 3. Listen! Jimmy! 4. Strike Three-You're In Full length mirror/refrig. box Scales

142

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	They could draw someone else and what he looks like to them.	Tape measure Large rolls of drawing paper Scissors Book: I Am Better Than You by Robert Lopshire.
	Discuss and show study prints on awareness.	Study Prints: Awareness SRA-Focus on Self-Development Kit. Filmstrip: "Cindy and the Elf" (On own appearance and others)
3. How old are you?	See if children can tell you, let them count it, and find it on number cards. Can write it on board.	Number cards. Book: The Very Little Girl by Phylis Krusilousky
4. When is your birthday?	Big cake and candles. When child learns his birthday he gets to put his name, date on the candle, and then place candle on the big cake. Children can make.	Birthday cake out of poster board and candles.
5. Where do you live? What is your phone number?	Use study prints to introduce this. Discuss whey they need to know this. Worksheets on phone and house address; when they learn they get to write it on the space on the color sheet.	Study prints: Awareness SRA-Focus on Self-Development Kit. Work sheets Crayons

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Role play what would happen if they did not know it, etc. (give them a situation). The class could write the story together.	
6. What can you do by yourself?	Read the stories "The Things I Like" and "Lazy Tommy Pumpkinhead".	Stories: The Things I Like by Francoise Seignbose. Lazy Tommy Pumplinhead by William P. DuBois.
	Teacher guides discussion and exploration to see if child can zip, button, tie, brush teeth, bathe, dress self, brush hair, etc. for self.	Table of manipulative objects such as a shoe to tie, zipper, buttons, toothbrush, hair brush, soap, etc.
	Give child worksheets on these. He will keep for his booklet. Read story.	Worksheets on these: "I Can Do It Myself by Corner. "The Early Bird" by Richard Scarry.

BROAD OBJECTIVE: (3) To help children develop positive attitudes and behavior that will enable them to work and play cooperatively.

(4) To help the children become aware of the rights and feelings of others; and extend their awareness of the necessity of being a cooperative group member.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Can I always have my way?	Read the stories The Hating Book and Let's Be Enemies.	Stories: The Hating Book by Charlotte Zolotow. The Quarreling Book by Charlotte Zolotow. Let's Be Enemies by Maurice Sendak.
2. Can you always have your way?	Show study prints.	Show study prints-Awareness.
3. How do we play together?	Teacher guides class discussion-then the children make props and put on a puppet show. Read story.	Make puppets from paper bags or socks. Book: Kind Little Joe by Vera Cerotti.
4. What are some things you do with others?	Show and discuss filmstrips. Have children draw and portray in front of class their circle of feelings. Give them a certain feeling to pantomine.	Filmstrips: 1. Lonesome Ben 2. Magic Glasses 3. The Parade 4. Judy's Ups and Downs 5. Circle of Feelings. Book: Littlest Rabbit by Robert Kraus. Construction paper Crayons

INTRODUCTION TO: "Let's Go On A Safari"

In this unit the child gains an insight into the preparation for and the carrying out of safely capturing wild animals for the zoo.

He begins to realize how each job enables the zoo to provide animals for all people to enjoy.

The subject areas and skills of first grade can readily be developed throughout this unit.

BROAD OBJECTIVES:

1. To help the children become familiar with wild animals and to help them gain an appreciation of safely capturing the animals.

2. To broaden his interests and introduce new experiences that will increase his knowledge of workers involved in supplying zoos with animals.

3. To develop an awareness of the cost of different modes of transportation.

4. To provide the children with opportunities to make decisions based on their interests and available information.

5. To develop skills in physical coordination, self-expression, computation and cooperating with others.

6. To develop an awareness of the various occupations included in this unit of study, with emphasis on the animal trapper.

151

BEST COPY AVAILABLE

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Motivation Let's Go On A Safari	Bulletin Board Show a filmstrip or read a story on a safari or about wild animals.	Book or filmstrip
1. Before we go, who can tell me what is a safari?	Teacher guided class discussion to discover that a safari is a journey or hunting expedition, especially in eastern Africa.	
2. Where is Africa?	Map study. Globe study. Begin construction of model. Do boundaries of African land mass.	Map, globe, cardboard, plaster of paris, paints (tinted with temper), trees made from popcycle sticks.
3. Why are we going to Africa?	Show study prints of African wild animals and discuss that our job is to bring these animals back to the zoo. Story or filmstrip.	Study prints. K-Talk Starter Treasure Chest Book or filmstrip.

152

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Have children bring any information or articles from home that they wish which relates to wild animals.	
	Children will share with others and arrange a display of things in the room.	Display area in the room.
4. What are we called when we go to look for animals.	We will be animal trappers. Read a book.	Book
5. What do we need to know and do before we can be an animal trapper?	Teacher guided class discussion.	
6. What kind of clothes will we wear?	Film, filmstrip, or book. Class discussion. Children will make paper dolls and dress them for safari. These will be added to model.	Construction paper. Popcycle sticks. Clay..
7. What tools or equipment will we need?	Discuss tools needed, such as: guns, nets, cages, tents and camping equipment	Pictures Milk cartons for tents.

153

UNIT TITLE: DEEP IN THE OCEAN

APPROXIMATE GRADE LEVEL: GRADE 1

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: "Deep in the Ocean"

This unit on oceans is designed to cover the most important meaningful aspects of the ocean and its relationship to man and the world he lives in. It will provide the children with a general knowledge of the occupations involved in fishing, shelling, and maintenance of the beach.

First grade skills and subject areas can readily be developed in this unit.

OBJECTIVES:

1. To teach children to know the fun, work and usefulness of the ocean.
2. To develop an appreciation for the ocean.
3. To develop an appreciation for a clean beach.
4. To develop an appreciation for food from the ocean.
5. To help children become aware of the various jobs involved in fishing, shelling and maintenance of the beach.
6. To help children understand why the ocean is so important to us.

191

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Motivation: "Deep In the Ocean"	Have a mystery box including ocean items such as: play fish, sponge, sheels, star fish, sand dollars, boats, octopus, sea weed, choral and sand. Allow children to investigate the contents of the box by senses other than sight. As children discover the contents of the mystery box, allow them to place on ocean bulletin board which already contains net and ocean scene.	Mystery box and its contents.

162

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is an ocean? Where is the ocean?	Display of pictures and class discussions using maps and globes. Worksheets of globe. Read a story or poems. Science lesson.	Pictures, maps, globes, book. Experiments to show why ocean is different colors, why ocean is salty.
2. What do we get from the ocean?	Teacher-guided discussion leading into transportation, fishing and recreation. Have children make a collage with pictures. Begin display table from items children bring in.	Pictures
3. How many have been fishing?	Guide children in seeing the difference in fishing as recreation and fishing as a way of making a living. Read a story. Show filmstrip	Books and filmstrip.
4. Can you name some fishing jobs?	Discuss the various jobs and list them on a chart. Include such jobs as: equipment salesman, fisherman, captain of the

	boat, fish-buyer.	
	Children will draw a picture of the job they like best.	
	Resource person to discuss fishing experiences.	Parents or local resident (Jim Rutherford) Mr. N. M. Christian or members of his fishing party.
5. What kinds of boats can be used for fishing?	Children will bring in toy boats to add to display table.	
	Discussion of types and sizes of boats.	
	Have children make shadow box or picture with cellophane over it, depicting water scene.	Box, construction paper, crayons or paints, cellophane.
	Children may construct a fishing boat from large box.	Large box, paints.
	Children can make clay boats.	Clay
	Children may rule play	
	Read a story or poem.	Books

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
6. What can you do for recreation at the ocean?	Teacher-guided discussion explaining to children that recreation includes all the different things we do for fun.	
	Children will write and illustrate their experiences at the seashore. This will be put into a large class booklet.	Poster board, crayons, construction paper.
	Play record and learn songs.	Do-Re-Mi record.
7. Who looks after the seashore?	Discuss jobs and duties of the lifeguards and caretakers of the beach.	
	Children may share experiences they have had at the beach.	Books
	Read a story.	
8. Who has a home at the bottom of the ocean? What is this home called?	Show study prints of different kinds of shells. Discuss animals and their shell homes.	Study prints.

165

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Have a "Bring and Brag" session allowing children to bring shells and other items from the beach. These may be added to display table.	
	Read a story Poem	Books Big and Little by-Dorothy M. Wisooker I found a great big shell one day Upon the ocean floor. (hold hands cupped as if holding large shell) I held it close to my ear. I heard the ocean roar! (raise hands to ear) I found a tiny little shell one day Upon the ocean sand. (one hand cupped as if holding little shell) The waves had worn it nice and smooth. It felt nice in my hand.

UNIT TITLE: COMMUNITY

"MR. ZIP"

APPROXIMATE GRADE LEVEL: GRADE 1

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: Community
"Mr. Zip"

In this unit the child gains an insight into numerous occupations. Through the study of various community workers the child learns to understand and appreciate the contribution of each community helper. He begins to realize how each job enables the community to function as a whole.

The subject areas and skills of first grade can readily be developed throughout this unit.

During this unit the teacher will concentrate on the jobs of the parents in the class. She will rely on these people for resources and use them as the link which will include the other community workers studied in this unit.

MOTIVATING ACTIVITY	RESOURCES AND MATERIAL
Bulletin board and study prints of the postman. Filmstrip-Taking A Walk in the Community. Read a story.	Study prints: Community Workers Postal Helpers Filmstrip: Taking A Walk In The Community Story: Mr. Zip and The U. S. Mail (Jene Barr)

171

BROAD OBJECTIVE: To help the student understand the functions and operations of the community; and his role in relation to the community.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Who am I?	Teacher carries Mr. Zip's mail bag and wears postman's hat (surprise in bag). Children tell the teacher which community worker she is.	Post Office by Colonius and Sbroeder
2. What does the postman/ mailman do? Where does he work?	Use puzzle and flannel board items. Discuss postman's duties, how he carries them out, who helps him, etc.	Puzzle - Postman Flannel board - Community Helpers.
3. Who helps him? What are the tools they use?	Read story. Do rhythmic activity: The Postman I came from the post office, (walk from the post office) My mail sack on my back; (pretend to carry mail on back) I go to all the houses (pretend to go to a house) Leaving letters from my pack. (pretend to drop letter into mailbox) One, two, three, four, (hold up fingers as you count) Who are these letters for? (pretend to hold letters and scratch head)	Story: Our Post Office and Its Helpers by Irene Miner. Study prints: Workers In Our Neighborhood-The Postman Rhythmic Activity-The Postman Wooden figures on Community Helpers

172

CONTINUED (2) To help the children become aware of and respect the people who work in the community. 3

(3) To help the children understand and appreciate the contribution of each community helper and his duties or responsibilities.

(4) To help the children become aware of the various modes of transportation in the community, such as: truck, train, airplane, bus; and the people who are responsible for these vehicles of transport.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	One for John and one for you, (pretend to hand out letters) One for Mary and one for you! (pretend to hand letters to others)	
	Show filmstrip.	Filmstrip: Mail Delivery
	Teacher explains that there will be a postman(Mr. Zip) from the class; he will visit us each day with a surprise in his mail bag. The surprise (letter, book, hat, badge, puppet, etc.) will help us to learn about a new helper in our community.	Wooden figures of community helpers.
	Introduce and learn the poem: The Postman The postman is like Santa Claus. He has a great big sack. The sack is filled with letters. It is carried on his back.	Poem: The Postman

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Old Santa comes at Christmas time. To bring his Christmas cheer, But the postman(mailman) visits us each day, And not just once a year.	
4. What do we need before we can have the postman visit us?	Discuss, guide class to realize we must build a post office, post office truck, etc. Read story.	Let's Go To The Post Office by Buchheimer
	Have children bring shoe boxes from home to use in post office. Children will construct post office-build, measure, paint, etc., plus all the work stations.	Shoe boxes Box Paint
	All this after a visit to the post office.	Field trip: Post office Resource person: Clerk or mailman from post office.
	Children will also bring cancelled envelops to school. They can write real and make believe letters to be mailed, delivered, and then read to class. Role play post office.	Cancelled envelops. Songs, poems, stories about post office/postman.
	Children can possibly meet postman when he brings school mail.	Postman at school.
	Children can do rhythmic activity 'The Postman' again, but this time instead of	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	pantomining or pretending-they can actually go to the stations, etc. Also, can deliver to the houses in the model community or the community children.could build with milk cartons or boxes.	Model of Kinder Community (Kindergarten has) Milk cartons Boxes
	Filmstrip-view and discuss. Children can take turns dressing as Mr. Zip and bring the surprise which will lead us into activities and discussion of the other community workers.	Filmstrip: What's In A Community?
5. Who wears this badge? How does he help us? Who helps the policeman?	Mr. Zip delivers policeman's badge, book and puzzle. Read story. Class discussion-use study prints on policeman. Have children make puppets and role play. Make police cars, patrol belts, signs, etc. Discussion on safety and signs.	Puzzle: Policeman Patrolwoman Our Friend The Policeman by David Cunniff. Study prints: Police Department Helpers. Books: Let's Find Out About Policemen by Martha and Charles Shapp. Mr. Pine's Mixed-Up Signs by Leonard Kessler.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Have school patrol visit class-discussion. Have policeman visit class.	Resource person: 1. School patrol 2. Policeman
	Class visits police station. Children will make traffic signs, stop lights and role play. Play game in physical education.	Field trip: Police station Your Police by George Zaffio. Policeman Small by Lois Lenski. Game: Red Light-Green Light The True Book of Policemen by Irene Miner.
	Class will begin a display area of tools, hats, etc. of the community workers as we study each one. They will include the books we use. Each item will be labeled. Bulletin boards will coincide with study. Children will begin list of occupations studied thus far.	Bulletin boards Display table Sentence strips-for labeling.
6. Who do you know that wears a hat like this? Is he your friend?	Mr. Zip delivers fireman's hat. Children discuss who wears the hat. Child can role play what he thinks the fireman does. Read story.	Fireman's hat The First Book of Firemen by Benjamin Brewster.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
7. What are his duties?	Show and discuss study prints on the fire department helpers and the fireman. Have children do fireman puzzle.	Study prints: Fire Department Fireman Puzzle: Fireman
8. How does he help you? How can you help him?	Discuss the role of fireman in community and how he helps us and how we can help him. Read story.	Let's Find Out About Firemen by Martha and Charles Shapp
9. Do you know anyone else that helps him?	Invite a fireman to come visit the class and talk about his work and who helps him. Read and discuss book. Show filmstrip. Play record.	Resource person: Fireman Book: Fire Snorkel Number 7 by Jene Barr Filmstrip: Johnny The Fireman Record: Fire Truck
	Children can bring paper bags and make fireman puppets. Make fireman hats from construction paper. Use flannel board of community workers to continue discussion.	Paper bags Construction paper Flannel board-Community Workers
	Read a story and discuss fire engines and fire stations.	The Great Big Fire Engine by Tibor Gergely. The Little Fire Engine by Lois Lenski. The Big Book of Real Fire Engines by Elizabeth Cameron. Let's Go To The Firehouse by Naomi Buchheimer

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Then take a trip to the fire station. When the class returns, have a discussion on all facets of the firehouse.	Field trip: Fire station
	Guide the children in building a model of fire truck. Role play Add to display and list, etc.	Box Paint
10. Who is this book about?	Mr. Zip delivers a doctor puppet with a book and a nurse's hat.	
11. Who do you know that wears this hat and helps the doctor? 12. How do these people help us? What do they do?	The puppet introduces himself as Dr. Dolittle and reads his own book. Dr. Dolittle leads class in discussion of how doctors and nurses help people, especially little boys and girls-he includes what doctors do and who helps them. Use study prints on doctors and nurses.	Travels of Doctor Dolittle by Al Perkins. Puzzles: Doctor, Nurse Animal Doctors by Carla Greene. Doctors and Nurses by Carla Greene. Study prints: Doctor Nurse Helpers
13. Where do some doctors and nurses work?	Visitor to talk to class. Discuss where some doctors and nurses work. Read story. Plan a visit to the hospital-especially the emergency room. Children could set up doctor's station or build an ambulance.	Resource person: Nurse Retired doctor Someone else from hospital Field trip: Hospital (Emergency room) Refrigerator box

125

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
14. What doctor do you know that helps you care for your teeth? Does he use this tool?	Mr. Zip, the postman, delivers a dentist's tool and study prints on a dentist. Discussion of study prints. Use flannel board kit on dentist and nurse. Read stories.	Study prints: Dentist Nurse Dentist tool Flannel board-dentist Books: A Visit To The Dentist by Bernard J. Gern Dentist's Tools by Carolyn Lapp
15. How does he help you? How can you help him?	Also discuss with use of flannel board kit and charts the 4 basic food groups and how they help our teeth.	Flannel board-4 basic food groups. Charts-basic food groups. Model of teeth, toothbrush.
16. Can you show me how to brush your teeth? Do you know what foods are good for your teeth?	Discuss proper care of teeth and toothbrush. Show filmstrip and demonstrate how to brush teeth. Then let children demonstrate. Invite a nurse or dental assistant to discuss dentist duties and who helps him. Children can use wooden figures, model community, puppets and hats made etc. and have a puppet show involving all the jobs and community helpers talked about thus far. Mr. Zip could deliver invitations. Children could choose who they wanted	Filmstrip: Tommy Tooth Let's Go To A Dentist by Naomi Buchheimer. I Want To Be A Dentist by Carla Greene. Resource person: Nurse Dental assistant The Hat Book by Leonard Shortall Our Neighborhood Friends by Olivia Flouring

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	to be. Class will continue adding to display and to list of occupations.	Puppet stage-made during family unit. Invitations
17. Where does mother buy food?	Mr. Zip brings a grocer's apron and several empty food containers. Children discuss where these items come from, who uses them and how.	Grocer's apron Empty food cans
18. Who do you know that works there? What are the duties of these jobs?	Discuss study prints on supermarket. Filmstrip-view and discuss.	Study prints: Supermarket Helpers Filmstrip: Super-Market (Edu. Craft)
	Take a field trip to grocery store. Have a resource person.	Field trip-visit grocery Resource person-grocer
	Children will build a grocery store and invite grocer back for role play of various parts. Use flannel board figure.	Refrigerator box Paint Cash register Flannel board-grocer
	Children will bring empty food containers from home. They will do all the planning.	Empty food cans
	Show filmstrip.	Filmstrip: The Grocer
	Children do puzzles individually.	Puzzles: Baker Grocer Cake maker

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Children will make a mobile of all community workers studied. Use geometric figures/shapes to make the model worker and a tool he uses. Display materials and complete list.	Materials needed:
19. Are all communities alike? How are they different?	Show filmstrip and discuss.	Filmstrip: Communities Are Different

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Teacher will arrange for a special delivery package to be delivered to the class by a real postman. The package will contain a surprise for each child. The surprise could be a different stamp for each child with a letter explaining the fun involved in stamp collecting.	Package Stamps Letters
Then the teacher will have a resource person who is a stamp collector come to the class and bring his tamps, equipment, etc. and tell the children all about stamp collecting and how to start, who helps, etc.	Resource person: Stamp collector(Wayne Nester)

INTRODUCTION TO: School
"It's In The Bag"

This unit extends the child's knowledge of his world still further. It presents him with information concerning the school staff and their jobs. Also, the child becomes aware of his role and his job in school and in relation to others. He learns to appreciate his role and that of the school helpers.

First grade activities and subject matter will correlate throughout the unit.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIAL
Show filmstrips and discuss.	Filmstrips and Cassettes: Knowing Our School: 1. Going To School 2. Our Room In School

BROAD OBJECTIVE: (1) To help the children learn appropriate occupational information about the occupations of the school staff and to instill an appreciation and understanding for each job.
(2) To help the children become aware and appreciate his role and job in school and in relation to others.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Why do we need helpers in the room? What do they do? Their duties?	Introduce helper's chart-discuss how room helpers help the teacher and the children. Talk about their duties. Make a mobile of all the room helpers.  Show filmstrip. Make hats of all the jobs in the room and label with proper title. Role play. Play record of Sounds in Our School and show photo cards that go with it. Discuss. Use flannel board.	Jerry At School by Kathryn and Bryon Jackson. Good Morning, Teacher by Jene Barr. UNIT TITLE: TRANSPORTATION

"LET'S TAKE A BUS RIDE"

APPROXIMATE GRADE LEVEL: GRADE 2

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: Transportation
"Let's Take A Bus Ride"

Few aspects of our daily lives are unaffected by transportation. Either directly or indirectly, our food, clothing, shelter, and our entire lives reflect the availability of goods and services provided by transportation.

It is intended, through this unit, that children become aware of the many modes of transportation of goods and people and the many jobs required for the efficiency, speed, comfort and safety involved.

Since transportation is such a broad subject, involving so many people, this unit will deal with the bus, extensively.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIAL
Have children bring in pictures of as many buses as they can find. Let them place the pictures on the bulletin board. Discuss sizes, shapes of buses and where you can go on a bus.	

194

BROAD OBJECTIVE: To help students develop interest in buses and the important part they play in our lives.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How do people get from place to place in our community?	Class discussion of ways children get to and from school, to grocery store, to a department store. Visit local bus workshop (terminal); watch many people at work and ask about their duties.	
2. If you had no car and wanted to go to Roanoke or nearby city to shop, how would you get there?	Write stories about family trips taken. Draw appropriate pictures to go with story. Make individual booklets of materials collected and work done during unit. (Add to booklet as work proceeds)	Text: Our Language Today 2 Chapter 7-"Writing Stories" Crayons Paper fasteners Construction paper

BROAD OBJECTIVE: To help students develop an understanding and appreciation of the workers involved in operating buses; for our convenience.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Who are the workers who help us travel in our community? on a bus trip across the United States?	Make a large chart of brief facts learned about the topic, for example: Bus Workers — Duties Bus driver — He drives the bus. Mechanic — He keeps bus running.	Oak tag Study prints: Community Helpers C89 Filmstrip: The Bus Driver F-A9 The Gas Station Attendant F-R20 Service Station Workers CF-A86
	View and discuss films and filmstrips depicting bus drivers and their duties.	Films: Bus Driver #40904(Rad.) Bus Drivers Helpers #70705(Rad.) Buses That Serve Our Community #27904(State) Busy Airport #83404(Mad.) Big Trains Rolling #28012(State) Boat Trip #05104(State)
	Invite a local and(if possible) Greyhound or Trailway bus driver to talk with class.	
	Role-play workers on the job.	
	Learn and sing songs.	"Helpers" p.44 Discovering Music "Going to Boston" p.47 " " "Going to Travel" p.45 " "

196

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Read stories. Learn to spell words related to unit. Invite bus driver to talk to class.	 Resource persons: Bus driver Mechanic Bus station manager

BEST COPY AVAILABLE

BROAD OBJECTIVE: To increase the child's knowledge of ways of travel.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How do people choose among the many ways of traveling?	Make a chart(picture and word) of as maqy types of transportation as possible.	
	View and discuss "Progress of Transportation" chart. (Barbara Cox has this chart)	"Progress of Transportation" chart.
	Children choose mode of transportation and draw, color, cut out pictures and place on bulletin board.	
	Learn and sing songs related to transportation.	"The Service Station" p.32 Discovering Music. "Jet Planes" p.36 Disc. Music. "Fly to the Moon" p.37 Disc. Music. "The Midnight Special" p.72 " "Sailboats" p.163 Disc. Music.
2. How did people in olden times travel in our country?	Make a picture chart of ways of travel in early America.	
	Discuss advantages and disadvantages of early modes.	
	View and discuss ways of travel in early America(through charts and filmstrips.	"Progress of Transportation" chart(Barbara Cox has)

198

BROAD OBJECTIVE: To extend the child's knowledge of the world beyond his immediate environment.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are some ways to travel on land, on water, in the air and in space?	Arrange mode(cars, trucks, buses, airplanes, space modules, etc.)to make a travel museum. Put explanatory labels on all exhibits.	
	Read stories(pupils) "Fun in the City", "A Neighborhood of New Houses", "A Trailer Trip", "Fun at Home".	Learning About Our Neighbors Wann, Wann, Sheehy - Allyn and Bacon
	View and discuss filmstrips.	SVE-F796-6 Manners on Public Transportation.
2. What goes on at a busy bus terminal, an airport, a wharf and at space center?	Visit local Greyhound bus terminal and observe work going on. Ask questions of workers about their duties.

UNIT TITLE: THE GROCER

"TO MARKET, TO MARKET"

APPROXIMATE GRADE LEVEL: GRADE 2

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: The Grocer
To Market, To Market

This unit is organized to give children information, which is within their realm of understanding, about one of the very important work roles in our community. Also, it should stimulate an appreciation for the services rendered by the various workers in satisfying the needs of our society.

Hopefully, the children will also become aware of the fact that the many aspects of community life are dependent upon each other.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIAL
Serve crackers and peanut butter and kool-aid as a "refresher" after a class. Then ask the children where they think I got the crackers, peanut butter and kool-aid. Class discussion of a grocery store, who works there, etc.	

204

BROAD OBJECTIVE: To help students become aware of the grocer as a distributor of food for our meals.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Who is the grocer and how does he help us? What does he have to know and do to become a grocer?	Identify and interview a grocer (about what his job is, who works for or with him, etc.) Class discussion of qualifications in performing his job.	Resource person - Grocer (Local community grocer) SVE Study Prints: Set SP-123 Supermarket Helpers SVE Filmstrip and Cassettes: (4) JF210 SATC Supermarket Workers
2. Does the grocer raise the food he sells in his store?	Read stories(teacher and pupil) about people who grow, produce, process, transport, or sell various foods. Construct models of boats, planes, trucks, etc.(means by which our food is transported. Cut out magazine pictures for a bulletin board, "Ways Our Food Gets to Market".	Story: Childcraft Vol. 7 How We Get Things.
3. What is a supermarket? How many departments are there in a supermarket? What do we mean by a "display"?	Class discussion of differences and likenesses in grocery store and supermarket. Teacher read story, The First Book of Supermarkets. Write original stories and poems about experiences to a supermarket.	Story: A Visit to a Supermarket p. 47-60 Book: Learning About Our Neighbors 2 by Wann-Allyn and Bacon, Inc. Book: The First Book of Supermarkets Textbook: Our Language Today 2 "Writing Stories and Poems"

206

BROAD OBJECTIVE: To help students realize that grocers get goods from many sources.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITES	RESOURCES AND MATERIAL
1. What people are responsible for getting our food to a grocery store or supermarket, where we can buy it?	Field trip(early morning) to observe bread, milk, produce truck, etc. delivering their products. Discuss content question here. Read stories(teacher and students). Show filmstrips.	Stories: The Handsomest Pigs in Town (Childcraft Vol. 11 p.188-193) Let's Go Shopping (Childcraft Vol. 6 p.218-233) Street Markets (Childcraft Vol. 6 p.224-225) Filmstrips: How We Get Vegetables How We Get Fruit How We Get Meat How We Get Bread The Story of Milk
2. Where do these people obtain the products they bring to the supermarket?	Build a bakery and make a baker's hat and coat. Role-playing make loaf of bread using recipe on page 83-84 in Learning About Our Neighbors. Bake rolls in classroom. Make a poster of places people obtain products they bring to the supermarket. (Bakery, produce market, etc.)	Story: The Surprise p.61-68 Bread For Greenwood p.69-74 The Story of Bread p.75-79 Bread Long Ago p.80-84 (From book: Learning About Our Neighbors by Wynn-Allyn & Bacon) Story: Stores in the Neighborhood p. 80-89 Book: Our Working World by Lawrence Senesh-Science Research Assoc.

206

BROAD OBJECTIVE: To help students realize that people in a community are interdependent.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What do we give in exchange for our food?	Listen to and talk with a milkman(in the classroom) about how he exchanges the money he earns, from delivering milk, for the many products he needs in daily life.	Story: Money in a Basket Childcraft Vol. 6 p.226-227 Resource person: Milkman
	Story-(Teacher or child read to class)	Story: When People Didn't Use Money Childcraft Vol. 6 p.230-231
	Show filmstrip.	Filmstrip: The Grocer(K.B)
2. What services does the grocer render? Could we do without the grocer?	Write an article for the school newspaper(K.B. Buzzer) about our trip to a supermarket and the visit from the milkman to our class.	
	Check grocery prices in ads from several stores in the area(advertising).	Daily newspapers(News Journal The Roanoke Times)
	Print "make believe" ads for our room supermarket.	
	Filmstrip or films	Film:(18809)Food Store(State)
	Stories: (Pupil and teacher read)	Story: The Store on Wheels Vol.6 p.84-85 Little Wheels for Big Jobs Vol.6 p.88 Bags, Sacks and Baskets Vol.6 p.228-229 What Place is This? Vol.5 p.222-223 Childcraft

207

BROAD OBJECTIVE: To help students realize that friendliness and courtesy are important in business.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Why should the grocer be friendly and courteous?	Discuss some manners for a grocer and customer.	Book: Manners Can Be Fun by Leaf-Lippincott(395-L)
	Make a poster of manners that should be practiced.	Book: Courtesy by Slobodkin-Vanguard Co. (ES)
	Role-play grocer and customer.	Book: The Courtesy Book by Dunlea-Beckley Cardy(395-D)
2. Should we as customers be friendly and courteous?	Film(view and discuss)	Film: 97804 Courtesy For Beginners(Radford College)
	Show filmstrip. (View and discuss)	Filmstrip: Manners in Public 241 Curriculum Lab D56g Radford College 130F

208

BROAD OBJECTIVE: To help students develop an understanding that sanitation is important in business.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is the meaning of sanitation?	Class discussion of cleanliness, sanitation and their importance. Make a dictionary of new words introduced into this unit and use the word in a good sentence.	Our Language Today 2 "Writing a Good Sentence"
2. Why is sanitation important in the grocer business?		
3. Should we as a customer think of cleanliness when we buy and handle food?	Film(view and discuss).	Film:(50505) Health-You and Your Helpers(Radford College)

BROAD OBJECTIVE: To help students develop a realization that speed and accuracy in handling money is important to the grocer and to the customer.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Is it necessary for the grocer to know how to count and make change for money? Why?	Role play: Grocer and customer(selling and buying before math unit on money and then after).	
2. Is speed and accuracy, in counting money, important to the grocer? Why?	Role play: (Same as above) Learn and use liquid measure and weights.	Math textbook: Mathematics 2 (Sets, Numbers, Numerals-Laidlaw) (Unit on Money) (Unit on Liquid Measure & Weights) Different types of containers and scales. (Mrs. Stump has old model scales)
3. Should we as a customer know how to count money and make change? Why?	Have different children each morning help take up, make change and count lunch and ice cream money. Role play: Cashier, customer, bag boy, custodian.	

218

BROAD OBJECTIVE: To broaden student knowledge of the world of work.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Can you name some people who work in a supermarket and tell what they do?	Decide on store name. Make sign. Plan, build, and operate a "grocery store". Play the roles of manager, clerks, customers, custodian. a. practice courtesy b. practice counting and changing money. c. practice buying and selling. Leave the store in room as long as interest holds.	Resource person: Store manager or clerk in a neighborhood store.
	Make a picture poster of "People Who Work In and Around A Supermarket".	Make labels of products sold in a grocery store(tempera paint).
	Film(view and discuss). Make a sign for name of store. Read stories(pupils).	Stories: Food for Greenwood Book: Learning About Our Neighbors-Allyn Bacon p.45-80.
	Show filmstrip. Learn and sing songs: 1. The Milkman(p.78) 2. What Sort of People Come to Our Town(p.111) 3. Making Cookies(p.10) Song: "You Turn for Sugar and Tea"(p.25)	Filmstrip: Supermarket Workers Music textbook: Music In Our Town Textbook: This is Music
	Write original stories about supermarket workers.	Study prints: Talkstarters: At the Store(Scott Foresman #2059) (Kindergarten has this)

211

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Role playing: 1. The grocer 2. The milkman 3. The bread man 4. The produce man 5. Clerk 6. Bag boy 7. Custodian 8. Cashier 9. Customer

INTRODUCTION TO: "RADFORD THEN AND NOW"

This unit on the City of Radford is designed to help children develop an appreciation for the past and understandings of the changes that have taken place in their city.

Through various resource personnel and field trip activities we hope that each child will become aware of not only the historic past but also the present career opportunities offered.

MOTIVATING ACTIVITY	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Display a large map of the City of Radford.	1. Class discussion of what a map is. 2. Location of school on map. Location of other main points of reference (Ex. Norwood Street).	Map of Radford.

2/6

BROAD OBJECTIVE: To show children that a city can be drawn on a map, and to help children learn basic math skills.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Can we find our home on a map of Radford:	1. Give each child a map of the City of Radford to locate their home & draw route to school. 2. Have each child mark his home on the big map on the bulletin board.	Maps available from Chamber of Commerce.
2. How can I locate things on a map?	1. Class discussion & teacher demonstration of scale, legend and key. 2. Game - Location of landmarks of City.	Modern Mathematics II - unit on measurement.

217

BROAD OBJECTIVE: To help children understand the changes that have taken place in Radford over the past 100 years. (Historical)

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What would a map of Radford 100 years ago look like?	1. Give the child a map of Radford in 1755. Let children try to locate present existing landmarks.	Included in unit.
	2. Discuss the differences in the map.	
2. What was our community like 100 years ago?	1. Tell the children the story of the Ingles family.	Possible resource people.
	1-A Art act. - Draw Indians	Necessary information attached.
	2. Show a film.	Wilderness Road 16508
	3. Children write the story in their own words.	Mary Draper Ingles
	4. Give each child a picture of Lovely Mount Tavern (stage route on Wilderness Road) and Lovely Mt. Church and discuss.	Copy attached to unit.
	5. Construct stagecoach.	

218

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	6. Teacher present pertinent information: Old Brick Church Connleys Run East & West Radford John B. Adams- Radford home behind High School Belle Heth Academy 7. Crossword puzzel to review history learned.	Information attached.

219

BROAD OBJECTIVE: To help increase the childrens knowledge of occupations available in Radford (past and present).

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How has the appearance of our community changed?	Display on bulletin board pictures and information of businesses and schools past and present.	Resource persons - natives of Radford. "This Is Radford Virginia" available from Chamber of Commerce.
2. What occupations existed 100 years ago that no longer exist today?	Class discussion resulting in chart showing how occupations have changed.	Slide Presentation of Radford - available RHS library.
3. What occupations do your parents have?	Each child interviews their parents about their places of work. Record childs report to the class.	
4. What occupations are available in Radford?	Prepare a list of industries to study. Fill in a simplified job application form.	Resource person from Radford Planning Commission. Resource person from Radford Employment Agency.
5. What education is necessary for various careers?	Resource persons from selected industries to explain the industry and products made there. Prepare a display table of products made in Radford.	

220

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Add to list of industries - the products made in each.	
	Field trip including historic points as well as selected industries.	
6. What things I learned about Radford's past and its occupational opportunities that I would want to tell newcomers?	Children prepare a brochure using pictures taken on field trip and original descriptions of them.	
	Creative writing lesson, choosing a career from those discussed.	

1748 - Mary Draper lived with her family at Drapers Meadow (now Blacksburg).

1750 - Mary Draper married William Ingles. Was first white marriage West of Alleghenies. Had 2 children - Thomas and George.

1755 - Shawnee Indian raid on Draper's Meadow in which several were killed and Mary Draper Ingles and her children were captured. The Indians separated them and carried Mary into Kentucky and finally Ohio. Here she was forced to make salt, the first made in our country by white settlers. Mary taught nursing, cooking to the Indians thus won priviledges and title "heap good medicine squaw." Accompanied by a Dutch woman Mary Draper Ingles escaped. For 40 days and nights she climbed cliffs, slid down mountains and lived on berries and nuts. Finally she fled from the Dutch woman, who crazed by hunger and exposure, tried to murder her.

Mary was found by a neighbor near Dunkards Bottom where her husband had rebuilt their cabin. This was on New River near Radford. Later a log cabin was built by the Ingles just West of Radford on the river. Here they operated a ferry known as Ingles Ferry. Mary sent scouts to look for the Dutch woman. Later a monument built from the chimney stones of her cabin was erected to her in Westview Cemetery in Radford.

First permanent settlement in Radford was Ingles Ferry in 1755.

Lovely Mount Tavern - Was built on Rock Road (Wilderness Road). Was a double log cabin built on stage route. Hog droves and cattle driven on this road. Was first post office in community until 1866.

1845 Old Brick Church on Lovely Mount.

UNIT TITLE: THE FARM

"OLD MACDONALD'S FARM"

APPROXIMATE GRADE LEVEL: GRADE 2

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: The Farm
Old MacDonald's Farm

City children need to learn how country people live. Actually, many city and rural living conditions have become quite similar because of modern means of communication and travel, and the development of consolidated school systems.

The overall view of the typical small farm and its animals and crops lends itself to a wide variety of activities which hopefully will lead the children into a better understanding and appreciation of the interdependence of people who live and work on the farm and in the city.

Second grade subject matter fields can easily be incorporated into this unit.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIALS
Play record and sing: Old MacDonald's Farm. Look at and discuss: (Model Farm from National Dairy Council) and child's vacation experiences on a farm.	

224

BROAD OBJECTIVE: To help students gain an appreciation of life on a farm.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What would living on a farm be like? 2. What does the farmer's family do all day?	1. Class discussion of the child's vacation experiences on a farm. 2. Read selections and give reports on farm life. 3. Study famous paintings which depict farm life. 4. View filmstrips or films depicting farm life. 5. Role playing "A Day on the Farm."	Books: What I Will Be from A to Z by National Dairy Council. The Little Farm by Lois Lenski. The Cow in the Silo by Patricia Goodell. My Friend the Cow by National Dairy Council. Films: Farm Animals(Radford College) Farm Babies and Their Mothers (Radford College) Farmyard Babies(Radford College) Feeding Farm Animals(State) Poultry on the Farm(State)
3. What animals live on a farm? Why does a farm have animals? 4. Where does the farmer keep his animals? 5. Who helps keep farm animals healthy?	1. Make a scrapbook of pictures of farm animals(include vocabulary words for spelling). 2. Discuss sanitation procedures on a dairy farm(care of barns; farmer's personal cleanliness; government inspection, etc.) 3. Visit dairy farm(noting all above discussed items). 4. Play a matching game on mother and baby animals(on an electric game board). 5. Set two eggs in a "chick-u-bator" and count time for hatching(avoid drastic temp. changes). Interview vet. or invite to classroom.	Filmstrips and Record: F-L24 Sounds on the Farm Eye Gate House, Inc. Dinky, the Calf Fluffy, The Chick Frisky, The Colt Fleecy, The Lamb Porky, The Pig Our Poultry Farm Worksheet on matching animals. Slides(in library)SL-01-SL15 Chick Embryo Book: All About Eggs by Millicent Selsam(in public library)

125

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
6. What kind of machinery does the farmer use?	Make a mural depicting the different types of machinery (at work) on a farm. (Class project)	Film: Farming in South China- The Si River Valley(Radford)
7. Where does he keep his machinery?	Make models of farm machinery (from clay or small cardboard boxes). Film and filmstrips.	World Book Encyclopedia Model Dairy Farm - Dairy Council (order early)

BROAD OBJECTIVE: To help students become aware of how living conditions on a farm and in a small community(such as Radford) are similar,(because of modern conveniences, communication and travel).

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. In what ways is farm life different from city life? 2. In what ways is farm life similar to city life?	Draw individual pictures(as the child recalls it) of a farm and of our community(include activities going on in both pictures). Make a chart of activities of people in our community and check to see if jobs of each are same on farm. Same as above except for listing conveniences(such as telephone, TV, etc.) Pop corn and make applesauce as an entertainment in both farm and community. Play games about farm activities(and discuss possibility of children in our community.)	Films: The Cardboard Cox (State) Old MacDonald(State) Pageant of American Farms(State) (a little above some heads, but some received much from this) Songs: Music in Our Town 2 1. Farmers' Market 2. Watermelons 3. Barnyard Family 4. Our Ponies 5. Sheep Are Coming Down The Road 6. Growing Crops 7. Harvest 8. Market Day 9. Planting Cabbages 10. Shake the Apple Tree 11. Wind in the Corn 12. The Farmer Filmstrips: (F-L24) (Including study prints & record) Sounds on the Farm Sounds Around Town(F-L29) Sounds Around City(F-L30) Dairy Farm Panorama Kit

227

BROAD OBJECTIVE: To help students develop an understanding of how we depend on the farmer for our food and how he depends on us for his livelihood.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What crops does the farmer raise:	Discuss and list foods raised on the farm(in the U.S. anywhere and in our community)	Filmstrip: Set of 6(F-S15-S20) Learning About Plants Life on a Dairy Farm #7680 Encyclopedia Britannica Educational Corp.
2. How are farm animals important to us?	Make a picture chart of the different products derived from sheep, cattle, hogs, etc. Learn and sing songs about farm animals. Make up new songs. Read stories and poems about farm animals-write stories and poems. Churn butter. Visit creamery for consumer use. Imitate sounds of farm animals. Guess the animals. Use for physical education	Flannel Board Kit: Farm Animals #88 (Kindergarten has this) Animals and Their Young (Kindergarten has this) Teaching Pictures- A Trip To The Farm(Kindergarten) Sounds I Can Hear(Record-Kindergarten)
3. Where does the farmer 4. Who buys the foods at the market?	Read some poems about the farmer, his products and market. Make and work farm picture puzzles. Film. Role playing, "The Farmer at the Market"(buying and selling).	Films: Agricultural Lifelines(State) Agriculture's Showcase Abroad " Let's Read Together Series (Fourth Grade-Section on Farm Poetry)

228

BROAD OBJECTIVE: To help students gain an insight into the duties of a farmer in daily life.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What does a farmer do all day?	Several short filmstrips or films on the farmer at work.	Textbook: Our Working World-Neighbors at Work P.4-52 by Lawrence Senesh-SRA
2. Who helps the farmer with his work?	Discussion of large farm picture (Childcraft) of what farmer is and will do on the farm. Construct a farm(and for vocabulary and spelling, label the buildings, animals and machinery). Role playing, "The Farmer and His Helpers at Work."	
3. What does the farmer do in different seasons?	Construct a bulletin board (divided into 4 seasonal sections) and depict through cut out pictures jobs of farmer each season.(Measure board--divide into fourths) Learn and sing songs about farmer and his seasonal crops.	Film: The Farmer(Radford College) Textbook: Mathematics 2(Laidlaw) Units on Measurements

229

BROAD OBJECTIVE: To help students become aware of some problems which face a farmer(erosion, improvement in soil, selling of products, meeting standards).

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are some of the problems with which a farmer must deal in improving his soil?	Plant some seeds in two flower pots. Add fertilizer to one pot. Note which plant grows better.	Film: What is Soil?(State) Soil Conservation-Erosion(State) Soil Conservation-Soil and Water Conservation(State) Textbook: Concepts in Science 2, "Plants and Animals" Our Language Today 2, "Letter Writing" Farmer's Almanac(Librarian has these)
	Experiment to show how water carries fertilizer to plants. Pour some sugar or salt on a piece of cloth stretched over a bowl. It will not go through the cloth. Now pour water over the cloth. Taste the water.	
	Show film and discuss.	
2. How does the farmer protect the soil to keep it from washing or blowing away?	Show films or filmstrips depicting different methods of soil conservation. Visit and discuss ex. of soil erosion. Resource person to talk to class about soil...its composition, care and conservation.	Film: Our Land-It's Many Faces(State) Fifth Grade Science Book (has an experiment on erosion)
	Discuss and summarize.	
	Visit a farm to clarify and broaden our understandings.	Field trip to a farm.

230

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. Who assists the farmer in deciding what to grow, when and where on his farm?	Bring, read and discuss newspaper clippings on farm reports. Listen to farm reports on local radio and television stations.	
	Film Role playing, "Farm Agent on Radio Broadcast."	Film: The Agriculture Story(Radford) Agriculture in Virginia(Radford) Your Meat Inspection Service(State) Letter Writing for Beginners (Radford)

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Role playing of: 1. "A Day on the Farm" 2. "The Farm Family" 3. "The Farmer and His Helpers" 2. Begin list of Careers We Have Learned About, on wall above chalkboard. Leave all year; add to as year goes on. (Children cut out letters as we learn about each career in the unit) 3. Have a barn dance.	Resource Persons: 1. Farmer 2. Salesman 3. Repairman 4. Grocer 5. Machine operator 6. Soil conservationalist 7. Soil analyst 8. County agricultural agent 9. Horticulturist 10. Park ranger 11. Dairyman 12. Farm realtor 13. Feed dealer 14. Manufacturers of farm tools 15. Biologist 16. Landscaper 17. Livestock breeder 18. Veterinarian

INTRODUCTION TO: Our Homes-Shelter
"Where Do You Live?"

Throughout the primary grades, attention is given to self, home, community and the workers whose services contribute to them.

In the second grade, with increasing maturity of the children, interest in the home, its structure and furnishings is extended.

Since every aspect of the child's life is touched by the home, his experiences and interests will be prevalent.

It is hoped the children will gain a better understanding of and appreciation for the workers involved, from the architect's drawings of the house plans to the role of parents and children.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIALS
Filmstrip and story: (F-L8) Hansel and Gretel(Gingerbread House)	Filmstrip: (F-L8) Hansel and Gretel
Construct cardboard houses to resemble gingerbread house.	
Make a gingerbread house or a small cardboard house to resemble real gingerbread box with frosting and gingersnaps on it.	
Dramatize story Hansel and Gretel or conduct a "man on the street" interview, using microphone and tape recorder. Teacher will act as "man on the street" first to give class the idea. Then different children will be chosen.	Tape recorder
Filmstrip and story: Three Little Pigs Dramatize story Three Little Pigs.	Filmstrip: Three Little Pigs Where do you live? Child give home add.

237

BROAD OBJECTIVE: To help students gain an appreciation of our homes.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What did the very first homes look like?	Filmstrip: View and discuss Draw caveman and his home. Draw Indian homes. Build Indian village(tepees, fire area sleds, totem poles).	Filmstrip: The First Homes(313A) Homes of the American Indian(313H) Homes in the U.S. Old and New(313I) Books: Houses We Live In True Book of Houses
2. What kinds of homes are in our neighborhood?	Read stories(pupils and teachers) Read poems Take field trip around school and in neighborhood where most of class reside to view kinds of homes. Discuss types of houses; materials houses are made of and process involved in building a house. Filmstrip-view and discuss. Build own houses out of milk cartons. Build a house out of a cardboard box. Paint it.	Story: Three Little Pigs (p.60) The House That Jack Built The Little Stone House The City Mouse and the Country Mouse(p.94) Childcraft-Vol. 2 Filmstrip: The Homes We Live In-Jam Handy Poem: Peter, Peter, Pumpkin Eater There Was An Old Woman(p.31) The House of the Mouse(p.94) The Shiny Little House(p.16) Childcraft-Vol. 2 (Mrs. Showalter's room)

238

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. Why do we need homes?	Transparency-Home as a Place of Shelter.	Transparency: Home as a Place of Shelter(creative visuals)
	Class discussion of weather factors.	
	Filmstrip-view and discuss	Filmstrip: Why We Need Houses (238B)
4. What kinds of rooms does a house have?	Make a list of rooms in a home and the furnishings used in each room.	Childcraft-Vol.6(Mrs. Darden's room) 1. Adobe(p.127) 2. Apartment(p.123)
	Examine and discuss blue-prints(floor plans) and learn about scale model. Correlate this with math class on measurement and cost(addition and subtraction of simple money problems).	Math textbook-Mathematics 2 Sets, numbers, numerals a. measurement unit b. money unit c. geometric shapes
	Try drawing simple floor plans for "your" house.	
	Collect and discuss floor plans from newspapers and magazines.	Filmstrip-Parts of a House (238B)

239

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Read stories(pupils) The Cloud House in the Sky p.94(Sun and Shadow) Moving Day-The Apartment p.116-122(Sun and Shadow) The Little Clay House p.97(Together We Go) A Baby in the House p.135(Together We Go) Tools for Work p.102(A World of Surprises) Two is a Team p.201-221(A World of Surprises) The Painted House p.8(Going Places, Seeing People) My Home p.46(Going Places, Seeing People)	Reading textbook: Sun and Shadow Reading textbook: Together We Go Childcraft-Vol.10, p.218-219 "The Carpenter's Cutting Tools"
5. What important tasks need to be done in our homes?	Plan one extra chore that you can do daily to help at home. Make a poster illustrating rules of courtesy at home. Make a chart of all home jobs, who does them, and which ones you can help with.	
6. Ways we can make house more pleasant.	Plan and plant a bulb or dish garden. Make a chart of why we need homes.	

240

BROAD OBJECTIVE: To help students develop an understanding of workers involved in building, furnishing and maintaining our homes.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What kind of tools are used to build a house?	Filmstrip-view and discuss. Children make own tools out of construction paper for bulletin board. Bring tools from home and show class.	Filmstrip-Tools and Materials for Building Houses(238D)
2. What workers are needed to build a house? How did the workers learn their skills?	Children make puppets out of bags depicting worker who builds houses. Class discussion of workers and how they learned the skills. Architect-show blue prints and let children draw simple plan of their own houses. Correlate with math class on measurement and cost. Make class picture and story book of construction workers depicting as many different phases of their jobs as possible. Go to an area where the workers are in the process of building a house.	Childcraft Moving(Vol.7) Carpenter(Vol.7) Apron(Vol.9) Belt(Vol.10) Tools(Vol.10, Vol.9) Electrician(Vol.10) Plumber(Vol.8, Vol.10) Painter(Vol.10)

241

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. Where do the materials to build our homes and furnishings come from?	Invite a carpenter, plumber, electrician(any other available person children might know) in to briefly explain their work and how they learned their skills.	Books: I Want to be An Architect I Know a House Builder
	Filmstrip: View and discuss	Filmstrip: Men Who Build Our Houses(283F)
	Collect and make an exhibit of different kinds of materials used in constructing a house.	Science experiment: Why green lumber is not used in building by wetting a piece of plywood and drying as quickly as possible.
	Make a picture chart of household furnishings(emphasizing as many different types of materials used in each).	Childcraft Brick's for Houses(Vol.7) Grass(Vol.5) Mud(Vol.5) Paper(Vol.5) Tree(Vol.5) How to Make Furniture(Vol.9)
	Filmstrip, records or cassettes	Filmstrip, records or cassettes: (Singer/SVE)World of Work The Home We Live In How We Get Our Homes

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
4. What important tasks need to be done in our homes? Who performs these tasks?	Learn and sing songs: At Our House(p.8) Leaky Faucet(p.6) Making Cookies(p.10) Needle sing(p.11) Old House(p.83) Make up other songs or verses to songs in books.	Music textbook: Music in our Town
	Pantomine the work of different kinds of duties in home. Have other children guess which worker is being represented.	Music textbook: Discovering Music
5. In what ways can we help make our homes more pleasant?	Learn and sing songs: Helpers(p.44-Disc.Music) Help me Today(p.80-Disc.M) If You're Happy(p.8-This Is Music)	Music textbook: This Is Music
	Art-decorate wooden boxes for trinkets or create felt picture and vase of paper flowers-art design out of toothpicks. Children may put art decorations in playhouse, if available.	Economy Handicrafts-Flushing, N.Y. p.29 felt and burlap picture pack.
	Play rhythmic game- If You're Happy(p.8-This Is Music) Come Sing and Play(p.6-This Is Music)	
	Read stories(pupil): The Little Red Hen(p.46). Act out play.	Textbook: Together We Go

243

BROAD OBJECTIVE: To help students develop a realization and appreciation of the many conveniences in our homes.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How do we heat our homes in winter? How do we cool them in summer?	Class discussion of ways their homes are heated and cooled.	Childcraft Furnace(Vol.6 and 8)
	Invite a heating and plumbing contractor or helper(a father, if possible) to answer questions and enlighten children as to types of heat and cooling devices.	Resource person-heating and plumbing contractor.
2. What materials are used for insulation?	Interview parents about insulation in home and report to class.	
	Invite school custodian to explain heating system in school.	
	Make an exhibit and label types of fuel. Discuss advantages and disadvantages.	Language textbook: Unit on "Labeling Things".
3. What furnishings does a home need? What purposes does furniture serve? Of what materials is furniture usually made?	Read poems(pupil or teacher)	Poems-Childcraft-Vol. 1 The Clock My Bed
	Class discussion of advantage and disadvantages of rugs, carpets, tile, cement, linoleum, bare wooden floors.	
	Cut out pictures of furniture for a room and arrange it several ways, deciding on the most convenient arrangement.	Poems-Childcraft-Vol.1 The Clock My Bed

244

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Make something useful or decorative for the home. (Book marks, memo pads, napkin rings, door stops, letter-holder, pin cushion).	
	Make a list of labor-saving devices.	
4. What conveniences for the home have come in to use recently? How do they add to our comfort and well being?	View and discuss film.	Film: Pioneer Home(#80904 Rad.)
	Filmstrip and cassette-view and discuss.	Filmstrip and cassette: (Eye Gate) The Story of Houses What's Around Us-The Home
	Math-identify and work simple addition and subtraction problems with "sets" of objects and "groups" of workers, furniture, etc. in the home.	Childcraft Refrigerator(Vol.6) Telephone(Vol.6) Television(Vol.6) Dishwasher(Vol.6) Washer & dryer(Vol.6 and 8)
	Free reading-read the books on the special reading table(to be set up for this unit)	
	Report on any particular book you think would interest the class(book report).	Books for reading table are included in back of unit.
	Children interview parents with cassette tape recorders on labor-saving devices.	

245

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Construct a house Role play(people who build the house as well as family who lives in the house). Classroom quiz Booklet-of all papers and objects children have done and made during unit.

RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: Custodians(Janitors)in Our Lives

All too often we take for granted the important work performed, for us, by the custodians or janitors. These people include our mothers and fathers, as well as those persons who are responsible for the maintenance of private and public buildings.

It is hoped, through actual association with the school custodians and observation and class discussion, the children will begin to realize and appreciate those who care for the buildings used by us all.

This unit is designed for a second grade class; for two to three weeks.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIAL
1. Display some of the equipment used by custodians or janitors.	
2. Through cooperation with the school custodian, do not clean the classroom for a week(without the knowledge of the children in the class).	
3. Class discuss the appearance of the classroom after the week of work within; and having no one clean it.	
4. Ask for volunteers among the children in the class to carry out the duties which the custodian would have performed each day.	

150

BROAD OBJECTIVE: To help children learn about the importance of a custodian or janitor in all phases of their lives.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATEIAL
1. What is a custodian? a janitor?	Use dictionary and find meaning of both words.	The Harcourt Brace School Dictionary Harcourt Brace Jovanovich,Inc.
2. Where do we need a custodian or janitor?	Class discussion of the meanings and their likenesses and differences.	The Picture Dictionary For Children
	Class discussion of places they have observed custodians and janitors at work.	
	View and discuss filmstrip and cassette and pict-o-graph.	Helpers at School-Knowing Our School CFA110
		Pict-O-Graph-Community Helpers C-89
	View and discuss films	Community Keeps Healthy
		Communities-Keep Clean
		Helpers at Our School

251

BROAD OBJECTIVE: To help children develop an appreciation of custodians or janitors in their lives; through a workable knowledge of their duties and responsibilities.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are the duties of a custodian? a janitor?	Learn and sing songs about a custodian or janitor at work.	"Pounding A Nail" Page 43 Discovering Music-Berg, Richard "Helpers" Page 44 Discovering Music-Berg "Jack-A-Needle" Page 3 Discovering Music-Berg "Leaky Faucet" Page 6 In Our Town-Mursell, James "Galoshes" Page 3 In Our Town-Mursell
	Invite custodian(school) to room to explain his duties.	Resource persons: School custodian and janitor.
	Take tour of school building, with a custodian and let him show and explain the extent of his work.	Field trip: Tour of school building.
2. What would our public buildings, as well as our private homes, look like without the services of a custodian or janitor?	Invite a custodian from some public building(such as recreaction hall) to visit the class and explain and answer questions about his work. Then compare his work with that of the school custodian.	Resource persons: School custodian and janitor.

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Children read stories about school janitor.	"Mr. Pickle's Surprise" Page 51 Foolish and Wise-Smith, Nile About Family Helpers-Hoffman Busy Bodies-Bowman Dear Garbage Man-Zion
	Class discussion and list together places where custodians or janitors are needed.	

BROAD OBJECTIVE: To help children realize that everyone, to an extent, act as a custodian or janitor sometimes.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Did you ever think of your mother or father as a custodian or janitor?	Class discuss and list duties of parents which custodians or janitors perform in public buildings. Examine and discuss study prints.	Family Responsibilities in in the Home CSP-19
2. Have you ever done any work as a custodian or janitor?	Class discussion of ways the child has helped in his home. Each day during this unit allow four or five children to do the work the custodian would ordinarily do in the classroom. View and discuss filmstrips.	Janitorial equipment. School Helpers F-A84-226 Our Jobs at School FA85-227 Helpers at School CFA110 School Courtesy FA87-229
3. Is it the duty of only a custodian or janitor to take care of and clean the building he is in charge of?	Class discussion of the appearance of our classroom after it had not been cleaned. (At the beginning of the unit.) Examine and discuss study prints.	School Friends and Helpers CSP-20 Keeping the City Clean and Beautiful CSP-23

154

CULMINATING ACTIVITY

Plan and carry out a special day or party for custodians in the school, in appreciation and understanding of jobs performed by custodians and janitors.

Each child in class will wear a "thank you" badge which they have made for the occasion.

INTRODUCTION TO: THE ARTS: "COLOR MY WORLD"

It is hoped, through a unit of this type, that children will develop an interest in cultural contributions to society.

Selections from the finest works of both past and comtemporary times should be included. Tha arts contribute to the enrichment of almost every area of learning. Children will be encouraged to use many art forms to express their own feelings and ideas creatively.

BROAD OBJECTIVES:

1. To help students develop the sensitivity, taste, and appreciations which will enrich their lives.

2. To help students become aware of their interests in selected activities.

3. To help the children become aware that they rely upon community members other than their family and that learning helps people do things for the community, state, and nation.

4. To enable the students to explore possibilities of opportunities for employment, as well as the arts as leisure time activities.

5. To help the students understand how their personal and physical characteristics and abilities (or talents) influence their personal goals and career decisions.

6. To become familiar with some famous artists (and works of art) and some famous musicians (and musical compositions).

258

BROAD OBJECTIVE: To help students develop the sensitivity, taste, and appreciations which will enrich their lives.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What kind of stories do you enjoy?	Teacher read and tell different types of stories to class. Pupils read different types of stories. Role-play some story characters. Make a chart (child made) of types of stories and let each child put his name under the type he prefers.	
2. What do stories do for people?	Ask the children about some subject they know nothing about. Then read them a story and follow with a class discussion about how they feel now.	
3. How can you learn to enjoy music?		Books: Balet, Jan B. <u>What Makes An Orchestra?</u> (Oxford) Britten, Benjamin. <u>The Wonderful World of Music</u>. (Doubleday)

259

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
		Books Continued: Daniach, Shula. Every Child's Book of Music and Musicians (Ambassador) Kaufmann, Helen L. History's 100 Greatest Composers. (Grosset) Norman, Gertrude. The First Book of Music. (Watts)

BROAD OBJECTIVE: To help students become aware of their interests in selected activities.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What do you do for fun and relaxation?	Class discussion of what each child does now when not in school. Set up centers for each child to experience activities in different areas (study prints of famous paintings, filmstrips, records and cassettes of different types of music). View and discuss films.	Film: 14904 Fiddle Dee Dee (Painting to Music)

BROAD OBJECTIVE: To help the children become aware that they rely upon community members other than their family and that learning helps people do things for the community, state, and nation.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. When you want something to do for entertainment who is responsible for furnishing the entertainment?	Make a class chart of activities for entertainment. (For example: a. Watch TV b. Listen to radio, tape player, etc. c. Play at area playground. d. Go to movie theater. e. go swimming. f. skate or play basketball at the recreation hall.) Class discussion of the people and their jobs in the different entertainment areas. Resource persons from several areas.	

BROAD OBJECTIVE: To enable the students to explore possibilities of opportunities for employment, as well as the arts as leisure time activities.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What career opportunities await art and music students? or children in elementary grades who show talent in both areas?	Class discussion of what the children think one could do for a living or a hobby in art and music. View and discuss film.	World Book Volume M Careers in Music. Film: Music Career or Hobby 97404 91104 Clay in Action

BROAD OBJECTIVE: To help the students understand how their personal and physical characteristics and abilities (or talents) influence their personal goals and career decisions.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are my interests in the area of art and music? 2. Do I enjoy activities in either or both of these areas?	View and discuss films, filmstrips. Try different media in art activities.	Films: 89504 Making of a Mural. 55604 Cinderella (Shows children's drawings and narrations) 44004 Let Us Write A Story

BROAD OBJECTIVE: To become familiar with some famous artists (and works of art) and some famous musicians (and musical compositions).

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
What works of art and musical compositions have been profitable to their composers?	Display on bulletin board some copies of famous works of art and have children give their interpretations.	
	Show filmstrips and films.	
	Listen to parts of some different types of famous musical compositions.	
	Do group research on prices some works of art have brought.	
	Read stories about lives of some authors and music composers.	World Book Encyclopedia
CULMINATING ACTIVITIES:	Art Festival Music Assembly

UNIT TITLE: TRANSPORTATION - "ROW-ROW-ROW-YOUR-BOAT"

APPROXIMATE GRADE LEVEL: GRADE 2

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: "ROW-ROW-ROW-YOUR-BOAT"

Transportation touches our lives in many ways, directly and indirectly. Through this unit we hope to create an awareness of the importance of transportation and an appreciation for workers involved in it. Because of the broadness of the topic, this unit will deal with water transportation.

MOTIVATING ACTIVITY	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Have children bring in pictures of as many boats as they can find. Let them place the pictures on the bulletin board. Discuss the size, shapes, of boats and various places that boats can be used.	Listen to, view and discuss filmstrip and record.	A Boat Named George SVE Filmstrip and Record

BROAD OBJECTIVE: Since boats were one of the first forms of transportation it will be interesting for children to study some of the first boats and compare them to modern vessels.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What did the first boat look like? Why were they made?	Class discussion of who might have made the first boats and how they might have looked.	
	Look at pictures and filmstrips of boats from the past.	16704 Flatboatmen of the Frontier
	Activity - Make a model of a dugout or Indian canoe or draw them.	
2. How were boats involved in the early exploration of our country?	Read a story of Columbus' voyage to the "new world".	First Book of Ships. First Book of Holidays. 24808 Story of Christopher Columbus
	Sing songs related to Columbus voyage.	
	Write an original story about the hardships involved in Columbus' voyage.	Our Language Today 2. Unit 7 - Writing Stories Can Be Fun
	Read a story to the children about the Pilgrims' voyage to America.	
	Role-play the Pilgrims' voyage.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Assign spelling words in connection with the "exploration" phase of the unit. (Ex: Mayflower, Pilgrim, Thanksgiving)	
	Play Club-Quiz to review facts learned about history of water transportation.	Teacher made Club-Quiz wheel.
3. How were boats improved through the discovery of steam?	Experiments to show how steam can move objects.	Concepts in Science 2 "Molecules At Work"
4. How and why are ships today different from the first vessels?	Have children compare the pictures of modern vessels on their bulletin board to the first vessels they studied.	Bulletin board of ships.
	Class discussion of how the vessels are similar, different-size, shape, seaworthiness.	
	View and discuss film.	46608 Transportation By Water 56308 Americas Inland Waterways
5. In what ways are ships used today that are different from the past?	Class discussion of how ships can be used to transport goods and people.	
	Draw pictures of the "first" boats and boats today.	

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
6. What are some of the various types of modern vessels?	Discuss a way to group vessels. (Passenger, Cargo, Pleasure)	
	View films and filmstrips showing various vessels.	Filmstrips: Boats. Educ. Reading Service Boats and Ships. Jim Handy.
	Make a large, brief chart listing boats in the proper group. Ex: Pleasure Boats rowboat yacht motorboat Cargo Ships fishing vessels	Best in Children's Literature Transportation - Bowmar Record

BROAD OBJECTIVE: To help children become aware of the importance of water transportation in their own lives.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. If you wanted to go to Europe and couldn't get an airplane ticket, how else could you go?	Class discuss how passenger ships are important. Discuss the advantages and disadvantages of this mode of travel.	Travel brochures. 57004 Airplane Trip By Jet.
	Read "A Floating City".	Going Places, Seeing People. Harcout, Brace & Javanovich Skills 6.
	Invite someone who has taken a cruise in to talk to the class.	
	View films that show passenger cruises.	12505 Transportation By Ship 05104 Boat Trip
2. What other special tasks are done by boats?	View, listen to, and discuss films, filmstrips and records showing boats and ships involved in special tasks	Filmstrips: The Fogboat Story, Young Peoples Records. The Waterfront, Coronet. The Harbor, Coronet. 81904 Ferryboat 99004 Tugboats 26805 Tugboats and Harbors 58505 Ships In Harbor
	Read Story.	"Five Fish For Supper" Going Places, Seeing People Skills 6

272

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. In what way can boats be used for enjoyment?	Invite a parent who owns a boat in to talk to the class. Encourage children to share experiences involving recreational vessels. Paint picutres based on the experiences of the children.	Safety Primer for Pleasure Boats; Sailing Is Fun. Available from Nat. Assoc. of Engine & Boat Manuf.

BROAD OBJECTIVE: To help students develop an understanding and appreciation of the workers involved in operating ships and boats.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What workers are necessary to operate a passenger ship?	Discuss the facilities available on passenger ships and the workers involved in operating them. Let the children divide into groups and role-play the workers on a large passenger ship-captain, navigator, stewards, recreational director, doctors, etc.	
2. What workers are involved in shipbuilding?	Interview a shipbuilder or invite him to the classroom. View and discuss filmstrip on shipbuilding.	 How We Build Ships, Eye Gate.
3. What kinds of work are done aboard Navy ships?	Invite a naval recruiter or naval reserve officer into the classroom. Discuss the training available through the Navy.	Pictures, posters and information from the U. S. Navy Department. Teachers Packet Packet on Submarines Office of Information Navy Department - Washington D.C. 20350
4. What other workers have we seen in our study of boats? Which one would I like to be?	Role-play workers on the job. Read stories.	

274

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Learn to spell words associated with the unit.	
	Review some of the filmstrips used.	
	Sing songs.	
	Construct a ship in the classroom, to use in role-playing.	Modern Mathematics 2 Unit on measurement.
	Write a story about one of the workers we have studied.

RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: FUELS: "PUT A TIGER IN YOUR TANK"

Children have had a great number of experiences with fuels. They know many vehicles need fuel in order to run. They know some homes are heated and their food is cooked with some kind of fuel.

It is hoped, with the present day concern for fuel shortages, the children will gain an insight into the many careers involved in producing, in the proper use of and in conserving fuels.

BROAD OBJECTIVES:

1. To help students become appreciative of the process by which fuels are made.
2. To help children recignize and learn to appreciate jobs involved in producing fuels.
3. To help children realize the necessity of conserving fuels; and what part they can play.
4. To help children learn about people and jobs involved in distributing fuels.

278

BROAD OBJECTIVE: To help students become appreciative of the process by which fuels are made.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Where do green plants get and store energy?	Through investigation and experimentation place plants under different situations (observe).	Concepts in Science 2 Harcourt, Brace & World Unit on fuels p.25-38.
	Begin a science vocabulary chart.	
	View, listen to and discuss filmstrips, cassettes and transparencies.	Cassette: CE-CTA99 Energy Transparency: Tr.4C-905 The Solar System (The Sun and Energy from the Sun) Filmstrip: The Sun What is Energy
2. Where is the tree's food made?	Field trip close by to observe trees.	Field trip to area surrounding.
	Class discussion of parts of trees.	
	View and discuss filmstrip.	F-S66 Telling Trees Apart.

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. What is carbon? 4. Where is carbon made?	Art activity: Give children sticks of artists' charcoal and let them use them for drawing.	
	Experiment: Make carbon.	Concepts in Science 2 Unit on fuels p.29.
5. What are some other fuels and how are they made?	View and discuss filmstrip.	A Trip To A Coal Mine, CF-A178.

280

BROAD OBJECTIVE: To help children recognize and learn to appreciate jobs involved in producing fuels.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Where do fuels come from?	View and discuss filmstrips and listen to record.	Filmstrip: CF-A12 Gas and Oil Workers. Record: C Rec-A14 Gas and Oil Workers.
2. How do we get fuels?	Interview a miner or engineer. (learn to interview)	Filmstrip and Cassette: CE-CT-A43 Acquire an Interview.
3. Who is responsible for mining coal, oil, etc.	View filmstrips and listen to cassette.	Filmstrips: CF-A178 A Trip To A Coal Mine CF-A177 A Trip To An Oil Well Cassette: CE-CT-A62 A Coal Mine
	Invite a Forest Ranger to talk to class. View filmstrip and listen to cassette.	Cassette: CE-CT-A131 I Want To Be A Forester.
	Make models of: a coal mine, an oil well, etc.	

281

BROAD OBJECTIVE: To help children learn about people and jobs involved in distributing fuels.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. After fuels are produced how do we get them?	Show and discuss filmstrips and listen to record.	Filmstrips: CF-A89 Gas and Oil Services. F-S61 Oil: From Earth To You. Record: C Rec A41 Gas and Oil Services.
	Invite a gas or oil distributor to class to explain his work and the work of others responsible for getting gas and oil to homes and businesses.	Resource person.
	Collect pictures of oil and other fuel industries: drilling rigs, oil wells, pipelines, storage tanks, refineries, trucks and workers. Make bulletin board (children).	

BROAD OBJECTIVE: To help children realize the necessity of conserving fuels, and what part they can play.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is conservation?	Show and discuss a filmstrip.	Filmstrip: CF-S8 What is Conservation? Cassette: CE-CT-S2 What is Conservation? Filmstrip: F-S60 Petroleum In Today's Living. F-S21 Forest Conservation Today.
2. What can we do to help conserve fuels?	Conduct a class conservation campaign: Make individual posters.	
3. Why is there a shortage of fuels now?	Bring in and give news reports on fuel shortages.	Newspapers Television Radio

RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: Clothing
"The Shirt on Your Back"

This clothing unit will give a group of primary children a glimpse of farms mills, factories, warehouses, stores, and their own clothes closet.

They will read with interest and purpose, and gain practical information about the clothes they wear.

Through many, varied art activities and field trips in our community, learning will be made real to them.

Through contact with workers from all walks of life, responsible for producing and supplying our clothing needs, the children will emerge with a better understanding, appreciation and interest in the world around them.

MOTIVATING ACTIVITY	RESOURCES AND MATERIAL
Two dolls(a boy and a girl, appropriately dressed) will be placed on a display table. Also, on the table will be a display of sources of materials used in making clothing (piece of raw wool or picture of a sheep; piece of leather or picture of a cow; coal; wood; silk worm cocoon or picture; cotton ball, etc.). Class discussion and guessing game of parts of clothing made from each source on the table.	

page 135

BROAD OBJECTIVE: To help students develop an interest in clothing. 2

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are some of the reasons that people wear so many different kinds of clothing?	Make a list (children) of the types of clothing people wear (dress, shirt, boots, raincoat, etc.)	Textbook: Our Working World Families at Work Neighbors at Work
	Read to students about the different kinds of clothing.	Textbook: A World of Surprises "The Jumping Hat" p. 130 Going Places, Seeing People "Tito's Hats" p.29-34
	Show filmstrip and concept cards on proper clothes and care.	Filmstrip: Proper Clothes and Care (Radford College) Concept cards.
	Learn and sing songs: 1. "Galoshes" p.39 2. "Green Dress" p.3	Music Textbook: Music in Our Town
	Read story	Book: Story of Your Coat by Clara Hollos

287

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
2. What clothes are best suited for school, play, parties, church, and other occasions?	Students prepare a bulletin board using pictures appropriate to the best clothes to wear to school, church, etc.	Textbook: Sun and Shadow "Miss Poppy" p. 132-157
	Read (pupil) stories about the appropriate clothing to wear.	
3. What workers need special clothing for their jobs?	Collect pictures and make posters of community workers, we have already studied about, in appropriate dress.	
	Read story to the class and use felt board.	Childcraft Vol.10 p.220-221 "Making the Clothes You Wear"

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
4. How are "fashions" established?	Boys will (draw) a piece of clothing in the "design" room.	
	Girls will hand sew (or on a simple sewing machine) a piece of clothing for dolls.	
	Learn and sing songs: 1. "Hat Parade" p.60 2. "Here We Go" p.119	Music textbook Music in Our Town
	Design and make costume jewelry p.105	
	Design fabric prints by using muslin and print with potato prints, soap prints or sponge stencils.	Art book: Arts and Crafts for Elementary Teachers

BROAD OBJECTIVE: To help students develop an appreciation of the cooperation of the many workers, in making, supplying and caring for our clothing.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What places and workers in our community provide our clothes?	Read (pupil) story. Play act above story. Social Studies: read(pupils) "A Visit To The Shirt Factory" Show filmstrips to class. Class discussion of workers in the shirt factory. Visit shirt factory. Discuss the workers seen on the visit. Read (teacher and pupils) "Let's Go To A Clothing Factory" Visit Kenrose dress factory. Invite a parent who works at Burlington Industries to explain process of cloth production.	Textbook: Going Places, Seeing People "The Elves and the Shoemaker" p. 173-180. "A Visit To The Shirt Factory" p.98-102. Filmstrips: How America is Clothed How Things Are Made (Clothing) Library Book: Let's Go To A Clothing Factory by Harry (E-L) Lazarus, G.P. Putman Sons, New York. Parent

290

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
2. What places and people help us care for our clothes?	Learn and sing songs: "The Shoemaker"	Music in Our Town (2) Music Now and Long Ago (3)
	Visit laundry and observe and talk with workers washing, cleaning & Pressing clothes.	Silver Burdett(record G.2#5 p.75 and Grade 2 p.62)
	Invite a parent to come to classroom and discuss care of clothing.	Parent.

BROAD OBJECTIVE: To help students gain an understanding of the different products used in making our clothing.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Of what materials is our clothing made?	Make a "cooperative" list of all things children can think of which clothes are made from(wool, cotton, etc.)	
	Social studies: Read(pupils) stories "Clothes are Made from Many Things"	Textbook: Learning About Our Neighbors "Clothes are Made From Many Things" p.92-97
	Discuss how cloth is made and different materials for clothing.	
	Spelling and language: Clothing vocabulary-class discussion, flash card word game.	The Instructor Publications P. O. Box 6108 Duluth, Minnesota #634 Clothing #637 Clothing accessories
2. From what sources do clothing materials come?	Science unit: Coal	Science textbook: Concepts in Science "Coal" p.30-31 "Millions of Years Ago and Now" p.149-156.
	Learn and sing songs: "The Sheep Shearing" p.124 "The Tailor and the Bear" p.100 "I Had A Little Overcoat" p.96 "The Shoemaker" p.94	Music textbook: This Is Music 2
	Transparency: View & discuss Learning About Clothing	Creative Visuals transparency Family Relations-Learning about Clothing 301.42AE-05
	Read stories(students)	Stories: The Youngest Camel by Kay Boyle; The Luck Llama by Alice Desmond.

292

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. How is thread made?	Read(teacher) and discuss process by which thread is made. Make dyes from plant sources-onion skin, beets, spinach, walnut. Try making yarn or thread by hand from various fibers. Discuss how thread is made today.	World Book-Vol. T
4. How is cloth woven?	Discuss pictures which will be placed on bulletin board of spinning wheel, etc. Read "Clothes Long Ago".	Textbook: Learning About Our Neighbors; "Clothes Long Ago"
	Filmstrips: View & discuss The Story of Cotton The Story of Wool The Story of Rubber The Story of Leather	Filmstrips: 204-S How We Get Our Clothing (SVE)

BROAD OBJECTIVE: To help students gain an understanding of the importance of wise and careful selection of our clothing.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How can we take care of the clothing we have?	Learn and sing songs: "Hanging Out the Linen Clothes" "The Laundryman" Provide a lost and found box for misplaced clothing in room. Empty box daily by finding owners.	American Folk Songs for Children; Doubleday, Garden City, N.J. Music For Young Americans; American Book Co., New York. Sharing Music (Kindergarten)
2. Which is more practical for children's clothing-silk or cotton? Why?	Collect and label samples of clothing materials-leather, nylon, plastic, silk, linen, cotton, wool, rubber. Examine and discuss fibers, texture, etc. Deliberately stain with berry juice, etc. samples of above materials and try to wash them. See the results.	Samples of materials.
3. Should we play in the clothes our parents have provided us with for school and other activities?	Class discussion of "dos and don'ts" of wearing our school clothes to play in. Invite a mother in to discuss with class above subject and give her view.	Class mother.

294

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Write thank-you letters to mother who visited room. Write stories and poems about playing or not playing in our school clothes.	
4. What would a complete "outfit" for me to wear to school in winter cost?	Read(pupils): "A New Hat and a New Dress" "New Clothes for Henry" List an ideal "outfit" for boy and girl and then visit a department store or use a catalog and list costs. Then add the total costs.	Textbook: Learning About Our Neighbors "A New Hat and a New Dress" p.109. "New Clothes for Henry" p.87.

295

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Have a "style" show (for other primary grades) with different children dressed to represent community workers; plus appropriate clothing for children at play, school, church, etc. The child appropriately dressed will recite a creative poem about his "fashion."	Primary Grade Activities Childcraft 1971 p.40

RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION:

Most all children have at one time or another heard a radio program of some form. Their interest is keen enough and they are witty enough to develop their own classroom radio program. It is hoped that through this unit the class will learn about the operation and functions of a radio station as well as the job opportunities which are available to them.

BROAD OBJECTIVES:

1. To help the child see himself in relation to the radio station.
2. To help the child learn about the various qualifications and special requirements that are needed to hold a position in this industry.
3. To help the child discover the various occupations available through the radio station.
4. To help the child realize the financial set up of the radio station.
5. To help children learn how they would apply for or seek employment in this area.
6. To help children gain an appreciation and wholesome attitude toward the radio station.

199

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
MOTIVATING ACTIVITY	Listen to a radio program or broadcast in the classroom. Discuss what have just heard- where it came from. Make a bulletin board using title of unit and sound waves moving toward an ear. Put up a poster board or piece of tag board titled "New Words". Add any new words met in this unit - use them as spelling words or learn them as sight vocabulary.	
1. What is a radio station?	Class discussion.	
2. Why do we have radio stations?	Class discussion. Make a list or chart of the different reasons we use radio stations.	
3. Does Radford have a radio station? Where is it?	Field trip. Write stories or reports about visit.	Radford Radio Station.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
4. How do we actually hear the radio programs? What is involved? (bring in sound & sound waves)	Use transparencies. Teacher prepare showing sound waves.	
	Read story from reading book.	Ring Around the World.
	Filmstrip.	F-S47 An Introduction to Sound.
	Books.	Geralton, James. The Story of Sound. Irving, Robert. Sound & Ultrasonics. O'Neill, Mary L. What is That Sound. Sootin, Harry. Science Experiments with Sound. Wolff, Janet, and Owett, Janet. Let's Imagine Sounds. National Teachers Association Energy in Waves. "Sound" The Golden Book Encyclopedia. Childcraft.
	Set up a filmstrip learning center. The children can work in small groups and view and discuss these filmstrips.	Sights and Sounds of America with record F-A33 F-A38 F-A43 F-A48 F-A34 F-A39 F-A44 F-A49 F-A35 F-A40 F-A45 F-A50 F-A36 F-A41 F-A46 F-A37 F-A42 F-A47

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Experiments involving sound waves.	Energy in Waves. National Teachers Association. Science Experiments with Sounds. Sootin, Harry.
5. What jobs are found at the radio station?	Class discussion. Use comic books.	C281 Popeye and Communication and Media Careers.
	Use cassettes.	CE-CT-A53 Broadcast Technician. CE-CT-A53 Radio - TV Announcer.
6. Are all the people responsible for a broadcast at the station? Where are they?	Class discussion.	
7. What are the duties of the various people involved? What requirements are needed to hold each position? Is any special training or talents required?	Review cassettes.	
	Resource person.	
	Filmstrip.	CF-L1 Speaking & Writing.
	Class discussion.	
	Make tape recordings of the class members reading various types of material to show the importance of a clear distinct voice when preparing a selection for a broadcast.	Tape recorder - cassette tape

302

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
8. What happens if a radio broadcaster gets sick?	Class discussion. Resource person can discuss. Interview - a group of children can do this as a project and present it to the class. Role play this situation.	
9. How are radio stations financed?	Class discussion. Pretend to try to sell ads to finance a special radio program - just how would you go about it?	
CULMINATING ACTIVITY	Make a microphone - set up a radio station - prepare a broadcast complete with commercials, news reports, music, etc. Can present news to the class in this fashion.

INTRODUCTION TO: AEROSPACE - BLAST OFF!

Many third graders are interested in space and space travel. Although the jobs in this area are decreasing, it seems that a unit of study in this area is acceptable since the children express a desire to learn the subject matter. It seems that the children should know about any field where jobs are diminishing as well as flourishing in order to have a realistic picture of the "World of Work".

OBJECTIVES:

1. To help each child realize his position or relationship to space.
2. To help each child learn about the jobs and opportunities available in the area of aerospace.
3. To help each child gain knowledge about the requirements and qualifications in this area.
4. To help child learn about the cost of the space program and why the figures seem large.
5. To give the child guidance so that he understands that if he chooses a career in this area that he will be competing with many others and that at present job opportunities are small.
6. To help the children learn how they go about applying for the jobs in this area.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
MOTIVATING ACTIVITY	Make a bulletin board about space. Put circles of different sizes on the bulletin board, then put question marks on each circle. The circles represent the different planets. Title the bulletin board "What Are These"?	
	Make a display of books about space and space travel. Plan these as free reading materials.	You Will Go To The Moon. Mae Freeman. Space Travel. Jeanne Bendick. Man & Space. Arthur Clarke. By Space Ship To The Moon. Mae Freeman. Space Flight & How It Works. William Gottlieb. Men Behind the Astronauts. Wayne Hyde. A Book of Astronauts For You. Leonard Kessler. You and Space Travel. John B. Lewellyn. Space Travel. Ley Willy. True Book of Space. Illa Podendorf.
	Put up pictures about space program - pictures available from Kodak	Sandy has in her room.

307

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is space? What does the word mean to you? (relay the meaning at hand to the outer limits, beyond our grasp)	Class discussion. Use this opportunity for space exploration in P. E. Let each child find his own space and experiment with different movements - see how tall, small, wide, etc. you can be in your space.	
2. What do we find in outer space?	Let children make a list of things that can be found in outer space. Make a chart which can be added to.	
	Transparencies & duplicating masters.	Tr 4c-906 The Solar System Tr 4c-907 Outer Space
	Read pp. in Science book.	Concepts in Science
	Read story in reading book.	Widening Circles
	Filmstrips.	F-S55 Stars and Galaxies F-S56 Comets and Meteors F-S57 Earth's Satellite, the Moon
3. What is a constellation?	Filmstrip.	F-S54 Constellations
	Book.	Stars. H. Zim.

305

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Use overhead projector and construction paper and make the different constellations - use pins to make the holes so that when the paper is placed over the screen the light can shine through the holes - tell about the different constellations. Cut out stars from white or yellow construction paper and paste on a dark piece of paper to make the constellations at night in the sky - use for a bulletin board.	
4. What are the different planets? Which one is the smallest? the largest? Which one is closest to the sun? fartherest away?	Refer to Science book. Label the different circles on the bulletin board (from the beginning of the unit) to show the planets in relation to the sun. Make up a song about the planets. Write stories about which planet you would like to visit and why. Start a vocabulary chart listing all new words encountered so far.	Concepts in Science.

309

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
5. What do we know about each planet?	Class discussion after reading in science book.	Concepts in Science.
	Oral reports - individual or group.	
	Set up a learning center about the planets. Have stories or whort sketches about each of the planets and worksheets or questions to accompany the stories. Let the child read about the planet and then answer questions. There should also be answer sheets so that the child can check his answers.	
	Have a short skit with different children assuming the role of the different planets. In the skit they can reveal information about their planet.	
	Make paper mache replicas of the planets and the sun. Hang them around the room.	Balloons, paper mache mix, string, tempra paint, brushes
	Filmstrips.	F-S58 The Sun and Its Planets. F-S59 The Earth in Space.
	Review transparencies used earlier.	

3/10

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Worksheets involving the planets.	
6. How do we travel in space?	Discussion.	
	Make a rocket ship to be taken on an imaginary trip to the moon or one of the planets.	Chicken wire, wheat paste, newspaper
	Build a model rocket to be blasted off and parachuted back. (Sandy has the model.)	
	Transparencies.	Tr 4C-909 Space Travel
	Read poem from reading book about travel. Illustrate the poem.	Going Places, Seeing People.
	Use cassette.	CE-CT-A129 Jets and Rockets.
	Using the paper spools which the local dress factory uses to hold the thread, each child can make his own rocket.	
7. What are some of the jobs involved in space travel?	Class discussion.	
	Make a list on the board of all the ones discussed.	
	Use book from NASA as a guide - (free).	For teacher.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Study prints.	SVE BSP-155 The Astronaut - Train- and Equipment BSP-156 Countdown to Splash-down BSP-158 Building Toward the Moon
8. What are the specific duties involved in each of these jobs? What are the qualifications or requirements for each job?	Teacher prepare short stories about the jobs and use them as reading lessons. Can use study prints here also. Use book. Role play the different jobs.	 Men Behind the Astronaut. Wayne Hyde.
9. How do the astronauts eat in space? What kind of foods do they eat?	Class discussion. Let the class look for pictures from magazines. Make collage.	

312

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
CULMINATING ACTIVITY	Set up a NASA station with each person having a specific job in the flight effort. Train the astronauts. Launch the rocket and send the astronauts to the moon or a planet.

RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION: Children are inherently interested in living things in their environment. Zoo animals, being unusual, hold a fascination for this age child and this subject affords many opportunities for the study and appreciation of the management of large and small zoos. The children will become aware of the varied occupations involved in this area.

BROAD OBJECTIVES:

1. To give the children an awareness of when, how, and why zoos began.
2. To give the children an understanding of the main classifications of animals.
3. To develop an understanding of the people needed to maintain a zoo.
4. The child will becoma aware of the importance of presenting information both orally and in written form.
5. The student will recognize the necessity for mastery of the basic skills needed for all jobs covered in this study.
6. The children will begin to understand the economics involved in maintaining our zoos.
7. To guide the children in the understanding of the difference between fact and fiction.
8. The children will begin to use resource information.
9. The children will begin to understand the importance of cooperation and sense of responsibility among the many workers necessary to maintain a zoo.
10. To help the children understand the scientific and educational importance of zoos.

317

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How many have visited a zoo?	Class discussions. List the names of zoos children have visited, pointing out different types.	
2. Why do we have so many different types of zoos?	Oral reports by children who have visited zoos recently.	
3. Where and when was the first zoo?	Historical facts will be given by the teacher in the form of handout material and maps, supplemented by group discussion.	The World Book Encyclopedia, 1970 Edition, pages 502-504
	Collect material for a booklet which will be added to throughout this unit and completed, if desired, as a culminating activity.	
4. What are the occupations and job requirements of the people who operate a zoo?	Write letters to various zoos requesting information and materials (using correct form).	
5. How can we obtain correct information about zoos?	Looking up information in reference books, and making written reports.	
	Viewing cassettes, filmstrips (andffilms listed in film catalog).	Cassettes: CE-CT-A20 -"Robert and His Father Visit The Zoo" CE-CT-A107 - "I Want To Be A Zoo-Keeper"

318

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
		Filmstrip: CF-A57 - "Robert and His Father Visit the Zoo"
6. How much does an individual animal cost?	Special reports by children.	
7. How much does it cost to take care of animals?	Bring books from home and set up a lending library in the room, using student helpers. Separate books into fact and fiction. Writing and solving problems dealing with actual costs of animals.	Books: Hornblow, Leonora. Animals Do The Strangest Things. Bridges, William. Zoo Careers Henried, Lorraine. I Know A Zoo Keeper. Shay, Arthur. What Happens At The Zoo. Munari, Bruno. Zoo Moore, Nancy. The Unhappy Hippopotamus. Miklowitz, Gloria. The Zoo. Meeks, Esther K. Mammals.

319

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
8. What are the characteristics of the main class of animals?	Reading from text book - class discussion. Field trip to Biology Lab at Radford College. Preparing a bulletin board using pictures of zoo animals and study prints. Children will choose an animal in which they are interested on which to do special research. These will later be taped and presented as a program. Constructing paper mache' animals found in the zoo, and make a minature zoo using cut-outs for people involved. Making a display of zoo animals, using paintings, drawings, clay models, shadow boxes, etc. Children will choose their favorite media.	Text Book: Concepts in Science III Harcourt, Brace Co. Biology Lab at Radford College. Study Prints: SVE (with record 12.00 without record 5.00) BTSP - 1128 Zoo Animals Reference books in library. Science text books. Free Materials: 1. Poster - "Principles of Laboratory Animal Care." Address: National Society For Medical Research 1130 Massachusetts Ave. N.W. Suite 103 Washington, D.C.20005 2. "A Visit To The Children's Zoo" (Animal descriptions in rhyme, grade 1-4 teachers only, 12 pp.) Address: Eli Lilly and Company

320

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
		Address (cont.) Public Relations Services 307 East McCarty St. Indianapolis, Ind. 46206 3. "Visit To The Children's Zoo, A" (Booklet of humorous rhymes about eleven different animals) Classroom quantities. Same address as 2.
	Writing poems and stories. Making a collection of poems and songs about zoo animals.	
CULMINATING ACTIVITY	Preparing and presenting a program about careers involved in maintaining a zoo. This could be presented as a radio or television program for parents or other classes. All of the activities used during this unit would go into the making of this final activity.

PHONE: 1-703-639-5673

THE RECREATION DEPARTMENT - "THINGS GO BETTER WHEN WE WORK TOGETHER".

Since most third grade students show an interest in all areas of recreation and enjoy competition with their peers, it seems appropriate to implement a unit on the Recreation Department. Because many are already involved in the recreation programs, it will be familiar to them and for those who are not involved it will stimulate them. We feel that the children need to become aware of the interest that the community contributes to the Recreation Department. The unit will attempt to cover the various occupations and activities associated with the Radford Recreation Department.

BROAD OBJECTIVES:

1. The children will become aware of themselves as participants in the activities offered by the recreation department.

2. The children will need to become aware of all the jobs and the requirements involved in the management of a successful recreation program.

3. To help children realize that these facilities are mainly financed by taxes paid by their parents.

4. To give children guidance in decision making.

5. To emphasize the basic skills required and the importance of this as related to the recreation department.

6. To help each child realize how he must apply for a job in this area.

7. To help children realize that many people donate their time to these programs.

8. To help children recognize the need for good sportsmanship.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How many of you have played any kind of ball or went to the playground this past summer?	Class discussion. Draw a picture, write a poem or story about summer activities- to be used on bulletin board.	
2. Where are the playground areas?	Field trip to differend play ground areas. Filmstrip on importance of good manners. Draw map of town locating different areas.	See if First Virginia Bank has small individual maps.
3. Where is the recreation department located? Why is it placed there? (in center of Radford)	Class discussion.	
4. What are the different things or services offered by the department?	Discussion - bringing in the library filmstrip.	CF-A59 Library Workers - Cassette CE-CT-A2. CF-A152 The Library and the Librarian CF-A238 A Visit to the Library
	Field trip allow children to obtain a library card and check out books.	Go to recreation department.
	Cassettes	CE-CT-A118 Getting to Know the Library CE-CT-A103 I Want to Be A Librarian (book bag)

324

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Make some type of reading chart or bulletin board to motivate children to read books.	
	Make a miniture library within classroom.	
	Make a display in library of any books that relate to this subject.	
5. Who are the people involved in making our recreation department successful?	Make chart listing various jobs, names and duties - language capitalization and last names.	
	Resource persons from recreation program and library.	
	Filmstrip	CF-A155 Recreation, Park, & Playground Workers
	Interviews for different duties.	
	Role-playing - pretend you are one of these people and act out his or her job.	

325

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
6. How would you apply for one of these positions? What are the job requirements?	Discussion dress, manners, applying for job.	
	Filmstrips	CF-L3 The Job Interview CF-A37 The ABC's of Getting and Keeping A Job - Cassette CE-CT-A7 CF-A38 Preparing For The Job You Want
	Cassette	CE-CT-A43 Dress For Interview
7. How is the recreation program supported financially?	Interview parents or someone in recreation department. Class discussion.	
8. Who are the paid workers? What about those who aren't paid?	Bring in a volunteer parent or recreation department. Perhaps parent or older brother or sister could come and referee a ball game.	
9. What is good sportsmanship?	Filmstrip Make a chart listing things they feel makes a good sport. Bobcat visit class and talk about good sportsmanship. Role-play good sport and poor sport.	

326

CONTENT QUESTIONS	CULMINATING ACTIVITY	RESOURCES AND MATERIAL
	Plan a class ballgame - make a microphone - select someone to assume duties of recreation director and broadcast the game, play by play.	
	Teach song "Take Me Out to the Ballgame".	Mrs. Conrad has words.
	Have a sports day - boys could wear any uniforms and girls could wear any that they have. Make displays of trophies or awards. Bring in baseball and football cards and make a display.	
	Make banners and decorate the room.

INTRODUCTION TO: Let's Go To Town

This unit covers the different occupations that may be encountered on a simple trip to town. This unit was developed with the hope of making the class members more aware of Radford City and the many occupations that they may meet everyday. This unit provides for various forms of creative expression and it is hoped that from this unit the personality of the child can be shown.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIALS
Make a car out of box - will be used for role-playing.	Refrigerator box Paint
Using opaque projector blow up pictures of mother and two children(make poster board size people and cut them out) introduce them and tell children that they are going to follow the mother and children to town. On the way cover the different occupations- could put them on bulletin board.	Poster board
Could also make puppets to represent the three.	Wheat paste
Give the family members names. Poem - read and discuss.	Poem: "Saturday Shopping" - Childcraft Vol. 1
Book - read and discuss.	Book: Little Auto - Lois Lenski

330

BROAD OBJECTIVE: (1) To help class members become more aware of Radford City and the many occupations that are encountered everyday.
(2) To develop an awareness of the duties involved in each job.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Where are we going today?	Make a list of different places you want to take the family. As you go to each place list the occupations that were found there. Guide the children so that such occupations as these will be covered: 1. filling station attendant 2. store clerk 3. policeman 4. garage mechanic 5. jeweler 6. bank teller 7. food store employees a. meat clerk b. check-out clerk c. stock-clerk	Material needed: Chart paper Magic marker
	Filmstrip - view and discuss.	Filmstrip: Series #8990 p.10 Going Downtown Encyclopaedia Britannica
	Let the children list the different people and jobs that they meet in the course of a day-each child make his individual list. Do it at the beginning of the unit and again at the end. Make a bulletin board using study prints.	Study prints: SVE Urban Life Picture-Story Set SP-127 Neighborhood Friends and Helpers.

331

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
2. Who works at a filling station?	Put this on list-let a different child do it each time you meet a new occupation.	
	Book - read and discuss.	Book: Let's Go To A Garage- J. M. Goodspeed
3. What does he do?	Filmstrips-view and discuss.	Filmstrips: 107H The Automobile Service Station; Eye Gate-Some Neighborhood Helpers; F-R20 The Gas Station Attendant-in library; ECF111 Service Station-edu-craft
	Using car, role-play a situation which calls for use of a filling station attendant.	
	Song: Introduce and sing.	Song: "The Service Station" - Discovering Music 2
	List the department store helpers on a chart.	
4. When you go into a department store and want to buy something, who helps you?	Filmstrip and record-view, listen and discuss.	Filmstrip and record: Eye Gate - W400B Retail Clerk
	Role play a situation where the family goes into a department store and purchases some article.	

332

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Book - read and discuss.	Book: I Want To Be A Sales Clerk- Eugene Baker
5. What person can you see downtown who doesn't work in a store or a shop, but who helps us?	Lead children in discussion letting them present their ideas.	
	Have a "grab bag" with articles in it which would be identified with the policeman. Take different articles out(one at a time) and discuss possible occupations where the article might be used. Put all the articles together and the occupation will lead to the policeman. Arrange articles on bulletin board.	Material needed: Whistle Gun Badge Hat Patch(like one worn on shirt)
	Books-read and discuss.	Book: Policeman Small - Lois Lenski
	Use study prints on bulletin board.	Study prints: SVE Community Helpers Set SP-119 Police Department Helpers.
	Filmstrips-view and discuss.	Filmstrips: Eye Gate - Workers for Public Welfare. 140A Police and Police Protection F-A2 Policemen at Work(in library)

333

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Have one of the policemen or even a student from NRCC come and talk to the children.	Resource person.
	Books-read and discuss.	Books: The True Book of Policemen and Firemen-Irene Miner. Your Police-George J. Zaffo. Let's Go To A Police Station-Laura Sootin. Squad Car 55 - Cynthia Chapin
	Songs-introduce and sing.	Songs: This Is Music-Book 2 "Cops and Robbers" "The Traffic Cop" Discovering Music-2 "Helpers"
7. Where do you take your car when something is wrong with it? Why? Who fixes the car?	Add this to list of occupations the children are making. Film-view and discuss.	Film: 72005 Transportation Maintenance 11 min. co/bw 1969 P.E.L. State
	Book-read and discuss.	Book: Let's Go To A Garage-J. M. Goodspeed
8. What tools does he use?	Have someone come in and talk about his job, discussing the tools he uses, what time he goes to work, and what his work is like.	Resource person.

334

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Field trip-perhaps children could visit garage and see these men in job situation and interview them-could see who else works there. Perhaps some of the boys will enjoy role-playing and repairing something about the class car.	
9. Susan broke the fastener on her bracelet and her mother said they would take it to have it repaired. Where will they take it? Who will fix it?	Another occupation to add to the children's lists. Have a display of jeweler's tools, if possible.	
10. Would you have to have good eyesight in order to repair jewelry? Why or why not? What things does he use to help him in his job?	Have someone come in and talk about his job. Set up a jewelry store. Using a bead kit make different pieces of jewelry and repair broken pieces.	Resource person. Bead kit: B-113 Pixie Beads $3.50 per 1000 B-118 Fine Elastic Car $6.00 per 144 yd. Magnus Craft Materials, Inc. 109 Lafayette Street New York, N. Y. 10013
11. Mrs. Jones had to go to the bank. Can anyone tell me what the lady who waited	Add this to the list of occupations the children are making; read & discuss book.	Book: Let's Go To A Bank- Laura Sootin

335

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
12. Have you ever been to a bank? What does a bank teller do?	Plan a visit to a nearby bank, interviewing the bank tellers and watching them at their job. Write stories about a bank teller and the job using the field trip as a reference.	Field trip perhaps to the bank on Ingles Street.
	Make deposit slips, etc. to be used in role-playing. Set up a bank and act out different situations such as depositing money.	Material needed: Play money
	Books-read and discuss.	Books: What Can Money Do?-Jene Barr; The True Book of Money-Benjamin Elkin.
13. Why would you go to a grocery store or a supermarket? Do you like to go? Why? What can you get there?	Class discussion. Add this to list of occupations. Poem-read and discuss.	Poem: "General Store" Childcraft Vol. 1
	Make a list of things you can get at the store.	Material needed: chart paper
	Have children bring in things which can be obtained at grocery store(ex.: empty can that contained peas, empty cereal box). This will be used in role-playing.	

336

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
14. Who are the different people who work at the store? What are their jobs or duties?	Study prints-use them to make a bulletin board and lead class discussion.	Study prints: SVE Community Helpers Set SP-123 Supermarket Helpers
	Filmstrips-view and discuss.	Filmstrips: F-All The Grocer-in library ECF-110 Supermarket-edu-craft
	Book-read and discuss.	Book: Let's Go To A Supermarket- J. M. Goodspeed
	Field trip-visit a supermarket close by to observe these people in their jobs.	Field trip-supermarket
	Set up a grocery store and buy and sell groceries using the things that the children have contributed.	Material needed: Cash register
	Song-introduce and sing.	Song: "To Market, To Market"- This Is Music-Book 2

CULMINATING ACTIVITY:

CULMINATING ACTIVITIES	RESOURCES AND MATERIAL
Select a family and take it on an entire trip to town using same places imaginary family went.	
Children can make up riddles describing different occupations and people. Read them to class letting class members guess who is being described. Illustrations may accompany the riddle. Bulletin board may then be made.	
Children could also draw a picture representing their favorite occupation covered in the unit and write a small paragraph telling about the occupation and why it is their favorite occupation.	Material needed: Drawing paper
One of the last things that can be done to review the unit is a teacher-prepared tape. On the tape the teacher describes the different occupations, one at a time. The student is to listen to the tape and then write down the answer. After the entire exercise has been presented he can then check his paper by listening to the answers which are given on the same tape. This can be done individually or in small groups. It is possible to use some of the riddles that the children have written.	Material needed: Tape Tape recorder Head phones
Learn to spell the different occupational names that are covered in the unit.	

338

CULMINATING ACTIVITIES	RESOURCES AND MATERIAL
For physical education divide the class into small groups with each group representing a different occupation. Have one person be it. Form a straight line with rest of class members. "It" calls out a occupation and all the people representing that occupation run to a boundary line marked off somewhere behind "it". Could also form 2 lines, one on each side of "it" and have class run to the opposite side when their occupation is called(have some with the same occupation on different sides). Children could pantomine different occupations and have the class members guess the occupations. The class might be divided into teams and keep score seeing which team can guess the most occupations. Filmstrip might give them some ideas.	Game: X = line of class members X = "it"  Encyclopaedia Britannica Series No. 8990 p. 10 Playing Community Helpers
Draw a mural depicting all the places that the children went to and all the occupations that were covered. Filmstrip-view and discuss. Film-relate the number of occupations discussed which may also render home services.	Material needed: Paints and long pieces of drawing paper(roll). Filmstrip: SVE p. 3 Robert and His Family Film: 12205 Helpers Who Come To Our House 11 min. co/bw 1956 Radford

INTRODUCTION TO: Postal Services
"From Me To You"

Letter writing is included in the third grade curriculum and what better way to introduce it than through our postal services. By role playing the child can see the importance of legible handwriting and why the address must be complete. This brings the area of postal services closer to them. It is hoped that through this unit the child will become more aware of the various job opportunities found within the postal services.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIAL
Teacher write a letter to class, mail it, and have it delivered to classroom. In the letter explain the new unit of study. Also, put the letter on a sheet of chart paper or poster board to make a bulletin board. Can make an envelope and attach it to bulletin board. Can use opaque projector to show and read the small letter to the class. Label bulletin board "From Me To You". Teacher will write a letter to the class on a large sheet of paper. Put it on the bulletin board and label the different parts.	

BEST COPY AVAILABLE

BROAD OBJECTIVE: To help children see the relationship of the postal services to their lives.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Do you ever receive any mail?	Book-read to the class. Discussion	Book: Any Mail For Me?
2. How do we get our mail?	Class discussion-let children present their ideas and thoughts.	
	Film-view and discuss.	Film: Helpers Who Come To Our House 11 mins. co/bw 1956 P. Rad.
	Draw pictures to represent their ideas of how we receive our mail.	Material needed: Drawing paper

BROAD OBJECTIVE: To help children improve letter writing skills.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. When you write a letter, what things must you include?	Class discussion-bring in the different things that are included in all letters(heading, greeting, etc.). Make a chart by putting a letter on paper and labeling different parts.	Material needed: Chart paper
	Can use letter written to class. Make a transparency-write a letter and as a class label the letter parts.	Material needed: Acetate sheet for transparency. Felt tip pen for writing on transparency.
2. Are all letters the same? Would you write the same type of letter to a friend as you would to a businessman?	Discuss types of letters-friendly letters, business letters-reading examples of each.	Resource persons - to tell about the form of a business letter and why students might need to use one(job application, etc.) and how different jobs require business letterswritten. Could use business majors if a college is nearby.
	Write letters-class activity. Display letters-on bulletin board.	
3. After you write a letter, what do you put it in (envelope)? Why do you use it? What do you put on the outside of the envelope?	Class discussion.	
	As a class activity make a large envelope and address it correctly. Let children address envelopes to go with the letters they have written.	Lang. book

345

BROAD OBJECTIVE: To acquaint children with the various types of letters (ex.: air mail, special delivery) and the costs involved in mailing different types of letters.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Is all mail classified the same?	Discuss different classes of mail. If possible, display different types. (Certified, special delivery, registered)	
2. Why do we use stamps?	Read story.	Story: "About Stamps"-Going Places, Seeing People
	View stamp collection-perhaps a child can bring one in.	Material: Stamp collection
	Design a stamp.	
3. Do all stamps cost the same amount?	Class discussion-let different ones bring in stamps to see if all stamps cost the same and are alike. Refer back to stamp collection.	
4. What is a zip code? Why do we use zip codes?	Filmstrip-view and discuss.	Filmstrip: Home Services - ECF-107 Mail Delivery
	Make Mr. Zip Code-large enough for bulletin board.- can be group project.	
	Book-read and discuss.	Book: Mr. Zip and the U. S. Mail

346

BROAD OBJECTIVE: To acquaint the children with the various personnel in the postal services and their specific tasks in mail delivery.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Who are the different people involved in mail delivery?	Bulletin board using study prints. Filmstrips-view and discuss Rhythmic act: The Postman I came from the post office, (walk from the post office) My mail sack on my back; (pretend to carry mail on back) I go to all the houses (pretend to go to a house) Leaving letters from my pack. (pretend to drop letter into mail box) One, two, three, four (hold up fingers as you count) Who are these letters for? (pretend to hold letters and scratch read). Film-view and discuss. Song-"The Postman" Make individual mail boxes.	Study prints: Set SP121-Postal Helpers Filmstrips: F-A7 Post Office Workers F-A12 The Mailman Workers for the Public Welfare-140C <u>The Post Office and Postal Workers</u> Films: <u>Mailman</u> 10 mins. co/bw 1947 El. Rad. Exploring Music
2. Where do they work?	Filmstrip-view and discuss. Film-view and discuss. Books-read and discuss.	Filmstrip: Our Post Office-SVE p.29 221-5 Film: Our Post Office-10804 11 mins. co/bw 1966 El. Rad. Books: <u>At the Post Office</u> <u>Let's Go To A Post Office</u> <u>The True Book of the Post Office and Its Helpers</u>

347

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. What are their different jobs? How is a post office divided?	Book-read and discuss. Make a chart listing various jobs. Could also use groups to explain jobs of each. Field trip Write letters asking permission to visit post office. Then write thank-you notes after visit.	Book: Behind the Scenes at the Post Office Material needed: Chart paper Visit post office
4. What are their jobs like? What are the dangers of the job?	Resource person-talk about his job. Role play different positions (Ex.: mailman in the snow, rain-sorter at Christmas time) Also children can write a story about this situation and illustrate it.	Resource person
5. Does anyone work in a post office at night?		-
6. What is involved in our mail delivery?	Book-read facts about the pony express. Film-view and discuss. Write stories on mail delivery. Flannel board cut-outs on mail services.	The Pony Express Film: 86004 Helicopter Carries Mail 11 mins. co/bw 1965 P. Rad.

348

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Construct a post office and a street mail box. Assign different roles to different class members, (ex., postmaster) and since the children have already constructed individual mail boxes, they can write letters and put them in their mail box or in the street mail box to be picked up by the mailman. The mail will then be taken to post office, sorted and eventually delivered. Reading session can then be held. The children are to use the forms for letter-writing and correct addressing of envelopes that they previously learned. They may use stamps on their letters which they previously designed. Have mail delivery everyday with a different person as the mailman once a week. Rows become streets and the mailman sorts and delivers the mail.	Materials needed: Refrigerator box Smaller box

Include discussion of the following quotations: "Neither snow nor rain nor heat nor gloom of night, stays these couriers from the swift completion of their appointed rounds".

349

INTRODUCTION TO: SCHOOL MANAGEMENT "SCHOOL DAYS"

Because young children today seemingly take so many things for granted, it would be enlightening to them to gain an understanding of the numerous jobs necessary for a school to operate efficiently.

BROAD OBJECTIVES:

1. To acquaint the children with the various jobs necessary for the efficient operation of the school.
2. To help the child become aware of his part in the total school program.
3. To familarize the child with the skills needed for each job.
4. To give the child a basic understanding of how schools are financed.
5. To guide the child in the realization that he does by his own actions, help or hinder the effectiveness of the school.
6. To help the child understand the process by which one would obtain employment.
7. To give the child an appreciation of the importance of the cooperative efforts of each person involved in the total school program.

353

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Who are the prople who make our school run smoothly?	Class Discussion	
2. What are the duties of each of these people?	List people who have been brought out in the discussion and then take a tour of the building pointing out different jobs. Add any jobs which were omitted in the original list.	Study Prints-SVE CSP-20 School Friends and Helpers CASSETTES: CE-CT-H10 - Building Custodians
3. What training is necessary for each of these jobs?	Have the children prepare a bulletin board using cut-outs, original drawings or collages. Compose riddles or pantomine the various jobs.	CE-CT-A42 - Become A Secretary CE-CT-A120 - Getting to Know the School CE-CT-A135 - I Want to be a Secretary CE-CT-A106 - I Want to be a Teacher - I Want to be a Librarian

354

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Make a collection of poetry relating to jobs - also stories. These may be taken from books or be original. Bring in resource people from within the school to discuss their jobs. Filmstrips and films. Have a dictionary lesson using the key words used thus far.	Filmstrips: CF-A121 - Custodian Bus Driver CF-A152 - Library CF-A160 - Cafeteria Workers CF-110 - Helpers at School CF-A33 - School Helpers CF-A58 - School Workers Casette - CE-CT-A21 CF A32 - Teacher - record C rec - A2
4. How do I fit in to the total school program:	Initiate and develop a clean-up campaign. Invite the guidance counselor to discuss with the class each child's responsibility in the school program.	

355

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
5. Where does the money come from to operate the schools?	Have a resource person from school board or central office to discuss this topic. Perhaps a parent could do this. Teach telling time in connection with the school schedule. Measurement can be taught in connection with cafeteria workers. Also, this would be an appropriate unit in which to study the different food groups. Develop an awareness of managing money through their own experiences with lunch money. Set up learning centers using units of measurement and play money.	
6. How does my behavior affect the other people in the school?	Filmstrips Books Role-playing - using puppets and/ or skits prepared by the children.	CF-L5 - Manners at School - record - C rec - A32

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Suggested culminating activities: 1. Construct a cafeteria lunch counter. Role play food being prepared, served, and purchased. 2. Set up a principal's office giving special attention to the personnel and their duties as well as to the various types of equipment contained in the office. 3. Construct a television set and show a film prepared by the children depicting the jobs included in this unit.

UNIT TITLE: THE HOSPITAL EMERGENCY ROOM

APPROXIMATE GRADE LEVEL: GRADE 3

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: The Hospital Emergency Room

The unit on "The Hospital Emergency Room" was designed for a third grade class with the objective of developing an awareness of the jobs available in this area and of the duties of the people who perform these jobs. It is hoped that from this unit the children will realize how the emergency room and rescue squad relates to them.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIALS
Bulletin board - begin and develop as unit develops-let children contribute pictures as unit progresses.	Can include on bulletin board pictures taken from disaster day-taken by News Journal.
A display of books or stories which relate to the unit.	Books: A Drop of Blood At the Pet Hospital About Miss Sue, The Nurse About Doctor John The First Book of Hospitals Let's Find Out About the Clinic Doctor's Tools Penny The Medicine Maker The First Book of Nurses The Emergency Book Mom! I Broke My Arm My Daddy is an Ambulance Driver My Mother is a Practical Nurse Greene, Doctors and Nurses, What Do They Do?, Harper, 1963.
Have children relay what they feel in an emergency.	This can be done by drawing a picture depicting an emergency followed by a discussion developing a definition of an emergency.

359

BROAD OBJECTIVE: To help children realize the importance of the emergency room in relation to them and the rest of the hospital.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is an emergency room?	Class discussion.	
2. Why would we need one? Have you ever been to one?	Class discussion. Make list on chart paper. Class members can make a booklet keeping these lists in their booklet. Form a committee, too.	Chart paper. Notebook paper. Construction paper for covers(or manila paper), staples, stapler.
	Story-read and discuss.	Story: Mom! I Broke My Arm
3. Why does a hospital need an emergency room?	Class discussion. Add these things to the list formed under question #2.	

360

BROAD OBJECTIVE: To acquaint children with various persons working in the emergency room and the area associated with the emergency room.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. If you go to an emergency room, who would you find there?	Study prints-add to bulletin board. Discuss various ones-teacher leading children in discussion-find doctors, nurses, aides, orderlys.	Picture-story study prints.
	Read teacher written stories about these various people-do as a whole class. Draw pictures of what you think these people would look like on job.	Can be done and memiographed, giving out individual copies, put on a sheet and shown on opaque, or put on large sheet of chart paper.
	Film-view and discuss.	Film: 75504-Nurse 10 min. CO/BW El. Rad.
2. Who else is related or concerned with the emergency room?	Teacher-directed discussion-receptionist, x-ray technician, lab technicians.	

361

BROAD OBJECTIVE: To acquaint the children with the various jobs or duties of those involved in the emergency room.

To acquaint children with the types of tools or materials used by these people.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are the specific jobs of each person involved in the hospital emergency room?	Stories-read and discuss-work in committees-read books, then report to class about book telling about the jobs involved.	About Miss Sue, The Nurse About Doctor John The First Book of Nurses My Mother is a Practical Nurse Doctors and Nurses, What Do They Do?
	Individual work-stories written which describe various jobs (done in form of booklet). Write down name of job-answers for each description are put on an answer sheet-SRA reading type of thing-stories are written by teacher-put on index cards.	
	Filmstrips-view and discuss.	Eye Gate 107A-The Neighborhood Doctor My Mother Has a Job W400C The Nurse
2. What types of tools or instruments do they use in their various jobs or duties?	Discussion Storyies-read and discuss.	Stories: Doctors' Tools The First Book of Hospitals My Mother is a Practical Nurse
	Make a chart showing or listing various jobs and the tools used.	Chart paper
	Make a chart of vocabulary terms.	

362

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Plan a field trip to the emergency room, interviewing the people and taking pictures.	Contact Kitty Campbell for field trip. Camera and film.
	Plan a discussion after the trip.	
	Write creative stories about a visit to hospital. Stories can be illustrated.	
	Display stories and illustrations on bulletin board.	
	Paint a mural showing hospital emergency room and people at work.	Roll paper, paints.

BROAD OBJECTIVE: To acquaint children with persons other than the hospital staff who also provide emergency treatment(in particular-rescue squad, ambulance service) and how they relate to us.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What other persons, in their job, give emergency type treatment?	Discussion-rescue squad, ambulance service.	
2. Are their services available to us?	Class discussion-lead into fact that often the rescue squad men give first aid before reaching emergency room at hospital.	
3. How did these people get their job?		
4. How are they related to Radford Community Hospital's emergency room?	Resource person come in and discuss his job, duties, requirements, qualifications.	Resource person.
	View some of the things used by these men and how they operate.	
	Story-read and discuss.	My Daddy is an Ambulance Driver
	Construct a hospital emergency room assigning the various roles to different members of the class. Also construct an ambulance and also assign these parts to class members. Make a stretcher.	Refrigerator boxes. Materials needed for emergency room: gauze bandages, stethoscope, tongue depressor, pretend, candy pills, individual oxygen masks, thermometer & splints, x-rays & hypo. needle

364

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Role play an emergency situation that calls for both ambulance service and use of emergency room-call emergency number.	
By use of teacher prepared tapes, the children can learn first aid procedures such as simple bandages. These can be done for individual or small group use. May also demonstrate before class.	Cassette cartridge. Tape recorder. Listening unit-head phones. Several triangular bandages.
Resource person tell about first aid.	Red Cross-College 1st aid.
Students should be able to list 3 things a nurse, doctor, aide attendant does and tools they use.	
List 1 thing x-ray technician and lab technician do and why they are important.	
Use words you are concerned with as spelling list for the week.

INTRODUCTION TO: The Weather
Rain or Shine

The primary grades provide an excellent opportunity to introduce the topic of weather and the jobs available in this area. The children are interested in weather and now is the time to build on this curiosity. It is hoped that from this unit the children will become aware of weather conditions, weather changes, weather instruments, and how they are used. It is also hoped that the children will gain an insight into how weather conditions affect their way of life.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIAL
Bulletin board title: What's It Like Today? On bulletin board have a section for a calendar. In order to mark the date let children put up a symbol each day to represent the various weather conditions. As the unit progresses add things to bulletin board which relate to weather.	Material Needed: Poster board for calendar
What is it like outside today? Bring in a weather report from a newspaper or if it is possible to find out the time that the weather forecast will be presented on radio listen to weather report.	Materials: Newpaper Radio
Film-view and discuss	Whatever the Weather Educational Horizons, 1959 10 min. sound, color, an introduction to wind, rain, snow. Radford College-No. 24205
Riddle-What is it molds the life of man? What makes some black and other tan? What makes the Zulu live in trees? And Congo natives dress in leaves? While others go in furs and freeze? Poem-Whether it's cold, or whether it hot, We will have weather, whether or not.	
Filmstrip-view and discuss	Filmstrip: (F-S13) Our Weather-in the library

369

BROAD OBJECTIVE: To increase within the children an awareness of weather conditions and weather changes as well as weather terminology.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is weather? What causes it? What causes it to change?	Discussion after film or filmstrip. Let children present their various ideas, then let someone look it up in dictionary. Start a weather booklet. Include the definition in it. New terms to use in spelling can be added to this.	Dictionary Childcraft - Vol. 9, p. 98
	Filmstrip-view and discuss.	Filmstrip: (F-58) Weather Changes - in the library
2. What are some weather conditions? a. rain b. fog c. dew d. hail e. sleet f. wind	List these weather conditions in weather booklet. Discuss each condition. Experiments for: evaporation steam rain dew frost rainbow fog-use dry ice & put it in water. wind-run outside to feel the effects of wind there. Blow up balloons and let the air out against hand or face. Compare the difference between the wind outside and the wind from the balloon.	Childcraft - Vol. 9 Hot plate Tea kettle Dry ice Balloons Prism Also can find in: 1. Investigating Science with Children Vol. 2 The Earth Teachers Publishers Corp., Darien, Connecticut

370

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Make paper snowflakes-fold sheet of paper and cut to make different shapes-put on bulletin board. Poems-read and discuss "Rain"-Robert Louis Stevenson "Ice"-Dorothy Aldis "Wind Capers"-Nancy Byrd Turner "Down the Rain Falls"-Elizabeth Coatsworth "Rain,Rain,Go Away"-Old rhyme "The Wind"-Robert Louis Stevenson "Look at the Snow!"-Mary Carolyn Davies "The Umbrella Brigade"-Laura E. Richards "Kite Weather"-Ralph Bergengren "The Wind and the Moon"-George MacDonald "The Snow Man"-Mildred Plew Meigs "White Fields"-James Stephens "Look at the Snow!"-Mary Carolyn Davies "The First Snowfall"-James Russell Lowell "Fog"-Carl Sandburg "The Romp"-Nancy Byrd Turner	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	"Thaw"-Eunice Tietjens "Wintertime"-Robert Louis Stevenson	Source: Childcraft
	Poems can be included in weather booklet, memorized, used in choral reading, and illustrated.	
	Learn songs about weather- "Seasons" "Snow in the Night" "Spring Song" "Miss Breeze" "The Wind Song"	Exploring Music
	"The Spring of the Year" "The Wind"	Childcraft This Is Music
	Read stories-both teacher and children.	Stories: About Clouds The True Book of Air Around Us About All Kinds of Days About Our Weather Nimbo, the Little White Cloud That Turned Black The Wind and Peter Not Only for Ducks Where Does the Butterfly Go When it Rains? Rain Drop Splash
	Films-view and discuss	NET Rain

	Read weather reports in newspapers for duration of unit or listen to them on radio or TV	
3. What are clouds made of?	Film-Water, Water, Everywhere	Coronet 1954
	Filmstrip-view and discuss Finding Out About the Clouds 27 frames, captions, color, kinds of clouds, and also dew and frost.	SVE, 1959
	Where Do Clouds Come From? (a girl does experiments to learn what makes clouds form)	First Experiments About Weather Series-Jam Handy, 1955 p.50.
	Class discussion.	

373

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Poems-"Clouds"-Christina Rossetti "The Cloud"-Percy Bysshe Shelley	Childcraft Favorite Poems-Helen Ferris, Doubleday & Co., Inc., Garden City, N.Y.
	Experiment-make clouds-p.80	Investigating Science with Children, Vol. 2
4. Are there different types of clouds? What are they?	Show pictures with different types of clouds.	Cloud chart-11"x17" $.35 35 color illustrations. Cloud chart-18"x22" $.55 35 color photos Cloud Chart P. O. Box 8615 Richmond, Va. 23226 Get additional charts from: United States Dept. of Documents Washington, D. C.
	Draw different cloud types for booklet, labeling each type and describing briefly. Filmstrip-if don't use under question 3 can use here. Finding Out About Clouds Pretend that they are a type of cloud and personify it, moving as it would move and giving the sounds that it would make. Make different cloud types for bulletin board.	Cotton

374

BROAD OBJECTIVE: To introduce the children to various weather instruments, and how they are used.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What instruments are used in making a weather report?	Use book.	Weather Instruments-How They Work
	Make a list for booklet-make reports on different instruments to be included in booklet.	
	Make different instruments. Children can bring in materials to be used.	Childcraft, Vol. 9 Investigating Science with Children, Vol. 2
	Make a chart collecting information from these instruments.	Xerox sheets
	Use weather information and 16 color cloud pictures.	How to Forecast the Weather Cloud Chart P. O. Box 8615 Richmond, Va. 23226
	Filmstrips-view and discuss Weather Maps and Weather Forecasting How to Forecast the Weather	Filmstrip: Eye Gate - p.66 F-S6(in library)
	Field trip-visit college and view their weather instruments.	Radford College
	Take a walk around school or perhaps a neighborhood block watching for such things as types and shapes of clouds, any fog, dew, frost, wind direction, & any instrument that might be out which is used in measuring weather.	Field trip

325

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Display different instruments.	Instruments: Rain gauge U.S. weather map(in library) Barometer(in library) Hygrometer(in library)
	Use weather kit.	Weather station kits(in library)
	Films-view and discuss.	Films: 00805-How Weather is Forecast 10 min. co/bw 1953 Radford 48704-Measuring Temperature 10 min. co/bw 1952 Radford

376

BROAD OBJECTIVE: To help children realize how the weather can affect them and their ways of life.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What difference can the weather type make?	Resource person-have someone come in from airport and tell how the weather can affect them.	Resource person
	Role playing-pretend that they are someone living in Alaska, Hawaii, or Switzerland. How would their lives be different? Could they still do all the same kinds of things that they do in Radford? Why or why not? Discuss how weather affects travel, activities, and transportation of goods. Make a wall chart of affects of weather-this chart can be put into weather booklet.	
	Film-view and discuss.	Film: 15705-How Weather Helps Us 11 min. co/bw 1958 Radford
	Dress the boy or girl on flannel board according to weather conditions of the day.	Material: We Dress for the Weather-Instructo-in kindergarten

377

BROAD OBJECTIVE: To create an interest and awareness in jobs available in the area of weather.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are the different jobs that are found in weather?	Invite someone in from radio station or college professor come in and talk about the different people who are involved.	Resource person
	If possible, locate a weather station nearby. An excursion could be arranged so that children can see these people at work.	Field trip NRCC-has weather room
	Filmstrips-view and discuss. A Visit to a Weather Station Weatherman at Work	Source: Eye Gate p.66 Eye Gate 101H p.63
	Films-view and discuss.	Films: 67008 Weather Scientists 14 min. co/bw 1961 Radford 33204 Weather Station 10 min. co/bw 1956 Radford
	Make a microphone to use in a weather skit. Arrange a radio or TV weather report to be given by different class members on different days during a sharing or news time. They can use the weather instruments that they have made to give the report and make any weather predictions.	Let children bring in materials for this

INTRODUCTION:

Most children in this age group have some understanding of the work done by dentists. A study of this unit will further familarize the child with the duties of the dentists and other careers related to dentistry. Hopefully the children will, to some extent overcome their fear of the dentist. How teeth develop and how to care for them will also be included in this unit.

BROAD OBJECTIVES:

1. To give the child an understanding of how the dentist helps him as an individual and to help him overcome his fears of the dentist.

2. To help the child become aware of the careers involved in dentistry and the educational requirements.

3. To give the child some understanding of the demand for dental services.

4. To help the child develop good health habits.

5. To give the child a basic understanding of tooth development.

6. To help the child realize that the responsibility for having good teeth is largely his.

382

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How many have been to a dentist's office?	Listening to story and class discussion.	Book: Let's Go To A Dentist. Putnam, 1959 Buchheimer, Naomi.
2. What people did you see in the office?	Show filmstrips and use cassettes.	Filmstrip: CF-A126 My Mother is a Dental Assistant. Cassettes: CE-CT-H6 Dental Hygienists. CE-CT-H6 Dentists.
3. What tools does the dentist use?	Read book and show actual tools if possible and discuss their uses. Sketch dental tools and use for bulletin board. Invite a parent who works in a dentist's office to talk to the group.	Lapp, Carolyn Lerner. Dentists Tools, Lerner, 1961. Parent.
4. How many teeth have you lost? 5. When do babies get their first teeth? 6. Why is it important to take care of your temporary teeth?	Class discussion about their own teeth.	Books: Schloat, G. Your Wonderful Teeth. Scribner, 1954. Showers, Paul. How Many Teeth. Crowell, 1962. Byrd, Neelson, Moore. Health, Book 3; pp. 58-60

353

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
7. When and how do you brush your teeth?	Class discussion and demonstration.	Model of tooth (Radford College Curriculum Lab.)
8. What else can I do to help me have good teeth?	Plan menus and make food charts showing a balanced diet. Prepare a bulletin board showing the four basic food groups. Collages or posters may be used.	
9. Why is it important to see your dentist twice a year?	Read and discuss page 60 - Health 1.	
	Throughout this unit have each child keep a toothbrushing chart.	Use charts ordered from: Bureau of Dental Health 211 East Chicago Avenue Chicago, Ill. 60611 (The following free material may be obtained from this address.)
	Write a paragraph or story about a visit to your dentist. (true or make-believe)	You Can Teach Toothbrushing S-M Your Teeth and What They Do S-4 Break the Chain of Tooth Decay - S-3 A Visit to the Dentist S-14 Swish and Swallow S-7 Dudley the Dragon G-45 Casper, the Friendly Ghost, and the Friendly Dentist Elementary School Posters 58-a-d Your Child's Teeth 57B

384

CULMINATING ACTIVITY

Divide the class into small groups and set up a make-believe dentist office. Children will role play receptionist, dentist, dental assistant, dental hygienist, dental laboratory technician and patients.

INTRODUCTION TO: This is My Life

This unit is designed for the fourth grade class and will serve as an introduction to a guidance program which will continue throughout the school year. Knowledge of self is an integral part of the career awareness program. This unit is intended to be correlated with chapters 1 and 12 of the fourth grade health text, Health by Byrd, Neilson, and Moore(Laidlaw).

387

BROAD OBJECTIVE: To help children become aware of themselves.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	(Autobiography, self-portrait, and photo put in folder.)	
1. "All About Me" bulletin board-each child will prepare a bulletin board about himself(for one week). During this week, the child will also be the classroom helper. He may choose someone to help him, if he wants to.		Portable bulletin board.
2. Guidance counselor will introduce her services. Throughout the year the counselor will conduct group guidance sessions.		Guidance Counselor, Mrs. Moore
3. Guidance counselor shows filmstrip.		"Who Am I", Eye Gate, 1968.
4. Who am I?	Show filmstrip.	Filmstrip and record: A Very Important Question - SRA Responding, Stage 2. Focus on Self-Development Kit.
5. When you look in the mirror-what do you see?	Have children describe their features as they look in mirror. Have two children look in mirror and describe each other.	Full length mirror or individual mirrors.

388

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
6. What are you like with your friends, your family, in class?	Write a short paragraph on each telling how you feel and act in each situation.	
7. Do you feel happy most of the time? Unhappy?	Folders started here.	Start self-profile bulletin board-children will bring pictures, drawings, and write facts and figures of their lives. Use 2 children at a time and let them have board 2 days.
	Cut pictures from magazines showing these feelings. Cut pictures from magazines showing things that make them happy and unhappy. Children write captions for the above pictures and display.	Magazines Newspapers
8. Do you like yourself?	Make a list of likes and dislikes about your self.	Ch. 1 in health book to motivate discussion. Byrd, Oliver E. Byrd, M. D., Health, Laidlow Brothers, Ill. 1966.
9. Do you think you would want yourself for a friend if you were another person?	Discussion of what a friend should be.	

387

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
10. What are some things you like to do? a. do you like to do new things? b. do you like to work with your hands? c. do you like to read? d. do you like to talk? e. do you like to do things with other people? f. do you like to do things by yourself? g. do you like to play school? if so, which do you like to be, the teacher or the student?	Discuss questions under number seven. Prepare bulletin board "Things We Like To Do." Have each child bring a picture showing the thing he likes to do most. Have list of children's names on bulletin board. Pin string from picture to the name.	Pictures from magazines. String or yarn. Pins. Invite school counselor into class to meet children and have informal contact.
11. Do you like to pick out your own clothes to wear to school?	Have children bring pictures of clothes they like to wear. Have children wear their favorite outfit to school. Make color chart. Discuss different colors. Children can make poster showing how their favorite color is used in life. (Example: red-stoplight, stop sign, fire engine, emergency light, Santa Claus suit, etc.)	Magazine pictures. Poster paper.

390

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
12. What is your favorite food?	Have each child bring a piece of their favorite food from home. (May bring a picture.) Discuss with the class-telling what it is, why they like it, etc.	Food or picture
	Make a chart of the basic foods. Discuss why we need all of these foods.	
	Have each child plan a meal-cutting out the different foods and pasting them on a paper plate. Display these plates and have children compare the different meals.	Paper plates. Magazines.
13. Do you have a best friend? What makes you all best friends?	Have each child write a short paper telling about his best friend-being sure to point out good and bad points.	
14. Is everyone like everyone else?	Have each student write an autobiography. Allow children to read each others autobiography and see that everyone is different.	
	Self-portrait.	Drawing paper.
	Bulletin board of self-portraits matched with photos brought from home.	
	Start individual folders or booklets about self and careers to be kept throughout the year.	Tab folder for each child.

UNIT TITLE: CONSERVATION

APPROXIMATE GRADE LEVEL: GRADE 4

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: Conservation

This unit on conservation is designed for the fourth grade class. It begins in the geographical area of the student involved. An investigation is initiated in the familiar localities of the mountains and valleys of Western Virginia and continues throughout the school year incorporating the curriculum of the fourth grade.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIAL
Map study of geographic areas of Virginia will form an understanding of environment and conservation needs in local situation.	Materials needed: 1. Mimeographed maps of Virginia for each child. 2. Colored pencils
Give the students the addresses where they can write to investigate the occupations available in conservation.	Materials to senf for: 1. Conservation Occupations U.S. Department of Labor Bureau of Labor Statistics Washington, D. C. 20212 2. Career Employment in the National Park Service Washington, D. C. Department of Interior, 1961. 3. Superintendent of Documents U.S. Government Printing Office Washington, D. C. 20402 4. Department of Commerce Game, Fish-Conservation Richmond, Virginia

397

BROAD OBJECTIVE: To help the children become aware of careers in the area of conservation of water, woodlands, soil and wildlife and to understand how individual talents and interests of students may develop into future needs and jobs.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are Virginia's conservation needs in the areas of water, woodlands, soil and wildlife?	Take the class on a field trip to Claytor Lake State Park.	Field trip-Claytor Lake State Park
	Students will set up aquariums for science projects and for enjoyment during learning experience.	Materials: Aquariums(2) 1. fish 2. terrarium
	Form children's interest groups(water, wildlife, and woodland): 1. write for information about areas of conservation, state and nationally. 2. research on conservation(found in school library and interviews from field trips).	
	Learn songs and music on conservation theme. Individual reading from resources available.	Songs: "Conservation, Conversation" "Shenandoah" ""For the Beauty of the Earth" "America the Beautiful"
2. What does conservation mean to you?	Listen to records and view filmstrips. Student investigation will initiate	Records: Rec. 08 079 080 083

395

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	a Big Book Project:(Class Project) In development of unit, each child will contribute one whole page. The book will include: 1. cutouts or drawings 2. scenes from impressions on conservation (water, wildlife, and woodlands). 3. Charts-water cycle food chain oxygen cycle 4. Maps-national forests state parks migration 5. Reports-uses of water and woodlands 6. Conservation career summaries(occupations) 7. Other ideas contributed by students.	Records: Rec. 111 115 Filmstrips: F-S105 - Pollution Materials for Big Book: Poster board-rings Paper 18"-24" Refer to bibliography: Sec. Wildlife of America Van Dersal-Lib. 333.7

396

BROAD OBJECTIVE: To help the children understand the water cycle, pollution problems and how people can work to improve and conserve water supplies.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. What is the definition of water cycle? What importance is the cycle to conservation?	Big Book Project pictures: Ways of using water Water scenes Water cycle Careers in water Use and conservation	Concepts in Science(4th grade) Unit 3-Study View transparencies TR S21-2 The Water Cycle
4. How does government affect water conservation? 1. Federal 2. State 3. Local 5. What areas of work are involved in conserving water?	Saltville(investigate problems in pollution). Write agencies for info. Invitation to city business men to talk to students. Reporting on letters on information sought. Reports from water interest groups. Add valuable information to individual folders. See films	Resource people:(Naturalist, geoligist, archeoligist, etc. available in area-VPI) 1. Park officials 2. Business men(local) Films:(Radford film library) What Makes Rain(McGraw) Water Cycle(EBF) Water for the Community(Coronet) Water Purification(AIMS
6. How is water used in recreation?	Field trip-Claytor Lake (Interview workers on tape) 1. Claytor Lake 2. Purification Plant	Field trips: Claytor Lake State Park Purification Plant

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Individual interest research. Read books in the library.	Books: (School library) Carona, Philip B., Water, Follett Beginning Science Book. (333.9-C). Chicago. N.Y. 1966. 16. What have we learned about conservation opportunities and needs of environment?	Students read books in the library. Role playing activities to be planned by students.	Books: Hogner, Dorothy Childs. Conservation in America. Lippincott Co. New York: 1958. Smith, F. C. The First Book of Conservation. Franklin Watts, Inc. New York: 1954. Laycock, George. Wild Refuge. American Museum of Natural History, The Natural Press, Garden City, N.Y. 1969.

404

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
A puppet stage will be built: 1. Plays written by students on topics: a. Water Conservation b. Woodland Conservation c. Wildlife Conservation 2. Puppets made to play roles created. 3. Write stories about some of the ways man has either improved or harmed the environment for living things. Include in Big Book and individual folder collection. 4. Present interesting stories, poems and drawings of students' thoughts and conclusions. (Use bulletin board for display throughout unit for complete involvement of students. Vocabulary enrichment to be incorporated throughout study to cover broad spectrum of occupations and general terms. Students to use tapes of interviews and snapshots taken during unit development to summarize understandings and awareness of objectives. Reports and pictures may be placed on bulletin board, Big Book or individual collection folders.	Materials needed: Cardboard Cloth-needle-thread Old light bulbs or towel rolls for heads Newspapers Wheat paste or flour paste Old socks Tempera paint-brushes

INTRODUCTION TO: Television

Television is a very important means of communication in the life of students today. An appreciation of the many skills needed in its development and productions is the aim of this unit.

A wide scope of learning experiences may be incorporated in the development of the unit, such as, art, science, language arts, social studies and music, with as much creativeness as possible.

4/11

BROAD OBJECTIVE: To help children learn the various kinds of skills, talents and careers used in the television industry.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How does television get into our homes?	Study units 1 and 2 in Science Concepts Grade 4	Text: Science Concepts Grade 4
	View filmstrips.	
	Have individual students or small groups set up investigations and experiments in: Unit 1 The Bounce of Sound Unit 2 The Bounce of Light	School Library: F S47 An Introduction to Sound. F S45 An Introduction to Light
	Review basic concepts of electricity. Show filmstrip.	F S83 Electricity-How Electricity Helps Us
2. What people make it possible for us to enjoy television?	Invite a local TV repairman to come to classroom and talk to students about the role of TV repair services and demonstrate with some of the tube testing equipment.	Resource person: TV repairman.
	Individual and group research on areas of interest motivated by repairman visit. Report topics: The Vacuum Tube; Television Tubes; Coil; Detectors; Live Plug; Antenna; Transistor; Speaker; Headphones.	Library resources and encyclopedia research.

412

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Large chart to be made by students depicting occupations related to TV service and production.	Poster board Art materials
	Bulletin board developed by interest groups.	
	Pictures collected concerning world of television to be used in scrapbooks, reports, bulletin board display, etc.	Art Material Old magazines
3. Why do we have television networks?	Take a field trip to TV station WBRA	Field trip: WBRA
	Class plan interviews for students to have with workers in TV station.	Tape recorder Camera
	Discuss field trip observations.	
	Have oral reports on specific questions students had in interviews.	
4. What careers are found in television industry?	Students list careers that would be associated with the industry. Examples of careers students may become aware of: TV Salesman TV Repairman TV Installer	Research from sources including encyclopedias, FCC pamphlets and interviews.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Business Management Accountants Typists Stenographers Clerks Messengers Ticket Manager Schedule Manager Commercial Layout Tech. Time Salesman Stage Manager Floorman Set Designer Scenic Designer Sound Effect Tech. Broadcast Tech. Development Engineer Make-up Tech. CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
5. What talents do I have that may fit into the work of television?	Divide into interest groups or in teams of 2.	
	Create presentations for role playing.	
	Build large TV screen for presentations.	Large refrigerator cardboard box.
	Make occupation packs for various jobs and TV careers.	Art materials Paint Paint brushes, etc.
	Write scripts, cue cards, news reports, weather reports, plays, advertisements, sports specials, etc.	Collection of objects and materials for forming occupation packs brought from home or other community sources by students and parents.
	Role play live productions to interested audience with lots of practice. Include as many areas of jobs in TV work and entertainment as possible for fun and development of understandings.	Resource books in library: Gould, Jack. All About Radio and Television. Dudey, Nancy. Linda Goes to a TV Studio. Buchheimer, Haomi. Let's Go To A TV Station. Brandwein, Paul F. Concepts in Science.
	Students read books about radio and TV.	
	Have students use the occupation packs to role play various careers in TV and radio industry.

INTRODUCTION TO: The World of Work

This World of Work unit is designed for the fourth grade class as an introduction to the different types of work available.

The children will get an over-view of many types of occupations and the qualifications necessary to do the work. Each child will begin to think about the types of jobs which interest him.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIAL
How many different jobs can you list?	Pre-inventory. Child lists all jobs he can recall to be compared at end of year with a similar list. Art project - drawings and cut and paste pictures of mom or dad at work.
THIS IS MY LIFE unit's Culminating Activity series as a motivating activity if these units are taught in sequence.	

BROAD OBJECTIVE: To help children become aware of the world of work.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What talent do I get from mom and dad?	View filmstrip, "What Else Do Mothers Do?"	Filmstrip: "What Else Do Mothers Do?" ECF202(The Wonderful World of Work Series 4-6)
2. What does your mother do?		
3. What does your father do?	Filmstrip-view and discuss.	Filmstrip: "What Else Do Fathers Do?" ECS201(The Wonderful World of Work Series 4-6)
	Discussion of what the students' fathers do.	
4. What do other people do?	Take picture of parent at work.	Camera-film
	View and discuss filmstrips on jobs.	Filmstrip:(A778-3) "What Is A Job"? SVE(SRA) "What Are Job Families"? (A778-4) SVE(SRA)
5. What jobs interest you?	Children bring in pictures and clippings for bulletin board over display.	Pictures of workers.
6. How many jobs can you list? Parents' jobs may be used here. Each child may interview parents about their work and make up their own skit to play that role in school.	Continued on individual basis.	Filmstrips:(ECF204-213) 204-Electrical Services 205-Gas and Oil Services 206-Telephone Services 207-Transportation 208-Manufacturing 209-Personal Services 210-Commerce
	View filmstrips related to their interest area. Have tour of library for sources of material.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Children were interviewed by class on jobs of parents.	211-Natural Resources 212-Instrumentation 213-Chemicals Library tour-Librarian
7. What do(_____) do? (role models representing interests of the interest groups) a. likes and dislikes b. hrs. and wages c. qualifications d. tie-in with education and specific subjects.	Bring role models(representing interest area) to be interviewed by the class.(Group method)	Role models from the community.
	Encourage role models to invite children to watch them at work. Take photo.	Camera Film Individual field trips-bus tours to view jobs and work in community of school and throughout the city.
	Each interest group construct shadow box scene.	Boxes and trivia
	Each interest group pantomine/ role play jobs in interest area. Alternative method: Audio-visual center for small groups and individuals may be used to view filmstrips and conduct research on job areas available. Each interest group compile a summary of that group's experiences. If there is an interest group related to secretarial work, that group could duplicate and distribute the summary reports. These reports

INTRODUCTION TO: Jobs In Virginia

This unit is designed for the fourth grade class. Since they study the history of Virginia, this unit on Jobs in Virginia will correlate very well with the subject matter. The unit will give an over-view of job opportunities in Virginia which stem from geographical factors of the State.

424

BROAD OBJECTIVE: To help the children become aware of job opportunities that stem from geographical factors in Virginia.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What job opportunities would be found in the mountains and valley?	Bulletin board showing: coal mining coal trains and trucks farming different industries (foundry- textile, furniture, chemicals, quarrying, etc.) recreation-forest ranger, naturalists, geologist, archeologist.	
	ITV lesson(video taped) on coal fields and filmstrip.	ITV lesson from Geography of Va. Lesson No. 25(Coal Fields) Filmstrips: "Mining and Industry" Coronet "Fishing and Mining-Two Extractive Industries"
	Individual reading	Books: "Forests-A Renewable Resource" I Want To Be A Coal Miner Children's Press Markun, Patricia, The First Book of Mining, Watts, 1959. Caudill, Rebecca, My Appalachia, Holt, Rinehart, and Winston, 1969. Brooks, Maurice, The Appalachians, Houghton Mifflin, 1965.
	Field trips to Blue Ridge Parkway-interview park ranger and naturalist.	Field trip-Blue Ridge Parkway

425

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Construct models of different kinds of mines, furniture, etc.	Material for models
	Role play(miner, trucker, forest ranger, etc.)	
	Field trip to Pocahontas Exhibition Mine(if field trip impossible, order pictures and written information to look over and study).	Field trip-Pocahontas Exhibition Mine or pictures and written information.
	Archeologist bring artifacts to school.	Archeologist
2. What job opportunities would be found in the Piedmont section?	Bulletin board showing tobacco farming, furniture making, textile industry, chemical industry.	
	Take field trips to a furniture factory and a textile industry.	Field trips-furniture factory and textile industry.
	Show film on Virginia's agriculture.	Films:(From regional film library) Education Motion Pictures for Virginia's Public Schools: "New Fields in the Old Dominion"
	Show ITV lessons on Piedmont industry and agriculture (video taped)	ITV Lessons from Geography of Virginia Lesson No. 17
	Have models of tobacco farm, curing, manufacturing cigarettes	

426

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. What job opportunities would be found in the Tidewater section of Virginia?	Bulletin board showing commercial fishing, naval training station, shipyards, Virginia beach, tourist business, military posts, peanuts and hogs.	
	See video-taped ITV lessons on the Eastern Shore and ports and shipbuilding.	ITV lessons from Geography of Virginia, (from WBRA TV in Roanoke) Lessons No. 4,5,11,12
	View films about the commercial fishing industry, naval training station, and the shipyards.	Films from Educational Motion Pictures for Virginia's Public Schools 1. Marine Invertabrates of the Chesapeake Bay 2. Commercial Fishing in the Chesapeake 3. Shell fishing in the Chesapeake Bay 4. Virginia's Fishing Industry 5. The Oyster and Virginia
	View filmstrip on Chesapeake Bay.	Filmstrip: 250-5 SVE The Chesapeake Bay Area: A Case Study
	Suggested creative writing: motivated by reading poems about ships and the sea; some children could draw large pictures of ships while others write poems.	Drawing paper.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Construct models or displays of shipyards, naval training station, bay-bridge tunnel, large bridges.	Scrap lumber Clay Play dough Elmer's glue Boards/cardboard
	Use sea shells to make ornamental plaques.	Seashells(children bring)
	Role play commercial fishing.	
	Songs-introduce and sing.	New Music Horizons, Silver Burdette. "Down in a Coal Mine" "Freight Boats" "Men at Work" "Peanut Picking Song" "Rich Harvest"
	View filmstrips about Virginia	Filmstrips: Industry and Commerce in Virginia Agriculture in Virginia
	Map activities: Figure distances from Radford to other places in the state.	Road maps of Virginia for each child.
	Make relief maps of Virginia (individual projects)(2 parts flour, 1 part salt, enough water to mix). Paint the Tidewater, Piedmont, Mountains and Valley different colors.	Materials: Wax paper(to trace outline) Flour Salt Cardboard Paint

INTRODUCTION TO: WHO WORKS FOR THE CITY

Who Works For The City is a unit designed for nine to eleven year old children. This unit specifically defines the framework of a city-manager type of government and explores job opportunities within that framework.

OBJECTIVES

1. The student will identify what constitutes a city and the basis for Radford's government, the charter.

2. The student will become aware of the interdependence of people and their need for government.

3. The student will become aware of divisions of the governmental organization of his city.

4. The student will identify the qualifications and responsibilities of the elected and appointed jobs available in the city's government.

5. The student will become cognizant of the economics involved in the operation of a city government.

6. The student will identify himself with services provided by the city.

7. The student will recognize his own responsibility as a citizen of his city.

8. The student's growth in self-discipline will be evidenced by his ability to keep materials together over a period of time and to organize these materials into a meaningful booklet.

UNIT TITLE: EATING OUT - THE RESTAURANT

APPROXIMATE GRADE LEVEL: GRADE 4

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. BUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: EARING OUT - THE RESTAURANT

This unit on eating out is designed for nine to eleven year old children. It is designed to teach the student the nutritional value of a properly balanced daily diet and to enable him to select a balanced diet. It will include the importance of a congenial atmosphere and good table manners. He will have the opportunity to become aware of the career opportunities available in the restaurant business and to evaluate his preference and suitability for one of the occupations.

OBJECTIVES:

1. The student will identify the four basic food groups and the nutritional requirements of a daily balanced breakfast, lunch, and dinner meal.

2. The student will discover his own body's need for nutrients. Hopefully, this will motivate him to select a balanced diet for consumption, when given the opportunity.

3. The student will udnerstand the value and importance of a congenial atmosphere during a meal and his part in providing that atmosphere.

4. The student will learn appropriate table manners and their value in a variety of situations.

5. The student will discover occupational information about the various jobs in a restaurant.

6. The student will become aware of the economics involved in operating a restaurant.

7. The student will become involved in decision making by choosing foods for diets and by choosing his job roles in the activities of the unit.

8. The student will relate the school curriculum to the requirements of the jobs in a restaurant.

9. The student will become aware of the importance of each work role portrayed in the operation of a restaurant.

10. The student will recognize the importance of punctuality, responsibility and following directions.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What do you eat?	Keep a record of everything eaten for three days (on an individual basis).	
2. What are the requirements of a balanced diet? A. What are the four basic food groups? B. Which foods belong in the meat group? in the bread and cereal group? in the fruit and vegetables group? in the milk group?	1. Read in a text. or 2. Research in a source book 3. Make bulletin boards of the four food groups. 4. View film 5. Related filmstrips on producers of foods can be available for learning centers.	Text: Laidlaw, Health, 4, Chapter 8. Magazine pictures Charts from the Dairy Council Film: Eat For Health, EVF, 1958. Filmstrips: Dairy and Beef Cattle, (Agriculture and Industry series) Educational Reading Service, 1969. Filmstrips and Cassettes: Living on a Farm series, Coronet, 1972 A Cattle Ranch, A Dairy Farm, An Egg Farm, A Fruit Farm, A Vegetable Farm. The Foods We Eat series, SVE, 1971: How We Get Bread, How We Get Fruit, How We Get Meat, How We Get Milk, How We Get Poultry and Eggs, How we Get Vegetables.

444

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. Why does your body need nutrients?	Reports and discussion on proteins, carbohydrates, minerals, and vitamins.	Library books Text: Laidlaw, Health 4, Chapter 9. Study Prints: Food and Nutrition, David C. Cook, 1966.
4. Did you eat a balanced diet each of the three days you kept a record?	Student assigns each food he ate to a food group and decides if he had a balanced diet each of the three days.	
5. Which foods do you enjoy eating for breakfast?	Itemize foods children eat at breakfast. From their suggestions set up 2 or 3 balanced breakfasts.	
6. Why is breakfast important?	Read in a text or research from the library. Dramatize a story about a child who did not eat breakfast and one who did.	Text: Laidlaw, Health 4, Chapter 8.
7. What makes a good lunch?	Children plan a balanced school lunch with the help of the school dietician or previous school menus.	Resource person: School dietician

445

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
8. Do you eat a balanced lunch?	Form an A+ Lunch Bunch. Make an A+ Lunch Bunch bulletin board. If the child eats all his lunch each day, he puts on the bulletin board a 2" x 3" tray (construction paper) with his name on it. This can be done daily for a period of 2 or 3 weeks. Hint: Make a master of the trays and run off on the ditto, one sheet of construction paper at a time.	Construction paper.
9. What makes a good snack?	Class discussion which stresses nutritional snacks eaten at the proper time. List foods good for after school snacks and assign each to a food group. (Soft drinks will not fit a food group.)	Text: Laidlaw, Health 4, p. 128-29.
10. What's for dinner?	Each child can make a balanced menu and make a small poster of it. He could either draw or cut out pictures of the foods.	Magazines Food charts Poster board or drawing paper.
11. How can you make dinner a pleasant time?	Class discussion. List points developed from discussion. Points to be stressed: good table manners at home, school, and public	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	dining: learning to eat new foods; pleasant conversation; not using dinnertime as a "family troubles" time .	
	Use filmstrip and record on manners.	Filmstrips and records from Learning About Manners Series, SVE: CFL4 Manners at Home. CFL5 Manners at School.
	Role play dinner conversation.	
12. Where else do we eat?	Discussion about different types of eating out: at grandmother's, at a friend's house, at a drive-in, and at a restaurant. Lead the discussion toward the restaurant and the jobs available in a restaurant.	
13. What are the jobs in a restaurant?	List jobs available and make plans for resource people, preferably from the families of the students.	Resource people: waitress, cook, chef, dishwasher, manager, hostess, cashier, busboy.
14. How do we interview our resource people?	Individuals should start to develop a list of questions they want to ask and add to the list as they learn more about the jobs.	Text: Exploring in English, Laidlaw, 1972, p. 32.
	Role play interviewing for practice.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
15. What is it like to be a _____? (waitress, chef, waiter, cook, cashier, dishwasher, etc.)	1. View filmstrips 2. Listen to cassettes.	Filmstrips: My Mother Is A Waitress. (Mothers Work, Too series) IFC, 1968. The School Cafeteria Workers (Occupational Education series) Eye Gate, 1965. The Waitress (Occupational Education series) Eye Gate, 1965. Filmstrips and Cassettes: Workers Who Provide Food (Workers series) Coronet, 1972.
	3. Read books.	Books: See Bibliography
	4. Interview resource people by bringing them into the classroom, by field trips to a restaurant, or on-the-job interview by tape recorder or video-tape recorder.	Resource people: Waiter Waitress Chef or Cook Hostess Cashier Busboy Dishwasher

448

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
16. What is the role of the manager/owner? A. What is profit-margin? B. Why does a restaurant manager buy from a wholesaler? C. What determines the amount of food to be bought and prepared? D. How are salaries determined? What part does tipping pay?	Interview restaurant manager.	Restaurant manager or owner Elementary Economics Guide, Grade 4.
17. What does it cost to eat out?	Examine a restaurant menu. Determine the difference in the cost of a restaurant meal and the same meal prepared at home.	Resource person: A mother, or each child's own mother.
18. Shall we eat out?	Create a restaurant in the classroom, school lunchroom, or wherever space is available.	
	1. Students assume roles of all workers in the restaurant. They could apply for the jobs.	Application forms.

449

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	2. Students plan the menu for a meal (breakfast is suggested)	
	3. Students consult with school dietician for purchase of food, figuring the cost to determine the prices of items on the menu, and the amounts needed.	Food purchased by the school cafeteria from school funds.
	4. Students can make their own place mats and set the table.	Construction paper Crayons Magazine pictures.
	5. Students in their chosen roles prepare and serve the meal-to themselves-and clean up.	Materials will depend on the meal planned. Play money is suggested for paying the cashier.

INTRODUCTION TO: The Telephone Industry
Wires That Talk

Children at fifth grade level are normally becoming very conscious of, and curious about scientific developments and technological advancement. It is hoped that this natural curiosity, interest, and understanding can be harnessed and channeled through this unit in such a way that they will grow in concepts, skills, and appreciations.

Hopefully, the students will become aware of the fact that the telephone industry has played an important role in our society's growth, that it is an integral part of our lives now, and is continuing to contribute to future developments.

At the conclusion of the unit the children should realize that there are many and varied work roles in the telephone industry and that it may hold for them possible future employment.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIALS
Why is the telephone industry important in modern society? Discussion Teacher will show pictures demonstrating the basic needs of our society and conduct oral discussion of the part the telephone plays in the satisfaction of these needs.	

453

BROAD OBJECTIVE: To help children become aware of the part the telephone industry plays in our society.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How does the telephone help in the satisfaction of the basic needs of our society?	List orally the basic needs of our society.	
	Make notes of all phone calls received at home one afternoon and night and classify according to needs they met.	
	Interview parents concerning kinds of calls they made during the day. What goods and services were asked for?	Parents
	Write a skit, "The Day the Telephones Went Dead." a. teacher tell first about N.Y. City's blackout. b. children discuss things that would happen.	
	Role play the above skit.	Play telephones
	Show filmstrip, "The Telephone" (Coronet)	Filmstrip: The Telephone" (Coronet) Projector
	Read poem "Eletelephony" and put to music.(Either original tune or adopt to another tune)	Childcraft Piano
	Show film-Here is Tomorrow	Film: Here is Tomorrow C&P Tele. Co.

454

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Write telephone conversation for the following, and role-play: a. giving a grocery order b. taking a message c. calling someone for your parents. d. checking a bus schedule e. calling a schoolmate for an assignment.	Language text-Our Language Today "Writing Conversation" p. 33-34
	Teacher call out impromptu assignments for making and receiving calls and let children role-play.	Play phones
	Construct a telephone booth from a refrigerator carton. a. measure b. figure cost of materials and labor in real life.	Refrigerator carton Masking tape Cold water paint Cellophane Yardstick Big paint brushes Glue Plastipak
	List cooperatively the different areas of usage of the phone: a. personal b. business c. emergency d. information	
	Show films: Crossroad Conversations	Films: (From C&P Tele. Co. Cables Across the Chesapeake

455

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIALS
	Work in groups and act out sample situations and telephone conversations for each category.	
	Make a list of rules of etiquette to be used in telephoning. Role play the rules of etiquette. Learn the telephone greetings around the world. Mimeograph world maps and have children locate the place of the different greetings.	Language text, Sharing Ideas- Grade 6, p. 85-87 World Book - Vol. 19
	Make a bulletin board showing the caller and string lines going through the switchboard to various areas of service. Make collages showing people served by telephone.	Bulletin board Small doll String Magazines for pictures Small thin box(1" thick)
	Make a board picture showing kinds of terrain the telephone lines cover - a. mountains b. residential areas c. shopping areas	
	Make shadow boxes showing kinds of terrain the telephone lines cover, putting in poles and wires.	Shoe boxes Construction paper Glue Crayon, string

456

BROAD OBJECTIVE: To develop increased understanding of the interdependence of society and the telephone industry.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How are people, places, and things in Radford and the people involved in the telephone industry dependent upon each other?	Children bring in newspaper clippings to illustrate any way the phone might have played a part in the development of events in the story.	Newspaper clippings.
	List industries in Radford and write paragraphs explaining how they use the telephone.	
	Make a telephone directory of the people in the room - a. set up printing company 1. sell advertisements 2. contract for printing 3. circulate directories 4. design cover 5. organize advertising into yellow pages.	Tagboard Typing paper White construction paper Yellow unruled paper
	Have rescue squad chief or policeman talk to children about the types of calls they get.	Chief of rescue squad or Chief of Police
	Invite telephone operator to tell about some types of long distance calls she has handled and the problems involved.	Telephone operator.

457

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Make a model of the telephone building from cardboard boxes.	Cardboard boxes. Masking tape. Clear cellophane.
2. How does the telephone industry affect the local economy?	Bring old telephone bills from home and work with the mathematics involved in compiling the total bill.	Old telephone bills. Math text
	Make imaginary long-distance calls and figure the cost.	Play phones.
	Invite local business manager or plant manager to school to explain the various facets of the cost involved in telephone service.	Business Manager
	Write "Thank You" notes to visitor.	Stationery. Language text-p. 40, 311, 337 Our Language Today
	Original poems may be written by students on subject of telephone.	

458

BROAD OBJECTIVE: To promote a respectful attitude toward all kinds of work and to enable the students to identify the careers that can be considered a part of the telephone industry, recognizing the positive and negative factors in all types of work.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What different kinds of occupations are involved in the telephone industry?	Take a field trip to the telephone building to find answers to the question in the left column.	Bus and driver. Parents to accompany us.
	Take a field trip to the telephone maintenance headquarters.	
	Follow up field trip by making charts to show involvement by clusters: business, construction, transportation, manufacturing, marketing and distribution, communication, etc.	Poster board. Magic marker. Magazines Manila paper. Crayons Glue
	Learn the occupations listed in the above activity, and their spelling.	
	Read World Book on telephone "Career Opportunities", p.84D	World Book - T - p.84D
	Make pictures of workers in their work settings (Use tempera for backgrounds)	Manila paper. Tempera. Study print: Telephone man Telephone lineman
	Make a collage showing workers named above. Listen to cassettes. Show filmstrips.	Magazines Glue Manila paper Cassettes: Telephone Craftsmen Alex.Graham Bell Linemen Filmstrips: Telephone Workers Telephone Services

459

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Invite retired telephone operator to talk to children to compare work experiences in the past with those of the present.	Telephone operator.
	Make survey of the class as to related parental occupations.	
	Show filmstrip, "The Telephone"(Coronet)	Filmstrip: "The Telephone" by Coronet
	Invite telephone lineman into class to talk about his work and to demonstrate the equipment he uses.	Resource person-Telephone Lineman. Lineman equipment.
2. What are the advantages and disadvantages of working in the telephone industry?	Discuss the question.	
	Write paragraphs stating choice or rejection of employment in this area and give reason.	Textbook, "Our Language Today" p. 33, 108, 169, 155-159
	Make "good" and "bad" charts showing the above. (Children paste on charts)	Tag board Crayons Magic marker
	Discuss the implications of weather patterns on the industry.	
	Invite a troubleshooter into the class to describe his work, and relate it to good and bad features of his job.	Telephone Company employee (Troubleshooter)

174

BROAD OBJECTIVE: To help children understand the part that growth and sophistication of society have played in technological development and work roles.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What were the circumstances surrounding the invention of the telephone? Who invented it? How did he go about it?	Child read to the class during after-lunch period, "Mr. Bell Invents the Telephone" (Barbara Cox)	Book: "Mr. Bell Invents the Telephone" (Barbara Cox)
	Read and report on biographies of Alexander Graham Bell and Thomas Alva Edison.	Encyclopedias Pamphlets
	Make a model of the first telephone.	Flat board Wires Spool Nails Tin can
	Role-play the first call by Bell. Show film, "We Learn About the Telephone."	Film: "We Learn About the Telephone" (C&P Telephone Co.)
	Children read at leisure pamphlets on reading table.	All printed material available.
2. What conditions have brought about changes and improvement of telephone services and equipment?	Trace westward movement on map and relate to problem.	U.S. map Social Studies text "Living in the America's" (Index under Pioneers)
	Discuss international trade and how that caused need for improved telephone communication.	

178

	Draw pictures showing improvements in the telephone from 1876 to 1972. Display these.	
	Show color film, "Party Line".	Film: "Party Line".

463

BROAD OBJECTIVE: To increase understanding of and appreciation for the technical skills needed in the various phases of the telephone industry.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What makes a telephone work?	Read and report on "How the Telephone Work ".	Compton's Encyclopedia
	Make phone with tin cans and string and demonstrate usage.	Tin cans String Nails
	Demonstrate sound waves with pebble in water.	Bucket Water Pebble
	Tear apart a piece of coaxial cable and examine contents.	Coaxial cable.
	Discuss wire insulation and relate to safety.	Piece of telephone wire.
	Examine phone wire.	Piece of telephone wire.
	Show film, "The Wonder of the Telephone".	Film: "The Wonder of the Telephone"-Eye Gate House 4SD
	Read pamphlet, We Learn About the Telephone.	Pamphlet: We Learn About the Telephone(one per child) C&P Telephone Company
	Read pamphlet, The Magic of Your Telephone.	Pamphlet: The Magic of Your Telephone(Sandy Davidson)

424

BROAD OBJECTIVE: To keep before the children things which will foster and keep alive their interest and enthusiasm for this unit.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Make bulletin boards and wall displays with flat materials. Exhibit manipulative materials. Set up a reading table with all available books, pamphlets, etc.	

465

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Make a cooperating class booklet showing all people connected with the telephone industry. 1. Children draw assignment for one occupation. 2. One page to each child. 3. Page to illustrate and describe work role. 4. Group to design and make the cover.	Large piece of cardboard. Cold water paint. Masking tape. Newsprint. Magic markers. Rings to put together booklet.

INTRODUCTION TO: Money and Banking
The Money Goes Round and Round

The affluency of our modern society seems to be channeling children into an unhealthy disregard for the value of money and the many agencies involved in its creation and distribution.

This unit should bridge some of the gaps in their understandings about the world of money, and the many and varied people whose work world revolves around money and banks. It should also help the students build good spending and saving habits. There should be a definite carry-over into their present and future lives.

BROAD OBJECTIVE: To help children become interested in a study of money and banking.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What do we know about money and banking?	Read together orally and discuss the pamphlet, A Visit to the Bank.	Pamphlet, A Visit to the Bank.(in Career Ed. library)
	Child "secretary" list on the board key words from the story as the children identify them.	
	Students start individual word lists for recognition, meaning, and spelling.(These words should become a part of their vocabulary)	
	Children help compile a list of things they would like to know more about on this subject.	Tagboard, 12"x18"
	Show film "It's Only Money"	F.D.I.C., Washington, D. C.

BROAD OBJECTIVE: To help children understand more about the many facets of the minting, printing, handling, and distribution of money.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is money?	Children show and count any money they might have with them and announce to the class.	
	Let other children guess which pieces of money were used to total the amount stated.	
	Show examples of each different coin and a bill, and talk about differences in their exchange value, and also of the differences in the materials in them.	Encyclopedias Tagboard
	a. one group use encyclopedias b. one group make charts showing examples of what each piece will buy and what change would be received.	
	Make written reports on the origin of money and the changes that have been made in the kinds of money used through the ages. (Group)(To be read to class)	Encyclopedias Pamphlet: Know Your Money p. 4 and 5 (in teacher's folder)
	Show film, The Nature of Money(Group)	Film: The Nature of Money U17001 Eye Gate

472

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	One student read pamphlet, Let's Learn Money, to the class. (p.4-8"What is Money?")	Pamphlet: Let's Learn Money (Virginia Banker's Assoc.)
	Through cooperative effort compile a definition of money.	
	Make poster "Money Through the Years."	Poster Board Encyclopedias Pamphlet: Know Your Money Steck Workbook(p. 4 and 5) Teacher's folder. New Journeys in Reading- p. 17,18.
	Make play money(use real money for patterns).	Math text, Mathematics 5 (p. 232)
	Study pamphlet, Know Your Money(p.6) to find characteristics of paper currency.	Pamphlet: Know Your Money Library book: Coins and Currency
	Discuss counterfeiting.	
	Use encyclopedias to find ingredients in coins.	Coinometry(in library)
	Children bring in coin collections for display.	Books on coin collecting in the library.
	Invite Paul Simptins to bring his coin collection and talk to class about it.	

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Children bring in foreign money.	
	Make world map and paste the foreign coins on their homelands.	Newsprint Magic marker Library book: Coins and Currency.
	Make large models of different kinds of money to be displayed over blackboard.(Draw to scale.)	
	Teacher show bills of different denominations (or pictures of large bills)and have children write and learn the names of the people on the bills.	Pamphlet: Know Your Money (p 11)
	Children give oral reports on the making of money.	Encyclopedias Library Books: Let's Go to the U.S. Mint Nails to Nickels
	Teacher, or superior reader, read story to class, "What is Money and Where Does it Come From" in magazine, Children's Day(No.13) in library.	
	Work problems about money.	Text: Mathematics 5 (p. 232,233)

464

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
2. How is money used?	Children ask parents about the uses of money in the home; "What does money buy for us?" "What can we not buy with money?"	
	Make a bulletin board, centered with the caption, "The Uses of Money" with strings going to cut out pictures.	
	Teacher make bulletin board titled, "Uses of Money" with cardboard strips labeled: a. as a medium of exchange b. as a yardstick of value c. as a store of value d. as a standard for debts	Pamphlet: Let's Learn Money (p.8) Cardboard
	Children talk about and try to analyze each use(with teacher help in the analysis).	
	Show film, Money and Its Uses. (This must be ordered early)	Film: Money and Its Uses (Virginia Banker's Assoc.)
	Role play, "The Journey of a Dollar" after discussing it. a. from the Federal Bureau of Engraving & Printing to the consumer. b. from a consumer of one service through many other services.	
	Learn song 'That's Where My Money Goes'.	

428

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. How does the bank become the center of money distribution?	Children will interview parents to find out how the bank plays a part in their lives. Children tell of their experiences in banks. Children tell about their bank accounts and how they have helped them grow - a. jobs b. allowances c. gifts	
	Examine pamphlet, A Visit to the Bank.	Pamphlet: A Visit to the Bank
	Plan for field trip to a local bank: a. children compile list of things they would like to look for. b. teacher add to their list. to observe the overall operation, the workers, the teller's window (for future use)	
	Visit the bank.	Field trip to bank Books: At the Bank Let's Go to the Bank

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Children make lists of jobs observed(to be kept for future use)	
	Write an account of the visit to the bank to be used in the school newspaper.	
	Read "What Is A Bank?" in pamphlet, Let's Learn Money.	Pamphlet: Let's Learn Money
	Show filmstrip, It's All Mine	Filmstrip: It's All Mine (Virginia Banker's Assoc.)
	Follow up of filmstrip should include discussion and list of jobs and services shown.	
	Add to the above list using pamphlets, Let's Learn Money and Using Bank Services(p.6)	Pamphlets: Let's Learn Money (Virginia Banker's Assoc.) Using Bank Services (American Banker's Assoc.)
	Group of children interview a bank officer to find what these services mean.(Tape the interview)	Tape recorder and tape
	Add to the list of words for vocabulary usage and spelling.	
	Make a bank teller's window from a refrigerator carton.	Refrigerator carton Masking tape Brushes Tempera paint Table

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	One child make a master copy of a page in a checkbook (stub and check)using a real book for a pattern. Teacher(?)mimeograph checks. Children make checkbooks by stapling pages together. Children work math problems using check books.	Checkbook

BROAD OBJECTIVE: To help make children become aware of available job opportunities in the banking business.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are the work roles associated with banking and how does banking play a part in community life?	Read in New Journeys in Reading(Steck)-The Beginning of Banks.	Workbook: Journeys in Reading (Steck)
	Refer to previously compiled list of workers and add to this list.	Teacher's list of workers — Bank officers Machine operators Cashiers Credit collectors File clerks Guards, watchmen Key punch operators Tellers Clerks Bookkeeper Typist Stenographer Trust officer
	Make a bulletin board (centered with picture of a local bank)to show many industries and businesses which use its services(using any object, picture, etc. which would be indicative of the industry or business).	S.R.A. Occupational Briefs
	Show film, A Banking Career.	Film: A Banking Career (Virginia Banker's Assoc.)

479

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Discuss the film with emphasis on the training necessary for the various careers.	
	Invite any parent who is a bank employee to visit the class and talk about some of the problems that arise in a bank.	Resource person - bank employee.
	Role play, "Going to the Bank." a. enact different reasons for the visit. b. children observe and discuss which worker would be involved.	
	Assign the learning of at least ten different jobs associated with banking.	
	Children will work in groups reading and studying "Occupational Briefs" connected with Banking and report to class.	SRA Occupational Briefs

BROAD OBJECTIVE: To help children develop constructive attitudes about the use of money.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How do people get their money and why do some people have more money than others?	Discuss the question to point out the merits of honest labor and thrift.	
	Work out a budget, cooperatively, for a weekly allowance of one dollar. Do math computations here.	
	Let children compare their spending with the budget.	
	Interview parents to determine the items which have to be included in family spending.	
	Teacher read to class, "What Is Saving?" from pamphlet, Let's Learn Money.(p.29-34)	Pamphlet: Let's Learn Money
	Plan together for role playing experiences(earning, banking, saving, checking, and paying).	
	a. Explain payment for tasks completed in the room(clean-up, board, books, materials, assignments, etc.) Play checks will be used for this and payment will be made on Monday morning for previous week's work. Decide on pay scale.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	b. Children discuss and decide on job roles necessary for this project(timekeeper, payroll clerk)	
	c. Children role play interviewing the room chairman for these jobs.	
	d. Set up plan for depositing checks and drawing out money to pay for such things as borrowed paper or pencil, undone assignments, messy desks.(The bank teller's cage will be used here. Real deposit slips will also be used.)	
	e. Explain that end-of-week savings will enable the child to buy special privileges.	
	Carry out the above activities.	
	Make purses from leather. (Mr. Dunn will help with this.)	Leather and leather-making tools.

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Why are banks and the money they handle so important to us? Visit the branch bank on Ingles Street. Discuss the similarities and differences in the two banks visited, and decide the reasons for these differences. Write lyrics to the melody of "The Music Goes Round and Round" using the money concept for the words.	Field trip to bank.

INTRODUCTION:

Since Radford is in the midst of an agricultural area it opens many avenues of future employment for these children. It is desirable that they gain an understanding of the problems of farmers, and the dignity and importance of their jobs to our American way of life.

BROAD OBJECTIVES:

1. To help children grow in appreciation for the dignity and the beauty which accompany the drudgery of working in the soil.

2. To help children become aware of the problems of the farmer.

3. To help children develop an understanding of the economic situation involved in farming and the effect of farming on the economic status of the consumer.

4. To help children discover the many careers directly involved in, and related to agricultural pursuits and to understand the reasons for the choices.

5. To guide children into an evaluation of farming as a way of life and to recognize desirable characteristics of a person who chooses farming as a career.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
MOTIVATING ACTIVITY	Show filmstrips of general farming. or Make a frieze showing the various phases of farming. or Visit a farm.	
1. What are the careers available in the field of agriculture?	Teacher prepare a reading table. Discuss careers observed in filmstrips. Children make individual lists of careers. Start a vocabulary list. (Meaning and spelling) Collect pictures and make a bulletin board showing careers. (Teacher title bulletin board) Start a class scrapbook to be continued throughout the unit.	
2. What does farming involve?	Visit a farm.	

488

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Children draw pictures of what they saw on the farm.	
	Write stories "A Day on the Farm".	
	Interview members of the family who have lived on a farm and report orally to class.	
	Write thank-you notes to owner of farm visited.	
	Study Occupational Briefs on farm-related careers.	
	Learn songs about farming. "Boll Weevil" "Oh, What A Beautiful Morning"	Music teacher teach songs: "Boll Weevil" "Oh, What A Beautiful Morning" "Whistle While You Work" "Swannee River"
	Use filmstrip.	FA31 - Agriculture in Virginia
3. What are the problems of farmers?	Read in text.	Text, The Social Sciences Mountain Farm - p. 121-p.129 A Dry Region - p. 131 - p.141
	Discuss ideas brought out in text.	
	Invite county agent to talk to class about problems of farming.	Mr. Terry Altizer, County Agent, Montgomery County

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Divide class into groups to role play various problems.	
	Make a display of farm machinery using a variety of techniques and materials.	
4. how does farming affect us?	Bring from home a display of products related to farming.	
	Groups make charts showing relationship of farming in relation to satisfaction of basic needs (food, clothing, shelter).	
	Interview parents concerning prices of commodities as compared with past prices, and bring report to class.	
	Invite grocer to discuss changes in prices and reasons for the changes.	Mr. Ted Bess Mr. Clyde Burcham Mr. Frank Harkrader
	Children make story problems with above information and solve.	
5. Why would you choose farming as a career?	Invite farmer to come into classroom and discuss the good and bad in farming.	A. B. Hylton, Montgomery County

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Children write character sketches about themselves and read to class. Class evaluate the sketch and discuss individual's adaptability to farming. Some children write and perform "The Good and the Bad About Farming".

UNIT TITLE: BOTANY - THE WORLD OF PLANTS

APPROXIMATE GRADE LEVEL: GRADE 5

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

BROAD OBJECTIVES:

1. To help children to develop an appreciation for the beauty of plants and to gain knowledge of the fundamental feature of plant behavior, through the study of botany.

2. To help children to understand that botany is an important tool in many professions such as forestry, horticulture, plant breeding, soil conservation and bacteriology.

3. To help children to develop an understanding of the ways that plants effect our lives economically.

4. To help children to be aware of our dependence upon plants as a way of life.

5. To guide children into an evaluation of botany related careers so they will recognize desirable characteristics of a person who chooses any of the fields of botany.

INTRODUCTION:

This unit should give the children a better understanding about the world of plants, and also the many and varied people whose work involved plants and plant products.

Hopefully the students will become aware of how our lives depend upon plants and that they effect our lives economically.

It is desirable that during this unit the students will have a better understanding of the structure and function of plants. Also the study should open new avenues of exploration and experience in the world of work.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
MOTIVATING ACTIVITIES	Discuss the term "botany"	SRA Occupational Brief
	Bulletin Board: How Do Plants Function?	
	Have examples of different kinds of plants. Let children identify them.	Plants.
1. What is the function of the stem of a plant?	Read and discuss page 161.	Inquiring into Science. Transparent - Plants.
	Experiment: Showing how stems carry water from the roots to the leaves. Place a stalk of celery in red food coloring water. Make a drawing to illustrate.	Filmstrip: How Plants Live Introduction to Plants. Resource person - Biology Professor Jack Clark White construction paper. Crayons.
	Children make a collection of different kinds of stems, so they can observe the structure.	
2. What is the function of the roots of a plant?	Read and discuss page 160.	Inquiring into Science.
	Let children plant bean seeds on a soaked paper towel, when seeds germinate they can observe the roots.	Magnifying glass.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Children make a root collection, identify and label. (From growing plants.)	Chart.
	Display examples of roots that children bring in from home. Examples: beets, carrots, radish, etc.	
	Resource person.	Dr. Clark, Radford College
3. What is the function of the leaf?	Read, study and discuss text p. 237-238 to gain information about how a plant manufactures food in the leaves.	Text: Concepts in Science V
	Discuss the process of photosynthesis.	
	Use a filmstrip.	Filmstrips: Many Kinds of Leaves. Plant Factory.
	Let children make a drawing illustrating photosynthesis.	White construction paper Crayons
	Make a leaf print. Mount on construction paper, using different colors.	Construction paper, glue
4. What is the function of a flower?	Read and discuss p. 165.	Inquiring into Science
	Make a chart showing the parts of a flower.	Filmstrip: Parts of a Flower

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
		Filmloops: Many Kinds of Flowers. What is a Flower?
	Children look at the parts of a flower by using a microscope.	Microscope.
	Have children to make a flower model by using clay, colored toothpicks, gumdrops, cardboard center from a roll of paper toweling.	Clay Colored toothpicks Gumdrops Paper toweling
	Start a scrapbook to be continued throughout the unit.	Poster board Large rings
	Start a vocabulary list. Spelling and Understanding of words. Display on wall.	Chart
	Resource person.	Person from a greenhouse. Garden Club member - Miss Cardwell
5. What are some conditions for plant growth?	Make a list and discuss conditions.	Filmstrip Flannel Board - Study of Plant Growth.
	Grow several kinds of plants in room under different growing conditions. Keep a record as to how the plants respond to sunlight, temperature and moisture.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
6. What are some plant geography areas of the United States?	Use a large relief map. Locate the different areas.	Relief Map.
	Give each child a mimeographed map to fill in the areas.	Mimeograph map.
7. How would the plant geographic areas effect the careers of the people living in a certain area?	Discuss with children some of the careers that would involve botany in these areas.	
	Start a list of different types of careers that would be offered in botany.	
	Make a chart, hang on the wall. Collect pictures for chart that would represent a career.	Chart Pictures
	Do research on different careers that would involve plants, children can report findings to class.	Filmstrip - Picking Fruits.
	Children interview parents concerning jobs related to the unit. Report to group.	Filmstrips: My Dad Is A Carpenter. My Dad Works In A Super-Market.
	Children make a collection of materials that have derived from plants, use as an exhibit in room.	Filmstrip: Plants We Use Its the Growing Thing

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Make an additional list of things that you would like to learn about jobs that concern botany. "I'd Like To Know" Set up a bulletin board showing some of the jobs that were listed on the job chart. Each child make a booklet, use one page for each job. Page would include information about job, pictures and then the childs evaluation about the job.	
8. What are some products that would involve plants?	Discuss - make a list of products.	Filmstrips: Cotton Making Maple Syrup Coal Mine
9. What jobs would involve fibers, wood products, wood derivatives and latex?	Form groups to work on each product group. Discuss, do research, collect or draw pictures and report to group. Make a frieze that would have different products and pictures illustrating products and pictures showing the kind of job that was necessary to make the products.	Filmstrip - Lumber Mill Field trip - Furniture Factory Resource person - Chemist

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Discuss how products from plants effect our lives economically. Compare prices from a year ago.	Field trip - Grocery Store.
10. What careers are in the field of forestry and conservation?	Discuss. List careers that sould be offered in either. Do research. Report to class.	Filmstrip.
11. What is the future of jobs that are necessary in producing products from plants?	Do research by looking in newspapers, magazines, T V and re-	Newspapers, magazines, resource person, filmstrip.
CULMINATING ACTIVITIES	Let the children make own bulletin board, using the materials they have collected during the unit. Explain to class. Class present scrapbook. Different children explain one page. Filmstrip.

UNIT TITLE: THE WONDERFUL WORLD OF TEXTILES

APPROXIMATE GRADE LEVEL: GRADE 5

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: The Wonderful World of Textiles

Many parents of the children attending Kuhn Barnett School are employed in factories which are related to textiles; consequently, the students are interested in this topic, though they have not categorized it as such.

Also, in grade five the social studies emphasis is centered around life in the Americas. An important facet of this study is the part the textile industry plays in the economic structure with attention focused on the reasons for its importance as it is related to climate, geographical features, population, and technological development.

It is desirable that, during this unit, the students will grow in understanding of the textile industry and its role in our progressive society. Also, the study should open new avenues of exploration and experience in the world of work.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIALS
What do we mean by the term "textiles?"	
Examine equipment and materials in the classroom to discover use made of textiles.	
Discuss different materials in clothing worn by the students and identify as textiles or non-textiles.	
Discuss differences in these materials to discover the meaning of the term "textiles."	
Formulate a definition and compare with the dictionary.	Dictionary

BROAD OBJECTIVE: To help children understand the importance of geographical location on industrial growth and development of textiles in the southeastern states.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Why has the textile industry grown in the southeastern states? (Make maps showing areas of growth of natural & textile materials, textile manufacturer, and production of man-made fibers.)	Read and discuss Farming in the Southeast.	Social Studies text - Living in the Americas, p. 208-213
	Make a products map of the southeast states showing the areas where plants and animals are grown for textile use.	Manilla paper - 9"x12". Materials brought from home. Magic markers.
	Learn to spell words such as southeastern states, the names of the states, textiles, climate, industry, growth, depend.	
2. In what other areas of the Americas is the textile industry important? Why?	Discuss ways of finding the answer to this question.	
	Follow up above activity by using the sources mentioned and making notes of books, encyclopedias, text, etc.	Library Encyclopedias Card catalogue Text
	Study the climate maps of these areas(text).	Text
	Draw pictures showing the various means of transportation which are indicated in different situations(display these).	Manilla paper - 9"x12". Crayons

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. How was the textile industry initiated in this country? How and why has it grown?	Read in pamphlet, The Wonderful World of Textiles and Textiles in American History.	Pamphlet: The Wonderful World of Textiles
	View filmstrip.	Filmstrip: Textiles: Measure of Civilization
	Use transparency 859, "Development of a Southern Plantation."	Transparency 859 Overhead projector
	Show filmstrip.	Filmstrip: The Story of Cotton 204-1, SVE
	Learn to spell words associated with the plantation.	Broom handles Box Wrapping paper Drawings Glue
	Make movie of: (1) Steps in early production of cotton. (2) Life on a plantation (3) Trip to Viscose (4) Textiles in use today	
	Write an outline of a day on the plantation.	
	Role play, "A Day on the Plantation."	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Learn, "The Virginia Reel."	Record: The Virginia Reel.
	Show filmstrip, The Story of Wool 204-2	Filmstrip: The Story of Wool 204-2 (Society for Visual Education)
	Bring in raw wool a. wash b. card wool c. twist into fibers	Wool card Wool
4. What products are created in the textile industry and what materials are used in creating them?	Read World Book Encyclopedia T-p.173	World Book - T
	Make wall chart naming textiles.	Poster paper
	Children bring samples of all available fabrics from home.	
	Consult encyclopedia to find materials used in each fabric.	Encyclopedia
	Make a bulletin board of swatches which children have brought from home. a. label swatch and list materials used. b. supplement with teacher's cards. c. center the board with the sample card from Amer. Text. Man. Inst.kit.	Teacher's fabric sample cards(in folder) Swatch card from American Textile Manufacturer's Institute kit.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Working in groups, make charts of manmade and natural(plants, animals)fabrics.	Encyclopedias
	Test fabrics.	World Book - T - p.173
	Collect samples of fabrics with design. a. talk about these b. identify the geometric patterns.	
	Cut designs from construction paper and mount to show geometric or other designs in textiles.	Colored construction paper, scissors, glue
	Make designs on cotton fabric with potato prints (6"x9")	Potatoes Cotton cloth Tempera paint
	Tie and dye cotton cloth or children's old T shirts.	Dye Pans Cotton cloth
	Tissue paper collages showing types of design.	Tissue paper and glue
	Mount on tag board the potato designs for wall hangings.	Wooden framing Cardboard, screws, string
	Sandpaper designs showing texture.	Sandpaper and crayons
	Exhibit cotton ball and examine under microscope.	Cotton ball Microscope
	Children find costs of various materials by yard.(Compare and compute cost of given amount.)	

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Invite a sheep grower into the class or have a child interview a sheep grower and report to the class.(Make pictures, if possible.) Field trip to see sheep being sheared.	Camera Film

BROAD OBJECTIVE: To help children recognize the importance of the textile industry as basic and essential to the American way of life. To help children appreciate the accomplishments of the industry in creating products that have raised our standard of living by lightening our labor and contributing to our convenience and leisure.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are the uses of textiles?	Children survey their homes and make lists of textiles they can find in the homes.	
	Use pamphlet, Cotton to find the uses of cotton.	Pamphlet: Cotton
	List cooperatively all the uses of textiles.	Fabric charts Encyclopedias
	Make a frieze, using magazine pictures to show uses of textiles.	Magazines Wrapping paper Glue
	Read and report on biography of Eli Whitney.	Encyclopedias
	Show film, Eli Whitney.	Film: Eli Whitney - 47208 Radford
	Examine and discuss big chart on cotton, then display chart.	Chart: Cotton (in folder)
	Write stories telling how various textiles would be used in: a. a trip to the moon. b. our vacation at the beach.	
	Work in gps.; make collages showing people served by tex.ind.	Magazines, mtg.paper, glue, scissors

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	c. we go sleigh riding. d. our country's defense. e. we move into a new home.	
2. How is our standard of living affected by the textile industry?	Use the list, compiled earlier of textiles in the home and discuss the work that would be entailed if we did not have them.	
	List recreational uses of textiles.	
	Interview mothers(or have one come to the class)to find out how their work load has been lightened by the textile industry.	Resource persons - mothers
	Compare a day at home now with the previously written account of a day on the plantation.	
	Dress dolls to show the different clothing styles and textures for different climates.	Dolls Needle Thread Materials
	Read text, Living in the Americas to find answers to questions about plantation life: p. 141-144 p. 149-151 p. 208-209	Text: Living in the Americas

505

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Invite a home economics teacher to talk about the versatility and importance of new textiles in clothing and home furnishings.	Home Economics teacher

BROAD OBJECTIVE: To help children discover that most of the goods we buy are produced in factories and to discover some characteristics of factory production.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What part have technological and scientific developments played in the growth of the industry?	Visit Kenrose or Shirt Factory. Write paragraphs about different phases of the trip. Figure cost of trip-gas, driver, etc. Write letters of thanks to places visited & to resource people.	Field trip to textile industry.
	Write an account of the process in the mill.	
	List workers observed along the route of the tour.	
	Bring in a parent to describe his or her work in the mill and to discuss the negative and positive features.	Parent
	Weave mats on looms made in class from cigar box lids.	Cigar boxes Yarn Curtain rings
	Demonstrate advantages of assembly line production over individual production of whole product with paper weaving: a. measure paper and label b. cut paper c. measure strips d. cut strips e. weave f. trim g. glue edges	Pamphlet: The Wonderful New World of Textiles

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Read and discuss mimeographed teacher-prepared list of characteristics of factory production.	
2. What occupations are involved in the textile industry?	Children make individual lists and explain the role of various workers. Group make cooperative list based on the individual lists. Children choose the jobs they think they would like(but do not tell of choice). Write riddles to go with the choice and let other children guess or role-play the part and let the other children guess. Role-play job interviews and let the children decide which applicants would be employed. Write limericks about jobs. Children will read and report on jobs connected with the industry.	SRA Occupational Briefs

BROAD OBJECTIVE: To help children learn how the textile industry uses the discoveries of science for present and future improvement of textiles.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What scientific developments and inventions have influenced the textile industry?	Set up a display of tools and equipment used in early weaving (if these cannot be obtained, use pictures in folder on Colonial Life).	Tools
	Read and report on biographies of: a. Sir Richard Arkwright b. Samuel Compton c. James Hargraves d. Samuel Slater	Encyclopedias
	Invite chemist, Dr. Preston Durrill(at Radford College) to speak to class on the part chemistry has played in textile improvements.	Dr. Preston Durrill-Radford College

512

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Invite the parents to attend a class display of their unit activities-stories, bulletin boards, charts, weaving, etc.	
Show pictures in the ATMI Kit on the opaque projector. Students will give explanations of each picture as it is shown.	Opaque projector Textile Teaching Kit Education Department American Textile Manufacturers Inst., Inc. 1501 Johnson Building Charlotte, North Carolina 28202
(1) Groups gather all work and display, describing each. (2) Reports on different aspects of types of jobs available in industry studied. (3) Reports on people responsible for industrial inventions and improvements. (4) Various art work to display showing texture, design, etc. (5) Other reports(from volunteers) dealing with advantages and disadvantages of various jobs. ALTERNATE: Make individual booklets of work on unit, and display these in room. a. Children write short reports to be distributed to all for inc. in booklet. b. Children make master copies for duplicating. (1) what materials are used in creating textiles? (2) where in the Americas & other countries is the industry important? (3) what products are created in the industry? (4) tests for fabrics

UNIT TITLE: FEDERAL GOVERNMENT

UNCLE SAMMY CAME TO TOWN

APPROXIMATE GRADE LEVEL: GRADE 5

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: FEDERAL GOVERNMENT - UNCLE SAMMY CAME TO TOWN

Children at this level need to feel a strong sense of patriotism and a responsibility to our government. Hopefully, in this unit they will develop a background of information, a feel for their individual obligations, and understanding and appreciation of our democratic way of life. They should become aware of their individual freedoms and rights provided by our government.

OBJECTIVES:

1. To help children become aware of the many facets involved in the organization of the Federal Government.

2. To guide children into an understanding of the individual freedoms enjoued by citizens and the corresponding responsibilities involved under our form of government.

3. To help children understand and appreciate all the Federal Government does for us.

4. To develop an awareness of the career possibilities within the framework of the Federal Government.

5. To help children become aware of the relationship between the Federal Government and our economic situation, and the way it affects our way of living.

517

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Motivating Activities	1. Display U.S. Flag. Talk about its history and meaning. Bulletin board.	Vertical File (The United States Flag)
	2. Pledge to the Flag and analyze.	Red Skelton, Analysis
	3. Teach patriotic songs.	Music Teacher Vertical File Patriotic Songs of America
1. What do we know about our Federal Government?	1. Discuss with children and make a cooperative list of facts.	
	2. Children find or draw pictures to accompany this and make it to a chart.	a. Long sheet of paper b. Magazines c. Scissors d. Crayons e. Glue
	3. Children interview parents for additional information or any materials they might bring.	
	4. Start a word list of new and associated words.	

518

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	5. Make a cooperative list of things they need or want to know.	
	6. Discuss sources of information to help in answering questions.	
2. Why did the need arise for a Federal Government?	1. Read text.	Text, The Social Sciences p. 209-223
	2. Role play situations of group interaction (conflict situations).	Text, p.237 Language, Text "Discovery in English" p.92-95 Text, p.212
	3. Make bulletin board showing three branches of government.	
	4. Divide class into groups to study and report on the branches of government.	Encyclopedias Any available printed material, text book, The Social Sciences. Vertical File a. American Documents
	5. Set up a system of governing within the classroom.	

519

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	6. Children and teacher establish a set of rules applicable to the classroom.	
	7. Outline branches of government.	
3. How are our lives affected by the Federal Government?	1. Bring in a resource person from city government, to tell about the city agencies which are wholly or partially controlled by the Federal Government.	a. City engineer b. City manager c. City treasurer
	2. Children make a chart illustrating learnings from resource person.	
	3. Take field trip to sewage disposal plant.	
	4. Visit a grocery store to discover government controls of food prices.	
	5. Visit civilian defense shelter at the hospital.	
	6. Build and stock a civilian defense shelter unit.	

520

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	7. Interview school personnel to discover parts played by the Federal Government in school administration.	
	8. Make collage showing ways in which individual lives are affected by the Federal Government.	
4. What are career possibilities within the framework of the Federal Government?	1. Bring in resource person from U. S. Employment Office.	Employment Office Manager
	2. Children use occupational briefs for reporting.	
	3. Make Virginia maps showing concentration of federal.	
	4. Bring in newspaper clippings about government affairs.	
5. How is our way of life affected by the Federal Government?	1. Discuss and list ways our lives are influenced by the Federal Government.	
	2. Children choose one item from above list for research and written reports.	Text, "Discovering in English" Paragraphing p. 36,37,340,341,338, 339,342-345

CE 008 889

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
		Research p. 290,292,296,298,288, 289,286-287 Encyclopedia
	3. Make bulletin board items listed in No. 1.	
	4. Teacher prepare a reading table of all available printed matter.	
	5. Bring in resource person on pollution control.	
CULMINATING ACTIVITY	1. Make U.S. Flag with twisted crepe paper. a. Measure a flag and figure proper proportions. b. Draw flag. c. Children work in groups to paste on various parts of the flag.	
	2. Present class program: a. Patriotic songs. b. SPledge of Allegiance. c. Children recite rules of proper flag etiquette.

PUBLICATION DATE: NOV74

TITLE: RESEARCH AND DEVELOPMENT PROJECT IN CAREER EDUCATION. CAREER EDUCATION ACTIVITIES: VOLUME II. GRADES K-7.

DESCRIPTOR: *CAREER EDUCATION; *LEARNING ACTIVITIES; ELEMENTARY EDUCATION; UNIT PLAN; BEHAVIORAL OBJECTIVES; *CAREER AWARENESS; *RESOURCE MATERIALS; *CURRICULUM GUIDES; *SPECIAL EDUCATION

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 605P.; RELATED DOCUMENTS VT 103 221 THROUGH VT 103 223 IN THIS ISSUE.

ABSTRACT: VOLUME II CONTAINS CAREER EDUCATION ACTIVITIES FOR GRADES 5-7 AND FOR SPECIAL EDUCATION CLASSES. THE UNITS ARE DEVELOPED AROUND SPECIFIC TOPICS AND INCORPORATE THE FOLLOWING ELEMENTS: SUBJECT-CONTENT RELATIONSHIPS, OCCUPATIONAL INFORMATION, RESOURCE SPEAKERS, INTERVIEWS AND REPORTS, PARENT-FAMILY INVOLVEMENT, HANDS-ON AND OTHER SENSORY EXPERIENCES, ROLE PLAYING AND SIMULATION ACTIVITIES, AND CAREER-RELATED FIELD TRIPS. EACH UNIT REQUIRES FOUR TO SIX WEEKS, AND TEACHERS MAY SELECT THOSE ACTIVITIES MOST APPROPRIATE FOR THEIR PARTICULAR STUDENTS. THE UNITS GENERALLY CONTAIN OBJECTIVES, CONTENT QUESTIONS, TECHNIQUES AND ACTIVITIES, RESOURCES AND MATERIALS REQUIRED FOR EACH ACTIVITY, AND A BIBLIOGRAPHY. SAMPLE UNIT TOPICS ARE CARTOGRAPHY, WEATHER, AND IRON WORKING. THE CAREER EDUCATION UNITS FOR SPECIAL EDUCATION CLASSES ARE DESIGNED FOR THREE INSTRUCTIONAL LEVELS: PRIMARY AND INTERMEDIATE EDUCABLE MENTALLY RETARDED, AND TRAINABLE MENTALLY RETARDED. THE SPECIAL EDUCATION SECTION COMPRISES ABOUT ONE THIRD OF THE DOCUMENT. (AUTHOR/RG)

UNIT TITLE: MIND AND BODY

"ME AND MY SHADOW"

APPROXIMATE GRADE LEVEL: GRADE 5

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: Mind and Body
Me and My Shadow

Much of the science and health work in grade five is centered around a study of the body structure. Since children at this age level are becoming aware of their self images, and conscious of their body development, it seems good that they make a comprehensive study at this time of their mental and physical health with the ultimate aim of improving both. Such a study also affords an excellent opportunity for children to discover and relate to the job roles which are associated with general well-being of the people in the community, and for identification with these roles.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIALS
1. Children draw shadow silhouettes of each other. Mix them up and let others guess the identity. 2. Children write paragraphs about themselves and read to class as riddles. 3. Discuss the importance of both images, physical and mental and relate this to the actual body(physical) and the shadow it casts(social, mental). 4. Mount the silhouettes and display them.	Filmstrip projector White construction paper(12"x18") Black crayon (cut out and paste to wall)

BROAD OBJECTIVE: To help children understand more about themselves and their individual personalities.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Whc am I?	Show filmstrips in Getting to Know Me series.	Filmstrips:(In library) FA92 People are Like Rainbows FA93 A Boat Named George FA94 Listen, Jimmy FA95 Strike Three! You're Out
	Read health text-p.42-52 and discuss.	Health-Grade 5-Laidlaw Publishing Company
	Children make fact sheets about themselves and check anything they would like to change. a. physical traits b. abilities c. interests d. faults e. behavior f. manners, etc.	
	Children role play different life situations, with two groups for each situation. a. they have broken a neighbor's window while playing ball. What to do? b. parents are away and a neighbor child comes to visit. What to do? c. John sees his neighbor cheating on a test. What	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	d. your team has won a ball game but you know you did not play fairly. What to do?	
	Show film, Clown.	Film: Clown- Radford College 65509
2. Why am I different from other boys and girls?	Make bulletin board with pictures of children- Heredity & Environment + Experience = You (Children bring in pictures to illustrate these things)	
	Read Health 5(text)p.14,15	Health-Grade 5 Laidlaw Publishing Co.
	Write paragraphs telling what they like to do best with their families.	

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. How do I feel about things?	Show filmstrip, Our Feelings.	Filmstrip: Our Feelings (Jam Handy) in guidance office
	Children tell stories about things that have happened to them and their reactions. (Happy, sad, exciting, frightening)	
	Other children discuss these stories by suggesting alternative reactions.	
	Discuss emotions	
	Collect pictures of people showing different emotions, and label them.	Magazines
	Show filmstrip, Leak in the Dyke.	Filmstrip: Leak in the Dyke FL15(in library)

BROAD OBJECTIVE: To make children more aware of their bodies as physical structures which house their beings.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is the structural make-up of my body?	Review, through discussion, the role of cells in the body.	
	Read in science text, Concepts in Science, p.191.	Text: Concepts in Science-5
	Scan pages 192-205 in text to determine, from content headings, the kinds of cells which make up the body.	Text: Concepts in Science-5
	Teacher show transparency, Body Cells 81811	Transparency: Body Cells 81811 (in library)
	Examine charts on The Human Body.	Nystrom Physiology and Hygiene Charts.
	Children list the body systems.	
	Discuss functions of the body systems.	
	Children study and discuss p.196-205 in text.	Text: Concepts in Science-5
	Start word list to be displayed in the room, and assign them for spelling mastery.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Children make bulletin boards using anatomy charts.	Scientific Plastics, The Human Body
	Invite a doctor into the class to talk about the importance of the body parts working together.	Resource person - Doctor
	Display x-ray pictures and talk about how they are made.	X-ray pictures
	Children who have had x-rays made tell about their experiences.	
	Assign a small group to report on the x-ray machine, its inventor, and effectiveness.	Encyclopedias
	Divide class into groups to work on the various body systems and plan presentations to the entire class.	
	Establish guidelines for each presentation - a. name of body system b. good summary of the material in the science and health texts on the specific body system. c. duties of the system.	Science text: Concepts in Science-5(p.206-222) Health text: Health-5 (p.106-196) Science in Our World "Exploring Your Growth" (p.238-253) (in room library)

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	d. parts of body system e. charts, posters, and diagrams. f. models of body parts from clay when possible. g. dramatizations h. original ideas	
	Teacher set up display of all available material which are pertinent to the study.	Torso Visible man Skeleton models Skull collection
	Groups preview filmstrips on the body systems and present them to the class.	Filmstrips: FH15 The Skeletal System of the Human Body FH16 The Muscular System of the Human Body FH17 The Digestive System of the Human Body FH18 The Circulatory System of the Human Body FH20 The Nervous System of the Human Body
	Teacher show transparencies on the body systems for final discussion and fixation of concepts.	Transparencies: 818-1 The Digestive System 818-2 The Circulatory System 818-3 The Nervous System 818-4 The Skeletal System 818-5 The Respiratory System

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
2. What can I do to protect and care for my whole self?	List cooperatively the factors which contribute to good physical and mental health- a. food e. cleanliness b. rest f. medical care c. exercise g. leisure time activities d. clothing	
	Divide into groups to make posters illustrating each of these.	
	Each group plan and direct a class activity on its subject- a. plan menus b. direct phys ed., etc.	
	Have a hobby show with the children exhibiting their hobbies supplemented by resource people and their hobbies.	Rock collections Indian artifacts-Mr. Harris Stamp collections-Wayne Nester Dried flower placques-Ruth Duncan
	Invite guidance counselor into the class to talk to the children about maintaining good mental health.(Question and answer period)	
	Read health text-p.36,37.	
	Role play First Aid practices for simple accidents, using the health text(pages 35-36)	

BROAD OBJECTIVE: To help children discover the fact that many people contribute to the well-being of the mind and body.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Who are the workers in the community who help me be a healthy, well-rounded person, and why do I need them?	Discuss home situations which have arisen recently which prompted a call for help from some community worker.	
	Invite the city manager or city engineer into the classroom to tell about the duties of city workers as related to the health of the citizenry.	Mr. Kyle Roop, City Manager Mr. Ron Miller, City Engineer
	Compile a list of all community agencies which contribute to the public welfare.	
	Show film loops, City: Occupations	Film loops: City: Occupations
	Group projects- a. one group make a frieze showing Main Street and all workers who contribute to health of citizens. b. one group make a bulletin board showing workers(cut-out)who contribute to the health and well-being of the family with arrows pointing from pictures to the family in the center. Caption-City Workers and My Family	Magazines

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Children show and explain picture story study prints on Community Helpers and Urban Life.	Picture story study prints, Community Helpers, and Urban Life
	Make tagboard figures of workers for health and dress for the role.	Tagboard
	Children choose the occupation they would prefer and write stories telling why they think they are suited to it.	
	Pantomime the occupation and let children identify it.	

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Each child make a booklet entitled My and My Shadow and divide it into three sections; When I Was Little Now I'm a Fifth Grader When I Grow Up a. interview parents and others to get information for writing paragraphs about self in each section. b. bring pictures from home. c. make camera picture of class and mount. d. write self description. e. make collage page using cut-outs identified with self. f. add pages for the future section which illustrate the aspects the child would like in his self image of the future and his aspirations for the future(education, occupation, family life, etc.).

INTRODUCTION TO: Getting To Know Your Newspaper

In grade five the language arts text includes a significant study of the importance of newspapers and the different sections related to newspapers. The grade five social studies text emphasizes the important role of the newspaper in early America, as well as the significance of a free press in our democratic society. These subject-related facts about newspapers will aid the work of this unit.

It is hoped that each student will grasp the importance of the development of the newspaper. It is also desired that this unit will reveal the many varied opportunities in the newspaper business. The variety and number of careers in newspapers will open a whole new dimension to the work of work.

MOTIVATING ACTIVITY	RESOURCES AND MATERIAL
What do you think of when I say "newspaper"?(news, communication, etc.)	
What is the definition of "newspaper"?	Dictionary and/or encyclopedia
Examine resource table of different newspapers and books about newspapers.	
Discuss area newspapers as to their names and delivery times.	
Ask each child to bring in one entire newspaper for this unit study.	

BROAD OBJECTIVE: To help students understand the historical development of writing and printing which led to the development of newspapers. Also, to help students understand how the newspaper is organized.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIALS
1. What is the history of writing and printing?	Let the children speculate as to why writing, and eventually printing, developed.	
	Read and discuss History of	Pamphlet: Newspaper In The Classroom
	Locate areas on world map where printing and writing developed(Egypt, China,etc.)	World map
	Show film on writing.	Film: "Writing Through the Ages".(1951- 11 min.)
	Discuss development of printing press and its significance.	
	Assign report on Johann Gutenberg and his contribution to printing.	Encyclopedia
	Examine several samples of writings.	Study prints 302 and 303 (Radford College)
	Take a field trip to a printing shop.	Field trip
	Read and discuss the history of newspapers.	Pamphlet: How To Get More Out of Newspapers.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIALS
	Discuss influence of a newspaper in colonial America.	
	Discuss importance of a "free press".	
	Read and discuss "freedom of press" rights in Constitution.	Copy of constitution and Bill of Rights.
	Speculate as to why people read newspapers.	
	Make a chart of different reasons why people read newspapers for bulletin board.	Posterboard, magic markers.
	Have each student write a paper on what he likes most and least in a newspaper and expalin why.	
2. What makes the news, and where are the most important news stories found in a newspaper?	Let children look for definition of news.	Dictionary
	Discuss types of news.	Language Arts text: Our Language Today(pp.101-102)
	Make a News Calendar showing each day of the week for the length of the unit. A different child will be chosen each day to bring an article to share with the class and pin to News Calendar.	Posterboard, magic markers, news articles.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Read and discuss newspaper terms, specifically parts of the front page. (i.e. flag, caption, main headline, etc.)	Individual newspapers. Pamphlet: Your Newspaper
	Examine individual newspapers for examples of front page terms.	Individual newspapers.
	Make a bulletin board with front page of a newspaper. Point out different parts of front page.	
	Learn to spell newspaper terms, such as flag, headline, index, and by-line.	
	Read and discuss what makes a good headline.	Our Language Today (pp. 98-100)
	Teacher will read some short news stories, and students will create their own headlines.	Paper and pencil news stories
3. How is a good news	Read and discuss leads and types of news stories.	Our Language Today (pp. 102-104)
	Discuss six questions answered in good lead of news story.	

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Each child will read news article from his own paper and identify the who, what, when, where, why, and how of the lead.	Individual newspapers
	Discuss slanted news.	Our Language Today (pp. 106-107)
	Students will discuss current events in their area and write their own news story with good headline and lead.	
	Volunteers will read their news stories before the class. Display news stories.	
4. How is the newspaper staff organized?	Ask the children to make a list of members of a newspaper staff on a sheet of paper. Write a composite of their answers on board.	
	Complete their list and discuss: 1. Editors/Feature Writers 2. Editor in-Chief 3. Columnists 4. Reporters 5. Artists/Cartoonists 6. Lay-out Editor	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	7. Advertising writers: a. classified ads b. advertisements 8. Proofreaders	
	Divide class into eight groups to research one of the above. Report findings to the class.	Library: Card catalogue Encyclopedias Books
	Class will discuss different types of reporters and columnists found in area paper. (Sports, business, and society reporters or astrology columnists and such.)	Individual newspapers
	Book reports on members of a newspaper staff.	Books: This Is A Newspaper by L. H. Feigenbaum. Come To Work With Us On a Newspaper by Jean Wilkinson.
	A group of students will role play their interpretation of a reporter's job. Other characters may be editor, witnesses, police, etc.	
	Invite a reporter from a nearby newspaper to speak to the class concerning his job.	Resource person: A reporter

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Read and discuss mechanical staff of newspaper. (pressmen, linotype operators,etc.)	Pamphlet: Your Newspaper
	Show film "The Colonial Printer".	Film #05012: "The Colonial Printer".
	Make a chart of steps a news story takes from the scene of the event to the street.	Posterboard, magic markers.
	Show transparencies of Gutenberg press and rotary press. Compare and contrast the two.	Transparencies: (See: The Newspaper In the Classroom)
	Show film "The Newspaper Story".	Film #37708: "The Newspaper Story".
	Provide an activity centered around printing, such as potato or ink prints.	Potatoes, tempera paints, and/or ink, manila paper.

BROAD OBJECTIVE: To help children develop understanding of the various sections of a newspaper and an appreciation for each of these areas.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are the different parts of a newspaper?	Children will make a list of different sections of a newspaper. A composite list will be written on the board. Discuss: 1. Front page 2. Society page 3. Entertainment/ book reviews 4. Editorial section 5. Advertising a. advertisements b. classified ads 6. Business 7. Sports 8. Comics	
	Prepare a bulletin board showing various sections of newspaper and what they contain.	
	Make a mobile showing examples of different parts of newspaper with their respective identifying tags.	String, magic markers, crayons, tagboard, articles from newspapers.
	Children will examine their own papers to find location and organization of newspaper sections.	Individual newspapers

25

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Read and discuss what is found on editorial page.	Pamphlet: Your Newspaper
	Examine editorial page of a local newspaper.	Individual newspapers
	Compare and contrast a well written and poorly written editorial.	
	Write editorials about recent events or articles.	
	Select a group of student to proofread articles.	
	Read and discuss letters to the editor.	Our Language Today (pp. 108-111)
	Children will write their own letters to the editor to disagree with a topic of their own choosing.	
	Display clippings of newspaper editorials and letters to the editor with those the children have created.	
2. How is the newspaper funded?	Ask children to explain how they pay for newspapers to be published.	
	Discuss price of a newspaper and compare with cost of producing one newspaper.	World Book Encyclopedia Volume 12

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Write a short paper on what advertisements you like and dislike. Explain why.	
	Read and discuss three types of advertising: 1. National 2. Retail 3. Classified ads	Pamphlet: Your Newspaper Our Language Today (pp. 113-114)
	Make collages of ads found in magazines.	Magazines, glue, tagboard.
	Discuss different commercial advertisement slogans and illustrations.	
	Create your own ads with slogans and illustrations. Display.	Tagboard, construction paper, glue, crayons.
	Create a large mural-type advertisement of coming event or assembly. Display.	Tempera paints and role of white paper.
	Read and discuss different types of want ads.	Our Language Today(p. 114)
	Examine classified ads of a local newspaper. Discuss how they are written.	Individual newspapers.
	Children will write own classified ads.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Write or create a large replica of a classified ad section and glue children's ads to complete the page. Display in room.	Posterboard, magic markers, glue.
	Examine newspapers to see cost of classified ad per word. Compute the cost of ads written by the children.	
3. What are the other parts of a newspaper and what is the role of each?	Discuss why some people specifically read the business section and others the sports page.	
	Discuss different types of people and their interests. Compare this with what they probably enjoy most in a newspaper(i.e. mother-society page; basketball player-sports page)	
	Examine comics in a local paper. Compare with Sunday edition of comics.	Individual newspapers.
	Divide class into groups to make lists of why people read comics. A speaker for each group will report ideas of groups.	
	Children will create their own individual comic strips.	White paper, pencils, crayons.

28

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Display comic strips for children to read.	
	Make a diorama of favorite comic strip characters.	Cardboard boxes, paints, caryons, construction paper.
	Read and discuss book reviews found in local papers.	Individual newspapers. Our Language Today
	Discuss how book reviews are written and why they are found in newspapers.	
	Create a book jacket(illustrate cover) and write book review on inside flaps.	White paper, crayons, ink pens.
	Write a book review of a recently read library book.	
	Make a notebook of all the children's book reviews. Display in library for use by other classes.	Notebook or cover for book reviews, tape, white paper for pages.
	Compare and contrast book and movie reviews.	Individual newspapers
	Discuss importance of business, sports, and society pages. Who reads them? Are there special reporters for these areas?	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Learn basic points of how to read stock market reports.	
	Children will write papers to read before class on a favorite sports figure.	
	Invite a sports writer to speak before the class.	Resource person: A sports writer
	Make a wall hanging of a calendar of events for your school. Use society page calendar of events as an example and include PTA meetings, assemblies, and ball games. Display near school entrance.	Wooden strips for frame, heavy cardboard(white), magic markers.
	Select newspaper staff and create a class newspaper or newsheet. Allow entire class participation. Mimeograph for other classes. Advertise its arrival before circulation.	Paper, mimeograph paper, pens, etc.
	Take a field trip to a local newspaper to view production of a newspaper.	Field trip to local newspaper.

BROAD OBJECTIVE: To help students discover the numerous but varied jobs available in a newspaper business.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What career opportunities are available in the newspaper world?	Review list of members of newspaper staff.	
	Panel discussion of advantages and disadvantages of being a reporter.	
	Students will research the different jobs of staff members and report findings to the class.	Library: Card catalogue Encyclopedias Books
	Invite a member of local newspaper staff to speak on careers.	Resource person
	Make a movie of steps of a news story from even to newspaper on the street. The movie will show different jobs in order of occurrence.	Cardboard boxes, rolls of paper, paper sheets, crayons, wooden dowells, and glue.
	Research the possible incomes and education necessary for different jobs on a news staff. Report to class.	Library
	Illustrate the job you would most prefer in the newspaper business.	White paper, colored pencils, crayons.

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Circulate a class newspaper or news sheet to other classes.	
Invite parents to view a display of papers, drawings, charts, movie, dioramas, and bulletin boards, and other activities of the unit.	
Show filmstrip, "The Neighborhood Newspaper Story".	Filmstrip: "The Neighborhood Newspaper Story"

INTRODUCTION:

Though a great deal has been said and done about the ecological and conservational aspect of forestry, children need to know more about the part forests play in their present way of life. They need also to become cognizant of the many careers which are related directly to forestry. Children living in mountainous areas such as ours should be particularly interested in this as a resource for future decision making.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
MOTIVATING ACTIVITY	Invite forester to come into the classroom.	Jim Clarke, State Forestry Service (Christiansburg)
	or	
	Tour school to see uses of wood.	
	or	
	Children bring in leaf collection to be used in art project (shading leaves with crayon or making rubbings with leaves).	Variety of leaves. Crayons Paper
	Teacher make bulletin board - The Tree and I.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How do forests contribute materially to our way of life?	Bring in pictures of things made of wood or cut out pictures in class.	Magazines
	Children work in groups to group these pictures into categories. (houses, furniture, transportation, recreation, etc.)	
	Make a frieze of the above with divisions.	Long strip of wrapping paper Pictures Scissors Glue Construction paper
	Assign individual reports on the making of paper from wood pulp.	Encyclopedias Pamphlets
	Use encyclopedias to find by-products of forests - tar, rubber, etc.	
	See filmstrip.	CFA 180 A Trip to a Lumber Mill CE-CT-A63 A Lumber Mill
	Visit lumber mill.	Sales Lumber Yard (Bethel Road)

36

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
2. How do forests help us in ways other than by supplying other commodities?	Children write V.P.I. for printed matter on the subject.	
	Write U.S. Forester in Roanoke for material.	
	Invite Mr. Jack Clark into classroom to talk about forests and conservation.	Mr. Jack Clark Radford College
	List questions to be asked of visitor.	
	Short word list using such words as: conservation erosion forestry specialist protection (children help make the list)	
	Make large chart of words and hang in room. (children do this)	Poster board Magic marker
	Learn poem (song) "Trees" by Joyce Kilmer.	Childcraft
	Invite scout leader to talk about safety and conservation in the forest.	Scout leader.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. What are the outstanding forest areas in the U.S.?	Locate forest areas in U.S. on U.S. map.	Social Studies book <u>Living in the Americas</u>.
	Read and discuss pamphlet "Let's Learn About the Forest".	Pamphlet, "Let's Learn About the Forest"
	Group work: a. Draw U.S. map and locate forests on it. b. Report on Redwood Forest in California. c. Report on National Forests. d. Report on Great Smokies.	Book, <u>Living in the Americas</u> Manilla Paper Crayon Encyclopedias Pamphlets on Smokies (children bring these in)
	Make sand table forest.	Pasteboard box Sand Tree Branches
4. How are different kinds of wood suited to different functions?	Display pictures of different kinds of trees.	Board over black board.
	Press leaves and draw pictures for booklet id[illegible]ifying leaves.	
	Children make [illegible] showing samples of kinds [illegible].	
	Invite cabinet maker a[illegible] carpenter (par[illegible]nt) int[illegible] room to talk abou[illegible] ples.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Make hot plate mats or wall plaques out of wood scraps. a. Cut out b. Smooth with sandpaper c. Paint d. Shellac	
	Invite local artist into class to teach children how to draw trees.	
5. How is our federal government involved in the forestry industry? Why?	Children write letters asking for information and free materials to: a. Dept. of Interior b. U.S. Forestry Service	
	Write paragraphs about the dangers of cutting trees without restrictions.	
	Children describe national forests they have visited and tell about regulations governing their use.	
	Role play two groups of campers: a. Careless campers b. Careful campers	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
6. What is the need for people in the forestry service?	Find names of careers related to forestry. a. Use free printed matter.	Pamphlets and booklets in free material.
	b. Read Occupational Briefs.	Occupational Briefs
	c. Invite U.S. Forester into classroom.	Forest Technician Forester
	d. Listen to cassette, "I Want to be a Forester"	CE-CTA 132
7. What are the jobs related to the forestry service, and what are the good and bad features of each?	View filmstrip.	Filmstrip: "I Want to be a Forester"
	Study handbook.	Occupational Outlook Handbook - 1972-73 Edition
	Children read and report on Career Encyclopedia.	Encyclopedia of Careers Vol. II.
	Children interview Guidance Counselor for information on this question.	
	Invite Mr. McLean, Game Warden, Pulaski.	
	Exceptional readers read books about jobs in forestry, and report to class.	Books in H. S. Library. Your Future in Forestry. D. H. Hanaburgh Forest Ranger. John L. Floherty

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Children write personality sketches of themselves and tell why they think they will or will nor fit into a forestry career.	
CULMINATING ACTIVITY	Write garden club, and ask for assistance in securing and planting seedlings on the schoolground or at another locality. Plant the seedlings. Design plaque to be placed at site of planting.

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: MERCHANDISING - FROM FACTORY TO ME

One phase of Social Science on fifth grade level concerns the choices people have in making purchases of desired goods. Since children of this age are becoming more independent in their buying practices and have more money to spend than previous generaltions, emphasis on this part of their school experience should be interesting as well as worthwhile.

OBJECTIVES:

1. To help children understand what is involved in production of goods for retail sale.

2. To acquaint children with the transportation processes involved in getting products from

3. To help children recognize the role of supply and demand of goods in the production and distribution of same.

4. To help children determine what is involved in determining the prices paid for what they buy in stores.

5. To develop in children an understanding in a broad sense of kinds of jobs involved and skills needed for satisfactory fulfillment of these jobs that give them such economic choices.

44

MOTIVATING ACTIVITIES

1. Let children read and report on their reading of newspaper advertisments of goods for sale (any kind).

2. Children make a poster of clusters of items they like to buy.

3. Children determine relationship between items 1 and 2.

4. Class relates their desires to their needs in goods purchased, writes paragraphs of explanation.

BROAD OBJECTIVE: To help children understand what is involved in the production of goods for retail sale.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Where does the merchandise in our stores come from?	Have children list broad classifications of kinds of goods they can buy (i.e. food, clothing, furniture, etc.)	Chalkboard, chalk, paper and pencil.
	Show filmstrip.	CF-A-2[illegible] A Shopping Center, and record - CE-CT-A80.
	Have children discuss and name sources of goods (farm, factory, etc.) Use inquiry method of information seeking.	Chalkboard & chalk.
	Have children make fact sheets and include resume of findings in above discussions. a. Sources of supply. b. Types of manufacturers. c. Means & methods. (in broad terms)	Library references.
2. What kinds of jobs are required to produce and distribute these goods?	Children list any kind of work they think would apply to producing and distributing goods. Indicate which jobs in the list are sales jobs?	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. Why are certain goods produced? What determines what shall be produced and marketed?	Locate manufacturing centers in U. S., and in Virginia.	Old Social Studies Textbook, Living in the Americas.
	Make pictorial map of same.	Construction paper, felt pens.
	Discuss briefly with children why these cities bacame manufacturing centers.	
	Initiate listing of reasons why products are made available for public use. a. profit motive b. need c. satisfaction of desires d. etc.	Chalkboard & chalk. Concepts and Values, p. 169 - 176, 198
	Have two students read and report on two books: one about Food, and the other, clothes.	Nothing to Eat but Food. Frank Jupo, (Aladdin, 1954) Nothing to Wear but Clothes. Frank Jupo, (Aladdin, 1953)
	Make bulletin board illustrating the "From Factory to Me" theme.	Construction paper Magazines to be cut apart for pictures. Colored string or yarn. Pins or staples.
	Show filmstrips.	CF-A229 Americans at Work (has captions) CF-A201 A Manufacturing Area and cassette CF-A-201

BROAD OBJECTIVE: To acquaint children with the transportation processes involved in getting products from the factory to the store and thence to the consumer.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are different ways by which products may be transported from one area to another?	Initiate discussion by inquiry method of the main means of transporting goods in U. S. a. trucks b. railroads c. airplanes d. ships e. barges	Library references. Old Social Studies textbook, Living in the Americas.
	Assign groups to prepare posters illustrating each means of transportation.	Poster board, pens, pencils, magazines.
	Show filmstrips.	CF-A141 Modern Land Transportation (with captions)
	Play records.	CF-A75 Textiles: How They Get to Where You Shop & record C-Rec. A-49 Record C-Rec. A-51 Transportation.
	Invite long-distance Truck Driver to talk to class.	
	Write thank-you note to Truck Driver friend for coming to class.	Discovery in English, p. 254

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
2. Is there a profit involved by each business man or company as the products progress from factory to r.? Name some jobs involved. Which jobs appeal to you (student).	Read textbook and related materials. Ask for oral reports and discussions on material read. Trace one commodity from point of manufacturing to consumer. Show film on transportation processes. (optional)	Concepts and Values, p. 168-176. Library references. Film (to be selected).

BROAD OBJECTIVE: To help children recognize the role of supply and demand of goods in the production and distribution of same.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is meant by supply and demand? Plant idea to be pursued as textbook material is read.	Read textbook material on subject. (Individual silent reading assignment).	Concepts and Values, pages 169-178, for one assignment.
	Discuss text material on pages indicated.	
	Make graphs on costs involved in production and distribution. Figure percentages of interest costs on bank loans.	Graph paper, rulers. Mathematics 5, pages 266-277. Graphs study Fraction study, p.136 review
	Make word list of vocabulary involved in discussion of text material.	Chalkboard, chalk. Concepts and Values, p. 176.
	Read textbook material continuing subject matter then have group discussions.	Concepts and Values, p. 178-187, to complete assignment.
	Show filmstrip.	Filmstrip (to be selected)
2. What effect does the role of supply and demand have on sales jobs?	Have children engage in group discussions to clarify terms and ideas.	
	Report to class orally on same.	
	Invite Store Owner or Manager to talk about guide lines for employing salesmen.	

BROAD OBJECTIVE: To help children determine what is involved in determining the prices paid for what they buy in the stores.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What determines the prices you pay for what you buy?	Use inquiry method of open discussion for answers.	
	Classify answers that children give (include supply and demand concept).	
	Assign textbook material pages for individual reading and reporting.	Concepts and Values, p. 188-197.
	List factors relating to prices involved in these transactions. a. Installment buying b. Banking practices c. Charge accounts d. Desires (culture) e. Weather effects & season on perishable goods.	
	Use study prints.	C-Sp-29 Learning About Money.
	Use filmstrips and records.	CF-C2, The Nature of Money and record C-Rec.-C2 CF-C-3, Services of a Bank and record C-Rec.-C-3.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Plan field trip to Credit Union, bank, or "money institution".	
2. How do your values help to shape your choice of what you buy? Define value.	Children make individual lists of material things they value most highly.	
	Use art lesson to demonstrate high-value things.	
	Read assigned textbook pages.	Concepts and Values, p. 200 & 291.
	Have class discussion after reading of textbook pages 200-201 (& having finished entire unit on Economic Choices); class relates their list of highly valued things or goods with lists of their highly needed items to determine stable ideas of value.	
3. How can you connect prices, values, and sales jobs?	Class has open discussion, and draws conclusions.	
	Make lists of items included in conclusions on chalkboard.	Chalkboard & chalk.
	Play cassette on Workers Who Sell.	CE-CT-A90 Workers Who Sell.

BROAD OBJECTIVE: To develop in children an understanding in a broad sense of the kinds of jobs involved and skills needed for satisfactory fulfillment of these jobs that give them such economic choices.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. After goods are produced in factories, what are different kinds of jobs that get merchancise to us as concumers? Focus attention on sales work.	Children visit library and read from selected books on reserve.	Library references (to be selected at individual schools)
	Engage class in open discussion listing all jobs involved in distribution of goods.	
	Use newspaper classified ad sections to illustrate kinds of jobs involved in selling.	Newspapers, state & local.
	Display clippings from newspapers for sales jobs.	Newspaper clippings, poster or tag board, crayons for decoration.
	Have children write ads and put on bulletin board for display.	
	Have class review lists of jobs and focus attention on the importance of sales work, listing kinds of salesmen they can name.	
	Show filmstrips illustrating sales jobs.	CF-A123 My Dad Works In A Supermarket. CF-A121 My Dad Works In A Shoe Store

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Play cassette tape to illustrate supermarket jobs.	CE-CT-A121 Getting to Know the Supermarket
	Plan a field trip to a grocery supermarket, or other appropriate retail outlets.	
2. How many new sales jobs can you name after the studies and trips that have been made?	Revise list of kinds of sales jobs. a. stores b. door-to-door c. auto d. insurance e. etc.	
3. What are the duties of sales people?	Divide class into four or five groups to do research into one of the sales jobs listed above.	Library Card catalogue Books
	Report findings orally to class.	
	Show films or filmstrips on subject of sales.	Film - to be selected - book not available. Filmstrip CF-A228 Your Stores
	Invite sales person to visit class and explain his work. (Parent if possible) Have question and answer period.	
	Write individual reports on findings. Write thank-you note to sales person.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. What skills or educational requirements are needed for sales jobs that get merchandise from factory to me?	Determine personality characteristics needed for good salesmen.	Library references. (To be selected at individual school)
	Have children interview sales people. Report findings to class and on paper. Study and discuss proper procedures.	Library references.
	Have children investigate ads in local papers for sales jobs which might appeal to them.	Newspapers.
	Assign each child to write a letter answering a newspaper ad for a job that appeals to him (real or imaginary).	Discovery in English, letter writing, p. 265-267.
	Review vocational skills and/or educational requirements. Emphasize varied educational requirements from below high school completion to professionally trained people.	Library references.
	Make collages illustrating kinds of jobs, and their own particular interests.	Magazines.
	Have children learn to count money and change, (if not known), to write cash receipts, to make price tags, to prepare inventories, etc.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
4. What are the advantages and disadvantages of sales work?	Make composite lists as class activity.	Library references.
CULMINATING ACTIVITY	Make bulletin board. Plan and present skit. Establish small groups in the class who will have the broad assignment of planning, preparation, and demonstration of a sales situation, suggestions given below. Each group is given designated space. Plans are to be approved by teacher. 1. Appliance store 2. Food market 3. Book store 4. Sporting goods store 5. Plant nursery 6. Pet store (stuffed or live) 7. Furniture store 8. Car dealer 9. Drug store (Apathocary)

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Motivating Activities	1. Play game 20 questions. Headings are Animal, Vegetable and Mineral. All of these are resources.	
	2. Have a brainstorming session with the class after defining the word resources. Have children snap out a quick response of some resource.	
	3. Start a vocabulary list with the word resources at the top.	
	4. Have music teacher introduce songs that involve our resources. Learn others during the unit.	16 Tons Big John

BROAD OBJECTIVE: To help children understand that people adapt to and change their environment through the utilization of resources.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How do our environments change due to geography?	1. Show filmstrips Geography, Climate and Natural Resources. Defining the Rocky Mountain Region.	Filmstrips: Geography, Climate and Natural Resources (The Rocky Mountain States) (The Southwestern States)
	2. Divide children into groups and make murals depicting scenes from different geographical areas. a. Jungle Lands b. Mountainous Land c. Desert Lands d. Cold Lands	Encyclopedias Library Books
	3. Have children interview parents to find out information on different areas they have lived in.	
	4. Have a map of the U. S. displayed, pinpoint place of birth of each student.	Map of U. S. Varied colored pins Yarn
	5. Have resource person (preferably parent) visit classroom and discuss environment of some area in which they have lived.	

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	6. Write thank-you note to resource person.	
	7. Divide children into groups and work with study prints.	Interaction of Man and his Resources.
2. How do the farmers in a mountainous region change their natural environment?	1. Read Text pp. 121-129 A Mountain Farm and discuss material.	The Social Sciences pp. 121-129
	2. Review any information pertaining to mountain farming from filmstrip on Rocky Mountain States.	
	3. Let children choose one of the following activities:	
	a. Do the investigation into making an elevation map on page 124 in our Social Studies.	The Social Sciences p. 124
	b. Make a salt-flour map of a mountainous region. Try for a variety of places - California, Va., etc.	Salt-flour recipe.
	c. Make a physical map showing the elevation of some mountainous state.	Duplicated maps of Virginia, California, etc.

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	4. Start a chart to be followed throughout the unit with the following headings: a. Crop b. Climate (or growing season) c. Soil d. Water	Large chart 24 x 36" Magic markers
	5. Visit the Claytor Lake or Little River Dam.	
	6. Show filmstrip A Trip To A Sewage Treatment Plant	Filmstrip projector.
3. What are the resources of the central valley of California?	1. Read textbook pp. 131-140 A Dry Region and discuss content.	The Social Sciences pp. 131-141
	2. In Science class discuss the conservation of water and land both in a mountainous region and a dry region. Make a cumulative list and record.	
	3. Have children draw a picture showing some form of conservation for bulletin board: a. Dam	Paper

62

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	b. Terracing c. Irrigation d. Levees e. Canals	
	4. Visit the Water Purification Plant.	
	5. Listen to record and filmstrip Trip to an Electrical Power Plant.	A Trip to an Electrical Power Plant.
	6. Write a thank-you letter to the Water Purification Plant.	

3

BROAD OBJECTIVE: To help the children develop an awareness of the diversity of resources which they take for granted in their day-to-day life.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are some of our resources?	1. Play the Game of Interdependence. Each group choose an item in the room secretly and find out: raw material, where it came from, where it was manufactured and how materials were trnnsported. Put these on clue cards and display on bulletin board.	The Social Science Teachers Edition, p.161
	2. Have a large map of the United States and display resources (using symbols) as we discuss them throughout the unit.	United States map.
	3. Discuss and make a cooperative list of resources.	Large chart.
	4. Have each child take one resource and prepare a report and chart for class. Presentation including: a. products made from resource b. put their resource on U. S. map.	Encyclopedias

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	5. Do creative writing "If I were on a desert island without a match, what would I do to solve my problem?"	
	6. Have children work with study prints Interaction of Man and His Environment.	Interaction of Man and His Resources.
	7. See filmstrip.	The South, Resources and Manufacturing Industries. Rand McNally
		Utilizing Our Resources.
		Adding to Our Resources.
		Our Human Resources.
		Ill Fares the Land.

BROAD OBJECTIVE: To help the children gain an understanding of the scarcity of resources and the need for sharing resources through trade.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are the resources necessary in steelmaking?	1. Read textbook. pp. 143-149. 2. Show filmstrips and play cassettes: A Trip to a Coal Mine. Blast Furnace, The Story of Steel. A Trip to a Steel Mill 3. In Science class, study the resources that are necessary in steelmaking; iron ore, coking coal, and limestone. 4. Take a field trip to the limestone quarry. 5. Have a resource person from Lynchburg Foundry to give information on: a. raw materials used b. variety of products c. transportation necessary to obtain materials and to distribute products. d. Occupational choices.	The Social Sciences pp. 143-149.

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	6. Write a thank-you letter to the limestone quarry and resource person from Lynchburg Foundry.	
2. How do we share resources through trading?	1. Role play situations showing the necessity of sharing and trading of resources.	See The Social Sciences Teacher's Edition 167
	2. Do research on resources imported and exported by the United States and write up this information for presentation to class.	
	3. Working in pairs, have children make lists of foods, tools and clothing that are grown or manufactured in other regions.	
	4. Divide the children into groups and work with the study prints, Interaction of Man and His Resources.	Study print: Interaction of Man and His Resources.
	5. Do research into the effects that the need of a certain resource affects our economy. (i.e. selling grain to Russia)	

67

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. What are some occupations associated with steel? making skipmen stove tenders blowers keepers slaggers melter ladle cranemen steel pourer ingot stripper heater soaking pit cranemen roller shearman	1. Study occupational briefs. 2. Have children label the occupations and tell about the careers from the beginning to the end in the steelmaking processes by role-playing.	

BROAD OBJECTIVE: To help children perceive man's ability to use chemical technology to increase his resources and the variety of careers available in this field.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How did the shortage of rubber during World War II create a need to find a new resource?	1. Read textbook pp. 150-151 Creating New Resources.	The Social Sciences.
	2. In groups of two or three, the children can identify a problem of shortage and come up with a solution.	
	3. Have volunteers find information and inform class on: a. natural rubber, b. synthetic rubber.	
	4. See filmstrip.	The Story of Rubber Encyclopedia Britannica
2. What are the careers related to the field of rubber?	1. Study occupational briefs.	
	2. Make list of occupations.	
3. What are some other synthetic materials? polymers - nylon, orlon, acrilan, dynel; plastics; synthetic leather	1. Read text Chemicals for Modern Industries p. 151	The Social Sciences p.151
	2. Have each child make list of synthetic products found in their own home.	
	3. Have children research material on synthetic products: a. the history of b. raw material,	

69

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	c. careers available.	
	4. Make a list of synthetic products.	Large sheet of tagboard. Magic markers.
	5. Write a crettive story: What would our life be like if suddenly all of the plastic simply disappeared?	
	6. Take field trip to Radva Plastic.	
	7. Have a debate - What consequences do synthetic products have on other industries?	
4. What are the careers that are available in synthetic materials?	1. Make a list of occupations after Radva Plastics trip.	
	2. Study occupational briefs.	
5. How is petroleum refined and what does technology produce with the wasted?	1. Show cassette and filmstrip: A Trip to an Oil Well.	Cassette and filmstrip: A Trip to an Oil Well.
	2. Bring in newspaper clippings on the energy crisis and display on bulletin board.	

90

CAREER EDUCATION PROGRAM
RADFORD CITY SCHOOLS

UNIT TITLE: RECREATION-WORK WHILE YOU PLAY

APPROXIMATE GRADE LEVEL: GRADE 5

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: RECREATION-WORK WHILE YOU PLAY

This unit on careers in recreation is designed for the fifth grade class. It is hoped that the children will become aware of the need for a community recreation program as a part of everday living and of the ways in which it contributes to a well-rounded life. It is necessary, therefore, that children know about jobs related to recreation, and to gain an appreciation for this world of work.

OBJECTIVES

1. To help children understand the need for recreation as a part of wholesome living.

2. To help children develop and strengthen the concept that some play is necessary in a well-rounded life.

3. To point out to children the economic involvements in setting up a recreation program.

4. To guide children in developing an understanding of the numerous careers in recreation, and to realize how individual talents and interests and training may lead to procurement of jobs in this field.

5. To help children become aware of the advantages and disadvantages in recreation work.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Motivating Activity	Invite Recreation Staff members to class to talk with children about their work in the Radford Recreation Department.	Mr. and Mrs. Joe Hodge
1. How does the recreation program in our city contribute to our way of life?	1. Make a cooperative list of facilities in our city which come under the direction of the Recreation Department.	
	2. Make a chart "Fun in Our Town" using the above list.	Tagboard Magic Markers
	3. Make a frieze on the blackboard or a long sheet of paper showing recreation areas in our town.	Paper Colored Chalk
	4. Children interview parents to determine the ways in which they use the recreation program, and report to the class.	Parents
	5. Discuss with the class types of recreational activities they have participated in during the summer. Present to class.	
	6. Draw pictures showing the above activities.	Manilla Paper Crayons

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIALS
	7. Teacher set up a reading table of books and pamphlets on recreation activities.	
	8. Begin a collection of articles made by the children in any area of recreation activities.	
2. What are the recreational needs of our city?	1. Use chart of recreation facilities in our city as a guide and list additional civic needs such as: a. public swimming pool b. additional library facilities, etc.	
	2. Use city map to locate recreation areas.	Map of City of Radford.
	3. Choose one item from #1 and draw pictures showing the civic needs.	Paper Crayons
	4. Invite a member of Recreation Department to classroom to discuss recreation needs, and, what plans, if any, have been made as to fulfilling the same.	Mr. Dave Bisset
	5. Write Thank-You-Notes to Mr. Bisset.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. What does the field of recreation involve?	1. Make an individual list of all areas in which recreation is involved, such as: a. City Recreation Dept. b. Boy Scouts, Girl Scouts, Y.M.C.A., Kiwanis Club, etc.	
	2. Compile a composite list of the above.	Tagboard Magic Markers
	3. Collect pictures and begin a bulletin board showing the areas of involvement.	Magazines Scissors Glue
	4. Role play areas of involved activities.	
	5. Children bring in newspaper clippings about recreation activities in our city and report to class.	Newspaper - Radford News Journal
	6. Read from material on reading table and make a written report to be read to the class.	
	7. Children get city budget and enlarge the Recreation Department Budget and put on wall.	Budget, City of Radford
	8. Children research and report to class as to how the city program is funded.	
	9. Plan activity for making: a. bean bags b. checkerboard, etc.	Beans Material (cloth) scissors, needles, etc.

78

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
4. What are the careers that are available in the field of recreation?	1. Compile a list of the various jobs in the field of recreation. 2. Assign these careers to groups to prepare oral reports to be given to class. 3. Use reading table to research careers and discuss. 4. Make collages showing recreation careers. 5. Take a field trip to St. Albans to observe recreation facilities thers. 6. Show filmstrip 7. Plan and begin a class booklet on careers in recreation. 8. See filmstrip on careers.	Tagboard Magazines Scissors Glue St. Albans Filmstrip: Recreation Park and Playground Workers. CF=A155 The Library and the Librarian CF-A152
5. What qualifications are necessary for an individual to work in recreation?	1. Discuss with the class, and make a list of qualities necessary for an individual to have in this field, such as: a. Sincere interest in people. b. Leadership ability, etc.	

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	2. Use comic books to read and role play careers.	C286-Comic Books "Popeye and Hospitality and Recreation Careers"
	3. Make a chart listing qualifications.	Tagboard Magic Marker
	4. Study and report to class from occupational briefs about recreation-related careers and qualifications.	C98-Occupational Briefs
	5. Bring in a staff member from Recreation Department to discuss the advantages and disadvantages of work in the field of recreation.	Recreation Department Staff Member.
	6. Children analyze their own personal traits as to ability, etc.	
	7. Children write articles about themselves as to their talents and interests in the field of recreation. Read these to class.	
Culminating Activity	Have a hobby show.

RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: Rocks and Minerals
Treasures Beneath Your Feet

Much has been said in recent years about conservation and ecology and this has resulted in increased interest, on the part of children, in our natural resources and their importance to our economic and social life.

The study of rocks alone is intriguing to fifth graders and leads naturally into the study of other underground treasures and oddities.

It is desirable that after working on this project the students will experience an increased awareness of the value of underground treasures, as well as an understanding of the opportunities they may open up to them for employment in their adult lives.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIAL
Discuss bulletin board, prepared by teacher, showing volcanoes and caverns. (a) Stress volcanoes as a source of rock. (b) Point out importance of heat and pressure to all rock formations.	

BROAD OBJECTIVE: To help students understand the value of the ingredients in the crust of our earth as part of our life style; to guide them in understanding that this part of our natural resources is vital in conservation efforts, and that many jobs are created because of the presence of these treasures and are essential to gaining maximum usage from them.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are the treasures inside the earth?	Read, study and discuss text p. 35-45 p. 342-358	Text: Concepts in Science V
	Learn names of three rock groups and some kinds of rock in each group.	
	Learn spelling of the above.	
	On science table display, for handling and examination, commercial rock collections.	Rock collections from library
	Children make individual rock collections, identify, and label.	Rocks Boxes Paper labels
	Prepare reading table of books about rocks and minerals for free reading and examination by students.	Books from library
	Perform experiment to make crystals.	Text: Concepts in Science, p. 38
	Test limestone and marble to establish similarity.	Use vinegar on each to make carbon dioxide, proving presence of calcium carbonate.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	View filmstrips.	Filmstrips: Rocks & Minerals The Rock Families (Soc. for Visual Ed.)
	Invite geologist to give demonstration on collecting and identifying rocks.	Dr. Benson
	Compile a list of minerals and relate to geographical areas.	Encyclopedias
	Read and report on encyclopedia accounts of precious stones.	Encyclopedias
	Learn to spell most familiar metals, minerals, and rocks.	
2. How do these treasures affect our way of life?	Make charts of pictures showing different rocks, minerals, and precious stones.	Tag board Magazines Glue Rulers Magic markers
	Tour school plant to find any apparent uses of rocks and minerals.	
	Report on kinds of coal and relate to geographical areas.	Encyclopedias Maps
	Report on different methods of mining coal - strip shaft slope	Encyclopedias

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Discuss current problems caused by these methods and their relation to conservation.	
	Write letters to Bureau of Mines for information regarding safety regulations in mines.	
3. What careers are related to rocks and minerals?	Working in teams, study occupational briefs and report to class.	S.R.A. Occupational Briefs
	Locate on U.S. map industrial areas where coal is an important factor in production.	U.S. map
	Visit Lynchburg Foundry.	
	Make cut-out frieze showing job roles described in earlier reports.	Long sheets of wrapping paper. Construction paper Scissors Glue Crayons
	Role play jobs for class to guess identity of job.	

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Field Trip: Visit the Radford Limestone Quarry to find answers to the previously established questions: 1. How is the limestone quarried? 2. What proce-ses are used in the plant after quarrying? 3. What are the different types of jobs seen? 4. What are good and bad features of the jobs?

UNIT TITLE: FOOD SERVICES

APPROXIMATE GRADE LEVEL: GRADE 6

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: Food Services

This unit on Food Services is planned for a sixth grade class, but with alterations it could be used on other grade levels. The unit begins with a study of nutrition as this age group will eat those foods which appeal to their taste and convenience unless they have guidance in understanding the relationship of a well-balanced diet to health and strength.

The study of nutrition gradually leads to a study of food preparation in the home and finally to the food industry and the variety of associated occupations. Emphasis is placed on food producers and food service because of the great number of occupations involved.

Objectives:

1. To help students understand the importance of a well-balanced diet to health.

2. To help students develop an interest and awareness of the various job opportunities relating to food service.

3. To help students understand the importance of food services to the individual and the community.

4. To help students develop the attitude that all work has dignity and makes a contribution.

5. To review basic food groups and daily requirements of each.

6. To help students learn to plan menus.

7. To help students become conscious of food preparation in the home.

8. To help students become aware of the dependence of people on the food industry.

9. To help students become aware of the occupations associated with food service.

10. To help students relate the jobs associated with the food industry to themselves and their likes, dislikes, and abilities.

BROAD OBJECTIVE: To help the students become aware of the importance of a well-balanced diet.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are you? (You are what you eat)	Class discussion about "what each person is." Body is many cells. View microscopic slides of different human body cells. Display posters of malnourished individuals vs. nourished ones. (Animals)	Human body model. City Health Director, Dr. Mary Tom Long. College Home Economics instructors. Book: Cobb, Cells Zappler, From One Cell to Many Cells. Pamphlet: Your Food-Chance or Choice? Booklet: How Your Body Uses Food.
2. What are the kinds of food our bodies need?	Students make a wall chart to include the foods(protein, fat, carbohydrates, water minerals, vitamins) and why we need them. Produce skits in class to show many ways of using energy. Display wall chart "How Your Body Uses Vitamins."	Book: Leverton, Food Becomes You. Filmstrip: You and Your Food Young American Film Health Education Guide Grades K-6 State Board of Education

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. What are the four basic food groups and the daily requirements of each?	Display poster of 4 basic food groups.	Text book: Laidlaw, Health, 1966, Grade 6 Chapters 4, 5 and 6, p. 58-108.
	Make paper mache foods to illustrate the 4 main groups.	
	Make tests for nutrients in food. (Class demonstration)	Iodine and bread-turns starch blue. Burn mashed fruit and carbohydrate is ash. Burn protein for bad smell.
	Students keep a record of all the food they consume in a 24-hour period and then evaluate what they have eaten in terms of daily food requirements and balanced meals.	Charts on wall for reference. Booklets on food passed out.
	Each pupil must plan a balanced menu for one day.	Dietician will be resource person at this point.
	The class together prepares school lunch menus for a week. School cafeteria manager will give assistance.	School cafeteria manager.
	Oral reports on food science and history of foods.	

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	The teacher should encourage the students to use recipes and to try preparing food at home. Possibly a collection of favorite recipes could be started.	Children's Cook Books in library.

BROAD OBJECTIVE: To help the students become more aware of foods in the home.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are things to be considered when planning a meal?	Class discussion of the range of food prices and differences from store to store.	
	Obtaining prices of items from the grocery.	
	Have students bring in empty boxes and cans which still have price on them.	Newspaper grocery ads.
	Discuss different methods of preparation. Have one mother come to class to discuss recipes and prepared mixes, etc., and the preparation of food in the home. Cooking time and food storage should be included.	Parents.
	Cook a dessert in the room. Invite teachers in to be served.	
2. How is a good eating invironment established in the home?	Practice table settings with each student having a turn.	
	Make centerpieces which might make a table attractive and interesting.	
	Make burlap place mats.	10 yards burlap.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Role playing activity portraying a typical family eating dinner.	
	Class discussion of good table manners.	Book: Book of Etiquette
	Home Demonstration Agent can come to class and explain her functions and also talk about meal planning and preparation in the home.	Resource Person: Home Demonstration Agent
	Students plan a meal and shop for the necessary items at several stores in order to spend the least amount of money.	

BROAD OBJECTIVE: To help the children become aware of the dependence of people on the food industry and the variety of occupations in this industry.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Who are the food producers? Farmers 1. Dairy farms 2. Cattle farms 3. Vegetable farms 4. Grain farms 5. Livestock(hog) farms. 6. Peanut farms 7. Fruit farms or orchards.	Class discussion of the various food producers and the areas in which food is produced. Make a map of the U.S. and indicate areas where food is produced. Put a sample of the food in the appropriate area on the map.	Triggs Dairy Farm. A farmer Agricultural expert from V.P.I. Books from library: Johnson, Lois, What We Eat Wise, William, Fresh, Canned and Frozen. Tannenbaum & Stillman, Feeding the City. Eberle, Basketful Hammond, Wheat From Farm to Market. Petersham, Let's Learn About Sugar Orr, Feed Day, Eating and Cooking Around the World. Smaridge, The World of Chocolate Buehr, Salt, Sugar & Spice Hastings, At The Dairy
	View filmstrips: (Eye Gate) The Baker The Dairyman The Butcher The Fruit and Vegetable Store	Filmstrips: (Eye Gate) The Baker The Dairyman The Butcher The Fruit and Vegetable Store
	Display study prints on the dairy helpers.	Study Prints-The Dairy Helpers

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
2. What are the occupations associated with producting food?	Students begin making a series of occupational brochures portraying the various occupations. Farmer Farm manager Farm hand worker Rancher Agri-Extension Agent Vocational Agri Instructor Grain buyer Dairy manager Dairy workers Meat packers Home economist Home demonstration agent	Extension service at V.P.I. (Agriculture Instructor and Extension Agent) Dairy manager Field trip to dairy or to agriculture experimental station at VPI&SU Correspondence with food manufacturing company.
	Resource persons to visit class to give first-hand report on jobs and what they are like.	SRA work Widening occupational roles kit.
	Interview as many persons as possible who hold these jobs. Use instamatic camera to take pictures of the individuals interviewed.	
3. Who are the food distributors?	Exploration of the ways food is distributed to food manufacturers, produce companies, grocery chains, grocery stores, restaurants, institutions, and firally-the home.	Kroger Company official (Manager-Manpower) Sales representative(Mr. Hager) Small store owner (Ted Bess or Tony Darden)

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	a. By individual research and illustrated reports. b. Kroger manager to visit class and describe the distribution of food to the stores in the Kroger chain. c. Small store owner to tell class about distribution to his store.	
4. What are the occupations associated with distributing food?	Students make occupational brochures portraying the various occupations to add to the class collection. Truck driver Dairy products plant manager Milk truck driver Sales representatives	Truck driver who delivers to the school. Milk truck driver.
	Have local driver speak to class about his job.	Resource person.
5. What are the occupations associated with grocery stores and chains?	Students make additional brochures for grocery stores. Store manager Check-out clerk Meat cutter or butcher Assistant store manager Bag boys Produce manager Stocker Bookkeeper	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Have parents who may have these jobs come to class to talk about these jobs. Field trip to grocery store to see the different work stations, to gain an understanding of the responsibilities of each job and the importance of each job.	
6. What are the occupations associated with restaurants?	Make additional brochures for restaurant occupations. Waiter Waitress Bus boy Head cook-cook helper Manger Sanitation engineer Cashier Maintenance Hostess Menu Interview as many of these people as possible, take pictures of each and report to class. Have restaurant owner talk to class.	Restaurant manager (Hotel-Mr. Claflin) Filmstrip: The Waitress Waitress(Mrs. Barclay) A cook(Raymond Hill)

66

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
7. What are the occupations associated with food preparation at institutions? School and college Hospital Prison(Bland-self-supporting prison by producing all the foods used)	Students make brochures on the additional occupations not covered already: Dietician Nutritionist Sanitary engineer Bacteriologist Maintenance Interview persons with these jobs.	Radford College cafeteria administrator(Ted Gardiner) Bland Correctional Farm official.
	Field trip to school cafeteria to learn about the different jobs involved.	Filmstrip: The School Cafeteria Worker.
	Have Mrs. Landrum, cafeteria director, talk to the class.	Mrs. Landrum, school cafeteria director. Hospital Dietician(special diets)
	View film which gives a picture of the entire food industry.	Film: Where Do I Go From Here? State - 66212
	Have students choose the one job in the food industry which appeals to them most(while considering interests and abilities) and act out the duties of(in costume, if possible) that job for the class.	

SUBJECT MATTER TIE-IN

Social Studies

1. Where food is produced
2. What foods must be imported
3. Food price control
4. Surplus food supplies
5. Farm subsidies
6. Big business
7. Follow wheat products from beginning(filmstrip in library)
8. Farming

Language Arts

1. Manners associated with eating
2. Vocabulary list(spelling, penmanship, and enunciation)
3. Conversation in restaurants, etc.
4. Advertising products
5. Write letters of inquiry to large food companies

Math

1. Comparison of different prices for different brands
2. of a given food.
2. Totalling sums on grocery lists
3. Budgeting money
4. Comparison of cost of food items when packed in different size packages.
5. Study measuring units used in a store
6. Comparison of Thursday ad prices with special attention to "sales." Calculations of savings on "sales."
7. Breakdown of food cost per meal.
8. Salaries of employees, use of cash register, coupons, and trade stamps.

Art - activities including

1. Paper mache foods
2. Making place mats
3. Making table centerpieces

Music

1. Dining music

INTRODUCTION TO: ME----A CARTOGRAPHIST?

This unit written in contract from is designed for 6th grade Social Studies. The complete contract is given to each student, their designed grade is recorded, and work must be completed by a designated date. It shows the jobs involved in cartography. It helps develop the ability to read and interpret maps and globes.

BROAD OBJECTIVES:

1. To make students aware of present day careers in cartography.

2. To enable students to locate a place if given its latitude and longitude, to use map keys, and to secure different kinds of information from different kinds of maps (physical, political, special-purpose, etc.)

CONTRACT UNIT ON CARTOGRAPHY

NAME: _____

I understand that in order to receive a minimum passing grade (D) for this unit of study, I must complete all of the tasks marked required on the list below. In order to receive a grade of C, B, A, one must in addition complete the optional tasks specified below as required for those grades. I also understand that each task completed must be turned in and will be rated on pass or fail basis. If the task does not pass, it must be done over or revised and receive a pass before credit is given.

D - Complete only required work.

C - Required work + 6 optional tasks and at least a D average on quizzes.

B - Required work + 8 optional tasks and at least a C average on quizzes.

A - Required work + 10 optional tasks and at least a B average on quizzes.

The grade I wish to contract for is _____.

Parents Signature _____

Signed _____

I. Requirements:

1. A, B, C, student must take notes during class discussion.
2. Students must read carefully p. 325-330. The Social Sciences, Harcourt, Brace, Jovanovick. Do on paper questions p. 330.
3. Reading Requirements: (Related to Maps)
   (a) "Sea Rovers of the North", p. 64-70, Reading Power (Harcourt, Brace)
   (b) "Marco Polo's Great Adventure" p. 79-88, Reading Power (Harcourt, Brace)
4. View required films and filmstrips.
5. Field trip to drafting lab. at Community College.

II. Optional Tasks:

1. Make a chart showing the jobs in developing a completed map.
2. Make a vocabulary list with definitions of words related to cartography.
3. Write a two page report in ink on the topic, "How Maps Are Made". (World Book Encyclopedia)
4. Draw a map including longitude and laditude lines and color in the polar, temperate, and tropical zones.
5. Draw a population map. (Include a legend)
6. Draw a rainfall map with legend and scale.
7. Draw a physical map with legend and scale.
8. Draw a product map of a certain area of the world.
9. Draw a polar map with scale and legend.
10. Extra Reading:
    C=10 pages
    B=15 pages
    A=20 pages

    Suggested books for reading:
    Cutright, Living In The Old World.
    Ahlschwede, Exploring The Old World.
    McFall, Christe, Map Drawing.
    Oliver, John E., Map Drawing.
    Epstein, Sam, Maps.
    McFall, Christe, Maps Mean Adventure.
    Oliver, John, Maps.

11. Work and check three activity cards (as developed by teacher) related to map reading.
12. Make a booklet of several different types of ready-made maps.
13. (a) Write a formal business letter asking for an interview with Rand McNally & Company. (A prominent map making company)
    Progress in English, p. 355.
    (b) Role-play an interview with this company.
14. Fill out an application for a job as a cartographer with C. S. Hammond & Company. (Prominent map making company)
15. Using a school supply catalog, order a political map for use in a classroom.

16. Make a chart showing the history of map making from Columbus to present day.
17. As a small group, present to class an assembly line in making a map. (draftmen, lines, colors, words, numbers, symbols)
18. Make a relief map of one of continents using a salt-flour recipe.

INTRODUCTION TO: "Greek and Roman Mythology's Relationship with Today's Industry"

This unit is designed for the sixth grade level in social studies.

It shows the relationship of today's industries with the myths of the early Greeks and Romans.

Since this grade level studies old world history, it is important that they learn the contributions made to our occupations of today.

Motivating Activity and Background Material:

Read to the students about the main Greek Gods. Have them look up in reference books and make reports on the various Gods.

Learn Greek and Roman names of the Gods.

Bullfinche's Mythology and book listed from the Library should be used for this activity.

BROAD OBJECTIVE: (1) To make students aware of present day careers as they relate to Greek and Roman myths.

(2) To make students aware of symbols from mythology used in relationship with occupations of today.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What symbols from mythology often appear in trade marks used today?	Students discuss these trade marks which are reminders of famous myths. 1. Goodyear Tire 2. Socony Mobil Oil 3. American Medical Assoc. 4. Florists Telegraph Delivery 5. Mercury Auto 6. Missiles-Thor and Nika	World Book-Vol. M-13 p.814
2. Who were the Greek and Roman gods?	Show a chart of gods and goddesses in Greek and Roman mythology. (Teacher develop) Students do individual research on mythology in library in books and encyclopedias. Reports on particular god or goddess in which they're interested.	World Book Encyclopedia-Vol. M-13 p.816 Field Enterprizes 1964 Library books listed in Bibliography on Greek and Roman myths.
<u>Language Arts Tie-In</u> What god or goddess interested you most?	Draw a picture illustrating the character as you see it. Write a story about it. Show overhead transparencies and filmstrips on Greek and Roman civilizations.	Filmstrips & transparencies. Ancient Civilizations: Greece and Rome (J.H. Pence Co.-Social Studies T)

CONTINUED: To help students gain an understanding of how we have come to possess and enjoy the comforts and conveniences of the present day through the influence of Greek and Roman mythology.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. What did the Greek god, Hermes, and the Roman god, Mercury contribute to our times?	Class discusses this myth of the messenger god and his winged feet whose symbol is used in florist telegraph delivery and Good Year Tire and Rubber Co. Other industries that could be studied at this time are: Ford's Mercury Space industry and missiles	Resource person from florist to explain how this delivery works.
4. How did the myth about Hephaestus and Vulcan inspire the pioneers in the blacksmith, automobile, rubber, and fuel industry?	Class discuss the blacksmith for the ideas which led to: 1. Iron industry and metallurgy (Lynchburg Foundry and Inland Motors) Students may ask Inland Motor representatives about Inland's connections with NASA.	Resource persons: 1. Leading metallurgy consultant(Wally Levi) Representative from Lynchburg Foundry shell shop. Representatives from Inland Motor(Ray Hoyt, Corwin Mathews)
5. How did the myth about Demeter and Ceres lead to: 1. Growing of flowers and vegetables?	Students read and discuss the myth of the god of agriculture. Discuss the growth of florist shops and nurseries, bringing in the careers involved, such as, flower arranging, decorating and landscaping.	Library books on myths(listed in Bibliography) Other resource people may be asked to come to the class to discuss their occupations: Interior decorator Architect Landscaper Nursery employee Florist arrange flowers

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Discuss the phases of farming and truck gardening in N.J.	Pamphlets from N.J. Chambers of Commerce.
	Discuss the growing of vast amounts of vegetables for refrigerated food industry and grocery chain stores, on Del-Mar-Va peninsula.	Representatives from A&P, Kroger, etc. could appear as resource people.
	Science tie-in - Grow beans in a glass jar to observe the root and the plant develop	Beans Jars Soil
5. 2. Making of breakfast foods?	Class selects its favorite breakfast foods. Make a chart showing pictures of breakfast foods and the ingredients necessary for body building.	Containers of breakfast foods and pictures from magazines to be used for charts. Poster board
3. Making of the calendar?	Class discusses early peoples' awareness of climate and seasons.	Almanacs
	How the calendar developed from early days to present time(bring in how the Greeks marked time with the Olympic games).	Books showing: Egyptian calendar Julian calendar Gregorian calendar
	Class can make the different calendars developed during the years and compare these with our calendar today.	World Book Encyclopedia Vol. C

CULMINATING ACTIVITY:

CULMINATING ACTIVITIES	RESOURCES AND MATERIAL
1. Students study the council meeting of gods and goddesses.	
Students make costumes representing gods and goddesses and conduct a council meeting of gods and goddesses.	Materials needed:
Students write dialogue for the council meeting.	
2. Along with this, other students could represent industries and careers of today that relate to the myths studied.	
Students make costumes or items representing the industry or career.	Ex. of materials: 1. Tire-Goodyear Rubber Ind. 2. Cardboard Mercury automobile 3. Missile out of tin cans from cafeteria.
Students write the dialogue to go with the council meeting.	
The culminating activities could be performed in an asrembly program for the other classes.	

The last part of this unit could develop into another unit showing how the early Greeks originated the Olympic games and how they have influenced recreation, sports, and body building. Also, the many careers stemming from them.

INTRODUCTION TO: ECOLOGY

This unit is written for a seventh grade science class and begins with a study of land biomes. The main objectives are to cause the students to become aware of the need for the protection of our natural resources and to acquaint the students with the occupations involved in conservation. The students should be allowed to explore various occupations and be guided to realize that each individual is responsible for his environment.

BROAD OBJECTIVE: To help students become aware of the variety of land biomes found on the earth and to increase student knowledge of the immediate environment.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is a biome? Natural association of animal and plants in a given climate.	Play a game and match the picture of the land with a typical animal living there. Some will be more difficult than others.	Pictures of arctic, tundra, spruce-fir forest, temperate hardwood forest, tropical rain forest and desert surroundings available to be matched with a variety of wildlife pictures(National Wildlife Federation Animal Stamps).
	Discuss the relationship between plants and animals and climate and why certain animals live in certain regions.	Check BSCS Green Version High School Biology by Rand McNally - similar type of exercise.
2. What are some different biomes? Arctic, Tundra(Canadian Arctic), Spruce-fir forest, Temperate forest, Tropical forest, Desert, Mountains	Read section in text entitled, "Life from North to South", p. 44-50.	Text: Life, Brandwein, Burnett, Stollberg, p 42-57.
	View filmstrip series, Land Biomes.	Filmstrips: Eye Gate-The Desert, The Tropical Rain Forest, The Middle Latitude Deciduous Forest, The Tundra, The Mountains

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Make a frieze depicting the different biomes, including plants, terrain and animals.	Three large poster boards or paper on rolls
	Begin making student vocabulary lists.	
	Set up a reading table with several books and pamphlets.	Books: Berrill, Wonders of the Woods and Desert at Night. Dersal, Wildlife for America. Hastings, Animal Life in the Wilderness.
3. What is typical of the biome in which we live? A wide variety can be found in any small area.	Individual student reports on animals and plants characteristic to our area (temperate) and found in the city. Make a scrapbook of these reports with pictures and display on the reading table. One student can be chosen to design the cover. Take a trip to Wildwood Park to observe the wildlife present.	Book: Cohen, Animals of the City Encyclopedias

BROAD OBJECTIVE: To help students understand the necessity of environmental conservation.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Why does man need to conserve resources? They cannot be replaced.	Read cases of disastrous misuse of the environment in text, p. 513-516. Discuss each separately.	Life, p. 513-516.
	Display posters of man-created pollution.	
	View filmstrip, "America's in Trouble," which explains which resources cannot be replaced. Have several interested students tape the narration and then reshow filmstrip.	Filmstrip: "America's in Trouble" National Wildlife Federation
	Collect newspaper clippings dealing with diseases related to pollution.	
	Listen to ecology songs.	Record: "The People are Scratching"
2. What are some local conservation problems? Litter(paper, cans, bottles) Vacant lots Air pollution Small sewage plant Burning of trash Water pollution Junk cars	Assign students certain areas in the city to observe photograph, and report to class about existing conditions. What is presently being done about these problems?	

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Interview resource people if they cannot visit class. Examine the various conservation problems in our city.	Resource people: Sewage plant manager Sanitation Dept. official Water purification plant official Civic beautification commission president. Local Va. Air Control Board official.
	Discuss and plan a class project to help alleviate some local problems. Some possibilities are: Collection of trash on the streets. Beautification of school and/or school grounds. Students will be able to suggest others. A scrapbook of the project will be kept.	What about the economics of improving our environment? How will it effect the local tax rate? Two large green poster boards.
	Have students make clean-up, paint-up, fix-up poster depicting cleaning up Radford. Display these downtown and in our school.	65 pieces of oak tag board magic markers. Colored pencils.

124

BROAD OBJECTIVE: To help students understand the different kinds of conservation and the variety of careers associated with each.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Why is water conservation important? Economic importance. Necessity for life. Chemical pollution control. Watershed protection. Power production. Recreation.	Divide the class into groups for research of water topics. Provide books, pamphlets, etc. for research. Research should include personal interviews of local people involved in each area. Again the economics of thesituation must be considered. Will people lose jobs if a polluting plant is forced to close down?	Encyclopedias. Pamphlets: "The State of Virginia's Environment." "Industry, Environment, Virginia" Governor's office-others,also. Books: Carona, Water Green, Water Meyer, Water at Work Stevens, The Town That Launders Its Water Bauer, Water Riches or Ruin
	Obtain water samples from 3 locations in New River and test for certain pollutants.	Water testing kit.
	Collect newspaper clippings and magazine articles about polluted water or water conservation programs.	
	Take a field trip to the water filtration plant to observe the processing there. Attention to the employees will also be involved.	Field trip.
	View filmstrip, Water Conservation.	Filmstrip: Water Conservation

CONTINUED:

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
2. What are some occupations associated with water conservation? Filtration employees. Water patrol. Water safety instructor. Life guard. Pollution control chemist. Water Control Board employee. Dam construction engineer. Others students think of- Chemist Hydraulic engineer	Begin making a list of conservation careers and responsibilities of each on large poster boards to be displayed. Student research in SRA occupational briefs to find as many occupations as possible associated with water conservation.	4 poster boards. Large(12x18) white drawing paper. SRA occupational briefs. Booklets: "The State of Virginia's Environment." "Industry Environment Virginia"
3. Why is soil conservation important? Economic importance Protection against soil erosion by wind, water, fire damage. Protection of non-replaceable resources.	View filmstrip, Soil Conservation. Review pamphlets on soil conservation and how it is prevented. Discuss recent floods and reasons for floods. Collect soil samples from a variety of areas in the city and test these for the various minerals necessary for plant growth. Students can bring home garden soil samples.	Filmstrip: Soil Conservation Pamphlets Sudburry Soil Test Kit.

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Germinate seeds and plant them in different kinds of soil to find out which soil is best for plants. Then use soil test kit to check for minerals present.	
	Discuss why metals should be recycled.	
	Plan a class activity to help with the city can collection.	
	View filmstrip, Mineral Conservation Today.	Filmstrip: Mineral Conservation Today
4. What are some occupations associated with soil conservation? Soil analyst, County agent, Agricultural Extension employee, Farmer, Scrap metal dealers	Add to list of conservation careers and responsibilities. Use SRA occupational briefs.	SRA occupational briefs
	Have a resource person talk to class about his own job (county agent, hopefully).	Resource person
5. Why is wildlife conservation important?	Individual student research on endangered species. Reports to class.	Library books: Van Dersal, Wildlife For America. Hess, The Curious Raccoons. Laycock, Wild Refuge. Smith, The First Book of Conservation.

127

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Important to stress inter-relationship between: animals - animals animals - plants water & mineral cycles food webs/chains	Hogner, Conservation in America. Green, Wildlife in Danger. May, The Big Island. Seton, Animal Tracks and Hunter Signs. Barker, Winter-Sleeping Wildlife. Hornblow, Animals do the Strangest Things. Selsam, Animals as Parents. Berrill, Wonders of Animal Nurseries. Barker, Wildlife in America's History.
	Display pictures of endangered species. Class discussion of why we need wildlife and the reasons some species are in danger of becoming extinct. Point out certain pamphlets on reading table having to do with wildlife.	
	Students make terrarium containing small animals and plants. Maintain in room.	Text: Life, p. 434-435. Magazines: National Wildlife Virginia Wildlife

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	View bird study prints available. Try to learn to identify different species of birds.	
	Make animal puppets and have a puppet show to role play animal problems.	Material needed to make puppets.
6. What are some occupations associated with wildlife conservation? 1. Forest ranger 2. Zookeeper Game warden Biologist Naturalist Zoologist Ornithologist Biological aid Veterinarian	Add to existing list of careers and responsibilities.	
	Have a game warden come to class and explain his job.	Resource person
	Interview other persons involved in occupations associated with conservation of wildlife.	
	Role play game warden doing his job.	

129

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
7. Why is conservation of forests important?	Make a collage of products from the forest using magazine pictures or drawings.	Old magazines which children bring from home.
	Discuss ways forests are damaged.	Paper Manufacters
	View filmstrip, Conservation of Forests Today.	Filmstrip: Conservation of Forests Today.
	List recreation provided by forests.	
	Map the location of the national parks.	National Geographic
	View filmstrip, Yellowstone National Park.	Filmstrip: Yellowstone National Park.
8. What are some occupations associated with conservation of forests?	Add to existing list of careers and responsibilities.	Book: Hyde, What Does a Forest Ranger Do?
Forester Firemen Tree markers Forestry aides Forest recreation supervisor. Naturalist	Have a naturalist from Claytor Lake State Park visit the class and discuss his job.	
	Individual student research in SRA occupational briefs.	SRA occupational briefs.

130

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
11. What are ultimate problems of conservation? People and population Individual responsibilities: 1. Be informed 2. Be interested 3. Write letters 4. Ask questions 5. Teach others	One of the filmstrips will have already given the facts about population growth. Have a panel discussion on how to deal with the problems of a rapidly increasing population. Maintain a conservation newsletter for the school to be published and delivered to each classroom.	

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Play the game, "What's My Line," using the responsibilities associated with any career related to the environment as the clue. The class must guess the occupation.	
Hand out a word search puzzle to include the words in the vocabulary list.	
Make jewelry from scraps and discarded articles that would ordinarily be thrown away.	
Several interested students will make a nature trail at a local park. Signs will be made to mark the trail.	
Design a brochure advertising some site in the community of interest-possibly the school. Illustrate the brochure.	
Make posters for display in school to depict good conservation practices at school(tag board).	

SUBJECT MATTER TIE-IN

Language Arts

Oral reports
Written reports on reactions to resource persons or field trips.
Writing letters for information.

Math

Work problems dealing with mileage charts to and from park sites in Virginia, or national park sites.

Social Studies

Importance of forests and soil for products.
National Park Service.
Governmental agencies which protect the environment.
Legislation protecting the environment.
Problems resulting from too many people, crowding, etc.

Music

Ecology songs.
Students might write their own songs.

Art

Make a mural depicting scenes from a national or state park.

BROAD OBJECTIVES:

1. To acquaint the student with the careers involved in good speaking.

2. To develop skills in oral presentation.

CONTE.. QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What do we need to be a good speaker?	Discuss and list on board what makes a good speaker.	
2. Do I know any good speakers?	Scan table of content to find lessons that would help to develop speaking abilities.	Colin, David. Our Language Today, American Book Co., New York, N.Y. 1966. Hand, John S. Progress In English. Laidlow Bros., River Forest, Ill., 1972. Growth In English. Laidlow Bros., River Forest Illinois, 1972. Pollock, Words and Ideas. MacMillan Co., New York, N. Y., 1960.
3. In what careers do we need to be a good speaker?	Discuss poster that are displayed. Introduce people who will be coming as speakers. Organize questions students will want to ask resource persons.	Keefe, Barbara. Careers for Good Speakers. J. Weston Walch. Words and Ideas, p. 150.

157

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
4. What do persons in various careers do that requires good speaking?	Three or four of these will be asked to speak. Field trip to radio station to observe an announcer at work.	Possible resource areas for speakers: Lawyer Doctor Politician Interpreter Clergyman Sales Career Announcer Actor Personnel Clerk Receptionist
5. What career is of interest to me?	Choose a career for oral presentation and role play working situation. Schedule interview with chosen career person if possible.	
6. How do I schedule an interview? What questions should I ask?	Study and discussion of textbook pages.	Our Language Today, Grade 6, p. 256-257.
7. How do I present my career orally?	Give a 3 to 5 minute presentation on career choice. The class will score each person on a checklist for: Points - 3-Good 2-Fair 1-Poor	

Name	Posture	Pronunciation	Pitch and Stress	Poise	Total

CAREER EDUCATION PROGRAM
RADFORD CITY SCHOOLS

UNIT TITLE: MEASUREMENT AND THE METRIC SYSTEM

APPROXIMATE GRADE LEVEL: GRADE 6 OR 7

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

OBJECTIVES:

1. To help students recognize that his interest, aptitudes and achievements will influence his future.
2. To help students understand that preparation and proficiency are required for most jobs.
3. To help students recognize that behavior and skills used in school also are used on the job.
4. To help students understand personal interest and characteristics influence career decisions.
5. To help students develop some of the skills needed on the job.
6. To help students become aware of skills, attitudes and habits associated with employability.
7. To help students recognize that accepting a task he also acce s certain responsibilities.

INTRODUCTION TO: MEASUREMENT AND THE METRIC SYSTEM

This unit on measurement and the Metric System is planned for a sixth grade class, but with alterations it could be used on other grade levels. The unit begins with a study of the different types and units of measurement, to acquaint the students with the history of the units. The study then goes into precision and how precise one can be in measurement of linear, dry measure, liquid measure, time, and metric measure. Emphasis on the careers that use measurement and the percision each career requires.

MOTIVATING ACTIVITIES

Learning Center on Measurements and
Careers Using Measurement.
"What Job uses what measurement?"
List of careers.
List of measurements.
Match careers with measurements used
by the career.

BROAD OBJECTIVE: To help the students become aware of the different types and units of measurement.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is the different measurements you use or could use?	List lengths, heights, weights, distances, and time. Examples: 1. Pupils height 2. Pupils weight 3. Classroom length 4. Distance between two towns 5. Cup of sugar 6. Gallon of milk 7. Day, hours	
2. What is the appropriate unit of measure for each measurement?	Use list and decide what unit would be used for each.	
3. Why do we use certain units of measure?	View filmstrips.	Filmstrips: History of the English System History of the Metric System
	Discussion on why we use different units for different measure.	
	View films.	Films: Measuring Units - An Interduction. Measurement.
	View filmstrip.	Filmstrip: Measurement.

CAREER EDUCATION PROGRAM
RADFORD CITY SCHOOLS

UNIT TITLE: THE WONDERFUL WORLD OF GEOMETRY

APPROXIMATE GRADE LEVEL: GRADE 6 OR 7

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: THE WONDERFUL WORLD OF GEOMETRY

This unit was written for use in a seventh grade but could be deleted and used in part in a sixth grade. It is designed to create an interest in the beauty of geometric constructions and to give the student a better understanding of the occupations related to geometry.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIALS
Arrange interest - arousing bulletin board displaying pictures which will illustrate some of the occupations relating to the study of geometry. With each picture, place a drawing of a geometric figure and on the drawing write the identification of the occupation. Leave space for students to add other occupations.	Bulletin board space. Pictures cut from magazines. Drawings of various plane geometric shapes.

153

BROAD OBJECTIVE: To help students develop an appreciation of geometric construction in the world of art.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What does a person have in mind when he says, "That is a pretty home" or "I don't like the way this home is built"?	Have students mention and list the characteristics that might go into the making of a pretty home. Collect and display pictures of the exteriors of homes which are noticeably different.	Newspaper clippings (Roanoke Times, 6/14/73) Magazine pictures.
2. What are some of the shapes that you have observed from the pictures or that you recall from previous observations?	Have students illustrate these shapes. Have students identify the shapes by names. Have students illustrate an entrance to a home that is real or that might be a part of a dream home.	Compass, ruler, and protractor. Math Text Book Chapter 8. Geometric Charts (Plane) Geometric Solids Coordinate Paper
3. Do you know of any buildings (homes, business places, or any other type of building) that are especially interesting to you?	Have each student make a mental survey of his own neighborhood as well as other sections of Radford and surrounding area. Have lists compiled and placed on chalkboard.	Teacher of Virginia History to indicate places of historical interest. Chamber of Commerce to make suggestions regarding special geometric designs that appear in our city.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Plan and take field trip to observe places of interest in Radford. Observe architecture.	
	*Design and build home or special areas of a home. Use geometric designs.	Scrap lumber, popsicle sticks, Paint, Glue
	*Build replica of some well known building (Mt. Vernon, etc.)	
	*Group Work	
	Write reports on famous homes and other buildings.	English teacher.
	Write letter to the Association for the Preservation of Virginia Antiquities to ask for information about places in the Montgomery County which might illustrate special geometric designs.	Association for the Preservation of Virginia Antiquities English teacher.
	Plan and take field trip to observe designs of geometric nature in surrounding area.	Person to act as guide.
4. Do you know of any other types of constructions that might involve geometry?	Observe and discuss pictures in books and magazines.	Magazines and books.
	Show movie.	Movie.
	Show filmstrips.	Filmstrips.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
(Possible answers to No. 4): bridges, water tanks, TV towers, control tower at airport, forest ranger's observation tower.		
5. Why do you notice so many triangles in the construction of a bridge?	Visit and observe structure of bridges.	Popsicle sticks, glue, etc. for bridge construction.
		Field trip to observe general construction of bridges.
	Explore the use of the triangle in construction. Discuss rigidity and structural strength obtained through use of triangle.	
6. What are some of the interesting bridges that you have observed in your travels?	Compile list of famous well known, or special kinds of bridges.	Information from Virginia History Class.
7. Have you read about or seen pictures of others that interest you?	Check possibilities of such bridges in local area.	Teacher of Virginia History.
		Students who have observed such bridges in their travels.
8. What phase of geometry would be evident in the construction or use of a drawbridge?	Study and discuss various types of bridges including Bascule type.	Encyclopedia Britannica Volume 4, pages 192-203

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Construct a bridge (possibly Bascule type).	Use the idea of weights in windows to cause them to remain open. Science teacher.
9. In buying a frame for a picture, we usually think of what shape?	Discuss Madonna of the Chair by Raphael.	Famous paintings.
10. Can you remember a famour painting that has another outline shape? (circle)	Have one or two students do some research on Raphael and write reports.	Teacher of Art from Radford College.
11. How does an artist use geometry in his paintings?	Discuss the reason for the shape used in this painting.	Field trip to Art Department at Radford College or New River Valley Community College.

BROAD OBJECTIVE: To acquaint students with the use of geometry in the construction of factory produced and family produced items used in our day-to-day living.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What factory-made items have you used today? Can you associate geometric shapes with any of them?	Make a list of items mentioned and geometric shapes associated with each.	
2. If we organized the list beginning with the time you awoke, maybe we could remember more.	Display charts showing plane geometry figures as well as solid shapes to be used to associate with thinking.	Plane geometry charts. Solid geometric solids. Text book, chapters 8, 9, 10.
3. What are some of the parts of our homes or the more permanent installations in our homes that relate to geometry?	Make a list of everything mentioned. Use overhead projector and reserve for future reference.	Overhead projector. Bulletin board with pictures related to content question # 3.
4. What was the first thing that needed to be done when your house was built?	Check names of geometric figures involved in excavated space.	Textbook.
5. How many dimensions do you use to measure your basement (foundation)?	Check textbook to find names for dimensions.	Textbook.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
6. What might you do with the dirt that is excavated? How would you measure it?	Work problems in volume from textbook.	Textbook - Jr. High School Mathematics 7
7. If you were using brick for your home, would you use volume or square measure in purchasing the bricks needed?	Determine the reason for using square measure.	Bricks for illustration. Brick mason.
8. What else about your home might require the use of volume?	Study formula for volume of a rectangular solid. Apply this to the refrigerator at home or in the cafeteria. Do the same for a freezer.	Refrigerator at home or school. Freezer at home or school.
9. What kind of hot water tank do you have in your home? How many gallons does it hold? Is it rectangular or cylindrical?		Formula for volume of rectangular prism: $V=LWH$ Formula for volume of cylindrical tank: $V=\pi R^2H$
10. How many gallons will one cubic foot hold?		Use visual aides, such as cubic foot, cubic yard and cubic inch.
11. You will have walkways somewhere about your home. Of what materials are they made?	Have students mention kinds of walkways. (concrete, brick, etc.)	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
12. Most of you have mentioned concrete. Of what materials are concrete walks really made? Where do we get the concrete?	Mix small amount of concrete. Pour into previously built form at direction of resource person.	Science teacher. Small portions of sand, gravel, cement, and water. Person who builds concrete walks, walls, etc.
13. How do we measure the quantity of concrete needed for a walkway?	Discuss lingth, width and thickness as variables in the building of a walk. Solve problems from text book.	Formula for volume: V=LWH Text book, pages 276-280 Use a section of walk on schoolground for measuring and thus determining volume and possible cost.
14. Do you have flower gardens of geometric shapes? If not, could you?	List possible shapes and find area of each.	
15. How could you determine the quantity of grass seed for your lawn?	Decide what type of measure would be needed.	Work problems in finding area of lawns as designed by students.
16. Have you looked at the roof of your house? Is it flat? Why?	Draw quickly-done illustrations of the appearance of your roof.	Student's personal supplies for drawing. Rulers.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
17. Why do they all slope? How much do they slope? Are they the same?	Show how the right triangle enters into the discussion of slope.	
	Explain the Theorem of Pythagoras.	Burn's Board illustrating Pythagorean Theorem.
	Illustrate the geometric proof of the theorem.	Flannel Board
	Use string on flannel board.	Ball of twine.
	Write brief report on Pythagoras.	Encyclopedia.
18. Do you know about other people who have contributed to our knowledge of Geometry?	Have small group of students work in Library to try to find people related to #18. (Euclid, Plato, etc.)	Library resource material. Librarian who will guide them in finding material.
19. We spend several hours a day in our own classroom. Have you ever thought about how much air is in this room and how much each person in the room needs?	Have students decide on the shape of the room.	Text book for a study of various shapes.
	Have them suggest the unit of measure that might be used to measure the air.	Geometric solids.
	Have students measure the room and find the volume.	Insturments for measuring the room. Cardboard cubic inch, cubic foot and cubic yard. Science teacher to discuss importance of sufficient amount of air (15 cu. ft. per person)

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
20. Since we have measured the air in the room, perhaps we should find out about proper lighting.		
21. how do we adjust the light in our room?		
22. What do we find is necessary to do when someone is writing on the chalkboard?	Close venetian blinds and turn lights off; close blinds and turn lights on; open blinds and turn lights off; open blinds and turn lights on. Determine the difference in the four situations.	Doctor to explain importance of proper lighting to vision. Electrician to evaluate lighting in the room and explain why it is arranged in present manner.
23. How can we determine the amount of light needed in our room? 24. Does the type of work affect the amount of light needed? 25. What unit is used for measuring the amount of light required?	Study foot candle as a unit of measure. (1 foot candle is the amount of light a standard candle will give at a distance of one foot.) 50 foot candles needed for desk work. 200-300 foot candles needed for extra fine industrial bench or machine work. The sun on a clear day will give as much light as 10,000 ft. candles.	Colliers Encyclopedia, Volume 8, Page 711. Victor, Science for the Elementary School. Page 701.

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
26. What furnishes the natural light in a room? Do we need artificial light at all times? Why are some of the panes of glass in our room painted green?	Evaluate the window space. Find area of windows in both exterior and interior positions. Estimate those which can not be conveniently measured. Try to determine the number of foot candles of light.	Room windows. Venetian Blinds.
27. How do venetian blinds govern the amount of light entering the room?	Study the angles formed when blinds are lowered. (straight, acute and obtuse.) Observe that blinds are slightly concave (convex).	Charts Structure of venetian blinds.
28. When could we see actual preparation for some of the occupations that we have mentioned in our unit?	Visit Vocational Building at Radford High School.	Vocational Education Building at Radford High School. Supervisor and teachers in various vocational fields. Mr. Hopkins, Vocational Supervisor Mr. Robbins, Electricity Mr. Helms, Machine Shop Mr. Sayers, Drafting Mr. Hines, Carpentry Mr. Roane, Industrial Arts

CULMINATING ACTIVITIES

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
What can we do to keep some of the information that we have collected about vocations?	Compile information and place in booklet form. Have booklet pages reproduced so that each person may have a booklet.	Paper for reproducing pages of booklet.
	Use geometric art on cover of booklet.	Art materials.
	Organize a "What's My Line?" program.	
	Organize a "Classroom Quiz" program.	

The following items indicate a possibility for use in connection with this unit. Because it was not possible to preview them, they are not indicated in specific locations in the unit.

Filmstrips:

How We Build Bridges
The Neighborhood Optometrist
A Trip to an Airport
Father's Work - My Dad is a Carpenter
Assembling A Car
Building Houses
Workers Who Fix Things

Charts: (career cluster)

Mathematics C-107

Motion Pictures:

Geometry - Lines and Shapes
Geometry and You
Geometry In Action
Practical Geometry - Lines and Angles
Parallel Lines
Volumes of Cubes, Prisms, and Cylinders
What Is Area
Angles and their Measurement
Discovering Solids Part I
Discovering Solids Part II
Dynamics of the Circle

UNIT TITLE: MAKE ART YOUR "THING"!

APPROXIMATE GRADE LEVEL: GRADE 6 OR 7

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

BROAD OBJECTIVES: 1. To acquaint the students with careers of art.

2. To incorporate basic skills in research of art career.

3. To develop appreciation for the artistic person.

INTRODUCTION TO: MAKE ART YOUR "THING"!

This unit on Art Careers us planned for upper elementary. The unit is developed to be used as a management system over a period of several weeks in weekly art classes. It could also be used in a concentrated study.

It is designed to expose the student to many areas of art careers.

Teacher will introduce unit by displaying posters on art careers. A bulletin board with careers in art will be made and used as a management system to show student progress in a specific art aareer. Teacher will discuss various occupations and have student choose their preference. After introduction, students will proceed with their research on their own, recording process on bulletin board. Teacher will act as resource person in research and provide all available resources on art careers.

*Example of Management System:

ART TEACHER

A. Job Qualification ___
___
B. Job Availability ___
___
C. Salaries ___
___
D. Working Conditions ___
___
E. Example of Work ___
1. Role play job experience ___
2. Photograph of on job experience
3. Art object

F. Create personal example ___
___

Each student will compile information in a booklet to present to class as a culminating activity.

*OTHER CAREERS:

Architect
Mechanical Draftmen
Mechanical Engineer
Cabinet Maker
Interior Decorator
Sign Painter
Jewler
Art Teacher
Photographer
Displayman
Cosmetologist
Photo-engraver

Lithographer
Cartographer
Painter
Sculptor
Cake Decorator
Stage Designer
Fashion Illustrator
Greeting Card Illustrator
Museum Curator
Advertising Artist
Package Designer
Book Illustrator

Free Lance Artist
Art Gallery Manager
Glass Blower

CF-A159 The Variety Store, Eye Gate.
CF-A145 The Watchmaker and Jeweler, Eye Gate.

Transparencies:

CTR-2 Learning About Clothing, Creative Visuals

Possible Resource People:

Any parent involved in art career.
Art teacher from college.
Leggett's Department Store Display Artist.
Architect
Beautician
Professional photographer - display of.
Cabinet maker
Jeweler
Glass blower
Cake decorator

Possible Field Trips:

Radford College Art Department.
Visit a jewelry store.
Visit drafting lab. at Community College.
Visit a house being constructed in final stages.
Visit department store to observe displays.

INTRODUCTION TO: Careers Through Music

This unit is designed for use with sixth and seventh grades. Through this unit students can gain a general knowledge of music and careers related to music. It is hoped that the students will also understand and appreciate music as a means of entertainment and relaxation.

BROAD OBJECTIVE: To help students gain a general knowledge of music as it relates to the social level of the community.

To help students understand the satisfaction gained not only in a musical career but in any career.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is music?	Students define and discuss music as they understand it in their lives. Class listen to records portraying different categories. Teacher present categories of music: 1. Serious- opera, concert, chamber 2. Religious- Oratorio, spiritual, hymns, gospel. 3. Folk 4. Country 5. Jazz 6. Folk rock Students as performers may represent categories with their talents.	School records and students' records. Resource people from each category may appear before class. Instrumental Vocal
2. What is the history of music in the main cultures of the world through the years?	Students listen to record. Students read, report, and discuss musical history 1. Early music 2. Famous composers of: a. classics b. contemporary music	"Two Thousand Years of Music" (Barclay)

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Show slides on composers of the classics.	Slides: Three B's, etc.
	Introduce and listen to records.	Narration of Bach's life and music(Record-Barclay) Recorded classics of famous composers(familiar to young and old).
3. How does music affect our everyday lives?	Students discuss entertainment in world of music 1. musicians 2. dancers 3. singers 4. performers (music supplying a background)	
	Discuss aspects of people who entertain us.	Resource talent in community may appear.
	On chalkboard list your favorite: 1. actors-actresses 2. dancers(dances) 3. singers 4. instruments 5. instrumentalists	

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Students may be musical entertainers.	
	Students prepare for and take field trip.	Field trips: College(Special events) Radford High School (Band room, Chorus)
4. How is the entertainment world of today affected and influenced by music of the past?	Presentation of general theory and terms in music.	
	Students discuss relationship between past and present. 1. Music theory 2. Musical terms 3. Musical instruments	Special music teacher. Regular teacher.
	Math tie-in music theory: Fractions, percentage, decimals may be taught during reading of music, study of tempo, and rhythm.	
	Science tie-in: Musical sound-vibrations Human ear	
	Review: This was used in conversation unit.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Make simple musical instruments.	
	Show pictures of musical instruments.	Pictures of musical instruments in symphony and band.(Barclay)
	Make instruments for rhythm band.	Pictures of early instruments and their present-day counterparts or models.
	Show pictures of instruments.	Materials needed for instruments:

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Show a gramophone, forerunner of victrola phonograph and stereo.	
	Show how first rock group (Beatles) copied Phrygian mode used by the early musicians in Asia Minor.	
	Play record for students.	Record: "Two Thousand Years of Music"(Barclay)
	Show how Johann Sebastian Bach was "Father of Modern Music"	Record: "Father of Modern Music"(Barclay)
5. How does a general knowledge and appreciation of music lead to job roles?	Students discuss and list careers related to interest and ability in music. 1. Teacher 2. Composer 3. Director-orchestra leader. 4. Critic or musicologist 5. Arranger or orchestrator 6. Supervisor of music 7. Radio-TV announcer 8. Entertainer 9. Musician-instrumental 10. Clergyman-director of religious education. 11. Librarian 12. Dancer	Career persons visit class: 1. Choral director 2. Band director 3. Vocalist 4. Music supervisor 5. Instrumentalist(versatile)

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	13. Popular singer 14. Impersonator-Comedian 15. Choral director 16. Therapist-recreational and occupational 17. Piano technician and tuner.	
	Students role play the following: 1. Director 2. Entertainer-Impersonator-Comedian 3. Dancer 4. Et Cetera 5. Drummer 6. Pianists 7. Band students 8. Vocalists	Student participants Materials needed for the role playing activities.

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Have students present a musical program composed of: 1. Dancers 2. Vocalists 3. Instrumentalists 4. Impersonators 5. Group singers 6. Skits(operetta type) Students become lyricists for units of study and occasions during year. This will be a continuing activity.	Materials needed for musical program:

UNIT TITLE: MAGNETISM AND ELECTRICITY

APPROXIMATE GRADE LEVEL: GRADE 6 OR 7

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 Wadsworth Street
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: MAGNETISM AND ELECTRICITY

For over 2000 years, man has known of the mysterious force called magnetism. Magnetism and electricity plays an important role in our everyday life. Navigators use the magnetic compass to find direction. The operation of many useful devices such as the electromagnet, the electric bell, the telephone and telegraph, the electric motor, and radio depend upon the effects of magnetism and electricity.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIAL
List the ways that magnetism and electromagnetism are used in everyday lives.	Students knowledge of magnetism and electricity.
Wire a simple elctric circuit.	Battery-wire and bulb.
Make bulletin boards on magnetism and electricity.	Construction paper.
Make a learning center on magnetism and electricity.	Film: Magnetism and Electricity
Make a display of the different kinds of magnets and label whether they are natural or artificial.	

BROAD OBJECTIVE: To help students better understand the operation of many devices, as well as the magnetism of the earth itself.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is a magnet? What is a magnetic substance? 2. What are the kinds of magnets?	Discuss the origin of the work and find through research the different magnetic substances. Discuss in groups or individual students.	Dictionary - library research (World Book Encyclopedia) Filmstrip - Film: "Magnets"
3. What is the Law of Magnets?	Read and discuss with groups or individual students.	
4. What is a Magnetic Field?	Set up investigation to show a Magnetic Field.	Cardboard or glass, iron filings, bar magnets. Film: Magnet Force
5. How can you make a magnet by contact? 6. How can you make a magnet by induction?	Read and investigate.	Materials for contact: Steel knitting needle, bar magnet, Books. Materials for investigation on induction: Nail, bar magnet, and iron filings.
7. What is the difference between a temporary magnet and a permanent magnet?	Read and demonstrate.	Library.

182

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
8. How can we explain magnetism?	Reasearch - Various investigations set up by the students.	Books. Film: Magnetism
9. How can we demagnetize a magnet?	Read and discuss. Investigate and demonstrate.	Books. Materials: Hammer, source of heat.

183

BROAD OBJECTIVE: To help students realize how temporary magnets are produced by an electric current.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How can electricity create magnetism?	Investigation.	Materials: battery, bell wire, switch and iron filings.
2. How can you increase the strength of an electromagnet?	Read and investigate.	Film: Electromagnets - How They Work. Books - Filmstrips. Materials: wire, battery, switch, iron filing.

BROAD OBJECTIVE: To increase the students understanding about the uses of magnets and the earth as a magnet.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are some of the uses of magnets? a. Electric Bell b. Telegraph c. Electric Motor d. Telephone	Do research to find out the operation of each device. Make a working model of the one of your choice.	World Book Encyclopedia. Materials selected by students for models.
2. Why is the earth considered a magnet?	Research.	Books.

185

BROAD OBJECTIVE: To cause students to be aware of and understand static and current electricity.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is static electricity?	Show film.	Electricity and How It Is Made.
2. What is current electricity?	Do library research.	Books.
	Show Filmstrip.	Introduction to Electricity C-70
3. What makes an electric current flow?	Read and discuss.	
4. What are the electrical units? a. Volts b. Ampere c. Ohms	Do research on each electrical unit and be able to give examples of each. Discuss with group or individual students.	
5. How is electric current measured?	Research and demonstrate.	
6. What is an electric circuit?	Read and demonstrate.	Books. Film: Electric Current. Materials: Switch, battery wire, socket and bulb.

BROAD OBJECTIVE: To help students understand the dry cell and storage cell.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is the difference between a dry cell and storage cell?	Read and discuss.	Books (Encyclopedias)
2. What is the difference between series and parallel circuits?	Read and demonstrate.	Books. Materials: batteries, bulbs, sockets, wire.
3. What are the electric symbols?	Draw.	Poster board.
4. What are some of the uses of electricity? a. Generator b. Transformer	Read and discuss the principle of each.	Book.

BROAD OBJECTIVE: To have students from studying this unit realize the opportunities found in the work of the science of magnetism and electricity.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Are there jobs available in the field of magnetism and electricity?	Invite a resource person to talk with the students. Make a bulletin board of the careers found in this field. Library research.	Resource person. Materials.
CULMINATING ACTIVITY	Trip to telephone company or Foundry. Role playing using the project they made in the unit.

RADFORD CITY SCHOOLS

UNIT TITLE: WEATHER

APPROXIMATE GRADE LEVEL: GRADE 6 OR 7

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

BROAD OBJECTIVE: To help student be more aware of the weather and how it affects their daily lives.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Who cares about the weather?	Discuss and list the activities and jobs that are affected by the weather.	Book - Everybody's Weather.
	List the activities and jobs on overhead projector.	Overhead projector.
	Have some students make a bulletin board showing some of the activities and jobs.	Magazines Construction paper
	Role play a situation affected by the weather.	Students bring materials related to role.
	View film.	Your Career in Meteorology

BROAD OBJECTIVE: To help students understand the weather elements.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are the six weather elements?	Read and discuss the following weather elements:	Books and encyclopedias.
	1. The temperature	Thermometer
	2. The air pressure	Barometer
	3. The direction and speed of wind. View filmstrip.	Anemometer Winds Around the World. SVE
	4. The humidity View filmstrip	Hygrometer Humidity and How It Affects Us.
	5. The kind and amount of precipitation. View filmstrip.	Rain guage. Moisture and Precipitation in the Air.
	6. The condition of sky View transparency.	Cloud chart. Clouds.

BROAD OBJECTIVE: To help students understand why the weather changes.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What causes the weather to change?	View filmstrip.	Weather Changes and Their Causes.
	Students investigate air masses, weather fronts, highs and lows.	Books.
	Class discussion on air masses, weather fronts, and highs and lows.	
	View filmstrip.	Air Masses and Weather Fronts.

192

BROAD OBJECTIVE: To help students understand how to measure the weather.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How is the weather measured?	Divide class into groups to investigate the instruments used to measire the weather. Have each group make one of the following instruments: 1. Barometer 2. Thermometer 3. Anemometer 4. Weather Vane 5. Wet-dry bulb thermometer 6. Hygrometer 7. Rain Gauge Class discussion to compare the actual instruments to student-made instruments.	Books. Resource book: Science For The Elementary School by Edward Victor.

BROAD OBJECTIVE: To help students understand how the weather is forecast.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is the work of the weatherman?	View filmstrip.	How To Forecast the Weather.
	Have students set up a weather station using instruments made by students.	Student-make instruments.
	View film.	Weather Station.
	Have students make readings each day.	Field trip - NRCC Weather Station
	View filmstrip.	Visiting A Weather Station.
	Collect and compare forecast with actual weather.	
2. How are weather maps used?	Divide class into groups to study weather maps.	Weather maps. Woodrum Airport U.S. Weather Bureau
	Have students display: air masses, fronts and highs and low on felt map each day.	Felt map.
	View filmstrip.	Meteorologists.
3. How do weather satellites aid in forecasting the weather?	Read and discuss weather satellites.	Books.
	Have some students make diagrams, models, and/or bulletin boards on weather satellites.	Resource person from Woodrum Airport Weather Bureau.

197

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	View film.	Film - Weather Eye in The Sky.

BROAD OBJECTIVE: To help students understand violent weather.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How may a thunderstorm form?	View film.	Film - Weather Understanding.
	Read and discuss how thunderstorms form.	Books.
2. What causes lightning and thunder?	View film.	Film - Thunder and Lightning.
	Read and discuss causes of lightning and thnuder.	
3. How do hurricanes and tornadoes differ?	View films.	Film - Tornado Hurricane Watch
	Discuss differences.	
	Have some students make charts and diagrams showing differences.	Poster, magic markers, crayons,etc.
	Collect pictures showing storms and damage. Display on poster board or bulletin board.	
	Show film.	Unchained Goddess.

196

BROAD OBJECTIVE: To help students to be aware of research in controlling the weather.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Can man control the weather?	Have students investigate the six areas in which research toward weather control is being directed. Areas of research: 1. increasing rainfall or snowfall. 2. inhibiting the fall of hail. 3. getting rid of fog. 4. curbing lightning. 5. controlling hurricanes and other violent storms. 6. large-scale modification of climate. Prepare a panel discussion on "Should The Weather Be Controlled?"	Library research.

197

CULMINATING ACTIVITY

Make a collection of "Weather Sayings" and decide which sayings have any scientific basis based on information gained in the unit.

INTRODUCTION TO: The Bank

This unit was written for implementation in a seventh grade math class. The suggested activities should provide the students with an understanding of money and banking in the American economy and an understanding of the total operation of banking. The services that the bank provides to a community are stressed along with the various occupations associated with banking.

Student involvement and participation are encouraged so that they might relate occupations in the bank to their interests and abilities.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIALS
Hand out play $100 bills to each student. Tell them to pretend this money is real. Then ask what each child would do with this money. Class discussion around spending and saving. Some students can tell how they have earned money. Some discussion will develop on the "worth" of items.	

BROAD OBJECTIVE: To help the students become aware of the services of banks.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What services do banks provide for the community? Checking account Savings account Loans - short-term long-term Christmas funds Purchase of savings bonds. Safety deposit boxes Trust funds Bankamericard and Master Charge. Purchase of savings certificates. Wills & executors	View 16mm film on bank services "How to Use Your Bank." Read pamphlets: Let's Learn Money (good) Using Bank Services Role play situations to demonstrate the services provided by banks. Let the students make up skits to represent each service. Make a collage illustrating banking services with either pictures or drawings. Begin a vocabulary list of banking terms.	Film: "How to Use Your Bank" available Virginia Bankers Assoc. (Order early)
2. What interest do you receive on a savings account?	Encourage students to start a savings account. Have reading table supplied with books and pamphlets on banking.	Books from library: (Give reports on readings) Sootin, Let's Go To a Bank Rees, At The Bank Rosenfield, Let's Go To The U.S. Mint Campbell, Nails To Nickels Reinfeld, How to Build a Coin Collection Browin, F., Coins Have Tales To Tell
3. How do banks earn their money?		

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
		Hutchinson, Coins Masters & Reinfeld, Coinometry Arnold, Money Wade, From Barter to Banking
	Have a local banker come to class to tell about bank services. The students should plan questions they want to ask.	Local banker.
	Have students write their impressions of the discussion and explanations of the resource person.(language arts)	
2. What are the kinds of banks? A. Commercial banks B. Savings banks C. Central banks D. Trust companies E. Others(credit union, mortgage companies)	Divide the class into 5 groups. Each group can research one kind of bank and its functions. Later each group can report to the class using panel techniques. Panel should be a free exchange of information involving all students.	Encyclopedias Library books
		Trust officer from local bank.
		Credit union official from a local credit union.

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Savings bank official to explain services provided by savings and loan companies.	Savings bank employee (First Federal Savings & Loan)

BROAD OBJECTIVE: To help the student become aware of what money is and how it functions.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is money and how is it made?	View film, "Money and Its Uses."	Film: "Money and Its Uses" available from Virginia Bankers Association.
	Students give oral reports on the U.S. Mint and the making of money.	Book: Rosenfield, Let's Go to the U.S. Mint.
		Encyclopedias
	Ask students to bring coin collections to show to the class. Discuss collection of coins.	Library books on reading table.
		Resource person to bring coin collection to class.
2. What are the functions of money?	Class discussion of why we need money.	

BROAD OBJECTIVE: To help the students become aware of the overall operation of banks.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How does a bank operate?	Local banker to visit class and explain bank reserves, the clearing of checks, and check travels. Students should view actual cancelled checks and be allowed to ask spontaneous questions.	Local banker. Pamphlets and books on reading table.
	Individual student research on bank operations.	
	View filmstrip, "Travel of a Check."	Eyegate filmstrip: U17004 Travel of a Check
2. What is the Federal Reserve System?	Read about formation of Federal Reserve System.	Encyclopedia Library books Pamphlets
	Students create display on a large wall map and mark off the areas of the Federal Reserve System. Diagram flow of money from U.S. Mint to a local bank.	
3. Why was the Federal Reserve System established?		

BROAD OBJECTIVE: To help the students become aware of the occupations associated with banking.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are the careers involved in banking? Some are: Cashier 1. Mail teller 2. Savings teller 3. Collection teller 4. Ass't. head teller 5. Head teller 6. Assistant cashier 7. Cashier 8. Loan officer 9. Manager Clerical 1. Sorting clerk 2. Account analyst 3. Machine operator 4. Clearinghouse clerk 5. Ass't. transit dept. 6. Manager transit dept. Bookkeeping 1. Machine operator 2. Audit clerk 3. Bookkeeper 4. Ass't. bookkeeper 5. Accounting clerk 6. Balance clerk 7. Payroll clerk 8. Supervisor	View film, "A Banking Career." Field trip to bank to see the various working areas and departments. Request information about the jobs observed. Departments: Loans Business Savings Checking Bookkeeping Cashiers Tellers Bank Vault Safety Deposit Box Business Forms Security Devices Class discussion and analysis of the different activities observed should follow the field trip.	Film: A Banking Career, a film available from Virginia Bankers Assoc. Field trip.

206

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Data Processing 1. Sorting machine operator. 2. Keypunch operator 3. Verifier 4. Programmer 5. Supervisor of computer operations. Secretarial 1. Typist 2. Clerk-Typist 3. Stenographer	View the filmstrip, "The Banker." Make a listing of all the known banking occupations. Find out the education, salary scale and job description of each(student research). Have parents who work in a bank come to class to discuss their jobs. Make a bulletin board showing the many phases of banking as related to the world of work. Students make a telephone survey to compare the services of local banks. The table to be used is attached.	Filmstrip: The Banker(Eyegate) Personal contacts. SRA occupational briefs.

207

BANK SERVICES

Name of Bank	Safety Deposit	Safety Deposit Charges	Types of Loans: Home, Auto, Business, Personal, Education	Loan Rates	Interest Paid on Savings Account	Bank by Mail Service	Offer Drive In Service	Parking	How Do You Rate Their Service

208

CULMINATING ACTIVITY: Plan a model bank and carry out simulated banking activities.

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Set up the necessary banking departments to carry out the following activities: (Students will receive tokens from other teachers for tasks well done, etc. A certain number of tokens may be spent to have the opportunity to do a "fun" activity such as paint or work a puzzle)	Refrigerator box for teller's window. This activity is appropriate for sixth grade use.
1. Writing checks	
2. Filling out deposit slips(use tokens)	
3. Filling out savings slip.	
4. Savings account passbook	
5. Figuring interest on savings a. daily b. monthly c. quarterly d. yearly	
6. Compound interest on savings account	
7. Loaning money for personal reasons(use tokens)	
8. Forms of collateral	
9. Fill out loan payment book a. car payment b. house payment c. television payment(use tokens)	Discuss reasons people borrow money and the importance of credit rating.
10. Sorting and preparing money for bank deposits. The students guided by the teacher could count money from the lunch program.	Retail credit resource person.

209

CONTINUED

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
a. pennies b. nickels c. dimes 11. Using shoe boxes, set up a model of a bank safety deposit box system. The boxes could be numbered and rented out for certain time periods to different students. These boxes could be used to hold pens, pencils, scissors, etc. Set up rules for depositing and withdrawing items from the safety deposit boxes. Students could design the forms to use for all the banking operations or blank forms can be obtained from a local bank.	

210

SUBJECT MATTER TIE-IN

Science

1. Exploring the materials of which money is made.
2. Studying the alarm system.
3. Vault(materials of which it's made)
4. Wear and replacement of money.
5. Make an alarm system.

Social Studies

1. Location of Federal Reserve Banks.
2. History of banking.
3. American economy.
4. Bank failures(depression, recession)
5. Laws regulating banking.
6. Money and coins in other countries.
7. Different types of money that U.S. uses in comparison to the money of yesterday.
8. Stocks and stock market.

Language Arts

1. Vocabulary list of banking terms.
2. Penmanship.
3. Letter applications.
4. Notices of payments overdue.
5. Conversation with customers.
6. Applying for loans.
7. Reports on field trip to bank.
8. Reports on readings

Art

1. Posters
2. Maps
3. Making checks and bank forms.
4. Design layout of the model bank.

Music

CAREER EDUCATION PROGRAM
RADFORD CITY SCHOOLS

UNIT TITLE: "GET THE SCOOP - A NEWSPAPER CAREER"

APPROXIMATE GRADE LEVEL: GRADE 6 OR 7

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: "GET THE SCOOP - A NEWSPAPER CAREER"

This unit is designed for the 6 - 7th grade level in language arts and/or reading.

It develops the skills of collecting and reporting news data.

Since these grades may be involved in editing a newspaper and reporting current, it is important that they learn the occupations related to news gathering.

BROAD OBJECTIVES:

1. To make students aware of present day careers in newspaper work.
2. To make students aware of journalistic terms in relationship to reading and writing a newspaper.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is news?	Students discuss and conclude a definition for news: "Anything that is interesting enough to report".	Newspapers.
2. How do we classify news?	Circle local news in red. Circle state news in blue. Circle national news in black. Circle international news in green.	Newspaper (The Roanoke Times) Crayons and/or colored pencils.
3.	Discuss how a news article is developed (lead and supporting details) by answering the questions: Who? When? Where? How? Why? What?	Reporter from local newspaper.
4.	Discuss salaries, schedules, training, past experiences, etc.	Same reporter.
5. How are the questions: Who? Where? When? Why? What? answered in a newstory?	Study an actual newstory and list the answers to the 5 questions.	Growth in English, Grade 7. Page 285, "Eyewitness - Reporting An Event" "Story of an Eyewitness" by Jack London, Adventure for Readers, page 507.
6. How can I answer the 5 questions in a news article from a memory?	Use a well-known fairytale or nursery rhyme to write a newstory concentrating on answering the 5 questions. Share stories orally with class.	Example: Poster from magazine, "Learning".

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
7. How can I answer the 5 questions in a newstory as an eyewitness?	Report on an actual event such as: Skit presented by a person (informal such as entrance to deliver something to teacher.)	Resource person.
8. What do we learn from a newspaper?	Interest center.	"How to get more out of your newspaper" - booklet available from "The Roanoke Times".
9. What are common newspaper terms?	Worksheet with terms to match by using the glossary.	"Your Newspaper - A Living Textbook" from The Roanoke Times. Glossary in back - "Newspaper Terminology"
10. How can I locate different parts of the newspaper? Example: Index, Ears, etc.	Study poster on parts of paper then using a newspaper locate parts and label them with the same number according to study sheet.	Study sheet included in back. Newspaper for everyone. Colored pencils or crayons.
11. How do photographs add to a newstory?	Discuss choosing appropriate scene, angles, lighting, equipment, captions, salary, and hours.	Photographer from local newspaper.
12. Could a photograph add to the article (s) I've written?	Take photographs.	Camera, film.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
13. What are newspaper jobs?	Write job titles, descriptions, and qualifications.	Posters on Careers for Good Writers. Pencil and paper. Chalkboard or overhead. Poster from "Learning Magazine". Briefs - Editor #69 Reporters #216 Research Booklets - Journalism #19 Newsreporter #174 Newspaper Publishing #189 Photo Journalism-News Photography-#202 Sportswriter - Reporter - Journalist #266
14. How could I get a newspaper job?	Fill in applications for above job titles and submit to teacher.	Job application form.
15. How can we work together to produce a newspaper?	Designate job, select articles previously written, put together, cover with clear contact paper. Display.	Paper, typewriter.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
16. What have we done?	Film viewing.	#37708 - "Newspaper Story" 15 min. - Radford or State. and/or "The Newspaper" - Sound Filmstrip. and/or #65908 - "Newspaper Serves Its Community" - 14 min. - State.
	Small groups may wish to see.	"Jobs of a Printer" - Cassette and filmstrip.
17.	Field trip to The News Journal.	
18.	Bulletin board on "Great Reporters" as students study the unit, they may add great news person to the board and share a report on their contributions to the news world.	Adv. for Readers, Jack London, etc.

STUDY SHEET ON THE NEWSPAPER

Name _____

I. The front page contains the following parts:
   (1) flag
   (2) leads
   (3) major news item
   (4) dateline
   (5) by-line
   (6) main headline
   (7) index

II. A headline is mainly of two parts - the main headline and the "decks" which are below the headline and they provide additional information.

III. A summary of a news story that comes at the beginning of an article is called the lead.

IV. The lead in a newspaper story usually answers the questions Who? When? How? Where? What? and Why?

V. The most important information is given in the lead at the beginning of a news story. Important details follows immediately after the lead. Less important details are given at the end.

VI. Some types of leads are summary, quotations, pictures, questions and background.

VII. A headline that gives the reader a misleading idea is called a slanted headline.

VIII. Editorials express the opinion of the editor.

IX. Any matter that is considered interesting enough to report is news.

X. News is classified as local, state, and national or international stories.

MATCHING: PUT LETTER IN BLANK FOR ITS CORRECT TERM.

_____ 1. Banner Headline

_____ 2. Dateline

_____ 3. Ears

_____ 4. Editorial

_____ 5. Flag

_____ 6. Headline

_____ 7. Index

_____ 8. "Jump" story

_____ 9. Lead

_____10. News

_____11. Preview

_____12. Slanted Headline

A. The name of the newspaper.

B. Report of an interesting event.

C. A headline in large letters running across the page.

D. A brief alphabetical listing with page numbers indicating where items may be found.

E. Bits of information on either side of the flag.

F. Date and place of a news story.

G. Summary at the beginning of a news story.

H. Title of a news story.

I. Opinion of the editor.

J. Advance information about a radio or T. V. program.

K. A misleading headline.

L. Stories continued from the front page.

Seek and Circle 10 newspaper terms in the puzzle. They are written horizontally, vertically, and diagonally.

1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: Communication Through Conversation
"Conversation That Turns You On!"

This unit has been developed to be used with 6th and 7th grade students. It is basically a language arts unit but other subject matter can relate to it easily. The unit may also be modified to work with other grade levels.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIAL
Imagine how early man in prehistoric times, before they knew how to talk, might have expressed the thoughts which you express today by the following words: 1. This is mine 2. Go away! 3. Come here! 4. Hush! 5. Hurry! 6. Good-by!	

BROAD OBJECTIVE: To help students become aware of speech as it applies to job roles and careers.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is conversation?	Students discuss why conversation is a source of communication in every day life: 1. Home 2. School cafeteria library main office 3. Jobs observe duties plus necessary conversation 4. Recreation observe directions necessary in P.E. Correlate all of this with history of speech and its need in civilization from early to modern times.	Text: History of Language
2. What occupations require good conversation?	Let students list various occupations. Discuss each of the occupations and describe how conversation is essential in each. Suggested occupations for consideration are: Editor — Reporter Teacher — Sales person Radio-TV announcer Librarian — Clergy Lawyer — Nurse Doctor — Stenographer Receptionist — Insurance sales	

229

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. What are the essentials of good conversation?	Students discuss: 1. Talking and listening parts in conversation (listen or thy tongue will keep thee deaf) 2. Topics chosen by students to talk about in ordinary conversation. Students engage in unrehearsed class conversation. Let each student hear his voice on the tape recorder. Check for inflection and enunciation. Have students list ways and means of improving their own conversation. 3. Aides in introduction of people. Introduce: Boys to girls Girls to boys Men to women Women to men Younger to older Older to younger Discuss response and conversation. 4. Students observe the necessity of courtesy in all communication and jobs. Compare pleasant to unpleasant conversation.	Tape recorder or cassette recorder.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Discuss how jobs and life are brighter if one thinks "you instead of thinking I".	
4. What type of conversation is necessary for a job interview?	Have students role play people waiting for a job interview. Have students notice the personal appearance of people. Students prepare conversation and props.	
	Have each student interview for a specific job.	Tape recorder or cassette recorder.
	Have each student complete a job application form.	
	Have each student write letter of resignation.	
5. How is conversation an important part of living with others?	Students discuss: 1. Aides to good conversation at: a. home b. school c. recreation d. job 2. Public relations: Have students prepare a job classification chart of many occupations dependent on conversation or related to conversation.	Resource people to speak to class on how conversation is used in their respective jobs.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	3. Have students prepare bulletin board showing job class available that depend on good conversation.	Bulletin board material needed.
6. How is conversation used in the news media?	Discuss occupational conversation in the news media. 1. newspaper 2. television Have students observe technicians' role in putting on news programs. Stage Klassroom Kwiz in class. Have students make props. Have students develop questions to be used.	Resource person: Editor Reporter Photographer TV
	3. Radio	Field trip to radio station or resource person from station.
	4. Telephone Emphasize importance of voice quality in reflecting personality, particularly over telephone. Have students draw their perception of peoples' faces behind the voices in cartoons. Listen to humorous tape recorded voices of typical telephone personalities. Have students list occupations related to telephone industry.	Resource person: Operator Resource people: Supervisor Lineman Service and repair

INTRODUCTION TO: "Careers Through Knowledge of Simple Arithmetic"

This unit on "Careers Through Knowledge of Simple Arithmetic" is designed for use with sixth and seventh grades. Through this unit students can gain a general knowledge of how arithmetic is important to them an individual, how it is important in the home, how it is important in recreation, and how arithmetic plays an important role in different careers.

BROAD OBJECTIVE: To help students understand how knowledge of simple arithmetic is needed in everyday living and on the job world.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How is arithmetic important to you as an individual?	Students will participate in all activities to answer the need of simple arithmetic. Class discussion: 1. Allowances and how they are used. 2. Budget of allowance. 3. Make charts of job responsibilities at home. 4. Show how they are paid for these jobs-other than in money. (Rely on realization of bed and board given at home.)	
2. How is arithmetic important in the home?	Students discuss family need of arithmetic. Father of student appears before class to explain his role in management of finances at home. Examples: Budgeting his salary, measurements, etc. necessary in repairs at home. Mother may appear to do likewise-to show how she can enlarge or shorten recipes to fit size of family and how to use clothes patterns when sewing for family. Examples: Planning and management concerning food needed for	Resource people: Mother Father

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	family. Measure-regarding recipes, cooking, draperies, carpeting.	
3. How is arithmetic important at school other than in the regular class of mathematics?	Students discuss: 1. Lunch money-ice cream 2. Rental fees 3. Class picture fees 4. Library fee for overdue books. 5. Activity fee- school newspaper student handbook entertainment in auditorium Students assume responsibility of collecting money, especially daily lunch and ice cream. 6. In art class-measurement Alphabet cutouts from construction paper measures 2"x1 1/2" pasted on 9" x 12"(well balanced on sheet) 7. Physical education instructor will guide students through physical check-ups Height-weight Physical fitness(measure of distance-broad jump, dash, etc. Have students comput average height and weight in class.	Physical Education Instructor

237 C

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Make a graph showing weight and height of students.	
4. How is arithmetic important in recreation?	Students participate individually or in groups. Students discuss prices of: 1. movies 2. high school sports 3. plays 4. other activities Role play financial end for football season. Hands-on - Ticket booth Concession stands 5. Hobbies Records Tapes Collections - Stamps Coins Rocks 6. Bicycles and repairs	Materials needed:
5. How is arithmetic important in your jobs after school and during vacation?	Students discuss jobs and pay: 1. Baby sitting 2. Mowing lawns 3. Newspaper routes 4. Other jobs Director of News carriers may appear before class.	Books related to baby sitting, newspaper routes, etc. Resource people: Students

238

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
6. How is arithmetic important in the carcers you may choose, or in the world around you?	Have students list and discuss as many careers as they can that deal with arithmetic. Examples: 1. Waitress-bus boy 2. Grocery clerk 3. Department store clerk 4. Carpenter 5. Truckdriver 6. Secretary 7. Insurance salesman 8. Other careers Have resource people in any of these jobs appear before class. Take field trips to: Grocery store Department store Short order restaurants	Filmstrips Books in library.

239

CULMINATING ACTIVITY:

CULMINATING ACTIVITIES	RESOURCES AND MATERIAL
Skits - written by students showing arithmetic in action in the community.	

2 of 6

SUBJECT MATTER TIE-IN

Language Arts

1. Spelling lists of math terms
2. Writing of skits

Social Studies

Discuss contributions made to field of mathematics by:

1. Early civilizations
   Babylonia
   China
   Arabia
   Egypt
   Greeks
   Romans
2. Renaissance period
3. 1700's
4. 1800's
5. 1900's - present day

Science

Discuss the following topics as they relate to arithmetic:

1. Time
2. Travel-train, auto, sea, space
3. Weather
4. Cooking(food unit)
5. Photography
6. Metric system

BIBLIOGRAPHY

1. How Much and How Many...(Weights and Measures), J. Bendick, McGraw-Hill, 1960.
2. Arithmetic Can Be Fun, Munro Leaf, Lippincott, 1949.
3. A Cat Can't Count, B. Budney, Lothrop, Lee and Shepart, 1962.
4. First Book-Graphs, Dyno Lowenstein, Watts, 1969.
5. Take A Number; New Ideas + Imagination, J. Bendick; Marcia Lavin, McGraw-Hill, 1961.
6. First Book of Measurement, S and B Epstein, Franklin Watts, 1960.
7. True Book of Numbers, Children's Press, 1964.
8. Mathematics; Story of Numbers, Symbols, Irving Adler, Golden Press, 1961.

MOTIVATING ACTIVITY: Invite a resource person (archaeologist) to bring a collection of ancient tools and speak to the class about tools and why early man found a need for them.

BROAD OBJECTIVE: To help students understand why man uses machines.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Why does man use machines?	Students collect pictures to make a collage of common machines for display.	Magazines Paper
	Students interview their parents and list the machines (or tools) that each uses in his job. Students also take picture of one parent at work, if possible, for display in room.	Small cameras.
	Class discussion of the extensive use of machines and how even simple tasks are made easier with machines.	
	Have students operate a variety of hand tools and kitchen appliances showing how work is done with them.	Hammer, saw, screwdriver, scissors, egg beater, etc.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
2. What do machines do?	Have students complete investigations showing how machines: a. transfer a force b. increase amount of a force c. change the direction of a force d. increase speed or distance. View film loops. Set up reading table with a variety of books on machines. View film loops.	Materials will vary depending on the specific investigations chosen by the teacher. Reference: Science for the Elementary School by Edward Victor. MacMillan. Film loops on machines and how they work. (McHarg) Library books. Pamphlets. Film loops: Energy Makes It Move More Motion Requires More Energy

245

BROAD OBJECTIVE: To help students become familiar with the six simple machines.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are six simple machines?	View filmstrips.	Filmstrips: The Work of the Wheel and Axle. The Work of the Lever. The Work of the Pulley. The Work of the Inclined Plane, Screw and Wedge.
	Read and discuss the six simple machines in the text.	Text: Concepts in Science. Brandwein, Cooper, Blackwood and Hone.
	Divide class into six exploratory groups. Each group will be responsible for constructing a model of one of the following and demonstrating how work is done with it: a. Lever (1st class, 2nd class, 3rd class) b. Wheel and axle. c. Pulley (fixed and movable). d. Inclined plane. e. Screw. f. Wedge.	Resource Books: Concepts in Science. Science for the Elementary School. Scrap lumber, cardboard, nails, pulleys, thin cord, etc.
	Show transparencies on the six simple machines for review.	Transparencies on machines.
	Students report to class on famous inventors.	

246

BROAD OBJECTIVE: To help students understand that compound machines are made from a combination of simple machines.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are compound machines?	Students identify the simple machines that make up common compound machines as the scissors, can opener, pencil sharpener, meat grinder, water faucet, wrench, nutcracker, etc.	Students volunteer to bring the various common machines to class.
2. How are gears used?	View filmstrip.	The Use of Gears.
	Students make models of gears and manipulate these.	Cardboard - materials will vary.
	Examine a bicycle and discuss the gears with a chain.	Have a student bring a bicycle to class.

247

BROAD OBJECTIVE: To help students understand how friction affects work done by machines.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What causes friction?	Students examine smooth and rough surfaces with hand lens, magnifying glasses and microscopes.	
	Do investigation into the force of friction.	Concepts in Science, p. 181.
2. How can friction reduce the amount of work done?	Have students rub their hands together and note the heat produced by the resulting firction.	
	Complete investigations that demonstrate the following concepts: a. The nature of the materials affect friction. b. The nature of the surfaces affects friction. c. The amount of area between surfaces affects friction. d. The pressure of the surfaces against each other affects friction. e. Sliding friction is less than starting friction. f. Rolling friction is less than sliding friction. g. Lubricants reduce friction.	Resource: Science For The Elementary School.

248

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	h. Rollers, wheels, ball bearings, etc. reduce friction. Class discussion of how friction can be helpful (on icy roads, etc.).	

249

BROAD OBJECTIVE: To help students understand that engines provide the force needed to run complicated machines.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Why are engines necessary?	View film.	Film: Energy and Work.
	Read and discuss how man has used the forces of wind, moving water, and heat on gases to supply force.	
	Students research and report on the industrial revolution.	Library books and reference books.
2. How does the windmill supply force?	Have students read and report on windmills (wheel and axle machine) and their uses.	Books, reference books, library books.
3. How does the water wheel supply force?	Students diagram the different kinds of water wheels.	Machines - Life Science Library by Robert O'Brien
	Read and discuss the different kinds of water wheels.	

250

BROAD OBJECTIVE: To help students gain an understanding of different kinds of engines.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How does the steam engine work?	Do investigations to demonstrate how steam can be used to do work.	Text: Concepts in Science.
	Have students diagram a steam engine.	
	Students research and report on the different uses of steam engines.	
	Construct a steam generator to demonstrate how a steam turbine works.	Science For The Elementary School.
	View film.	Film: Engines How They Work.
2. How does the gasoline engine work?	Read and discuss the gasoline engine.	Book: Concepts in Science.
	Students draw diagrams of gasoline engine cylinders.	
	Display posters of gasoline engines on bulletin board.	Posters from General Motors.
	Students research to find where gasoline engines are used and how many cylinders these engines have.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Have students look at the engines of several parked cars at school and determine the number of cylinders of each and identify certain parts.	Teachers cars.
3. How does the Diesel engine differ from the gasoline engine?	Discussion of comparison of the cylinder operation of the Diesel engine with that of the gasoline engine.	
	Draw diagrams or make models of Diesel engine cylingers.	Encyclopedias.
	Discuss the advantages and disadvantages of the Diesel engine. Make a list.	
4. How does the jet engine work?	Students diagram a jet engine.	Text: Concepts in Science.
	View film.	Film: Jet Propulsion.
	Discuss Newton's Law of Action and Reaction.	
	Let students attempt to design a car or cart that does work by jet propulsion.	Materials obtained from home.

BROAD OBJECTIVE: To help students become aware of the variety of careers involved with machines and engines.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are some careers related to machines and engines?	Make a poster listing as many job opssibilities that students name. Leave the poster on display to add others later.	Poster Board.
	Students do individual research on careers in media center.	Pamphlets from General Motors.
	Invite personnel manager from Inland Motors Corp. to tell about job possibilities there.	
2. What activities are involved in the careers related to machines and engines?	Teacher video tape the work activities within Inland Motors and interview several employees asking questions about their jobs and responsibilities. Show video tape to class and discuss the different activities visible.	
	Invite an automobile mechanic to class to describe his job and his feelings toward his work.	
	Take a field trip to the high school machine shop. Interview high school students involved there to find out about their future plans, reaction to the industrial training, etc.	

253

CULMINATING ACTIVITY: Have students make or design a compound machine that will actually do work, using the simple machines studied.

BROAD OBJECTIVE: To help students become aware of the many careers that need some knowledge of Chemistry.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What careers need some knowledge of Chemistry?	Bulletin board - Careers in Chemistry. Have students investigate various careers in Chemistry. Discuss and list careers. Some students make a poster listing careers for class display. View Tr. on Chemistry Related Careers. View Film - Challenging Careers in Chemistry.	Books and Booklets: A Bright Future for You as a Chemical Technician. Career Opportunities in Chemistry. Chemist. Chemistry Guidance Leaflet. Chemistry and Your Career. A Dozen Reasons Why Young People Choose Chemical Industry Careers. Finding Employment in the Chemical Profession. Is Chemical Technology the Career for You? Tr. Film.

252

BROAD OBJECTIVE: To help students become aware of some famous chemists and their work.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Who were the alchemists?	Have students read about the history of Chemistry.	Books.
2. What contributions have chemists made to our world?	Give students a list of famous chemists and have them investigate the work of several and report to class.	Encyclopedia and books.
	View film.	Film - Wonders of Chemistry.
		Resource person - Chemist from Radford College.

257

BROAD OBJECTIVE: To help students learn to use the equipment and measurement system of the chemist.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are some of the equipment used by the chemist?	Give students a list of equipment and demonstrate how each is used.	Equipment (will vary)
	Have some students make diagrams of equipment on poster for display in room.	Poster Magic marker
2. What system of measurement is used by the chemist?	View filmstrip.	Filmstrip - Metric System
	Have students make measurements of length, mass and volume.	Materials (will vary)

258

BROAD OBJECTIVE: To help students understand the properties of matter.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are the properties of matter?	View filmstrip.	Filmstrip - Introduction to Chemistry.
	Have students read about the following properties of matter: 1. Volume 2. Mass and weight 3. Inertia 4. Elasticity 5. Granular structure 6. Electrical nature	
	Have students demonstrate some of the above properties.	
	Have students test material for physical and chemical properties.	Reference for teacher: ESS - Mystery Powders. NSTA - Atoms and Molecules.

259

BROAD OBJECTIVE: To help students understand chemical and physical changes in matter.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is the difference between physical and chemical changes in matter?	Have students read about chemical and physical changes. Demonstrate (teacher) chemical and physical changes. Have students observe and identify changes. View film or films.	Book. Materials (will vary according to the various chemical and physical changes demonstrated) Films: Chemical Changes About Us. Explaining Matter: Chemical Changes. How Materials Are Changed.

010

BROAD OBJECTIVE: To help students understand the groups into which matter has been classified.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How has matter been classified?	Discuss and list on overhead projector how matter has been classified into the following groups: 1. Elements - Atoms 2. Compounds - Molecules 3. Mixtures 4. Solutions, Suspensions, Colloids.	Overhead Projector. Resource person - Chemist from Radford College.
2. How do elements and compounds differ?	Read and discuss elements and compounds.	Book - Life and the Molecule
	View filmstrip.	Filmstrip - Elements, Compounds and Mixtures.
	Read and discuss how atoms and molecules relate to elements and compounds.	Book - Life and the Molecule.
	View two or more films to show how the chemist uses elements and compounds and how they are classified.	Films: Atomic Theory Erudence For Molecules and Atoms Chemical Families Family of Halogens Sodium Family World of Molecules World of Phosphorus

196

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	View filmstrips.	Filmstrips: Atoms, Molecules, and Ions
	Explain and discuss the chemist's shorthand.	Periodic System.
	View filmstrips.	Filmstrips: Symbols, Formulas, Equations. Atomic and Molecular Weights.
	Explain how the chemist uses chemical equations to show what happens in a chemical reaction. Interested students may want to: Calculate molecular weight. Balance equations Solve equations	
	Have some students make molecular models of compounds.	Toothpicks Small styrofoan balls
	Make charts to display some common compounds and formulas.	Poster board Magic markers
What is a solution, suspension, and a colloid?	Read and discuss solutions, suspensions, colloids.	Book - Life and The Molecule
	View filmstrip.	Filmstrip: Solutions, Suspension, Colloids

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Experiments: 1. Study Solutions 2. Solubility of Substances in Water 3. Temp. and Solubility of Solids in Liquids 4. Ways of making Solids Dissolve More Quickly in Water Have some students collect and display Elements, Compounds, Mixtures, Solutions, etc.	
CULMINATING ACTIVITY	Field trip to Chemistry Department at Radford College.

INTRODUCTION TO: Oceanography

This unit is written for a seventh grade science class with emphasis on career opportunities currently available in and near the oceans. As the last frontier on earth, more information is being sought about the oceans in hopes that the wealth of resources there might be used to meet man's increasing needs. The career opportunities in this area will tend to increase in the future.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIALS
Show film, Oceanography-Science of the Sea.	41605 Oceanography-Science of the Sea.

265

BROAD OBJECTIVE: To increase students' knowledge of the importance of the oceans.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is oceanography? The study of the ocean.	Discuss why it will be of benefit to increase our knowledge of the ocean. Read the quote by John F. Kennedy, "Knowledge of the oceans is more than a matter of curiosity. Our very survival may hinge upon it." Have students write letters for information concerning the oceans. Students begin to make individual scrapbooks on the oceans.	
2. What things does the ocean provide? Fish Industry: Food Iodine Fish oil(medicine, soap, etc.) Fish skin(billfolds) Mineral Products: Oil(mining) Gold(mining) Iron Uranium Sand, gravel,limestone Algae Food	Make a collage of products obtained from the ocean entitled, "Treasures from the Sea." Several assignments are given at one time so students may work at their own speed on individual research. Individual student research to explore the different products obtained from the fish industry. (In notebooks.)	Magazine pictures.

226

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Additives in other foods Kelp	Divide class in groups. Each group can select a mineral and find out how man uses it. Then a class chart can be made. Several students may work on one chart.	
	Find magazine and newspaper articles about the oceans and ocean products(oil mining,etc.) for the scrapbooks. Have students bring old magazines to school for this.	Magazines and newspapers.
Aquaculture: Oysters Fish Seaweed Kelp Recreation: Boating Surfing Swimming Hobbies	Discuss how the flooding of rivers effects the growth and value of water crops.	
Transportation	View collections of sea shells of all types. Students can share their collections with the class.	Collection of seashells.

267

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	View filmstrip, "Marine Resources." Have resource person come to class to talk about water safety.	Encyclopedia Brittanica filmstrip. Resource person: Game Warden.

BROAD OBJECTIVE: To help students understand the characteristics of oceans.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How many oceans are there?	Make a list of all the major oceans and seas. Discuss the difference. (Social Studies tie-in)	
	Let the children locate these on the globe and large world map.	Globe or world map.
	Set up reading table with various books about oceans. Encourage students to read and look at the pictures.	See bibliography.
2. What minerals does ocean water contain?	Students compile in scrap-books a list of the various minerals found in the ocean. A chart has already been displayed.	
	Obtain a sample of water from the ocean, lake and tap water. Let the water settle and examine the bottom of the containers.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. What causes currents in the ocean? Winds Sun's heat Earth's rotation Land formation	View transparency, Ocean Currents. Draw a map of the oceans and indicate the major currents (for scrapbooks).	Transparency: Ocean Currents
4. What causes waves? Friction between wind and water.	View transparency, Waves. Have student fill a bowl with water. Let students take turns blowing across the rim of the bowl-then blow harder. Surface water ripples then form larger waves. Have students who have been swimming in the Atlantic Ocean describe their experiences in the waves.	Transparency: Waves Bowl or pan.
5. What causes ocean tides? Gravitational attraction of moon. Highs and lows every 12 hours.	View film, Ocean Tides. Have students give individual reports on erosion caused by tides & life cycles depending on the tides. Refer to Va. Beach erosion problem under study. Have students who have been to the seashore tell about	Film Books on reading table. Encyclopedias

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	why it is important to know when the tides occur.	
6. How does temperature, pressure and light vary in ocean waters?	Class discusses these differences in an effort to get an understanding of what conditions occur in the ocean. Discuss how certain animals are suited for certain ocean regions.	
	Read section in text, Life, Its Forms and Changes.	Science text: P. 31-33
	View transparency, Characteristics of Ocean Water.	Transparency: Characteristic of Ocean Water.
7. What is the ocean floor like? Continental shelf Trench Plain Ridge Guyot Faults	Students draw a map of the ocean floor.	
	With a flour water mixture let students make a model of the floor of the Atlantic Ocean. Paint the model.	Materials needed: A - Flour B - Water C - Paper D - Cardboard base E - Salt

BROAD OBJECTIVE: To help the students become aware of the variety of life forms in the ocean.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What kinds of plants live in the ocean? Phytoplankton Algae Kelp	View transparency entitled, Plant Life of the Oceans. Draw pictures of ocean plants in scrapbooks.	Transparency: Plant Life of the Ocean.
2. What kinds of animals live in the ocean?	View film Secrets of the Underwater World. Study and learn to identify the various shells. View transparencies of ocean animals. Have students construct a diorama illustrating life in the ocean, both plant and animal. Have students draw pictures of ocean animals in their scrapbooks. Students make individual reports in scrapbooks. Students dissect preserved starfish specimen(in groups of five).	Film: State 46309 Secrets of the Underwater World Transparency Large cardboard box. Construction paper. Clay.

BROAD OBJECTIVE: To help students understand how the ocean is being explored and occupations associated with this exploration.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How do oceanographers explore the ocean? a. SCUBA b. Bathyscaphe	Invite oceanography professor to tell the class what oceanographers do and tell about careers in oceanography.	Dr. Scolaro, Radford College
	View transparency on Underwater Exploration.	Transparency: Underwater Exploration.
	Review necessity for SCUBA gear.	
	Student research on different industries employing scuba divers.	
	For an extra assignment, students can prepare a HISTORY of oceanography.	Books Encyclopedias
	Make clay models of the various ships which have been designed to explore the ocean depths.	Clay
	Discuss the various jobs of people on the ship and the preparation of each.	
	Find magazine pictures of equipment and supplies aquanauts use.	

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Invite SCUBA diver to class to show his gear and tell principles of diving.	SCUBA Diver.
	View filmstrip, Ocean Engineering	Encyclopedia Brittanica filmstrip: A - Ocean Engineering
	Take a field trip to Claytor Lake. Observe wave action, take several samples of water, gather water plants, try to collect plankton and different algae types, collect sample of sand. After the trip, view the sand under the microscope. Try to identify the types of algae and plankton.	Field trip - Claytor Lake
2. What are other occupations associated with the ocean?	Have students investigate industries resulting from the sea. Letters for information may be sent.	
	View the filmstrip, A Career in Oceanography.	Encyclopedia Brittanica Filmstrip: A Career in Oceanography
	Make a bulletin board display of different careers.	
	Have a classroom quiz contest, girls va boys, to review all important facts.	

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Prepare a skit or play depicting the problems and results of Sealab II. Refer to pictures and log of events in World Without Sun. Have students make the necessary gear and a model bathyscaphe to be used as props. Give presentation to another class. (See attached skit written by a student.)	Cousteau, J. I., World Without Sun, Harper and Row, 1965. Early, Margaret, Ed., Reading To Learn, "Men of the Sea," p. 325-335. Boxes, paint, construction paper, small lumber.

225

OCEANOGRAPHY SKIT

By: Lynne Rutkowski
Grade 7

Narrator: It's June, 1952, an underwater exploration is going to take place. All the technicians and oceanographers have checked and double checked their machines and figures.....

Luke: Ready to go to the underworld for three whole months?

John: You bet I am! I've been waiting for this for five years, and now that we're finally going to do it, I'm gonna make the best of it.

Narrator: I can bet you're wondering what that was all about. Well it all started when a man worked on an underwater inhabitance. He called it a bathyscaphe.....

August: Well Carl, we've finally finished it. All the gauges are working and the levers work fine.

Carl: In all my years assisting you, Dr. Piccard, I thought I'd never see the day. While we were working on it, it seemed to take forever, but now it seems like we started it just a few days ago.

August: Well, now you've seen the day, and in five months it'll be in use, Underwater.

Narrator: So now you see who John and Luke are. They are the oceanauts who will be underwater for 3 months.

#1 Tech. Everythings set.

#2 Tech: Going down!

Narrator: As the submarine-like ship went slowly down into the blue-green water, I'm sure everybody's heart skipped a beat. Technicians, doctors, Scientists, and others must have been asking themselves the same questions: "Will they be safe?" "Will they succeed?"

Luke: When is the first time we go out to explore?

John: I don't know, I guess I'd better ask. Hello, Hello Mr. Rogers, when do we go out?

Mr. Rogers: (over the teletype) Maybe you'd better wait till an hour or so. We want to check and see if all the gauges are working.

John: O.K. Over and out.

Narrator: Hours later the two men went out into the bluish-green water to explore the unknown.

Luke: Look at that coral reef! All those colors.

John: Let's take a sample back to the tub.

Luke: Alright, I'll get some.

Narrator: As Luke took some coral a whole school of tiny purple fish came out.

John: Get some with your net!

Luke: O.K.! O.K.! I hear you.

Narrator: They stayed out for about half an hour more and then went back to the tub.

John: Man, I'm hungry.

Luke: Yea, let's fix some grub.

Narrator: They ate and then rested. Every once in awhile the above ship would call in to see how things were going.

#1 Tech.: Everything alright?

John: Fine. Everything's fine.

#2 Tech.: Just wanted to tell you that two doctors are coming down to check your health.

Luke: O.K.

Narrator: Fifteen minutes later two doctors came down in a bathysphere.

#1 Doctor: You're fine. Your blood pressure is a little high, but you'll be fine.

#2 Doctor: We'll be down tomorrow, the same time.

Narrator: The next morning the two oceanauts went out again, but this time they really got wrapped up in their work, and when I say wrapped up I mean wrapped up! The two had just went down 100 feet and were looking at some very interesting coral.

Luke: Hey, watch out.

John: Watch out for what?

Luke: Turn around and you'll see.

Narrator: John turning around probably almost jumped out of his suit because.....

John: Holy Smokes, we better get out of here and fast.

Narrator: And you know what was coming? The biggest octopus you've ever seen. The oceanauts started swimming fast, but so did the octopus.

Luke: You know something.

John: What?

Luke: I think he is following us.

Narrator: They got back to the tub just in time too, because that octopus was a ten yards away.

John: Whew! That was close.

Luke: A little bit too close for me.

Narrator: The doctors came down around five minutes later.

#1 Doctor: You both look a little bit pale. Did anything happen?

Luke: Oh, no. We just got chased all over by an octopus.

#2 Doctor: Man, you must have been scared.

John: No, not a bit! (Winks at Luke)

#1 Doctor: O.K. We'll be down tomorrow the same time.

Narrator: Time was passing quickly. They had gone out many times in the three month period. On the last time out they took many pictures and samples back to the ship.

#1 Tech: All set.

Luke: Yep.

#2 Tech.: Going up.

Narrator: In just a little while they were upon the surface talking to everyone especially to reporters.

Luke: I'll just say it was a worthwhile trip, and I'm glad I made it!

John: I'll second that motion!

THE END

BROAD OBJECTIVE: To help the student understand why knowledge of atomic energy is important.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Why study atomic energy?	Bulletin Board - Careers in Atomic Energy.	Booklets: 1. Careers in Atomic Energy 2. Employment opportunities in the Atomic Energy Field 3. Selected Occupations Concerned With Atomic Energy
	Research various careers in library and materials in classroom.	Books and encyclopedias in library.
	Report to class.	
	Students write letters for information to Atomic Energy Commission.	
	Make a poster listing careers for class display.	Poster board.
	Read about famous nuclear physicists and tape record information to be used by other students.	Tape recorder.
	Show film.	Film: The Atom and Industry.

BROAD OBJECTIVE: To help the student understand the structure of the atom.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is the structure of the atom?	Read about the structure of the atom.	Texts.
	Make a chart for class display on sub atomic particles.	Reference Books: Library Books, Encyclopedias
	View filmstrip.	Filmstrip.
	Have pupils investigate the properties and structure of various elements.	
	Construct models of atoms.	Wire, Clay, Beads, Foam blocks, Toothpicks, Gum Drops.
	Have a bulletin board display of pictures or diagrams of the structure of various elements and their properties.	
	Discuss how the chemist uses the periodic table.	Periodic Table. Filmstrip - Periodic System
	Have pupils find out how scientists discover the many different particles that are found in the nuclei of atoms.	Dr. Durrill - Radford College.

283

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Discuss how our concept of the atom is constantly changing. View transparency on atoms.	Transparency - Atoms
	Investigation - Sealed boxes.	Sealed boxes with unidentified objects inside.
	Discuss isotapes and atomic structure.	
	Film.	Structures of Atoms.

284

BROAD OBJECTIVE: To help students understand how nuclear energy is obtained.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIALS
1. What is radioactivity?	Discuss the rays given off by radioactive elements. View transparency on Radioactivity.	Transparency: Radioactivity.
	Show film.	Film: Radioactivity 74708 13 min.
	Investigations: a. Effects of Radioactivity. b. Observe results of Atomic Disintegrations.	X-Ray Film. Watch or clock with dial painted with a radioactive substance.
	Have some pupils report on the uses and production of x-rays.	
	Discuss devices used to detect radioactivity.	Geiger Counter.
	Film.	Atomic Energy Inside The Atom.
2. How is the nucleus of an atom split?	Demonstrate (student) chain reaction.	Marbles, dominoes
	View film.	Neutrons and the Heart of Matter.
	Read and discuss - The Nuclear Reactor.	Books. Field trip - V.P.I. & S.U. Physics Department.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Make diagrams and models of Reactors.	Posterboard. Modeling clay, sugar cubes, toothpicks, shoe-box, dominoes, pencils.
	View film.	Nuclear Reactors for Research (AEC)
	Have a student interview a nuclear physicist at VPI & SU. Tape interview - Find out such information as safeguards that prevent a reactor from turning into a fission bomb.	Tape recorder.
	Read and discuss the cyclotron and other particle accelerators.	Books.
	Film.	Atom Smashers.

BROAD OBJECTIVE: To help students be aware of the many uses of nuclear energy.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How do atomic bombs work?	Have students do reports on the various people who contributed to the success of the first atomic bomb.	Library books.
	View film.	Atomic Power.
	Discuss $E=MC^2$	
	Discuss nuclear fusion.	
	Make diagrams to show how fission and fusion differ.	
	View film.	Living With The Atom.
	Discuss Civil Defense.	Resource person on Civil Defense. Booklets from AEC.
	View film.	Film - 33612 Radiological Defense. 28 min.
2. How is nuclear energy converted?	Read and discuss Nuclear Power Plants.	Books.
	View filmstrip.	A Trip to A Nuclear Plant.
	Make diagrams and/or models of Nuclear Power Plants.	Posters.

287

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	View film.	Film - 66108 Controlling Atomic Energy 15 min.
3. What are radioisotapes?	View filmstrip.	Filmstrip: The Atom: Mans Servant.. Radiation and Its Practical Uses. F158B -(RC)
	Divide class into research groups to investigate use of radioisotapes in: Medicine Industry Agriculture	Books, Booklets, etc.
	View film.	Film: Opportunity Unlimited: Friendly Atoms in Industry (AEC)
		Field trip and/or resource person from Radford Hospital.

288

UNIT TITLE: IRON WORKING IN VIRGINIA

THE IRON WORKER

APPROXIMATE GRADE LEVEL: GRADE 7

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: Iron Working in Virginia
The Iron Worker

This unit on the Lynchburg Foundry is structured for a social studies class. Since the seventh grade curriculum deals with the history and geography of Virginia, The Iron Worker begins as an outgrowth of colonial Virginia history with the discovery of iron ore at Germanna.

From this history, the unit develops all aspects of iron works concentrating on the processes at Lynchburg Foundry in Radford. Close attention is given to the variety of occupations involved in the operation there as many of the students' parents are employed by the foundry. Also, Lynchburg Foundry is the largest industry in the city and will provide future employment for many of our students.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIALS
What things in our school are made of iron? Take a walk around the school and let the students compile a list of everything they find that is made of iron. Also, have students list the different uses of pipe within the school building.	Virginia History History of Iron Mfg. - from earliest times in reference books.

BROAD OBJECTIVE: To help the students become aware of the importance of iron and how it's made.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. When was iron first found in Virginia?	Read "Spotswood's Exploration" in text.	Text - Virginia p. 146-148
	Map a large wall chart of the U.S. iron ore deposits.	World Book, Vol. 10, p. 346
2. What things are made of iron?	From a collection of old magazines make a collage of materials made from iron.	Old magazines which students bring in or old magazines discarded by the school library. Poster board.
	Set up a reading table with books of interest about iron.	
3. What is the "recipe" for making iron? 1 ton iron: 1 3/4 tons of ore 3/4 ton of coke 1/4 ton of limestone 4 tons of air	Examine samples of raw materials used in making iron(iron ore, coke, limestone). Display these on a table in the room.	Steel Kit
	Students research to find out where raw materials come from.	Encyclopedias
	Discuss process of making iron and the different kinds of iron.	(Back-up material in science class)
	Make diagram of process on large poster to display. Draw diagram of blast furnace and display.	Poster Board

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	View filmstrip on how iron is made.	Filmstrip - "How Steel is Made" - from Steel Kit.
	Display steelmaking flow chart.	American Iron & Steel Institute.

BROAD OBJECTIVE: To cause the students to become aware of the iron works at Lynchburg Foundry.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What products are made at Lynchburg Foundry?	Representative from Lynchburg Foundry to give slide presentation from the Foundry showing the products and how they are made. The slides will also suggest jobs associated with the Foundry.	Lynchburg Foundry Representative(Mr. Tilley).
	Read and display pamphlets and advertisements made available by the Foundry.	Pamphlets - Foundry
	Discuss why the Foundry is located here and its economic importance to the community.	
	Make a model Foundry. (Different shaped. Students can bring boxes and paper rolls. The finished model can be displayed in the library showcase.	Boxes, paper tubes, styrofoam, clay and wood blocks.
	View some of the products made at the Foundry.	Samples from Foundry. Pictures in the Iron Worker.
	Have students become familiar with the Iron Worker, the Foundry publication and have students write a history of the Lynchburg Foundry at Radford.	Iron Worker The Radford Review, "Radford, Va.: Its Location, Growth, and Significance" by D.A.Cannaday.

254

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
2. For what are the products from the Foundry used?	Using empty paper rolls, set up a system of pipes to pipe something from one part of the room to another.	Students can collect empty paper rolls.
	Take a field trip to Steven's Supply, a wholesale dealer selling Foundry products.	Field trip.
	Refer to collection of Foundry advertisements. Display these in the room. Articles in the Iron Worker illustrate products in use.	The Iron Worker

BROAD OBJECTIVE: To help the students become aware of the occupations associated with the work processes in the Foundry.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are the occupations associated with Lynchburg Foundry?	Have the personnel manager visit the class and tell about the various types of jobs.	Personnel Manager from Lynchburg Foundry (Mr. Bernard Tilley, Mr. Gary Mann, Mr. Coleman)
Business: Personnel manager Company officials Secretary Clerk	Have all the students' fathers who are employed by the Foundry come to class and tell about their particular jobs.	
Operations: Grinder Crane operator Molder Pattern maker Inspector Metalurgist Many others	Make a wall chart listing all the different jobs involved at the Foundry and the qualifications and duties of each.	Large posters. SRA occupational briefs
Maintenance: Plumber Electrician Safety & health officers Custodian Watchman	Students interview their neighbors who work at the Foundry and report to the class on these occupations and comments. The teacher should help make a list of suggested questions for the interview.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Associated Jobs: City Engineers City Planners	Role play individuals applying for a job at the Foundry. Different students can interview for different jobs.	
2. What are some problems related to occupations in the Foundry?	Individual student research to find out about trade regulations and wage price control which would affect the operation at the Foundry. Then a panel discussion planned by the students could deal with these problems. Students make posters to represent their points of view.	Encyclopedias. Economics books.
	Organized labor could be studied by having a union official and a non-union employee from the Foundry come to the class and discuss labor management problems and the advantages and disadvantages of a union. (These persons might be interviewed if they can't come in person.)	Labor official from Foundry. Non-union employee. Pamphlet, "Why Unions", AFL-CIO.
	Role play labor and management discussions of problems.	

297

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Collect any news articles dealing with labor or union relations and make a bulletin board display.	Daily newspaper - students bring to class.
	Discuss the pollution factor at the Lynchburg Foundry. Resource person from Foundry should come to class to explain the recently installed filtering systems.	Resource people
	Have a Virginia Air Pollution Control Board official come to class to discuss the level of air pollutants in Radford.	Virginia Air Pollution Control Board official.
	Class discussion of the importance of the Foundry to the community vs. the pollution it creates.	

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Set up a model Foundry in the room. Plaster of paris can be used to mold items which will be the products. Different stations set up in the room could include pattern making, molding, painting, advertising, production management, inspection, storage, maintenance, foreman. Enough products could be produced so that each student may have one to take home.	(Molding comparable to casting at the Foundry.)

959

SUBJECT MATTER TIE-IN

Science

1. Magnetic properties(make electromagnets)
2. Centrifugal force
3. States of matter
4. Thermometer and temperature
5. Soil conditions, terrain, why we use one kind of pipe one place and another somewhere else.
6. Safety
7. Pollution, air and noise
8. Alloys
9. Rate of flow, gravity
10. Study of simple machines
11. Process of making iron and steel.

Language Arts

1. Interviewing people
2. Advertising the products
3. Writing orders
4. Reading orders - where to be shipped
5. Vocabulary of the trade
6. Letters for information
7. Stating fathers' jobs
8. Reports, research
9. Write own stories and poems

Math

1. Thermometer-reading
2. Measurement-diameter, linear, liquid
3. Salaries
4. Cost of raw materials(figuring profits)
5. Selling products
6. Geometric shapes
7. Weights of pipe
8. Distances of shipments

Music

1. Rhythm of sounds
2. Sounds of different sized pipes
3. Sounds of metal on metal, metal on wood
4. Write foundry songs
5. Sing the foundry song

Art

1. Sketch foundry
2. Sculpture
3. Designs in smoke
4. Making charts and posters
5. Building a model of the foundry
6. Colors involved in metals
7. Drawing pictures
8. Paint metal pieces
9. Safety posters

Physical Education

1. Chin-ups
2. Movements with pipes
3. Simulate motions

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION:

This unit is designed for the 7th grade level in language arts and/or reading.

It shows the different occupations involved in dictionary development.

It's final product will be a reference book for students' basic career study.

BROAD OBJECTIVES:

1. To help students become aware of the various parts in a dictionary entry: diacritical markings, stress marks, definitions, word class, citation, etymology.

2. To help students develop a dictionary by putting various occupations to work.

3. To help students view the dictionary as a tool of necessity.

304

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How and why was the first dictionary produced?	Brief introduction by teacher and discussion from class. Announce extra credit can be achieved by writing report or drawing a chart on history of dictionaries.	World Book Encyclopedia A Structural History of English.
2. What does a dictionary tell us?	Brainstorm, then do selected exercises for clearing understanding.	Our Language Today, 7, Chapter 11 Words and Ideas 7, pg. 339-345 Growth in English, pg. 394 Adventures for You, p. 473-474.
	View transparencies.	Book of transparencies and masters. Joys and Journeys, Skillbook. McHarg Library.
	View Filmstrip, "What's in The Dictionary?" Color, record and script.	
3. What dictionary terms should we know?	Use entry from dictionary or overhead. Label parts and list terms: Entry, guide words, diacritical marks, pronunciation key, word classes, accent marks, parenthesis, etymology.	Transparencies. Preceding grammar book references.

805

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Give them 5 words they are probably not familiar with in sentence which indicate meaning. They are to alphabetize and then write as a dictionary entry, including all parts. Possibilities: 1. Lexicographer 2. Linguist 3. Grammarian 4. Etymologist 5. Secretary	
4. In what occupation might you use a dictionary?	Brainstorm session. Bring in examples of different kind of dictionaries used in our home - put on display.	Chalkboard, chalk.
5. What are the kinds of dictionaries? general and specialized.	Look at dictionary exhibit and classify them.	Dictionaries students brought from home.
6. What kind of dictionary could we use for our study on careers?	Survey on parents' occupations. Do a small index card (size depending on container) which writes the career like a dictionary entry.	Index cards, container.
7. How do we compile information for publication?	Field trip to Commonwealth Press.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
8. How can we organize ourselves to make a dictionary?	Brainstorm job titles. When about 20 jobs are listed, divide the class into groups to do jobs with various occupations. Each group will need: (1) a linguist - Do pronunciation (2) grammarian - Do definitions, word class and sentence (3) etymologist - Do history of word, its root, and various prefixes and suffixes. (4) secretary - Record final draft on cards (5) part-time illustrator Groups can be divided as follows: Occupations beginning with Group I - A, B, C II - D, E, F III - G, H, I, J, K IV - L, M, N, O V - P, R, S VI - T, U, V VII - W, X, Y, Z	Chalkboard and chalk. Encyclopedia of Careers and Vocational Guidance, Vol. I, II. SRA Briefs - Proofreaders #373.
9. How important is accuracy in information before publication?	Resource person to discuss proper pronunciation, fitting definitions to words, career opportunities, salaries, etc.	A grammarian or publisher.

307

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
10. How can we put our dictionary together?	Student aid types dictionary directly from index cards. Illustrator work with her. Groups reorganize to: Group I - Put in guide words, numbers pages. Group II- Proofread, put in diacritical markings. GroupIII- Write an introduction, do title page. Group IV- Make a pronunciation key. Group V - Do any additional reference pages. Group VI- Staple, bind, and cover book. GroupVII- Make a poster to introduce dictionary to school and display in library, display case, etc.

SPECIAL EDUCATION INTRODUCTION

The career education program of the Radford City Schools was implemented in the Special Education Program consisting of a primary educable mentally retarded class, an intermediate EMR class and a TMR class, in the following ways:

1. Units geared toward all three levels incorporating sensory experiences, field trips, resource people, community resources, occupational information, subject-matter tie-in, role playing and interviewing skills were written.

2. Classroom Job Responsibilities

TMR Class
1. Care of animals
2. Straightening of tables & chairs
3. Office messenger
4. Delivering orders to cafeteria for milk
5. Cleaning desks & tables
6. Line leader
7. Distribute & collect papers, mats, & pillows

PEMR
1. Line leader
2. Care of animals
3. Wash board
4. Office errands
5. Distribute papers
6. Pledge leader
7. Clean tables

IEMR
1. Office errands
2. Clean & straighten book cases & shelves
3. Clean board and erasers
4. Straighten desks
5. Sweep floors
6. Vacuum the carpet
7. Open & close windows
8. Pass out papers
9. Empty trash

CONTINUED

3. Special Education students are permitted to apply and interview for the school-wide jobs pertaining to his own age level.

We found this program very effective and meaningful for children with special needs. Special activities increased interest and motivation in all subject matter areas.

3/2

INTRODUCTION TO: FOOD NUTRITION AND THE SCHOOL CAFETERIA - " WHAT'S COOKIN'"

Children of the Trainable Mentally Retarded range need to become aware of the function of the workers involved in school cafeteria and the nutritional knowledge and work involved in planning meals and preparing meals at home and school.

MOTIVATING ACTIVITY

Ask each child individually to tell me what they would have for breakfast, lunch and dinner if they could eat anything they wanted. After conducting survey, read results of each child's menus to entire class and discuss why they chose what they did. Then try to decide if these are good choices and if not, what we can do to make better choices.

BROAD OBJECTIVE: Food groups and nutrition.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How many different types of groups of foods do we have to choose from?	Introduce the 4 Basic Food Groups: 1. Dairy-Milk Products 2. Fruits and Vegetables 3. Breads and Cereals 4. Meat	Books: Johnson, Lois S., What We Eat. Jupo, Frank, Nothing to Eat But Food. Eberle, Irmengarde, Basketful: The Story of Our Foods. Beck, Barbara L., The First Book of Fruits.
	Have each child tell some of his favorite foods and decide which groups they would fit in.	Study Prints: CSP-28-Food and Nutrition David C. Cook
	Take each food group individually and have children make a chart for each group by cutting pictures from magazines. Spend at least one day on each group.	Filmstrips: The Food We Eat Series-SVE CF-H1-How We Get Bread CF-H5-How We Get Fruit CF-H3-How We Get Meat CF-H2-How We Get Milk CF-H4-How We Get Poultry and Eggs CF-H6-How We Get Vegetables CF-H8-The Story of Bread CF-H9-The Story of Fruits and Vegetables CF-H7-The Story of Milk

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
		Cassettes: - SVE CE-CT-H1-How We Get Bread CE-CT-H3-How We Get Fruit CE-CT-H2-How We Get Meat CE-CT-H1-How We Get Milk CE-CT-H3-How We Get Vegetables CE-CT-H2-How We Get Poultry and Eggs
2. How do we know how many selections from each group we need each day to stay healthy?	Discuss with children that we need to include certain selections from all groups daily to keep fit and healthy and have a balanced diet.	
	Get large picture displays from local groceries of meats, produce, etc., and make costumes so children can act out their choice. Have for example, a 'meat' combine with a 'bread' and vegetable', etc., to produce a balanced meal.	Cardboard display pictures.
	Distribute 3 paper plates to each child and have them cut from magazines pictures of food to paste on plates to make a balanced breakfast, lunch	Paper plates, scissors, glue, magazines.

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	and dinner. Display these in room as a bulletin board.	
3. How do the foods we eat daily affect the way we grow and the way we look?	Very simply discuss with children the caloric values of different foods and food groups. For example, breads and cereals have many more calories than fresh, green vegetables. However, stress that even if you're dieting, you still need some selections from Bread and Cereal group daily.	Calorie charts.
	Make a chart to keep account of what each child eats daily. Have them tell what they had for breakfast, lunch and dinner to see if they are eating a balanced diet.	Chart
	The ones that need to diet can be helped more extensively by keeping weight record and emphasizing exercise along with good nutrition.	

3/6

BROAD OBJECTIVE: The School Cafeteria

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Who decides what we eat for lunch at school?	Have dietician from school cafeteria visit our class and discuss what preparation and planning goes into school lunch's.	Resource person - School dietician, cooks. Study Prints: CSP-20-School Friends and Helpers - SVE
2. Does the dietician use the 4 basic groups and calorie count in planning meals?	Have dietician bring a weekly menu and show children the selections from each group in each lunch that is planned. The dietician will probably have additional charts and information to bring to class. Have he or she tell what sort of training was necessary to become a dietician.	Filmstrips: CF-A160-The School Cafeteria Worker-Educational Series, Eye Gate CF-A217-Workers Who Provide Food - Workers Series Coronet CF-A33-School Helpers CF-A58-School Workers
3. Who prepares the food for our lunches?	Ask cooks from cafeteria to visit class and explain their duties. Have them point out that merely cooking the food is not their only task. Someone must prepare food for cooking, serve it, clean-up, etc.	CF-A58-School Workers Cassette: CE-CT-A28-Helpers At School - Knowing our School Series - Encyclopedia Britannica- 1970.

317

C A R E E R E D U C A T I O N P R O G R A M

R A D F O R D C I T Y S C H O O L S

UNIT TITLE: HOME SERVICES AND CHILD CARE
"HERE WE GO 'ROUND THE MULBERRY BUSH"

APPROXIMATE GRADE LEVEL: TMR

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

OBJECTIVES:

1. To help children become aware of the important role they can play in care of their home as well as in the world of work.

2. To strengthen children's ability to follow directions and routines involved in caring for a home.

3. To help children realize that they do have skills that can be developed into saleable occupational skills.

4. To make children aware of the economic benefits that even menial household jobs could mean to them. Also to show that one can, for example, bake one's own foods cheaper than buying them at a bakery.

5. To help children become more independent and make decisions on their own, such as which job would he prefer.

6. To incorporate basic skills in math, following directions in such things as following a recipe.

7. To show children that in order to obtain a job doing such things as housekeeping and/or babysitting one must be efficient and knowledgeable in those areas.

8. To develop an appreciation for the jobs their parents have at home and for the jobs they might one day obtain.

INTRODUCTION TO: HOME SERVICES AND CHILD CARE

Children of the Trainable Mentally Retarded range need to become aware of the many tasks involved in caring for a home and family, not necessarily their own home and family. However, with proper training and application, hopefully beginning in this unit of instruction, these children could occupy jobs such as housekeeper and babysitter.

MOTIVATING ACTIVITY

Ask children to think of a job their mother or father does around the house and role play it. The other children will try to guess the particular task being re-enacted.

Then ask what would happen if their mother or father got sick and they had to do these jobs?

BROAD OBJECTIVE: Cooking and Kitchen Tasks.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How does your mother or father know how to cook your breakfast, lunch and dinner?	Have color-coded units of measurement (for example, teaspoon is always red) along with simple recipes re-written to coincide with color-coded units of measure. Pictures could be used to denote ingredients. Have children make own recipe booklets to take home. Begin by making something simple such as no-bake cookies. Have these for a snack later. Progress to cupcakes, cake, etc.	Units of measure. Recipes (re-written) Filmstrips: CREC-A37-The Junior Homemaker (K-3) Dennoyer-Geppert CE-CT-ALL-Cooks-Chefs-Ed. Sensory Programming Books: Berry, Erick. Eating and Cooking Around the World. Boyd-Orr, John. The Wonderful World of Food
2. Do all foods we prepare require a recipe?	Do some practical cooking such as boiling eggs or potatoes, toasting bread. Continue cooking at least one day weekly.	Janice. Little Bear Learns To Read the Cook Book. Buer, Walter. Salt, Sugar and Spice.
3. Why don't we just buy all the foods we eat already cooked and prepared?	Discuss with children as simply as possible the differences in cost of prepared foods and those we prepare ourselves.	Books: Buchheimer, Naomi. Let's Go To A Bakery.

324

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Discuss the bakery and if possible visit a bakery and compare prices. Also give attention to the various jobs required for a bakery to function.	Colonius, Lillian and Shroeder, Gelnn W. At The Bakery. C74-PlaySkool Puzzle - Baker C78-PlaySkool Puzzle - Cake Maker
4. Once the food has been cooked or prepared, is our job finished?	Discuss dishwashing and its important function. Have children wash dishes after all cooking endeavors. Have children set table. Prepare a simple meal.	Cassette: CE-CT-A114 - Getting to Know The Bakery - (Let's Imagine Going Places series) Educational Reading Service

365

BROAD OBJECTIVE: Cleaning, Making Beds.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How do we keep a home clean and neat?	Introduce by referring to jobs in classroom concerning cleaning such as washing board, desks; straightening books, shelves, tables; picking up trash, etc.	
	Have new job board pertaining only to cleaning jobs in the room and extend to vacuuming rug, mopping floor, waxing floor, washing windows, waxing tables and desks, dusting, etc.	Job Board Vacuum, cleaning materials such as wax, windex, soap, etc. Comic Books: C284-Popeye and Consumer and Homemaking Careers, King
2. Can a person earn money by cleaning homes, offices for other people?	Invite a resource person (maid, housekeeper) to come to classroom and tell what she or he does in their job. Invite school custodians.	
3. Does straightening your own room at home and making your bed help your mother and can it it help you?	Discuss how even simple tasks like this at home can train you for later employment. Bring in a cot for the children to make-up.	
	Resource person - have mother come in and talk about her duties and responsibilities at home.	Filmstrip: "My Mother Works at Home" IFC CF-A130

BROAD OBJECTIVE: Washing and Ironing Clothes.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What happens to our clothes when they become dirty - do we throw them away?	Have displays of different washing powders, soaps, fabtic softeners, bleaches and explain purpose of these items.	Washing powders, soap, fabric softener, starch.
	Discuss the price of washing powders, etc. in relation to the price of a new article of clothing, if they did discard soiled clothing. Show play money equivalent to the price of washing materials and then to the price of clothes.	Articles of clothing Clothes rack
	Have each child bring something from home that can be hand-washed. Wash it at school and hang on clothes rack to dry.	Iron Ironing board
	Have iron and ironing board. Explain importance of safety with using an iron.	
	Allow children to iron articles of clothing they have washed. Use spray starch on appropriate items and contrast starched and non-starched items.	Filmstrip: CF-A144-Our Neighborhood Laundry - Our Neighborhood Workers Series, Eye Gate.
	Field Trip: to laundry and dry cleaning establishment. If possible, take items of	

3-7

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	clothing to be washed and dry cleaned so children can actually see process while they are there.	

BROAD OBJECTIVE: Child Care.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. When you were a tiny baby could you walk, talk, bathe, dress and feed yourself?	Discuss helplessness of a tiny baby and how these needs are met by parents, babysitters. Discuss how small child must learn to do these things slowly and how they are still learning to do new and different things on their own.	Filmstrip: CE-CT-A36 - The Family Has A New Baby - SVE Living With Your Family series.
	Have a life-size doll to dress, bathe, diaper, wash and iron its clothes, etc. Possibility of having a small baby in our classroom for some real application.	Doll, clothes.
2. If you were asked to babysit for your younger sister or brother or a neighbor's child, could you do it?	Discuss how small children need to be guided very carefully so as not to harm themselves. Bring in such things as playing with sharp things, matches. Point out that it is the responsibility of the babysitter to insure their safety.	
	Field trip to a child care center if possible.	

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. If a child gets sick or injures himself while he is in your care, what should you do?	Discuss and role play what a babysitter sould do if an emergency arose. Discuss importance of having emergency phone numbers such as doctor, police, fire department, or calling operator. Role play calling for help.	Phone

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Discuss what would be proper attire if you were looking for a job.	Cassette: CE-CT-A43 Dress for Interview. How to Do Series, Educational Sensory Programming.
	Make collages using materials and have them draw themselves and dress themselves, then tell where they would go and what they would do in that particular dress.	
4. Do different jobs require special clothing?	Discuss how many jobs, especially community helpers, require special dress or uniforms. Discuss firemen, policemen, waitress, nurse, doctor.	Flannel Board: CSP-88 "When I Grow Up, I Want To Be", Instructo.
	Have children dress dolls on flannel board with appropriate dress of different professions.	
5. Where do we get the clothes we wear?	Discuss with children that all the clothes we buy in a store must be made by someone. Ask them if they know of any places in our city where clothing is made.	Filmstrips: CF-A24 "How America is Clothed" America at Work series, Eye Gate.

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
6. What jobs are involved in clothes manufacturing?	Talk about the many jobs designing pattern, making pattern, cutting material by pattern, sewing on an assembly line, finishing, packaging, inspecting, delivering, etc.- bring pattern and cloth to show children. Take a trip to a clothes manufacturing company so children can see first hand the cooperation of workers on an assembly, what comes before actual sewing and what occurs after garment is completed.	Filmstrips (cont.): CF-A "Your Assembly Line Helpers" People Who Help You Series, Scott. CF-A242 Manufacturing Clothing, Agriculture and Industry Series, Educational Reading S Services. Books: Meliher, Alice V. Textile Workers. Lazarus, Harry. Let's Go To A Clothing Factory. Putnam. C96 - Textile Teaching Kit American Textile Manufacturers.
7. Could you learn to sew your own clothes?	After field trip, set up a clothes manufacturing plant in the classroom with designing room, pattern layout & cutting, etc. Set up assembly line of sewing, packing, etc. Children could make simple triangle scafts for girls, hankerchiefs for boys.	Filmstrips: CF-A169 Making Clothing - How Things Are Made Series, Coronet. Cassette: CE-CT-A58 Making Clothing - How Things Are Made Series, Eye Gate. Study Print: CSP-92 - Clothing Accessories, Instructo.

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
8. Could we be designers and create our own material?	Allow children to design material by tie-dyeing, potato and vegetable printing, object-printing and make into triangle scarfs, place-mats, table scarfs or something children might like to try. Have resource person visit class such as parent who sews or Home Demonstration Extension Agent and help children with endeavors. Teach children to sew on buttons and repair hems and ripped seams.	
CULMINATING ACTIVITY	Weave pot holders on nail-board looms for mothers for gifts and handkerchiefs for fathers. Continue sewing through-out year and let it be an individual project according to childrens' interests and abilities. Some could progress to embroidery, simple garments, etc.

UNIT TITLE: GROCERY STORE

"RING'ER UP"

APPROXIMATE GRADE LEVEL: PRIMARY SPECIAL EDUCATION

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

BROAD OBJECTIVES:

The student will:

1. Realize his personal dependence on the neighborhood grocer.

2. Understand that the grocer receives his goods from many sources.

3. Be able to identify several tools and instruments used to perform specific tasks in a grocery store.

4. Understand that speed and accuracy in hadling money is important to both the grocer and the customer.

5. Be able to decide if he has any interest in careers related to the grocery store.

6. Realize that friendliness and courtesy is appropriate behavior for working in a grocery store.

7. Recognize responsibility and the importance of completing assigned tasks.

8. Understand and appreciate the importance of sanitation in the grocery store.

INTRODUCTION:

This unit should give students an idea of the great inter-dependence of people in our society. It is also intended to make the students aware of the various jobs related to the supermarket and the training needed to become successful in one of these careers.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIALS
Pop corn in class. Serve kool-aid. Lead a discussion of where we got this food.	
Use opaque projector to make bulletin board related to supermarket.	Opaque projector. Bulletin board.
Read book. Discuss	Let's Go To a Supermarket, by J. Goodspeed.
Show filmstrip. Discuss	My Dad Works in a Supermarket. IFC.

340

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is a supermarket? What is its function?	Listen to cassette.	Getting to Know the Supermarket. Educational Reading Services.
	Show filmstrips. Discuss.	A Shopping Center. Coronet. Robert Goes Shopping. SVE.
	Visit a supermarket. Emphasize the variety of jobs and the specific tasks each worker performs.	Field trip.
	Read books. Discuss.	What We Eat, by Lois S. Johnson. Feeding the City, by Beulah Tannenbaum. When Hunger Calls, by Anne T. White.
2. Who works at a supermarket?	Make a list of all workers students can recall seeing when they visited the supermarket. Display this chart in room.	Chart paper.
	Show filmstrip and discuss.	Supermarket Workers. SVE. Workers Who Provide Food. Coronet. Workers Who Sell. Coronet.

INTRODUCTION TO: Clothing
"What's in My Closet?"

After learning about oneself and one's home, a logical step is to learn about one's clothing. This unit will give students a view of the many careers involved in clothing manufacture and care. Occupations in these areas are realistic choices for special students, so the knowledge gained from this unit will hopefully be functional in each child's daily life.

MOTIVATING ACTIVITY	RESOURCES AND MATERIAL
Two dolls(a boy and a girl, appropriately dressed) will be placed on a display table. Also, on the table will be a display of sources of materials used in making clothing (piece of raw wool or picture of a sheep; piece of leather or picture of a cow; coal; wood; silk worm cocoon or picture; cotton ball, etc.). Class discussion and guessing game of parts of clothing made from each source on the table.	

BROAD OBJECTIVE: To help students develop an interest in clothing.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are some of the reasons that people wear so many different kinds of clothing?	Make a list(children) of the types of clothing people wear (dress, shirt, boots, raincoat, etc.).	Textbook: Our Working World Families at Work Neighbors at Work
	Use pictures of clothing and clothing accessories from Instructor study prints.	Study prints: Instructor - Clothing
	Read(pupils) about the different kinds of clothing.	Textbook: A World of Surprises "The Jumping Hat" p.130 Going Places, Seeing People "Tito's Hats" p.29-34
	Learn and sing songs: 1. "Galoshes" p.39 2. "Green Dress" p.3	Music textbook: Music in Our Town
	Read story	Book: Story of Your Coat by Clara Hollos
2. What clothes are best suited for school, play, parties, church, and other occasions?	Students prepare a bulletin board using pictures appropriate to the best clothes to wear to school, church, etc.	Textbook: Sun and Shadow "Miss Poppy" p.132-157
	Read(pupil) stories about the appropriate clothing to wear.	
3. What workers need special clothing for their jobs?	Collect pictures and make posters of community workers, we have already studied about, in appropriate dress.	

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Read story(teacher)	Childcraft Vol.10 p.220-221 "Making the Clothes You Wear"
4. How are "fashions" established?	Learn and sing songs: 1. "Hat Parade" p.60 2. "Here We Go" p.119	Music textbook: Music in Our Town
	Design fabric prints by using muslin and print with potato prints, soap prints or sponge stencils.	Art book: Arts and Crafts for Elementary Teachers

BROAD OBJECTIVE: To help students develop an appreciation of the cooperation of the many workers, in making, supplying and caring for our clothing.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What places and workers in our community provide our clothes?	Read(pupil) story.	Textbook: Going Places, Seeing People "The Elves and the Shoemaker" p.173-180. "A Visit To The Shirt Factory" p.98-102.
	Play act above story.	
	Social studies: read(pupils) "A Visit To The Shirt Factory"	
	Class discussion of workers in the shirt factory.	
	Read(teacher and pupils) "Let's Go To A Clothing Factory".	Library Book: Let's Go To A Clothing Factory by Harry (E-L) Lazarus, G. P. Putnam Sons, New York.
	Visit Kenrose dress factory, J. Freezer & Son shirt factory.	
2. What places and people help us care for our clothes?	Learn and sing songs: "The Shoemaker"	Music in Our Town(2) Music Now and Long Ago(3)
	Visit laundry and observe and talk with workers washing, cleaning & pressing clothes.	Silver Burdett(record G.2#5 p.75 and Grade 2 p.62) Cook's Clean Center workers.
	Send a familiar clothing item through the laundry. Compare its appearance before and after cleaning.	Clothing item

352

BROAD OBJECTIVE: To help students gain an understanding of the different products used in making our clothing.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Of what materials is our clothing made?	Make a "cooperative" list of all things children can think of which clothes are made from (wool, cotton, etc.)	Use samples of cloth for wool, cotton, silk, etc. Also, emphasize cloth patterns(stripes, solids, polka dots, checks, etc.)
	Social studies: Read(pupils) stories "Clothes are Made from Many Things".	Textbook: Learning About Our Neighbors "Clothes are Made From Many Things" p.92-97
	Spelling and language: Clothing vocabulary-class discussion, flash card word game.	The Instructor Publications P. O. Box 6108 Duluth, Minnesota #634 Clothing #637 Clothing accessories
2. From what sources do clothing materials come?	Learn and sing songs: "The Sheep Shearing" p.124 "The Tailor and the Bear" p.100 "I Had A Little Overcoat" p.96 "The Shoemaker" p.94	Music textbook: This Is Music 2
	Transparency: View & discuss Learning About Clothing	Creative Visuals transparency Family Relations-Learning about Clothing 301.#2AE-05
	Read stories(students)	Stories: The Youngest Camel by Kay Boyle; The Luck Llama by Alice Desmond.

359

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. How is thread made?	Read(teacher) and discuss process by which thread is made.	World Book-Vol. T
	Make dyes from plant sources-onion skin, beets, spinach, walnut.	
	Try making yarn or thread by hand from various fibers. Discuss how thread is made today.	
4. How is cloth woven?	Discuss pictures will be placed on bulletin board of spinning wheel, etc.	
	Weave small samples from yarn. Use either loom made from tongue depressors or one made from shoe box.	Loom and yarn.
	Read "Clothes Long Ago".	Textbook: Learning About Our Neighbors; "Clothes Long Ago" p.103
	Filmstrips: View and discuss The Story of Cotton The Story of Wool The Story of Rubber The Story of Leather	Filmstrips: 204-S How We Get Our Clothing (SVE)

35

BROAD OBJECTIVE: To help students gain an understanding of the importance of wise and careful selection of our clothing.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How can we take care of the clothing we have?	Learn and sing songs: "Hanging Out the Linen Clothes" "The Laundryman" Provide a lost and found box for misplaced clothing in room. Empty box daily by finding owners.	American Folk Songs for Children; Doubleday, Garden City, N.J. Music For Young Americans, American Book Co., New York. Sharing Music(Kindergarten)
2. Which is more practical for children's clothing-silk or cotton? Why?	Collect and label samples of clothing materials-leather, nylon, plastic, silk, linen, cotton, wool, rubber. Examine and discuss fibers, texture, etc. Deliberately stain with berry juice, etc. samples of above materials and try to wash them. See the results.	Samples of materials.
3. Should we play in the clothes our parents have provided us with for school and other activities?	Class discussion of "dos and don'ts" of wearing our school clothes to play in. Invite a mother in to discuss with class above subject and give her view. Write thank-you letters to mother who visited class.	Class mother

355

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
4. What would a complete "outfit" for me to wear to school in winter cost?	Read (pupils): "A New Hat and a New Dress" "New Clothes for Henry" List an ideal "outfit" for boy and girl and then visit a department store or use a catalog and list costs. Then add the total costs.	Textbook: Learning About Our Neighbors "A New Hat and a New Dress" p.109. "New Clothes for Henry" p.87.

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Have a "style" show (for other primary grades) with different children dressed to represent community workers; plus appropriate clothing for children at play, school, church, etc. The child appropriately dressed will recite a creative poem about his "fashion." Set up a clothing store. Use catalogs to price all clothing items. Use each child's coat, hat, mittens, etc. for motivation. Role play jobs of all those involved(farmer, sheep shearers, truck drivers, factory workers, store owners, salespeople, buyers, etc.) Use play money to show that each person involved receives a profit.	Primary Grade Activities Childcraft 1971 p.40

RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: Self
"How Others See Me"

The development of enhanced self-concepts is an important goal in any special education classroom. After this unit is completed, each student should have a more realistic idea of how he looks to others. The role-playing of various occupations related to body care(such as barber and beautician) will hopefully eliminate the untidy personal habits so often found within a special class. For this reason and for purposes of getting acquainted, it is strongly advisable to begin the school year with this unit.

BROAD OBJECTIVE: To help children understand the concept of "Who Am I?" and to identify ways in which the child is unique.
To promote positive self-image.
To help him become aware of things important to him.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Who am I?	Teacher asks the class this question and guides discussion. Teacher introduces self and tells about self. Make small bulletin board w/pictures from past to describe self. Show filmstrips-discuss.	Bulletin board Filmstrip: "Sometimes I Wonder" SRA-Awareness Series SVE-Getting to Know Me series Book: Debbie and Herself by Lois Lensky.
2. Who are you? How do you look to yourself? To others?	Let children look in full length mirror-tell name, describe clothing worn, color of hair and eyes, tell if they like themselves(in order to be a really happy person, you must first like yourself). Remind them to use whole sentences while speaking. Using newsprint, lie on floor and trace outline of each other. Color, cut out and display in room.	Full length mirror. Newsprint. Crayons. Books: Many Names for Eleen by Peggy Sullivan. The Very Little Girl by Phylis Krusilowsky.
3. How old are you? Where do you live? Who are your parents?	Using worksheets, teach each child his name, age, address, school, mother's and father's name. Let each child complete an application form using this information to get a classroom job.	Worksheets. Word cards. Hat.

362

CONTINUED To help the children become aware of the feelings and rights of others.
To promote cooperation within the group.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Repeat this activity on the first day of each month so each child can have a new job. Make word cards of each child's mother's and father's name and put in hat. Draw one at a time and let rest of class guess whose mother or father this is to familiarize each student with other students' parents	
4. What can you do by yourself? What do you like and/or dislike?	Teacher guides discussion and exploration to see if child can zip, button, tie, brush teeth, bathe, etc. Discuss things we like and dislike. Make collage of things you like. Display on bulletin board with each child's name.	Manipulative objects for tying, zipping, etc. Construction paper. Old magazines. Bulletin board.
5. How do you feel?	Discussion of what makes us angry, happy, sad, etc. Show film: "Clown" and discuss emotions. Discussion of how to be a friend to others, what we expect of our friends, etc.	"Clown" Radford College Library 65509

CONTINUED To promote interest in and awareness of the occupations of barber and beautician.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
6. How can we improve our appearance?	Construct a beauty and barber shop to emphasize cleanliness. Style hair, shine shoes, file nails. Study details of being a barber and a beautician-hours of work, wages, training needed, etc. Role play in beauty-barber shop. Plan a skit and invite another class in to visit.	Shoe polish, comb and emery board for each student. Make-up, razor(w/out blade), hair rollers, colognes, hair clippers, shoe brush, curtains, wash cloth, towels, etc.

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Let each child have a small bulletin board for one week to tell about himself.	Bulletin board

BROAD OBJECTIVES:

1. Become aware of any interest he may have in careers related to transportation by bus, truck, or taxi.

2. Understand that information and skills he gains in the classroom can be applied to experiences he may encounter as a bus driver, truck driver, or taxi driver.

3. Understand that careers involved with transportation greatly depend on services from careers in areas such as fuel distributors, communication services, etc.

4. Recognize the economic implications related to a career in transportation.

5. Realize that decisions he will make concerning his work will affect other people.

6. Become aware of critical thinking skills and interpersonal behavior appropriate to a career with transportation.

7. Recognize responsibility and the importance of completing assigned tasks.

8. Understand that a job well done is rewarded by self-satisfaction and recognition from others.

INTRODUCTION:

Every person is either directly or indirectly affected by transportation careers. Through this unit, children will become aware of several modes of transportation for people and goods. Because transportation is such a broad topic, this unit deals only with careers related to buses, taxis, and trucks.

MOTIVATING ACTIVITY	RESOURCES AND MATERIAL
Let each student make either a taxi, a truck, or a bus from a shoe box. Let them construct the inside, paint it, etc.	Shoe Boxes Tempera Paint
Read book. Discuss.	I Want to Be A Truck Driver, by Carla Greene
Let children bring in pictures of buses, trucks, and taxis. Discuss sizes and shapes. Make a bulletin board (perhaps a collage).	Magazines Bulletin Board

368

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How do people travel in our town? If a person didn't have a car of his own, how would he travel?	Class assignment: Instruct each student to sit in his yard for 15 minutes and record all different types of vehicles he sees. Class discussion the next day; compare different answers from different areas, etc.	
	Divide class into groups to develop skits portraying how they could catch a bus or taxi in a crowded city.	
	Discuss study prints.	Means of Transportation. Instructor. How People Travel in the City. SVE.
	Draw pictures to show people traveling by bus, taxi, etc.	Drawing paper. Crayons.
2. Who are workers who provide ways for us to travel?	Read books. Discuss.	I Want to Be A Taxi Driver. Eugene Baker. I Want to Be A Bus Driver. Carla Greene.
	Show filmstrip. Discuss.	The Custodian and the Bus Driver. Mc-Graw-Hill.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Invite a bus driver and a taxi driver to visit class. Let students interview them concerning their jobs.	Resource persons - bus driver and taxi driver.
	Work puzzle.	Bus. Playskool.
	View and discuss films and filmstrip.	Bus Driver. #40904 (Rad.) Buses that Serve Our Community. #27904 (State) Cities and Transportation. Eye Gate.
	Correlate spelling lesson to include words related to transportation by bus, taxi, and truck.	
3. What other jobs are necessary to keep transportation careers in operation?	Read books. Discuss.	Who Built The Highway. Norman Bate. Let's Go To A Garage. J. Goodspeed. I Want to Be A Mechanic. Carla Greene. About Roads. Norman & Madelyn Carlisle.
	Use media center to let each student view filmstrips. Discuss.	Gas and Oil Services. Denoyer-Geppert. Fixing a Flat Tire. Eye Gate. The Gas Station Attendant. Eye Gate. The Bus Station. Coronet. Buses. Jam Handy.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Let each student write a short story telling what would happen to bus and taxi drivers if there were no mechanics, service stations, etc.	Writing paper.
4. What is the difference between public and private transportation? Which is better?	Read books. Discuss.	Transportation. Wilma Cain. America Travels. Alice Dalgliesh. The Story of Transportation. Jeanette Eaton. The Wonderful World of Transportation. David Lambert & Laurie Lee. The Look-It-Up Book of Transportation. Bernice Kohn.
	Let students make a chart comparing public and private transportation. Display in room.	Chart paper.
	When bus driver and taxi driver visit class, ask questions concerning public versus private transportation.	Resource persons - taxi driver and bus driver.
5. Which type of public transportation do most people like best?	Let class do a survey of the most popular type of public transportation.	Chart paper.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	If possible, make notes on reasons for different choices. Make a chart comparing results. (This survey may be taken at home as well as in other classes.)	
	Have a class discussion on which type of transportation students see most and possible reasons for this.	
6. How should we behave while traveling on public vehicles?	Show filmstrips. Discuss.	Manners on Public Transportation. SVE.
	View film and discuss.	School Bus Safety. #31708 (State, Rad.)
	Divide class into 2 groups. Role play skits portraying a right and a wrong way to behave while traveling on public means of transportation.	
7. Do things (furniture, animals, etc.) travel the same way as people?	Read books. Discuss.	Trucks. Herbert Zim and James Skelly. Trucks on the Highway. C. B. Colby.
	Show study prints. Discuss.	Moving Goods for People in the City. SVE.
	Shoe film and discuss.	Transportation by Land. #5204 (State, Rad.)

378

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
8. What types of careers are related to transportation by truck?	Read books. Discuss.	Truck Drivers: What Do They Do? Carla Greene.
	Work puzzle.	Truck Driver. Playskool.
	Read comic book.	Popeye and Transportation Careers. King.
	Discuss fact that some services are needed for operation of trucks as for taxis and buses (gas stations, mechanics, etc.)	
9. What are some advantages and disadvantages to a career related to transportation?	Let several students interview a bus driver, truck driver, and taxi driver. Tape record each session. Emphasize financial implications, hours of work, etc.	Resource persons. Tape recorder.
	Make a chart comparing the three.	Chart paper.
	Let each student choose the career he would like most if he had to choose one in transportation.	

CULMINATING ACTIVITIES	RESOURCES AND MATERIALS
Take a trip to a bus station. Let students buy their tickets, check luggage, and take a bus ride. OR Visit a taxi stand. Let students listen to calls, etc. If possible, let them ride in taxi to pick up customer. OR Take a trip to a truck terminal. Observe trucks being loaded and unloaded. Interview several drivers about their jobs.	Field trips.
Let students make a model of a city. Emphasize importance of gas stations in different locations. Use taxis, buses and trucks to show movement around the city in one day.	Shoe boxes. Styrofoam. Large table.

UNIT TITLE: HOTEL: NO VACANCY

APPROXIMATE GRADE LEVEL: PRIMARY SPECIAL EDUCATION

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

BROAD OBJECTIVES:

Each student will:

1. Become aware of any interest he may have in careers related to the operation of a hotel or motel.

2. Understand that information and skills he gains in the classroom can be applied to experiences he may encounter in the restaurant business.

3. Be able to identify some instruments and tools used to perform specific tasks in a restaurant.

4. Understand that speed and accuracy in handling money is important for a career in the hotel or motel business.

5. Realize that decisions he will make concerning his work will affect other people.

6. Realize that friendliness and courtesy is appropriate behavior for working in a hotel or motel.

7. Understand responsibility and the importance of completing assigned tasks.

8. Understand that his behavior toward customers would affect his financial gains from a career in a hotel or motel.

INTRODUCTION:

This unit is intended to make students aware of the various careers related to the operation of a hotel or motel such as the manager, clerk, bell-hop, maid, elevator man, and custodian. Since most large hotels and motels have restaurants, this unit is intended to be a follow-up to the unit on restaurant careers. In this way, the students will realize that the efficient operation of hotels and motels usually depends on the efficiency of the restaurant involved.

378

MOTIVATING ACTIVITIES	RESOURCES AND MATERIAL
Show filmstrip. Discuss.	Workers and Their Work. Coronet.
Use opaque projector to make bulletin board related to hotel and motel.	
Role play incident of family on a trip looking for a hotel or motel. It is about bedtime and they are unable to find a place with vacancies.	

309

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What is a motel? What is a hotel? What are their functions?	Look up meanings in dictionary. Emphasize the difference between the two.	
	Let students draw pictures of their concept of a hotel or a motel. Study results and try to clear up any mis-conceptions they may have.	Drawing paper. Crayons.
	Invite a mother and father to visit the classroom to discuss the convenience of having hotel or motel accommodations available when they are on trips.	Resource persons.
2. Who works in a hotel or motel?	Visit a hotel and/or a motel. Observe various workers on the job.	Field trip.
	Make a list of all workers students saw on the trip. Display chart in the room.	
	Invite a hotel and/or motel manager to visit class. Let him discuss various workers whom he supervises and the responsibilities of each.	Resource person.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Correlate spelling lesson to include careers related to a hotel and motel.	
	Read book. Discuss.	Careers in Hotels and Restaurants by Litton.
3. What are some specific duties of a hotel or motel manager?	Invite a manager to visit class and tell about his job.	Resource person.
	Listen to cassette. Discuss.	Hotel Manager. Educational Sensory Programming.
	Begin making a booklet of color worksheets for each hotel and motel worker.	Color worksheets.
4. What are some specific duties of a hotel bell-hop?	Invite a bell-hop to visit class and tell about his job.	Resource person.
	Continue booklet of hotel and motel workers.	Color worksheet.
	Show filmstrip. Discuss.	At Your Service. Denoyer-Geppert.
5. What are some specific duties of a hotel or motel clerk?	Listen to cassette. Discuss.	Hotel Clerk. Educational Sensory Programming.

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Continue booklet of hotel and motel workers.	Color worksheet.
	Show filmstrip. Discuss.	Become A Receptionist. Educational Sensory Programming.
	Correlate math lesson to allow students an opportunity to count money, make change, etc.	Play money. Cash register.
	Display study prints. Discuss.	Learning About Money. David C. Cook.
	Role play an incident of one person making reservations by phone and hotel clerk taking the call and getting all the necessary information accurately.	Play telephone.
6. What are some specific duties of a hotel or motel maid?	Invite a maid to visit class and tell about her job.	Resource person.
	Continue making booklet of all jobs related to hotel and motel.	Color worksheet.
	Let students set up a motel room in the class. (Use a cot for bed if there is not enough room for a large one.) Role play duties of maid such as	Bed or cot. Linens, chair, mirror, curtains.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	making the bed, cleaning the bathroom, replacing linens, etc.	
7. What are some specific duties of a hotel elevator man?	Invite an elevator man to visit class and tell about his job.	Resource person.
	Continue booklet of hotel and motel workers.	Color worksheet.
	Let a group of students take a tape recorder to a hotel and interview an elevator man about his job. Play it back and discuss it with rest of the class.	Tape recorder.
	Show filmstrip. Discuss.	Workers Who Provide Services. Coronet.
8. What are some duties of a hotel or motel custodian?	Invite a hotel or motel custodian to visit class and tell about his job.	Resource person.
	Continue booklet of hotel and motel workers.	Color worksheet.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Compare duties of hotel and motel custodians to custodians on other jobs. Decide if their incomes are comparable, working hours are good, etc.	
9. What are some other careers related to a hotel or motel?	Explain that all the careers we studied in our restaurant unit are necessary to the operation of a hotel or motel if it has a restaurant. Discuss fact that the operation of a hotel or motel is dependent on other careers such as laundry workers, food services, etc.	

CULMINATING ACTIVITIES	RESOURCES AND MATERIAL
Let each student choose his favorite career related to the hotel and motel. Allow them to make paper bag or sock puppets of that person. Role play operation of a hotel and/or motel.	Paper bags. Socks, crayons.
Make a mural representing the students' concepts of the operation of a hotel and motel. Compare this with pictures students drew prior to this unit. Display in classroom.	Roll of drawing paper. Crayons or tempera.

UNIT TITLE: POSTAL SERVICES

"A LETTER OF YOUR OWN"

APPROXIMATE GRADE LEVEL: PRIMARY EDUCABLE

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: Postal Services
"A Letter of Your Own"

Each student's desire to receive and send mail provides concrete motivation for improving handwriting and learning the correct form of letter writing. These parts of the primary special education curriculum are easily incorporated into the postal services unit. Hopefully, each student will become aware of the job opportunities related to all areas of the postal services.

288

BROAD OBJECTIVE: To help children see the relationship of the postal services to their lives.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Do you ever receive any mail?	Book-read to the class. Discussion	
2. How do we get our mail?	Class discussion-let children present their ideas and thoughts.	
	Draw pictures to represent their ideas of how we re-receive our mail.	Material needed: Drawing paper

BROAD OBJECTIVE: To help children improve letter writing skills.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. When you write a letter, what things must you include?	Class discussion-bring in the different things that are included in all letters(heading, greeting, etc.). Make a chart by putting a letter on paper and labeling different parts.	Material needed: Chart paper
	Make a transparency-write a letter and as a class label the letter parts.	Material needed: Acetate sheet for transparency. Felt tip pen for writing on transparency.
2. Are all letters the same? Would you write the same type of letter to a friend as you would to a businessman?	Discuss the friendly letter.	
	Write letters-class activity. Display letters-on bulletin board.	
3. After you write a letter, what do you put it in(envelope)? Why do you use it? What do you put on the outside of the envelope?	Class discussion.	
	As a class activity make a large envelope and address it correctly. Let children address envelopes to go with the letters they have written.	

BROAD OBJECTIVE: To acquaint children with the various types of letters (ex.: air mail, special delivery) and the costs involved in mailing different types of letters.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Is all mail classified the same?	Discuss different classes of mail. If possible, display different types.	
2. Why do we use stamps?	Read story.	Story: "About Stamps"-Going Places, Seeing People
	View stamp collection-perhaps a child can bring one in.	Material: Stamp collection
	Design a stamp.	
3. Do all stamps cost the same amount?	Class discussion-let different ones bring in stamps to see if all stamps cost the same and are alike. Refer back to stamp collection.	
4. What is a zip code? Why do we use zip codes?	Filmstrip-view and discuss.	Filmstrip: Home Services - ECF-107 Mail Delivery
	Make Mr. Zip Code-large enough for bulletin board.	
	Book-read and discuss.	Book: Mr. Zip and the U. S. Mail

391

BROAD OBJECTIVE: To acquaint the children with the various personnel in the postal services and their specific tasks in mail delivery.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Who are the different people involved in mail delivery?	Bulletin board using study prints.	Study prints: Set SP121-Postal Helpers
	Filmstrips-view and discuss.	Filmstrips: F-A7 Post Office Workers; F-A12 The Mailman; Workers for the Public Welfare-140C The Post Office and Postal Workers
	Film-view and discuss.	Films: Mailman 10 mins. co/bw 1947 El. Rad.
	Song-"The Postman"	Exploring Music
	Make individual mail boxes.	
2. Where do they work?	Filmstrip-view and discuss.	Filmstrip: Our Post Office-SVE p.29 221-5
	Film-view and discuss.	Film: Our Post Office-10804 11 min. co/bw 1966 El. Rad.
	Books-read and discuss.	Books: At the Post Office; Let's Go To A Post Office; The True Book of the Post Office and Its Helpers

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. What are their different jobs? How is a post office devided?	Book-read and discuss. Make a chart listing various jobs. Field trip Write letters asking permission to visit post office. Then write thank-you notes after visit.	Book: Behind the Scenes at the Post Office Material needed: Chart paper Visit post office
4. What are their jobs like? What are the dangers of the job?	Resource person-talk about his job. Write thank-you letter for visiting class. Role play different positions (Ex.: mailman in the snow, rain-sorter at Christmas time)	Resource person
5. Does anyone work in a post office at night?	Film-view and discuss.	Film: 20904 Night Community Helpers 11 min. co/bw 1968 El. State
6. What is involved in our mail delivery?	Book-read and discuss. Film-view and discuss. Write stories on mail delivery. Flannel board cut-outs on mail services.	The Pony Express Film: 86004 Helicopter Carries Mail 11 mins. co/bw 1965 P. Rad. Filmstrip: 53E The Mail Goes Through Eye Gate p.36 Obtain from kindergarten teacher.

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Construct a post office and a street mail box. Assign different roles to different class members, (ex., postmaster) and since the children have already constructed individual mail boxes, they can write letters and put them in their mail box or in the street mail box to be picked up by the mailman. The mail will then be taken to post office, sorted and eventually delivered. Reading session can then be held. The children are to use the forms for letter-writing and correct addressing of envelopes that they previously learned. They may use stamps on their letters which they previously designed. Send each student a letter to his home explaining that our postal unit is ending and expressing the desire that the student continue in the letter writing activity.	Materials needed: Refrigerator box Smaller box

BROAD OBJECTIVES

Each student will:

1. Become aware of any interest he may have in careers related to the restaurant business and understand his abilities to perform specific tasks related to that career.

2. Understand that information and skills he gains in the classroom can be applied to experiences he may encounter in the restaurant business.

3. Be able to identify some instruments used to perform specific tasks in a restaurant.

4. Recognize the economic implications related to a career in the restaurant.

5. Realize that decisions he will make concerning his work will affect other people.

6. Become aware of critical thinking skills and interpersonal behavior appropriate to a career with the restaurant.

7. Recognize responsibility and the importance of completing assigned tasks.

8. Understand that a job well done is rewarded by self-satisfaction and recognition from others.

INTRODUCTION:

Most students in an educable mentally retarded class can develop enough skill and competency to enter a career with a restaurant. This unit is aimed at building an awareness of the varied careers related to a restaurant - the manager, clerk, waiter, waitress, chef, cook, dishwasher, and custodian.

MOTIVATING ACTIVITIES	RESOURCES
Field trip to restaurant. Let students order own meal and pay at check-out counter. After eating, visit kitchen and discuss jobs.	Restaurant
Read story.	I Want To Be A Restaurant Owner by Carla Greene.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What do you think working in a restaurant would be like? What different kinds of jobs could you do in a restaurant?	Class will discuss types of work done in a restaurant based on prior knowledge and what they learned from field trip.	Filmstrip: CF-A125 My Mother Is A Waitress IPC
	Show filmstrip. Discuss	
	Begin booklet of different workers. (Color worksheets and/or newspaper clippings.)	Worksheets, magazines.
	Use opaque projector to do bulletin board of restaurant workers.	Opaque projector.
2. What appliances are needed to operate a restaurant? How does a restaurant look on the inside?	Recall things class saw at restaurant.	
	Draw a picture of what they remember.	
	Build a restaurant large enough for children to work in.	Refrigerator boxes.
3. What specific duties does a restaurant manager have?	Invite a manager to visit class and tell about his job.	Resource person: Restaurant manager
	Show filmstrip. Discuss.	CF-A218 Workers Who Provide Services Coronet

400

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Continue booklet of restaurant workers.	
4. What duties does a clerk have?	Invite a clerk to visit class.	Resource person - clerk.
	Continue booklet.	
	Correlate Math lessons dealing with adding money to get a correct sum and making change for a customer.	Cash register, play money.
5. What duties does a chef or a cook have?	Let a small group of students make an appointment to interview a cook and a chef. Let them tape record the interview to show with the rest of the class. Allow the class to decide on questions to be asked prior to the interview.	Tape recorder.
	Show filmstrip. Discuss.	Filmstrips: CF-A25 The Baker. EyeGate CF-A217 Workers Who Provide Food. Coronet CE-CT-A114 Getting to Know the Bakery. Ed. Reading Service.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
6. What duties does a waiter or a waitress have?	Listen to cassette. Discuss	CE-CT-All Waiters - Waitresses. Ed. Sensory Program.
	Shoe filmstrip. Discuss	CFA157 The Waitress. Eye Gate.
	Work puzzle.	C79 Waitress, Playskool
	Invite waiter and waitress to visit class and discuss their jobs.	Resource persons - waiter and waitress.
	Correlate Math lesson to include discussion of how a waitress or a waiter's actions and attitudes directly relate to his financial gains (tips,etc.) Role play an example of a waiter's cheerful attitude and one of a bad attitude. Let one student be the customer and show the different tips he would give to the different waiters.	
7. What duties does a dishwasher or a custodian have?	Let students visit school cafeteria and observe clean-up after lunch. If possible, let them be aides to scrape plates, load dishwasher, etc.	School cafeteria.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Invite a custodian from a restaurant to visit class and explain his duties.	Resource person - Custodian
8. What other types of jobs could a person do after working in a restaurant?	Class discussion of their ideas. List on chart.	
	Show filmstrip. Discuss.	CF-A160 The School Cafeteria Worker Eye Gate
9. Why do most people enjoy eating at a restaurant?	Let several students take a tape recorder home to interview their mothers on why they enjoy eating out. They could also interview fathers, neighbors, etc. Play interviews and allow whole class time for discussion.	Tape recorder. Parents, neighbors.
	Show filmstrip. Discuss.	CF-H15 Your Tasting Tongue. Jam Handy 19
	Read books.	Salt, Sugar, & Spice. Walter Buehr. What We Eat Lois Johnson Nothing To Eat But Food Frank Jupe

CULMINATING ACTIVITIES	RESOURCES
Let each student choose his favorite restaurant job. Use restaurant students built to role play each career. After practising, let class choose a meru, cook a meal, and serve it. Emphasize the importance of each person's cooperation and responsibility. If possible invite another special class to come in and be customers.	Model Restaurant Food
Read book.	Little Bear Learns to Read The Cook Book. Janice. Eating and Cooking Around the World. Erick Berry.

INTRODUCTION TO: Our Homes-Shelter
"The Roof Over My Head"

A study of homes is a logical extension of the study on self("How Others See Me"). After the student learns about himself, he will naturally be more curious about his home and family. Since occupations related to homes, the construction of homes, as well as the maintenance of homes, are realistic choices for special students. The experience and knowledge gained from this unit will be useful in later life.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIALS
Filmstrip and story: (F-L8) Hansel and Gretel(Gingerbread House) Dramatize story Hansel and Gretel	Filmstrip: (F-L8) Hansel and Gretel

BROAD OBJECTIVE: To help students gain an appreciation of our homes.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What kinds of homes are in our neighborhood?	Read stories(pupils and teachers) Read poems Take field trip around school and in neighborhood where most of class reside to view kinds of homes. Filmstrip-view and discuss.	Story: Three Little Pigs (p.60) The House That Jack Built The City Mouse and the Country Mouse(p.94) Childcraft-Vol.2 Filmstrip: The Homes We Live In-Jam Handy Poem: There Was An Old Woman(p.31) The House of the Mouse(p.94) The Shiny Little House(p.16) Childcraft-Vol.2 (Mrs. Showalter's room)
2. What kinds of rooms does a house have?	Make a list of rooms in a home and the furnishings used in each room. Use picture cards of furnishings from Peabody Kit and match all furnishings with the room they should go in.	Childcraft-Vol.6(Mrs. Darden's room) 1. Adobe(p.127) 2. Apartment(p.123) Peabody Reading Kit
3. Why do we need homes?	Transparency-Home as a Place of Shelter. Class discussion of weather factors.	Transparency: Home as a Place of Shelter(creative visuals)

208

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Read stories(pupils) The Cloud House in the Sky p.94(Sun and Shadow) Moving Day-The Apartment p.116-122(Sun and Shadow) The Little Clay House p.97(Together We Go) A Baby in the House p.135(Together We Go) Tools for Work p.102(A World of Surprises) Two is a Team p.201-221(A World of Surprises) The Painted House p.8(Going Places, Seeing People) My Home p.46(Going Places, Seeing People) Plan one extra chore that you can do daily to help at home. Make a poster illustrating rules of courtesy at home. Make a chart of all home jobs, who does them, and which ones you can help with.	Science experiment: Why green lumber is not used in building by wetting a piece of plywood and drying as quickly as possible. Reading textbook: Sun and Shadow Reading textbook: Together We Go Childcraft-Vol.10, p.218-219 "The Carpenter's Cutting Tools"

BROAD OBJECTIVE: To help students develop an understanding of workers involved in building, furnishing and maintaining our homes.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What workers are needed to build a house? How did the workers learn their skills?	Class discussion of workers they can think of and how they learned the skills. Make a picture book of construction workers depicting as many different phases of their jobs as possible. Invite a carpenter, plumber, electrician(any other available person children might know) in to beiefly explain their work and how they learned their skills.	Childcraft(Mrs. Darden's room) Moving(Vol.7 p.83) Carpenter(Vol.7 p.91) Apron(Vol.9 p.221) Belt(Vol.10 p.68) Tools(Vol.10 p.192,219) (Vol.9 p.94,95) Electrician(Vol.10 p.130) Plumber(Vol.8 p.25-41, Vol.10 p.177) Painter(Vol.10 p.165)
2. Where do the materials to build our homes and furnishings come from?	Collect and make an exhibit of different kinds of materials used in constructing a house. Make a picture chart of household furnishings(emphasizing as many different types of materials used in each). Collect pictures and make a bulletin board of tools that would be used in bldg.a house. Filmstrip, records or cass.	Childcraft(Mrs. Darden's room) Bricks for Houses(Vol.7 p.76) Grass(Vol.5 p.290) Mud(Vol.5 p.282) Paper(Vol.5 p.71) Tree(Vol.5 p.142,286) How to Make Furniture (Vol.9 p.106) Filmstrip, records or cassettes: (Singer/SVE)World of Work: The Home We Live In How We Get Our Homes

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
3. What important tasks need to be done in our homes? Who performs these tasks?	Learn and sing songs: At Our House(p.8) Leaky Faucet(p.6) Making Cookies(p.10) Needle sing(p.11) Old House(p.83)	Music textbook: Music in our Town
	Pantomine the work of different kinds of duties in home. Have other children guess which worker is being represented.	Music textbook: Discovering Music
4. In what ways can we	Learn and sing songs: Helpers(p.44-Disc.Music) Help me Today(p.80-Disc.M) If You're Happy(p.8-This Is Music)	Music textbook: This Is Music
	Play rhythmic game- If You're Happy(p.8-This Is Music) Come Sing and Play(p.6-This Is Music)	
	Read stories(pupil) The Little Red Hen(p.46) Act out play, Little Red Hen	Textbook: Together We Go

BROAD OBJECTIVE: To help students develop a realization and appreciation of the many conveniences in our homes.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How do we heat our homes in winter? How do we cool them in summer?	Class discussion of ways their homes are heated and cooled.	Childcraft(Mrs. Darden's room) Furnace(Vol.6 p.134, Vol.8 p.58-61)
2. What materials are used for insulation?	Invite school custodian to explain heating system in school.	
	Make an exhibit and label types of fuel. Discuss advantages and disadvantages.	Language textbook: Unit on "Labeling Things".
3. What furnishings does a home need? What purposes does furniture serve? Of what materials is furniture usually made?	Read poems(pupil or teacher)	Poems-Childcraft-Vol.1 (Mrs. Showalter's room) The Clock(p.64) My Bed(p.67)
	Class discussion of advantage and disadvantages of rugs, carpets, tile, cement, linoleum, bare wooden floors.	
	Cut out pictures of furniture for a room and arrange it several ways, deciding on the most convenient arrangement.	Poems-Childcraft-Vol.1 (Mrs. Showalter's room) The Clock(p.64) My Bed(p.67)

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Make something useful or decorative for the home. (Book marks, memo pads, napkin rings, door stops, letter-holder, pin cushion).	
	Make a list of labor-saving devices.	
4. What conveniences for the home have come in to use recently? How do they add to our comfort and well being?	View and discuss film.	Film: Pioneer Home(#80904 Rad.)
	Filmstrip and cassette-view and discuss.	Filmstrip and cassette: (Eye Gate) The Story of Houses What's Around Us-The Home
	Math-identify and work simple addition and subtraction problems with "sets" of objects and "groups" of workers, furniture, etc. in the home.	Childcraft(Mrs. Darden's room) Refrigerator(Vol.6 p.155) Telephone(Vol.6 p.281) Television(Vol.6 p.291) Dishwasher(Vol.6 p.177) Washer & dryer(Vol.8 p.223, Vol.6 p.173)
	Report on any particular book you think would interest the class(book report).	Books for reading table are included in back of unit.

413

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Construct a house Role play(people who build the house as well as family who lives in the house). Let each child construct his own house.

RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

BROAD OBJECTIVES:

1. To develop in the student an awareness that his interests, aptitudes, and achievements will influence his future occupational goals.

2. To help the student become aware that preparation and proficiency are required to enter a career in the mechanical field.

3. To develop an awareness that a job in the service station or garage is dependent upon his geographical location, his social needs, and his preparation.

4. The student will understand the social and economic relationships between life-styles and his career in the service station or garage.

5. To develop in the students the skills of gathering, organizing, and relating information about jobs in order to make a better judgement about selecting a career.

6. To develop a competency needed to use tools, equipment, and materials effectively and safely.

7. To develop an awareness that skills, attitudes and habits are associated with employability.

8. To develop an awareness of other jobs and their dependency of each other and to develop an appreciation for people in the mechanical fields, etc.

INTRODUCTION:

The Intermediate EMR student is at the age where he needs and is seeking a part-time job. The service station can provide this kind of job for many of our students, and therefore this unit will be used to familiarize them with their services.

MOTIVATING ACTIVITY:

Arrange a field trip, a tour around the city and let the children count the number of service stations and garages.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What does the word <u>service</u> mean?	Let the children discuss this and try to agree on a definition. Use dictionaries to find the word and apply it to their society. Write paragraphs about how we might be of some service to other people in the community.	
2. Why do we need fuel?	Discuss the motor and what makes it work. Bring in a model of a motor and show the parts and let the child see and touch them. If a child has a gas propelled car or plane, let him bring it to school and fill it with a limited amount of gas and see what happens when the fuel runs out. Discuss the effects the gas shortage might have on our society.	Gasoline, car

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Discuss and role play a family taking a trip and running out of gasoline. Discuss how you would handle this situation.	
	Make a collage of the modes of transportation that use our fuel supply.	Poster board, magazines, scissors, glue, etc.
	Do research as to where our fuel supply comes from.	Individual library work. Encyclopedias, books, etc.
3. Where can we get general service for our automobiles, trucks, etc.?	Draw blueprints of what a service station looks like.	
	Design and build a service station - (gas pumps, etc.)	
	Let the children take cameras and photograph people working at a gas station.	
	Discuss car wash and people who work there.	
	Let the kids set up own car wash.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
4. What are some of the jobs available at the gas station? Ex: 1. Service Station Attendant 2. Pump Gas 3. General Mechanic	Make a chart of all the jobs that you could find in a service station. Include job name, qualifications, walary, hours worked, etc.	
	View filmstrips.	CF-A158 Fixing A Flat Tire, Eye Gate, 1965. CF-A162 The Gas Station Attendant, Eye Gate, 1965. CF-A124 My Dad Works In A Service Station, IFC, 1968.
	Role play in the service station the various jobs you talk about.	
	Take a field trip to a service station and watch people at work. (Possibly give the students first hand experience at pumping gas, washing windows, checking oil, etc.)	
	Make a bulletin board showing all of the workers in a gas station.	
	Ask a resource person to come in and talk to the children about his job.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Read and report on study sheets pertaining to each occupation.	
5. Where can you get specific service for your automobile, truck, etc.?	Visit a garage and watch mechanics work on cars. Also go to the body shop and watch them.	
	Make a list of the garages in the city.	
	Have parents who may work at a garage come and talk to the class.	
6. What jobs are available in mechanic service?	Make a list of all the jobs available in garage work.	
	Discuss the jobs qualifications, training, etc.	
	Visit the auto-mechanics dept. of the Community College.	NRV-Community College.
	Role play the various jobs in the garage.	
	Bring in auto-mechanics parts books and let the children estimate the cost of repairing a car.	Available from garages.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Discuss guarantee and warranty on cars and work done by mechanics.	
	Compare wages made by mechanics and those of some other professional occupations.	Make on chart, pens, etc.
	Ask a mechanic and a body shop worker to visit the class and bring some of his tools.	Any garage that will cooperate.
	Let the class assemble some model cars and trucks.	Models donated by various stores.
7. What will happen to our demand for mechanics and service station workers if our country should run out of fuel?	Figure the price per gallon of gasoline and how much it cost to drive one mile today as compared to previous times.	
	Bring in newspaper clippings about the various stations closing because of fuel shortage.	
	Discuss supply and demand.	
	Role play a situation where a person is forced off his job because the business closed down. Ask students what will he do now?	

CULMINATING ACTIVITY

Service a car with the general service-

/assembly Line

Car Wash

/ group to wash and vacuum the car.

Gas Station Attendant

Fill-up with gas.
Check oil.
Clean windows.

UNIT TITLE: WHAT AM I LIKE?

APPROXIMATE GRADE LEVEL: INTERMEDIATE EDUCABLE

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: What Am I Like?

This unit is designed to develop in the EMR and TMR child a good self-concept and an awareness of the need to keep the body in a good working order. When teaching a unit of this type to a special education class, emphasis is placed on teaching the child how to keep the body neat, clean and healthy. This unit, although geared toward the primary EMR class, contains many ideas that should be taught on the intermediate level, however, in more depth.

As a result of this unit, the child will be more aware of the many occupations related to caring for the human body that are available through the public health service.

After the unit is completed it is hoped that the child will have a better insight as to how to answer the question, "What am I like?"

BROAD OBJECTIVE: To help students develop an awareness of the body and to help students develop a good self-image.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What am I like?	Class discussion on how the student feels that he looks like.	Instructor magazine-Feb. 1972 page 46.
	Let each child look at himself in a mirror and see just how he looks-ex. physical characteristics, etc.	Full length mirror is needed for this.
	Have pictures of boys and girls who look nice in appearance and those who don't and let the children fix the wrong one.	SRA-Focus on Self-development Stage One-Awareness Stage Two-Responding
	Let the children do silnouettes of each other to get a picture of his profile.	Black construction paper-Bright light-white paper.
	Let the children do drawings of each other. Have one child lie on a large piece of paper and let another trace his outline. The child then fills in the rest himself.	Recommended for Primary EMR and TMR's.
	Class discussion on how each child feels different things.	Also use SRA-Focus on Self-Development-Stage 2-Responding
	Have a sharing period each morning and let the children ask questions or talk about anything that bothers them or they are interested in.	Guidance-filmstrip-I Get Mad, Am I Glad - available from guidance.

Cont.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Show a film "Clown" and ask the children how they feel about the outcome.	"Clown" available from Radford College library.
2. How am I changing?	Make a chart of each child's weight, height, etc. and see how he is growing up.	
	Plant a fast growing vine early in the school year and start it around the room. Keep a chart on its growth.	Instructor: Feb. 1972, p. 48.
	Keep a classroom diary, letting each child help you keep it a week at a time. Record things that happen in the room, to the class, or to the community. This will show change.	Large scrapbook-excellent or you can let the children make this. - 9 1/2x11 manilla paper, pens, wood to make cover.
	Let the children draw their own time line. Put past, present and what they think the future will bring him-can write, draw, use cartoons, anything he wants to do.	Long sheet butcher paper, or other kind, crayons, or magic markers.
	Let each child have a small bulletin board for one week and let him put things on it about him and how he is changing.	
	May continue throughout year.	

429

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Have a puppet show and show how the class has changed. Also, could go into how the school has changed. Collect pictures from old magazines to show how man looked a long time ago.	
3. What will I be like?	Let the children write a short note to their parents. Right now, when I get big I want to be a _____. What do you think of this idea? Discuss each one. Let children draw pictures of what they would like to be like when they are older. Invite resource people in from various occupations and let the children ask them how they feel about their jobs and how they felt about what they would be like when they were small. Collect pictures of make individual collages of what he thinks	Instructor: Feb. 1972, p.50

430

BROAD OBJECTIVE: To present to the class a broad idea of the functions of some main parts of the body. To create an awareness of how we are alike.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIALS
1. What is meant by the body functions of our vital organs? Include the brain, heart, eyes, ears, intestines	Bring in models of the brain, heart, ear and eye and let the class touch these, take them apart and put back together.	Available school library or from Radford College Curriculum Lab.
	Charts-showing all the parts of the body. Ask students to help you identify the parts.	A Study of the Human Body. Denoyer-Geppert Pub. Co.
	Draw a empty man and also cut out parts-let the children hang the pieces in the proper place after studying these.	Poster board - white magic markers.
	Class discussion on the importance of all of these organs.	
	Current newspaper articles, magazine articles, etc. on open heart surgery.	
	Class discussion on the dependence that the organs have on each other.	
	Make some models of these organs, especially the heart or brain.	Modeling clay

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
2. What happens if some vital part of your body becomes injured?	Class discussion on the treatment you need to help heal an injured organ. Include all occupations of the medical field.	
	Draw pictures of doctors and nurses at work.	
	Language arts-make reading sheets about each organ you study and the people involved in the healing process of the organ.	Run off and collect to form a book.(Stencils available in Spec. Ed. room)
	Perform a short skit showing some occupations in the medical field.	

BROAD OBJECTIVE: To help students realize the need for keeping the body clean and in good working order and to create an awareness of the occupations involved in these fields.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What do other people see when they look at you?	Let the children draw and display some pictures of happy faces.	
	Bring in some pictures of some healthy, happy children at play and at work.	Children bring pictures in from magazines they have at home.
	Have a class discussion on what people see in a face.	
	Write a finger play and then let the children give it for a group. Stress the aspects of Mr. Grumpy and Mrs. Pleasant and show how a smile means a lot.	
	Pretend that a rare bird has brought happiness to everyone and have everyone for one day say nice, pleasant things to each other.	
	Make posters of boys and girls who are neat and healthy and happy and of those who aren't. Cut out a smile and clean nails, hair, etc. for the children to paste on to make "sloppy" ones look neat.	Poster board, magic markers, tape.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
2. What are some of the things you should do to your body to keep it healthy and looking nice?	Class discussion on what kinds of foods you should eat to keep your body healthy.	Pamphlet: "Every Day Eat the 1-2-3-4 Way"(my files)
	Plan a breakfast, considering the types of food you should have. Discuss housewife and dieticians.	
	Cook breakfast in your classroom.	Ex.: Pancakes, bacon, juice, and milk is simple to fix and most kids enjoy it.
	Have a class discussion on why it is important to keep your face and hands clean.	
	For boys build a football locker and make sure everything is clean especially the athletes' finger-nails and hands.	Use one area of the room.
	Bring clippers and make sure the class has neat, clean nails.	Finger nail clippers, files, etc.
	Let the girls make a beauty parlor and give a manicure by clipping and cleaning nails.	
	Make a picture list of some workers who keep our bodies looking clean. a. beautician d. yourself b. shoe shine boy c. barber	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Discuss why it is important to keep the hair clean and cut.	
	Let the kids build a barber shop and then invite a barber in to demonstrate his job.	A local barber or a retired barber.
	Discuss some tools used to keep the hair clean and neat. Ex.: shampoo, hair spray, hair oil, etc.	
	Sing some cute song advertising different products used to keep the body neat and clean.	
	Bring in some Q-tips and let the children learn how to keep the ears clean.	Q-tips
	Make a list of the do's and don'ts for keeping the ears clean.	Chart paper, magic marker.
	Talk about and draw pictures of the school nurse or ear specialist checking your hearing.	Drawing paper, crayons, etc.
	Make a dentist office and let the children role play a visit to the dentist.	
	Discuss the dentist, receptionist and nurse while role playing.	

135

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Bring in tooth brush, tooth paste, and discuss and make a list of the proper way to brush your teeth.	Toothbrushes, paste, etc. can often be gotten from local dentist who gives them as samples.
	Play the record and show the filmstrip, "The Mouth I Live In".	Available from Colgate.
	Borrow a Snellen Eye Chart from the office or eye doctor and let the children check each other's eyes.	Available in the library(P-H6)
	Ask an optometrist come in and talk to the class.	
	Plan a field trip to the health office where the children can see all of these occupations.	
	Books for children.	The Human Eye, Benjamin N. Schuman, M.D.-library. Your Skin and Mine by Paul Showers-library. How Many Teeth by Paul Showers-library. Your Eyes by Irving and Ruth Adler-library. YOur Ears by Irving and Ruth Adler-library. Why Glasses by George Sands-library.

436

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What happens to your body if you don't take care of it?	Watch a plant grow and talk about the care it needs and then don't give it this care and watch it gradually become "droopy" and sick. Invite a doctor in to talk with the class about his job and about what happens to people when they don't take care of their bodies.	
2. What are some things you can do to take care of your body?	Discuss and make a list of things you can do. a. rest b. proper clothing c. if sick, visit doctor Bring in felt dolls and let the children dress them for proper weather.	
3. What are some things that can harm your body?	Discussion on: a. alcohol b. drugs c. tobacco Resource person-ask a doctor or psychiatrist in to talk to class about the dangers of each. Make a list of the harms of each of these above things.	Resource person

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Show some filmstrips about these social problems.	F-A60 - I'll Choose the High Road-Smoking and Lung Cancer - in library.
	Discuss warning signals and bring in cigarette packs and let the children read the warning on it.	
Intermediate	*Resource person-a person who has been on drugs but now speaks against them-ask him to share some experiences with the children.	These people usually work with the public health service or a drug rehabilitation center.
	Bring in a drug kit and let children look at the dif.drugs.	This activity would be left to discretion of ind. school system. Avail. Radford College Curriculum Lab.

*This part of the unit will be covered lightly by the primary teach, however, it should be touched on to make the children aware of the dangers of these.

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Present a skit showing the various occupations in the health service. Have different groups represent the jobs of dentist and helpers optometrist and helpers school nurse psychologist doctor mother and yourself adiologist Have the kids now write a short story telling who they are and what they hope to be. Make a large picture-word list of all occupations you have studied during this unit.

INTRODUCTION TO: Camping
"A Home Under the Stars"

This unit on camping is geared toward our special education students, however, it could be adapted to almost any level. The emphasis on camping will hopefully give the student another means for enjoying his summer leisure time.

Many of the children in the intermediate EMR class are approaching junior high school level and are seeking summer jobs to earn some money. This unit will show them some job opportunities available to them at nearby Claytor Lake State Park.

MOTIVATING ACTIVITY	RESOURCES AND MATERIAL
The unit will be introduced by showing some films about our national parks and about camping.	

BROAD OBJECTIVE: To help students become aware of camping as a useful means of summer recreation and to become aware of the need to preserve our natural surroundings.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How can we have an enjoyable time by going camping?	Discuss and list some of the ways people use camping for recreation. Make a collage of our national parks and the wildlife you find there.	Book: Four Cheers for Camping by Seymour Fleishman(library-4757) Book: Not A Teeny Weeny Wink by Richard Bennett (primary library-EB) Magazines: Friends-put out by Chevrolet is excellent. Let the children bring these.
2. Why is camping a good way to spend our leisure time?	Discuss and make a list of the things involved with camping. Show filmstrips on how leisure time needs to be used wisely and with a purpose.	Eye Gate-Leisure Time: Busy or Bored.
3. How should we treat our land so that the animals' homes and our vacation spots will be kept so we can go back?	Show filmstrip. Bring some pictures of our clean country and also of the dirt and litter and discuss how this kills our animals.	Filmstrip: "Saving What's Left." Eye Gate p.57.

445

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Go outside and clean up the school grounds or area around and discuss how if everyone was careful this wouldn't be necessary. Talk about the children's pets and discuss how their homes need to be clean like ours. Show filmstrips.	"Wildlife Conservation Today" F-27 - library. "Animals and Plants of the Forest". - library.

444

BROAD OBJECTIVE: To help make the children aware of what things you take on a camping trip.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What kind of equipment do you take on a camping trip?	Class discussion on how much equipment weighs when you are carrying it to where your camp is. Make a list of everything the class thinks you should take and then have them narrow it down to what is absolutely needed, what's used occasionally and what's used seldom. If any of your class are boy scouts let them bring in equipment and explain to the class why it is needed. Bring in some camping catalogues and let the children go through and compare type of equipment and price and make up an order. Have a discussion on safety and the importance of always bringing the first aid kit. Bring in a pack and some small equipment and let the class pack it and see how much it weighs.	Book: The Young Sportsman's Guide to Camping by John L. Holden-library 796.54H The Real Book About Camping by Jim Roberts-library 796.5R

145

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
2. What type of clothing should you take on a camping trip?	Class discussion on the environment surrounding the campsite.	
	Make a picture list of the type clothing you should take on the trip.	
	Bring in different kinds of material and let the children experiment with them seeing which ones are durable when exposed to various conditions; ex. brush, rain, mud, etc.	Scrap material-children can bring this in or you can get it at some outlet stores.
	Let the children suggest numbers-(how many of each type clothing you would need).	
3. What kinds of food should you take on a camping trip?	Have a boyscout who has been camping come in and tell the children about what kinds of food to take.	Use boy from your own class but if one isn't available use any boyscout.
	Plan and keep a list of the meals you would want to have if you took a 2-day camping trip. Save for use later.	

446

BROAD OBJECTIVE: To help students become aware of some of the methods of selecting and setting up a campsite.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Where is the best place to set up a camp?	Let the children suggest places for camping-bring in area near water, problems with mosquitos and all environmental factors.	Book: First Camping Trip by C. B. Colby-library 796.54C
	Let the children give examples of experiences they might have had camping and where they went.	
	Plan a field trip to several campsite areas and study the environment surrounding the spots and point out both advantages and disadvantages of the area(stress safety).	Possibly Claytor Lake and several other areas around Radford.
	Have a park ranger or a boy scout director come and talk to the children about this.	
2. What are the different types of camp fires you can use and which is the best one?	Class discussion on the types of campfires you can make.	
	Let the children place on the bulletin board illustrations of the different kinds of campfires.	
	Bring in some logs and stones and let the children build different kinds of sites.	Let the class bring in some logs and brush.

4th

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Make a large chart showing illustrations of the different kinds of fires and a written explanation of each.	Use poster boards.
	Let the children write instructions for building a campfire site and see if another student can follow the directions and make the site. Stress the importance of having the proper site to prevent an uncontrolled open fire from spreading.	
	After list is compiled let the children talk about which would be the best.	
	Talk about how the Indians used campfires for sending smoke signals.	
	If you visit a campsite let the children make their own smoke signal guide and practice sending and receiving them.	
3. What kinds of tents and shelters can you use for camping?	Let a few children look this up in the encyclopedia and report to the class on this.	World Book Encyclopedia-1972 Ed. Vol. 3

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Make a tent that would be suitable for camping.	Can use poles, stakes, and a large piece of plastic or can use paper.
	Make a lean-to type shelter and discuss how it shelters you from the weather.	Wood-sticks you can get from the natural surrounding of the campsite.
	Draw illustrations for each type and place these on your camping bulletin board.	

BROAD OBJECTIVE: To make the students aware of the precautions necessary to take when camping.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are the health precautions needed to take when camping?	Boil some water for five minutes to destroy any bacteria that it contains. Discuss a need to do this since you won't know about the water around you. Discuss the various means of obtaining clean water for drinking and cooking with. Ex. boil chemical tablets(halazone) bringing own water. Discuss and make a list of the water safety rules and go over until the children know them. Make a list of the do's and don'ts of camping. Bring in pictures or ask children to draw pictures of the different types of poison plants that are around most camping areas. Ex. poison oak. Discuss some of the things you do if a child comes in contact with these.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Discuss need for first aid kit. Bring one in and let the children discuss what each item is for. Practice making and using some simple bandages. By taking a field trip learn to identify and classify as to safe or not various food producing plants that could be used for survival.	First aid kit

BROAD OBJECTIVE: To create an awareness of some of the recreational activities that may extend from camping.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are some activities you can engage in while camping?	Make a list with children's suggestions. Discuss each one and include safety precautions needed to be taken with each. Ex. swimming, fishing, hiking, boating, archery, hiking. Sing some campfire songs and play some games that you could play while camping. Read some book for individual interest.	Book: Canoeing by John Malo-library 797.1-M The First Book of Hiking by C. W. Harrison. Horseback Riding for Boys and Girls by Beverly and Margaret Mohan-library 798M Rounds are excellent for this. Book: Swimming for Boys and Girls by Harry Kramp and George Sullivan-library 797.2K Let's Fish by Harry Zarchy-library 799.1Z Fishing for Boys by Tom McNally-library 799.1M All About Mountains and Mountaineering by Anne Terry White-library 796.52W Sea So Big, Ship So Small by Jeanne Bendick-library 797.1B. I Learn To Swim by Ellie Fleuridas-library (primary)

452

BROAD OBJECTIVE: To help make students aware of some occupations available in the park service.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are some jobs that a high school boy or girl can get down at Claytor Lake during the summer? 1. Hiking guide 2. Horse stable attendent 3. Sell tickets 4. Pick up trash from beach. 5. Life guard 6. Showing movies at the outdoor theater.	Ask resource people to come in and talk about the jobs and who the boys and girls contact. Take a field trip to Claytor Park to see some of the jobs that young people are doing. Make a list of some of the jobs and tell how kids get them.	Personnel manager at Claytor Lake.
2. What are some jobs in the park service that are very important to campers? 1. Camp nurse 2. Forest ranger	Read brochures about the various national parks and the people that run them. Ask the forest ranger come in and talk to the kids about the park and camping. Tapes Books	"Forresters" "Forrestry Aids" 4506 - American Occupations Series "What Does A Forest Ranger Do?" by Wayne Hyde-library

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Plan and take a week-end camping trip. Let the boys go fishing while the girls go hiking, help with meal planning, cooking, etc.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Motivating Activity	Bring some iron products into the room and ask the kids to discuss how these could have been made. Ask if they thought they could make these and how.	

45-7

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
What kind of material does the Lynchburg Foundry use in making their products?	1. Ask the students to make a list of things they think the Foundry uses to make their products.	
	2. Discuss iron and what it is made up of. 1 Ton Iron 1 3/4 tons of ore. 3/4 ton of coke. 1/4 ton of limestone. 4 tons of air.	
	3. Make charts showing where the raw materials are found.	Chart paper - pens.
	4. Where does most of our iron ore deposits come from? Put on the map of U.S.	Encyclopedias and books on this.
	5. Show a filmstrip on how iron is made.	Filmstrip: "How Steel is Made" - from Steel Kit.
What products do the Lynchburg Foundry make?	1. Make a collage of different products made from iron.	Poster Board - magazines.
	2. Bring in products from the Foundry and display them in the room for the class to look at.	Secure from Lynchburg Foundry.

158

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	3. Ask a resource person to come in and show a film-strip on their products.	From the Foundry - Mr. Tilly
	4. Bring in a video tape of the workers and the product at various stages of production.	
	5. Make a list of the products that come from the Foundry.	Chart paper, pens, etc.
	6. Make some of the products they produce. Ex. iron pipe, Use paper tubes and pipe a line around the room.	Christmas paper tubes, paper towel rolls, masking tape, paint.
	7. Set up an assembly line and show how everyone is important in the making of the final products.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
What jobs are available at the Lynchburg Foundry? Business: Personnel Manager Company Officials Secretary Clerk Operations: Grinder Crane Operator Molder Pattern Maker Inspector Metalurgist Others Maintenance: Plumber Electrician Safety & Health Officers Custodian Watchman	1. Have students interview parents who work at the Foundry. Report back to class. 2. Make a video tape of the workers at the foundry and view it. (This can be good since a field trip cannot be arranged there.) 3. Make a chart listing all the jobs we can think of connected with the Foundry. 4. Have the personnel manager or someone come to the school to talk to the class about the jobs. 5. Get applications for employment at the Foundry and let the children complete them and apply for a job. Show filmstrip.	Large chart paper, pens. Available from the company The Job Interview (Occupational Ed. Series) Eye Gate, 1965.

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
How does one job at the Foundry affect another one?	1. Set up an assembly line of workers at the Foundry. (Choose according to job applications.) Discuss each jobs importance for the finished product. 2. Make plaster of paris moldings for each child. Use the above assembly line. Ex. Pattern Designers, Pattern Makers, Mixers, etc.	
What are some problems associated with the Lynchburg Foundry?	1. Talk about pollution and the affect it has on our community. 2. Write poems about pollution. 3. Talk about dangers of the jobs especially like the crane workers, etc. 4. Art lesson on the designs you might find in the smoke coming from the Foundry.	

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	5. Discuss the labor versus management problems. Filmstrip on labor.	Labor & Labor Unions. (Fundamentals of Economics series) Eye Gate, 1964.
Why is the Foundry located here?	1. Do research on the environment needed for this type of industry. List these.	Encyclopedias - Books
	2. Talk about our city as an industrial area.	
	3. Discuss transportation needed to transport material, waste and products.	
	4. Bring in a resource person to explain why their industry is here.	
How does the Lynchburg Foundry affect our community?	1. Talk about all the jobs it provides for our students parents.	
	2. Talk about the strike and how being out of work affected their parents.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	3. Make a chart of the economic advantage of having the Foundry here. 4. Interview a representative from the Foundry about this. Report back to the class.	
	CULMINATING ACTIVITY Build a model of the Foundry to display in the room. Make a mural of the Foundry and display in the room.	Boxes, paper tubes, styrofoam and clay.

UNIT TITLE: THE TELEPHONE AS A COMMUNICATION DEVICE

"WHO MAKES THE PHONE RING?"

APPROXIMATE GRADE LEVEL: INTERMEDIATE EDUCABLE

PROJECT SITE: RADFORD CITY SCHOOLS

PROJECT DIRECTOR: DR. JAMES E. RUTROUGH, SUPERINTENDENT

PROJECT COORDINATOR: RANDY WRIGHT

THE CAREER EDUCATION PROGRAM
THE RADFORD CITY SCHOOLS
1612 WADSWORTH STREET
RADFORD, VIRGINIA 24141
PHONE: 1-703-639-6673

INTRODUCTION TO: The Telephone As A Communication Device
"Who Makes the Phone Ring?"

Learning to communicate ideas is a persisting life problem which involves the acquisition of the essential habits, attitudes, understandings, and skills which commonly represent one's ability in the areas of reading, oral and written communication, listening and arithmetic.

This type unit is important because communication, the giving and receiving of ideas between people,is a vital part of everyday life, especially in our daily occupations. The EMR especially needs help in the area of learning how to communicate properly because:

1. It is often difficult for an EMR to express himself.
2. Inability to express oneself accurately may result in frustration and a poor self-image.
3. Communication is a basic social skill which the EMR needs to learn, to become a functioning member of society.

The telephone will be used as a special teaching device because of its usefulness in facilitating an understanding of such basic skills as:

1. Exchanging thoughts
2. Sharing ideas
3. Sending and receiving news
4. Giving and receiving information
5. Carrying on business

*Special emphasis will be placed on the occupations available within the telephone service.

An hands-on activity will be used to motivate the children for this unit. The children will build two telephone boothes - one a large enclosed boothe which will be constructed from a refrigerator box - the other will be a smaller opened boothe constructed from a cardboard box. The tin can phones will be wired from one boothe to the other.

The children will actually construct, paint, wire and use the phone boothes and the phones. With this, they will have some actual materials to get some first hand experience in constructing and using these communication tools.

473

BROAD OBJECTIVE: To help students develop the skills of giving and receiving daily messages and to introduce the word communication.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How do we give and receive messages from other people? What is communication?	Show pictures of various people communicating with one another. Decopage some pictures showing people communicating with each other(people at work or just friends). Class discussion - bring in how people communicate with one another when doing their jobs. Let the children communicate with their neighbor in the classroom.	Can be obtained from magazines, newspapers or study prints. Have children bring these from home. Materials: Scrap wood Maple stain Clear shellac Pictures Elmer's glue Screweyes Sand paper Paint brushes
2. Why is the telephone a good means of communication?	Show filmstrip. Play some current records and let the class see that a message is given in music and therefore it is a means of communication. Class discussion. List the advantages of using a telephone-ex. faster means, etc. Discuss how it has changed and is today one of our fastest means of communication and also a far-reaching service.	"Communications and the Community" (Available through the telephone company)

474

BROAD OBJECTIVE: To help students learn to use the telephone correctly.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are the 4 uses of the telephone? a. personal b. business c. service d. emergency	Have role playing situations where the child makes each type of call. Ex.: 1. call friend 2. give grocery order 3. take a message 4. call to make an excuse 5. check on bus schedule 6. call someone for one of your parents. 7. call to report a fire Class discussion-let the class evaluate each call. Write proper means of making these calls. Make a telephone directory-including numbers for making each of these types of calls. Include yellow pages-info. Include numbers at the beginning and friends' numbers. Show filmstrips Make individual dials-let the children bring their home phone numbers or those of a friend & ask them to dial it on their own dial. Put in hat and draw a number to give variety.	Use the telephones you have constructed with tin cans and string. Instructions: Darwin, Len; What Makes a Telephone Work? (Boston: Little, Brown & Co., 1970) p.17. Later use the two telephones or teletrainer if these are available from the telephone area. Filmstrips: "The Alphabet Works for Us" (Borrowed from Telephone Co.) "How We Use the Telephone" (Borrowed from Telephone Co.) Construction paper

495

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
2. What are some of the manners you should use when using the telephone?	Class discussion Make a wall chart of do's and don'ts on the telephone. Role playing-give some situations using these bad habits and then show the good manners and let the children see the difference. Put on a puppet show showing some of the good and bad manners. Have a resource person come and explain how using pranks on the telephone can get you into trouble.	Materials needed: Poster board or long sheet of paper. Make puppets of paper mache or other material. Resource person: Local telephone people

BROAD OBJECTIVE: To help students understand the processes of transmitting and receiving.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How does sound travel?	Take a tube and have one child speak into it and let the other children hear the sound - class discussion on the vibrations of sound-make the tube solid by placing a towel in the tube-repeat the above procedure and the child doesn't hear the sounds. Stress importance of air in vibrations of sound.	
	Show the receiver in the telephone by taking an old phone apart.	Use old telephone if available from Telephone Company.
	Show long sound waves and short sound waves by plucking a guitar or any musical instrument.	Book: Your Telephone and How it Works, by Herman and Nina Schneider-Whittlesey House - McGraw-Hill Co., 1952.
	Let the children make some musical instruments to see how sound actually travels and is made.	Musical instruments- Elastic 2" wide Jingle bells, small scrap wood, sand paper, coffee cans, heavy twine and rubber, old light bulbs, paper mache, tempera paint(red, blue, yellow, etc.) large pencils, paper towel rolls, contact paper.

47

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
2. What carries the sound from one telephone to another?	Class discussion on electricity.	
	Show how the string in a straight line conducts the sound between your two cans or cups.	
	a. Place a longer string (longer than 6 foot) on the cans and see how much sound is lost.	Book: Science-Far and Near by Herman and Nina Schneider.
	b. Place something heavy on the string or make it go around the corner and see that it then no longer works.	
	Take a walk outside and see how the phone lines run to your school or to houses.	
	Resource man	Telephone lineman from the local Telephone Company.

BROAD OBJECTIVE: To increase the students' awareness of the various occupations available in the telephone company.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are some of the jobs involved in the telephone company? Examples: Electrical engineer Lineman Operator Installer Repairman Custodians Accounting Secretary	Resource people Role playing-let the children as they learn the jobs become involved in situations. Construct switchboard and let each child be operator. Class discussion-let the children name these jobs. Make a list of each occupation including name, qualifications, salary, benefits, and problems. Let a child who is interested in each job tell you why and some of the tools he might use. Plan a field trip to the telephone company.	Books for children: David C. Knight; Let's Find Out About Telephones: New York: Franklin Watts, Inc., 1967.
2. How is each man's job important to the final end?	Resource people Class discussion on cooperation and team work. Set up an assembly line and plan ahead for one person to	Local Telephone Company

464

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	not do his part. See how the final end is difficult to reach due to this.	
3. How do the services of the telephone company help us?	Class discussion. Make a bulletin board with the telephone services in the center and branch off to all the people that it reaches. Let the children make a collage of people and places the telephone reaches. Let children hunt pictures from any kind of magazines.	

BROAD OBJECTIVE: To help make the students aware of the means of obtaining a telephone and the responsibilities he has for keeping the phone.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. How do you go about getting a phone installed in your home?	Have class discussion on how they think you might go about getting a phone.	
	Have a resource person come to tell the kids how to apply for a phone.	Local Telephone Company
	Discuss the installment fee in your community for a telephone.	
	Set up situation where one child in the classroom wants to get a telephone and have him come by the office for one. Go through procedures.	
2. How do they figure out your telephone bill?	Bring some old telephone bills and let the children figure out how the company got the total. (This involves multiplication, and addition and on a small level percentages.)	
	Class discussion on the subject on long distance calls being extra. Also tax on entire bill.	
	Class discussion on how to read the bill and figure out each section of the bill.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	With your telephone service set up a team of bookkeepers and accountants to figure out and keep a record of how much each child owes.	
3. What happens if you don't pay your bill at the assigned time during the month?	Role playing-situations where one student fails to pay. Let the children stop at a peak and write down what a solution will be. How do they deal with a non-paying customer. Compare these solutions to the solutions the telephone company are using.	

CULMINATING ACTIVITY:

CULMINATING ACTIVITY	RESOURCES AND MATERIAL
Role playing-let the children set up a telephone service with as many occupations being represented as possible. Let each child have a job and stress the importance of the whole team of workers. Give a skit with all of these jobs and invite parents or another room in to see this. You may also want a representative from the telephone company to come and see how much the children know about the services of his company.

INTRODUCTION TO: From the Ground to the Table

The EMR needs special help in developing and using the skill of selecting and purchasing food for his family. This unit, directed toward the intermediate EMR level, is designed to give the child a broad survey of the people and occupations involved with the growing and processing of food that is distributed through the supermarket. The supermarket is the main emphasis in this unit since it is an excellent resource for teaching how to get the most from your food dollar.

MOTIVATING ACTIVITIES	RESOURCES AND MATERIAL
As a motivating activity, the children will choose a recipe to either make cupcakes, candy or bread and list all the ingredients needed. Then we will plan a short trip to the store to purchase these ingredients, or plant a small box garden and talk about how the small seeds grow to be plants that produce the food they eat.	Ingredients and utensils necessary for cooking experience.
Field trip to A&P. Draw sketches of what they saw.	A&P Grocery Store Art materials

BROAD OBJECTIVE: To help students understand the processes of purchasing and distributing food.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. Where does food come from?	Class discussion on where different types of foods are grown or raised.	Filmstrip: "Making Maple Syrup"-F-S2(library)
	Ask children to relate experiences they might have had during the summer visiting a farm or helping to work in a garden.	"How Seeds Sprout and Grow into Plants."
	Visit a farm to see how different foods are grown.	
	Plant some seeds and watch the plants grow and stress how long it takes to produce food. A small box garden is especially good for this.	Place the seeds when cut open under microscope and study the structure of leaves & roots parts at intervals(need microscope)
	Read some stories for interest about why foods are like they are.	Childcraft-How We Get Things (Vol.7 p.4)
2. How does food get from the growers to the buyers?	Have a class discussion on how time is an important element in the delivering of goods.	Childcraft-What People Do (Vol.10 p.214) Getting Food Ready for Harvest
	Allow bread to mold in your room. Discuss the words perishable and non-perishable.	
	Make a chart, tracing one product-ex. corn from the field to	

487

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	the table. Include pickers, packers(canning, freezing, and fresh corn transporters, grocers and finally the home. Make this using seeds-then corn and use pictures to trace the other. Use a large poster or just large paper and put up on a wall.	
	Discuss each occupation involved in this process of getting the food to the grocery store.	
	Role play-having one child being a store operator and let him call to order food from the wholesale distributors. Discuss cost.	
3. How does the grocer distribute food to your family?	Discuss how the grocer is a purchaser as well as a seller.	
	Discuss how the grocer decides the cost to sell his goods for.	
	Bring in some old invoices and let the children see how much the grocer pays for groceries.	Obtain from some store or wholesale representative.
	Figure together how much one can will sell for after you get the actual cost to the grocer plus his profit.	

488

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Discuss how much profit a grocer should get. Let the children write down what they think would be a good amount to make. Compare this to the amount various types of stores get.	

BROAD OBJECTIVE: To help students become aware of the many jobs available in a grocery store.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What are some of the occupations(jobs) available to you in a grocery store?	Make a bulletin board of a large grocery store and place in the proper area the man who does that work. Make a chart to place somewhere near this board containing all information about that job. For instances-job title, qualifications for job, salary, duties, problems involved, etc. items he works with.	
a. stock clerk	Make a small wholesale house in one area of the room and a stock room in another area. Let the children collect small boxes, label each with the name, number of containers per box. Make your own order-make an invoice and by role playing let the children(some being distributors and some grocery store buyers) deliver and check in an order.	
b. produce department	Make a small weighing scale. Ex. place a one pound bag of coffee on one side and weigh out a pound of something else.	Filmstrip: F-S51 Fruits: "Their Growth andClassification" Study prints: Supermarket Helpers-library

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Have a class discussion about the temperature a produce area should be-also, make a chart of what fruits and vegetables should be kept at what temperature use thermometer.	
	Have a resource person come and talk about the jobs at the grocery store.	From one of our local stores-hopefully, a large chain store.
c. advertising	Set up an advertising room-with some artists designing signs to be placed in the store to advertise various prices, while others are writing catchy slogans to advertise their store to the public.	Magic markers 9 x 11 typing paper Write TV & radio commercials. Let the children practice, then tape, then do a skit for other classes.
	Build a check-out line and talk about the cash register.	Try to get a cash register if one is available at an office supply or store. Small one in libray.
	After talking about the various parts of the store and their workers and the items sold in each area-have a game "Where do I Belong?" Describe an item-such as chicken-tell how much it weighs, cost per pound and ask child-where do I belong, in the store; what special attention do I need? How much do I cost? and how much change	The Foods We Eat - will be available in the library.(6 filmstrips and records) Also some cassette tapes will be available in the library. Game: This is Your Life-Ex. a can of corn-child tells from bag, how seeds planted, trees

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	would you get back from a fixed amount of money if you bought me.	
e. stock boys	Have the store managers figure the prices of the items and let the stock boys stamp the prices on the collected items. Let the children role play the duties of the bag boys. Have different size bags and let the children decide which to use when given a specified amount of groceries.	
2. Why do we need each of the workers in the grocery store?	Class discussion on working together and helping each other. Let the children write some stories about the workers and how they help each other. Make a booklet of the workers in the store and how their jobs are interdependent upon each other.	
3. Why do we need the grocer and also how does he need us?	Bring in some pictures showing people spending money in a grocery store.	

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	Have a class discussion of where the grocer gets his clothing, shelter or car. Show he purchases these with money you spend for food.	
4. Why do they need other workers in community?	Discuss strikes and their effect on grocer and prices.	

453

BROAD OBJECTIVE: To help students become aware of the need to budget your money and shop wisely when buying food for your family.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
1. What type of grocery store should you shop at?	Plan field trips to a large supermarket and then to a small privately owned grocery store.	For instance-Kroger and then Bear Market
	Make a list of some prices from both stores and let the children discuss why the prices are different.	
	Bring in a grocery ad from Kroger or another large store and let the children discuss the weekly sales and how much bargain they get.	Thursday newspaper
	Resource person-have a salesman from a warehouse distributor come and discuss with the children how the grocer gets a lower cost if he buys a larger quantity rather than the small store who can't store a large quantity, and therefore small stores have to sell for a higher price.	
	After a list of both stores prices have been made give the child $5.00 and let him see how much he can buy from each store.	Play money

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
2. What foods should you buy to get the most for your money?	Plan meals for one day and talk about what you would need to buy from the store to prepare these meals. Give each child an assigned amount of money and let them budget it as far as food and grocery buying is concerned. Use the ads from the paper and the list of prices as well. Discuss the advantage of buying larger quantities if they will keep and if on special. Money saved by buying qt. rather than 2 pints. Let the children construct a money wheel where they divide their money down into the areas of the four main food groups. Have the children read the labels of the brand name products and the cheaper ones and compare ingredients. Discuss and make pictures of how one product can be prepared many ways to give variety to your meals.	Pamphlet-"How to get the most from your food Dollar" by Pauline Arnold and Percival White-copyright 1962 by Good Reading Rack Service Division, Koster-Dana Corp., 76 Ninth Ave., New York 11, N.Y.

495

CULMINATING ACTIVITY:

CULMINATING ACTIVITIES	RESOURCES AND MATERIAL
Visit a grocery store where the children can see all of the occupations and how each is dependent upon the other. Make an actual store in your room-arrange everything you have made throughout the unit and give it a name and use as many workers as possible. Bring a bag of fruit and let the children buy it and pay for it with points or tokens they have earned while working at the store. Let them do the whole process-weighing, pricing, buying and eating.

INTRODUCTION

The Intermediate EMR class needs to become aware of their environment. This unit was developed to help the student become aware of homes as means of shelter and also to familarize them with the occupations open in the construction field.

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Motivating Activity	1. Make a bird house and talk about it as a home and shelter for the birds.	
	2. Visit one of the childrens homes to see all aspects of it.	
	3. Read stories about houses and homes.	Krauss, Ruth. A Very Special House. Harper, 1953.
		Krauss, Ruth. The Big World & The Little House. Harper 1949.
		Lindquist, Jennie D. The Little Silver House. Harper, 1959.
		Skaar, Grace. The Little Red House. Young-Scott, 1955.
		Waddell, John F. Our Home. MacMillan, 1939.

225

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Why do we need homes?	1. Talk about shelter and the need for a place to live.	
	2. Transparency - "Homes as a Place of Shelter"	CTR-1 "Homes As a Place of Shelter" (Family Relations Series) Creative Visuals 1969.
	3. Filmstrips - Food, Shelter & Clothing	CF-A6 Food, Shelter and Clothing (The Wonderful World of Work) Denoyer-Geppert, 1969.
	4. Talk about the environment here and the type of homes you need for this area.	
	5. Talk about animals and what they use for shelter.	
How are homes different?	1. Take a field trip - walk around the school area looking at different types of homes.	
	2. Compare living in the city and the country--make a list of the different styles of homes.	
	3. Talk about apartment vs. house living. Interview students from each of these.	

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	4. Let the students take pictures of their houses and report to the class about the structure of them. Farm house, trailer, apartment, town house, etc.	
	5. Make a picture chart of the different types of houses.	
How have homes changed during history?	1. View a Filmstrip - "Homes in the U. S. Old & New"	CF-A22 "Homes In the U.S. Old & New" (The Story of Houses Series) Eye Gate, 1965.
	2. Talk about the first shelters or homes we know about.	Encyclopedias, Books, etc.
	3. Talk about any change that has occured in the child's own home.	
What are some homes like in different countries?	1. Study Prints on homes in different countries.	
	2. View a Filmstrip - "The Homes We Live In"	CF-A100 "The Homes We Live In (Our Community Series) Jam Handy, 1966.

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	3. Set up some different types of homes in the toom. Ex. tepee, lean-to, igloo. Let the students make these themselves.	Tepee- poles, muslin, paint, etc. Lean-to - poles Igloo - chicken wire, wire clippers, wheat paste, paper
	4. Let the students do reports on different homes in our land.	
	5. Ask a resource person from another country come and talk about their homes. (or someone who has visited other countries.)	Eleanor Stone - lived with Navaho Indians.
What workers are involved in building houses?	1. Filmstrips on the various jobs in the construction fields.	
	The Home	CF-A21 The Home(What's Around Us Series) Eye Gate, 1971.
	Building Houses	CF-A239 Building Houses (Agric. & Industry series) Ed. Reading Services, 1969.
	How We Build Houses	CF-A171 (How We Build Things series) Eye Gate, 1972.

53 3

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	A Trip to a Lumber Mill	CF-A180 (Field Trips Out of the Ordinary Series) Eye Gate, 1972.
	Carpenter	CE-CT-A49 (Amer. Occupations series) Ed. Sensory Programming.
	Houses	CE-CT-A59 (How We Build Things series) Eye Gate, 1972.
	A Lumber Mill	CE-CT-A63 (Field Trip Out of the Ordinary series) Eye Gate, 1972.
	My Dad the Construction Foreman	CF-A134 (What Does Your Dad Do series) Jam Handy, 1970.
	2. Take a field trip to a house construction site and watch the people at work.	
	3. Interview construction workers and report back to the class.	
	4. Make a model house and assign the different jobs to different students. Role play the jobs.	Cardboard box, cellophane, lima beand, rice, paint, saws, tools.

CONTINUED

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
	5. Make a chart of all the workers who build houses.	Long chart paper, pens.
	6. Invite resource people to the room to talk about their jobs. Ex.: Carpenter Painter Brick Layer Interior Decorator Electrician Plumber	Ask parents if they have this job, if not, get community resources.
What do you need to furnish your home?	1. Draw blueprints of a house and sketch the furniture that belongs in each room.	Large drawing paper, crayon, rulers, etc.
	2. Talk about interior decorators and their jobs.	Occupational briefs.
	3. Make a collage of different rooms of different types of homes.	Home decorator magazines Tag Board Scissors Glue
	4. View a filmstrip: Finishing the Home	CF-A70 "Finishing the Home" (How We Get Our Homes) SVE, 1959.
	Planning the Home	CF-A67 "Planning the Home (How We Get Our Homes) SVE, 1959.

585

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
Who makes the furniture that goes into your home?	1. Take a field trip to the furniture factory in Blacksburg. 2. Let children interview parents or neighbors who might work at the furniture company. Report back to class. 3. Make a list of some tools that furniture workers use. 4. Make a list of all the jobs you can remember about the furniture factory. Include job, salary, qualifications. 5. Have resource people come into the class and talk about their jobs.	
What are some dangers of working in the furniture factory?	1. Talk about some hazards of the jobs. Ex. saws, etc. 2. Talk about and list the age you must be to run a saw. 3. Have a resource person come in and talk about some dangers and safety precautions.	

546

CS 003 990

CONTENT QUESTIONS	TECHNIQUES AND ACTIVITIES	RESOURCES AND MATERIAL
<u>Culminating Activity</u>	1. Make a collage of homes here and abroad. 2. Design and do blueprints of the type of home you would like and of the furnishings you could put in it.	Tag Board, magazines, paste, scissors.

RADFORD CITY SCHOOL'S CAREER EDUCATION PROJECT
RADFORD, VIRGINIA 24141

INTRODUCTION TO SECONDARY CAREER EDUCATION ACTIVITIES

The Career Education Program of the Radford City Schools is a pilot project of research and development for career education techniques and materials. It is funded through a grant from the United States Office of Education which extends until December 14, 1974.

The activity approach was utilized to implement career education concepts on the secondary level. The activities were developed in five major subject areas which include Mathematics, English, Science, Health and Physical Education and Social Studies.

The intent of the activities is to assist in re-focusing traditional subject matter content to the extent that career orientation evolves as the original content is presented.

Some career activities are short in duration while others may consume several weeks.

ENGLISH

RADFORD CITY SCHOOLS CAREER EDUCATION PROGRAM

"CONVERSATION"

GRADE: 8
SUBJECT: ENGLISH

BROAD OBJECTIVE:

To research the many careers that require the essentials of good conversation and the ability to converse easily.

PERFORMANCE OBJECTIVES:

To improve the skill of good conversation.

To learn which careers require the greatest need for language skills.

To learn how vital a role our language plays in some careers.

LESSON PROCEDURES:

Students will:

work in groups and give demonstrations to class on examples of "good" and "bad" conversation - that is effective and ineffective;

give reports or demonstrations of jobs that require conversation every day - examples: Teachers, T.V. announcers, Lawyers, Doctors, Receptionists, Nurses, Salesmen;

watch and discuss a T.V. announcer and review what makes him effective as a conversationalist.

MATERIALS AND RESOURCES:

Recordings:

"Developing Creative Ability". Valiant I.M.C. Comes in 4 tapes or 2 cassettes.
"Developing Language Arts Skills". Valiant I.M.C.

Resource People:

A sales person from a local department store.
An insurance salesman.
A radio announcer.

RADFORD CITY SCHOOLS CAREER EDUCATION PROGRAM

"ADVERTISING"

GRADE: 8
SUBJECT: ENGLISH

BROAD OBJECTIVE:

For the students to become more aware of the world of advertising and the many job possibilities associated with this area of the world of work. Also for the students to see themselves as consumers and how they react to the pressures of mass media advertising.

PERFORMANCE OBJECTIVE:

For the students to study and analyze various advertising techniques--radio, television, newspaper, magazine and billboard advertising. They will discuss and study the impact that these techniques have on the consumer and how to judge the quality of the ad--whether it is believable and sincere.

LESSON PROCEDURE:

The students will begin the unit by listening to commercials which have been taped from television. They will bring in newspapers and magazine ads and discuss the strong and weak points. Ads from earlier years will be studied comparing the changes in advertising that have occured through the years. Students analyze the jobs associated with advertising (all areas) and individual reports are given on these jobs. The students, in a follow-up activity, will develop their own ads and present them to the class. Magazine and newspaper ads can be made with simple construction paper and put on the bulletin board, or sophisticated television commercials can be made with the video tape recorder.

MATERIALS AND RESOURCES:

Books:

Campbell, Hannah. Why Did They Name It? Fleet Press Corp., 1964.
Floyd Clymer's Historical Scrapbook Early Advertising. Bonanza Books, Division of Crown Publishers, 1955.
Wood, James Playsted. This is Advertising. Crown Publishing, Inc., 1968.

Newspapers:

Roanoke Times. Roanoke, Virginia.
Radford News Journal. Radford, Virginia.
The Acorn. School Newspaper.

MATERIALS AND RESOURCES: (Continued)

Filmstrips and Cassettes:

"What's Going on Here - Media and Propaganda". E.M.C. Corp., 1972.

Resource People:

A public relations person.
A newspaper publisher.
A radio announcer.

RADFORD CITY SCHOOLS CAREER EDUCATION PROGRAM

"A FAMOUS MEDICAL RESEARCHER: DR. JONAS SALK"

GRADE: 8
SUBJECT: ENGLISH

BROAD OBJECTIVES:

1. To read an account of a famous American and become aware of his work.

2. To orient students to the jobs available in medical research.

PERFORMANCE OBJECTIVES:

1. The student will appreciate the contribution of Dr. Jonas Salk.

2. The student will be able to describe the various jobs in medical research.

LESSON PROCEDURE:

1. Class discussion of the disease poliomyelitis.

2. Individual research.

3. Oral or written reports.

4. Read "A New Vaccine is Born".

5. Writing assignment "A Career in Medical Research Would Be Interesting Because.....".

6. Resource person.

MATERIALS AND RESOURCES:
